TESLA ROŽNOV

Editor:
TESLA ROŽNOV, národní podnik
dokumentace a propagace
ROŽNOV POD RADHOŠTĚM
Printed in Czechoslovakia
MTZ, Ostrava 1

This manual of TESLA electronic tubes and semi-conductor devices contains all basic technical data required for general information. It does not list detailed data required for the development and design of new electronic instruments. A concise catalogue of tubes compiled specially for the use of designers contains, in addition to all data, also the characteristics.

This catalogue is printed on loose leaves and is kept up-to-date by additions. Receiving tubes intended for use in newly designed receivers, instruments, etc., are listed in a table of preferred types.

KOVO, Foreign Trade Co.,

1. Double heating current, TESLA type more economical
2. Different socket
3. Different heating voltage
4. Different external design
