EchoMax 2000™

DIGITAL EFFECTS PROCESSING MICROPHONE

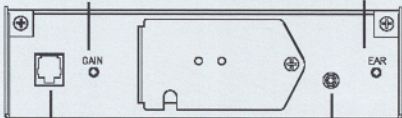

BASE STATION MICROPHONE WITH DIGITAL ECHO, SLAPBACK AND ETS

The **ASTATIC EchoMax 2000** is a communications desk microphone with digital echo effects and ETS (End of Transmission Signal). The use of modern digital microprocessor technology means that the echo effects have superior fidelity, clarity, and do not degrade with different settings of delay time. The **EchoMax 2000** features two different digital echo effects and two unique digitally generated ETS tones. It has a headphone output for easy setting of effects, and an analog VU meter for frequency response modeled after our famous **D104** microphone. The **EchoMax 2000** features heavy duty steel construction and has a one year limited warranty.

Output Level Knob
