1-11. NUMERICAL INDEX.

1-12. GENERAL. Section III, Numerical Index, is compiled in accordance with the numerical part number filing system described below:

a. Part number numerical arrangement starts in the left-hand column and continues from left to right, one column at a time, until part number numerical arrangement is determined.

b. The order of precedence beginning on the extreme left-hand (front) position in part number numerical arrangement is as follows:

Letters A through Z
Numerals 0 through 9 (Alphabetical O's are considered as numerical zeros.)

c. The order of precedence in continuing the part number arrangement in the second and succeeding positions of the part number from left to right is as follows:

Space (blank column)
Diagonal (slant)/
Point (period).
Dash (-)
Letters A through Z
Numerals 0 through 9 (Alphabetical O's are considered as numerical zeros.)

1-13. PART NUMBER COLUMN. In this column are listed part numbers, which are the same as drawing numbers, for procurable and nonprocurable parts and assemblies in the Group Assembly Parts List.

1-14. SOURCE CODE COLUMN. In this column is listed the source coding as assigned by the Procuring Department.

1-15. SOURCE CODE DEFINITIONS.

(a) CODE "P" - PARTS UNDER INVENTORY STOCK CONTROL.

(1) CODE "P" is applied to parts which are procured in view of relatively high usage. Code "P" parts may be requisitioned and installed by any maintenance level, unless followed by the letter "O", which restricts requisition and replacement to Depot (O&R) level only. Restricted service manufacture is considered practicable but only after an attempt has been made to procure from Supply Sources. In lieu of Procurement of "P" Coded parts, the Department may designate a Depot (O&R) level activity to manufacture supply requirements for the Program.

(2) CODE "P1" is applied to parts which are very difficult or uneconomical to manufacture. Service manufacture is considered impracticable. Code "P1" parts may be requisitioned and installed by any maintenance level, unless followed by the letter "O", which restricts requisition and replacement to Depot (O&R) level only.

(b) CODE "M" - MANUFACTURE, PARTS NOT PROCURED.

(1) CODE "M" is applied to parts which are within the facilities of any activity to manufacture. Procurement and stocking are not justified in view of the relatively low usage, or storage and installation factors, of these parts. Needs are to be met by local manufacture as required.

(2) CODE "M1" is applied to parts which can be manufactured only by utilizing the facilites of the Depot (O&R) activity. Procurement and stocking of these parts are not justified in view of their relatively low usage and installation factors. The needs of all activities are to be met through salvage, or by Depot (O&R) level manufacture.

(c) CODE "A" - ASSEMBLY NOT PROCURED.

(1) CODE "A" is applied to assemblies made up of two or more parts each of which carry individual part numbers and descriptions, and which may be assembled by any Maintenance level.

(2) CODE "A1" is applied to assemblies made up of two or more parts each of which carry individual part numbers and descriptions, and which may be assembled only by activities having Depot (O&R) facilities.

(d) CODE "X" - PARTS CONSIDERED IMPRACTICABLE FOR MANUFACTURE OR PROCUREMENT.

(1) CODE "X" is applied to Main Structural Members or similar parts which, if required, would suggest extensive equipment reconditioning. The need of a part, or parts, coded "X" normally should result in a recommendation to retire the equipment from service.

(2) CODE "X1" is applied to parts for which procurement of the next larger assembly is justified; e.g., an integral detail part, such as welded segment, inseparable from its assembly; a part machined in a matched set; or a part of an assembly which, if required, would suggest extensive reconditioning of each assembly.

(3) CODE "X2" is applied to parts which are neither procured nor stocked. Activities requiring such parts shall attempt to obtain from salvage; if not obtainable from salvage, such parts shall be requisitioned through normal supply channels with supporting justification.

(e) CODE * PARTS NOT PROCURED, MANUFACTURED, OR STOCKED.

(1) CODE * applies to installation drawings, diagrams, instructions or field service drawings, basic drawing numbers which cannot be procured or manufactured, and obsolete parts.

R - Applies to parts which are economical to salvage and economical to repair.

S - Applies to parts which are economical to salvage, if usable, needing only cleaning, sand-blasting, painting, plating, and/or inspection.

N - Applies to parts which are uneconomical, or impracticable to salvage.

1-16. FIGURE AND INDEX NUMBER COLUMN. In this column the digits preceding the dash refer to the figure in the Parts Breakdown on which the parts or

assemblies are illustrated. The digits following the dash are the index numbers or procurable or non-procurable parts or assemblies. For Government and contractor standard parts, the figure and index number shown in the Numerical Index is the figure and index for the first occurrence only of such parts in the Group Assembly Parts List.

1-17. QUANTITY PER ARTICLE COLUMN. In this column is listed the total quantity of parts or assemblies per unit of equipment. Where the total quantity of a part is not the same for the different units of equipment covered by this Parts Breakdown, the largest quantity for any one unit is shown.

1-18. REFERENCE DESIGNATION INDEX.

1-19. GENERAL. The Reference Designation Index, Section IV, lists reference designation symbols which have been established for any parts of the equipment covered.

1-20. REFERENCE DESIGNATION COLUMN. In this column are listed the assigned reference designation symbols, arranged in alphabetical-numerical sequence. The column contains all reference designation symbols shown on schematic diagrams and contained in Operating, Service, Maintenance or Overhaul Handbooks pertaining to the equipment covered by the Illustrated Parts Breakdown.

1-21. FIGURE-INDEX NUMBER COLUMN. This column contains the Group Assembly Parts List figure and index numbers assigned to reference designation items.

1-22. STOCK NUMBER COLUMN. The policy of including and updating stock number information in IPB manuals has been discontinued. Purging of stock numbers will be accomplished on a phased basis as changes are made to IPB pages to add or change other required information. See S-00-1-1, USAF Master Cross-Reference Index for converted part number to stock number information.

1-23. PART NUMBER COLUMN. In this column are listed the part numbers of those parts which have been assigned reference designation symbols.

1-24. Listed below are contracts for Receiver-Transmitter 618S-1 and 618S-1A with their serial numbers:

618S-1	AF33(600)26685	# 401 thru 971

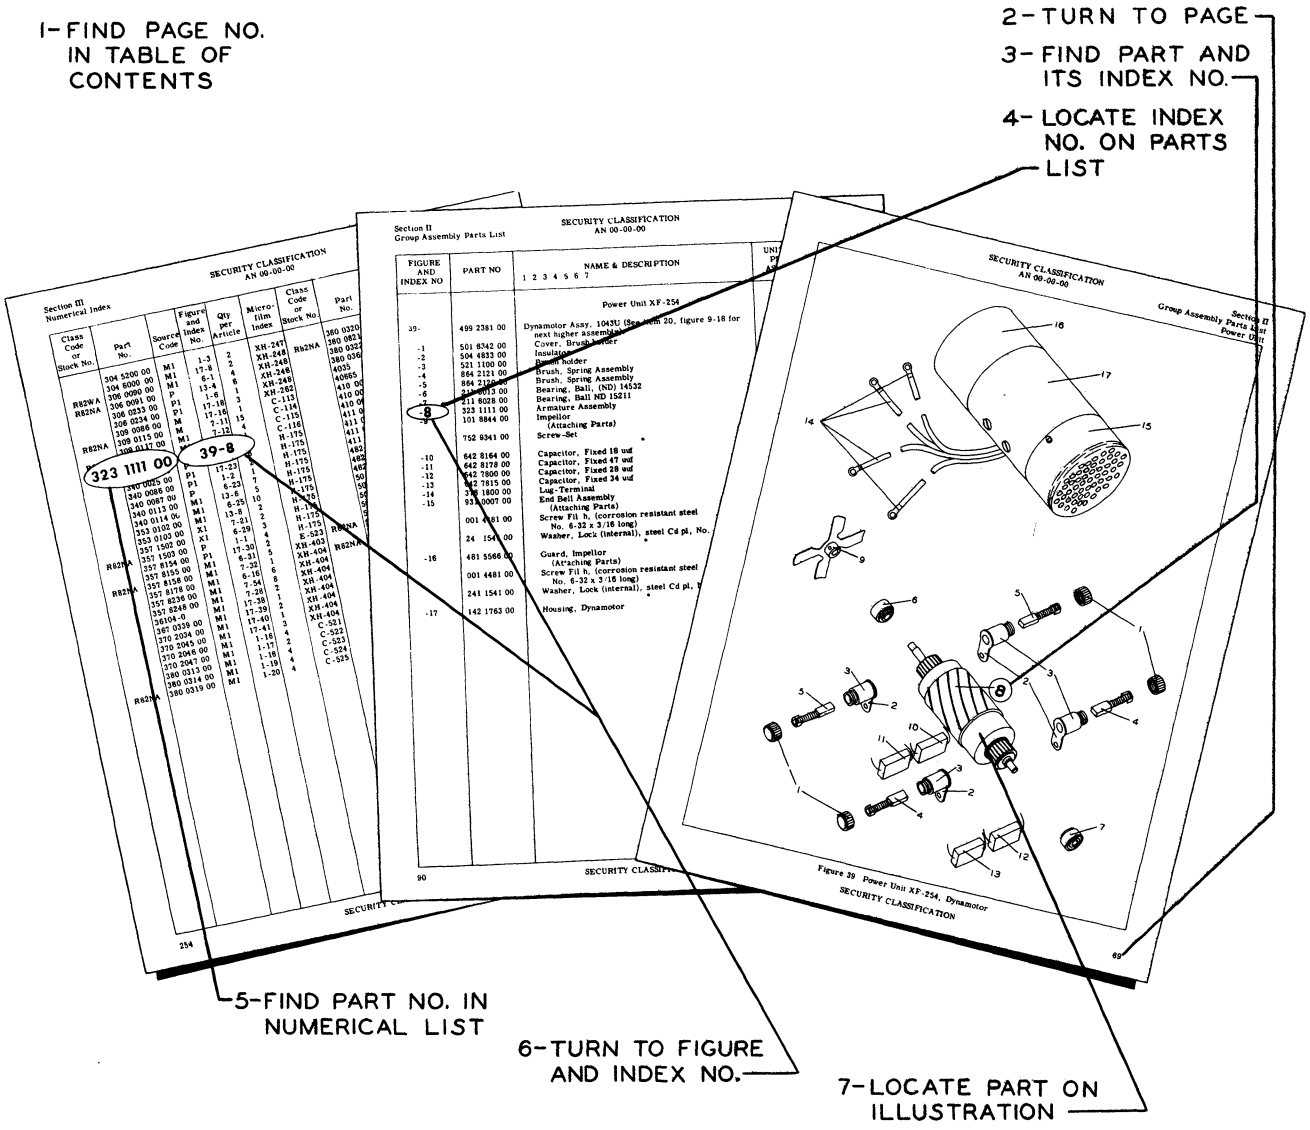
HOW TO USE THIS ILLUSTRATED PARTS BREAKDOWN



HOW TO FIND THE PART NUMBER IF THE SECTION OR SYSTEM OF THE EQUIPMENT IN WHICH THE PART IS USED IS KNOWN:

(1) Turn to the Table of Contents and find the page number for the Major Assembly or System in which the part is used.

(2) Turn to the page determined in step (1).

(3) Locate the part and its index number on the illustration.

(4) Find the index number on the Group Assembly Parts List page to determine complete description.

HOW TO FIND THE ILLUSTRATION FOR A PART IF THE PART NUMBER IS KNOWN:

(5) Refer to Section III, the Numerical Index and find the part number.

(6) Turn to Section II and find the first figure and index number indicated in the Numerical Index for that part. If this figure shows the part in a section or system of the equipment other than the one desired, refer to the other figure numbers listed in the Numerical Index.

(7) On the face of the illustration, find the index number determined in step (6).
