

ICF-7600D

SERVICE MANUAL

*AEP Model
UK Model
E Model*

SPECIFICATIONS

Circuit system	FM: Superheterodyne AM: Dual conversion superheterodyne	Battery life	Radio: approx. 12 hours of listening for four hours at a normal volume, using Sony SUM-3(NS) New Super batteries Computer back up/clock: approx. 1 year of continuous operation with Sony SUM-3 (NS) New Super batteries
Frequency range	FM: 87.6 – 108.0 MHz (FM Narrow) 76.0 – 108.0 MHz (FM Wide) MW: 522 – 1611 kHz SW: 1615 – 29995 kHz (AM Wide) 1615 – 26100 kHz (AM Narrow) LW: 153 – 519 kHz SSB/CW: 153 – 29995 kHz	Dimensions	Approx. 184.5×118.5×32 mm (w/h/d) (7 ³ / ₈ ×4 ³ / ₄ ×1 ⁵ / ₁₆ inches) including projecting parts and controls
Antennas	Telescopic antenna (FM/SW) Built-in ferrite bar antenna (MW/LW) External antenna terminal (FM/LW/MW/SW)	Weight	Approx. 640 g (1.4 lb) including batteries
Speaker	Approx. 7.7 cm (3 ¹ / ₈ inches) diameter		
Power output	200 mW (at 10% harmonic distortion, for UK Model) 400 mW (at 10% harmonic distortion, for AEP, E Model)		
Outputs	Recording output jack (minijack) output level 0.775 mV (–60 dB) output impedance 1 kilohm Earphone jack (minijack) for 8ohm earphone		
Power requirements	Radio: 6 V dc Four IEC designation R6 batteries (size AA) Supplied AC-240 ac power adaptor (110, 120, 220 or 240 V ac adjustable, 50/60 Hz) Optional DCC-127A or DCC-240 car battery cord for use with 12 V or 24 V car battery, respectively Computer back up/clock: 3 V dc, two IEC designation R6 batteries (size AA)		

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

**FM/LW/MW/SW
PLL SYNTHESIZED RECEIVER
SONY®**

TR

● Identification Of Each Model

Indication of Frequency Range

AEP model : FM 76-108 MHz
 UK model : LW/MW/SW 153-29,995 KHz
 E model

ME model : FM 87.6-108 MHz
 G-AEP model : LW/MW/SW 153-26,100 KHz

French model : FM 87.6-108 MHz
 LW/MW/SW 153-29,995 KHz

EXT ANT

Not provided for G-AEP model.

SSB

Not provided for ME model.

SERVICING NOTES

1. FREQUENCY RANGE ADJUSTMENT

When replacing switch board, adjust frequency range by solder-bridging or opening adjustment patterns according to original patterns.

Frequency Range	Bridge (A)	Bridge (B)
FM wide	open	_____
FM narrow	bridge	_____
AM wide	_____	open
AM narrow	_____	bridge

● **Frequency Range**
FM wide : 76.0–108.0 MHz
FM narrow : 87.6–108.0 MHz
AM wide : 153–29,995 kHz
AM narrow : 153–26,100 kHz

2. BUTTONS REPLACEMENT

3. MELF (Metal Electrodes Face-Bonding) Components

Warning

If MELF components are forcibly removed from the printed circuit board with pincers or pliers, the circuit board pattern is likely to peel away. Always remove MELF components according to the procedure described on the next page. Replace MELF components with the lead type components.

MELF components are soldered directly to the surface of the printed circuit board.

MELF resistors and capacitors have the same dimensions and are distinguished by their background colors: light brown for resistors, and pink or light green for capacitors.

The MELF resistor color coding is the same as for conventional resistors, and MELF capacitor color coding is the same as for tube-type ceramic capacitors.

Components larger than resistors and without a color code are cross conductors, which are used instead of jumper wires.

2. Color Code Reading

(Example of Resistor)

(Example of Capacitor)

background color { pink 25 V voltage resistance
light green 50 V voltage resistance

Fig. 2

1. Structure

(Resistors)

(Capacitors)

Fig. 1

3. How to Remove MELF Components and Mount Replacements

Use a soldering iron of at least 40W with an iron tip 4 mm in diameter and file the tip down to the angle shown in the diagram.

Fig. 3

1. Bring the flat surface of the soldering iron in equal contact with both soldered ends of the component.
2. The solder should melt in about 4 seconds. (The solder will melt more readily if a small amount of solder is attached to the iron tip and the iron tip is placed against the component.)
3. Once the solder has melted, tap the component aside with the tip of the soldering iron, and remove it from the board.

Fig. 4

4. Use lead type resistors to replace the MELF components.

This replacement may be mounted with short leads (see Fig. 5).

Fig. 5

Note: Use 3216 type chip components to replace the MELF capacitor components.
See page 6 for mounting of chip components.

4. Chip components

Chip components include resistors, capacitors, transistors, diodes, coil and adjustable resistors.

In this section, the types of resistors, ceramic capacitors, transistors and diodes which are used most frequently will be described.

Dimension of transistors and capacitors

(Unit: mm)

Type	L	W	T
3216	3.2	1.6	0.45 ~ 0.6
2125	2.0	1.25	0.35 ~ 0.5

Identification

Resistor

Laminated Ceramic Capacitor

Transistor

Diode

Replacing chip components

All chip components should be connected and disconnected, using a tapered soldering iron [temperature of the iron tip: less than 280°C (536°F)], a pair of tweezers and braided wire.

Precautions for replacement

1. Do not disconnect the chip component forcefully. Otherwise, the pattern may peel off.
2. Never re-use a disconnected chip component. Dispose of all old chip components.
3. To protect the chip component, heating time for attaching the component should be within 3 seconds.

○ Removing chip components

(1) Removing solder at electrode

Remove the solder at the electrode, using a thin braided wire. Do not remove the solder of the part (chip component) attached adjacent to the electrode.

(2) Disconnecting chip components

Turn the tweezers with the soldering iron alternately applied to both electrodes, and the chip component will be disconnected. Take careful precautions while disconnecting, because if the chip component is forcefully removed the land may peel off. Never re-use a disconnected chip component.

(3) Smoothing the soldered surface

After disconnecting the chip component, remove the solder by using a braided wire to smooth the land surface.

○ Connecting chip components

The value of chip components is not displayed on the main body. Take due precautions to avoid mixing new chip components with other ones.

(1) Applying solder to land on one side

Apply a thin layer of solder to the land on one side where the chip component is to be connected. Too much solder may cause bridging.

(2) Speedy soldering

Hold the chip component at the desired position, using tweezers, and apply the soldering iron in the arrow-marked direction. To protect the chip component, heating time should be within 3 seconds.

(3) Speedy soldering of electrode on the other side

Solder the electrode on the other side in the same way as in (2) above.

LOCATION AND FUNCTION OF CONTROLS

1 Telescopic antenna
Used for both FM and SW reception.

2 Frequency display
Displayed as follows:

3 Time display
Displayed by 24 hours.
The timer-setting time will be displayed when the SET button is pressed.

4 Time adjust button
Press the H (hour) button and M (minute) button while pressing the TIME SET button to adjust the clock to the current time.

5 SET (timer setting) button
Press the H button and M button while pressing the SET button to set the timer.

6 STANDBY (timer standby) button
Press this button after setting the timer.

7 TUNING indicator
The indicator illuminates when a signal is received.

8 MAIN POWER switch
Set this switch to ON before pressing the ON button to turn on the radio.
Set it to OFF when carrying the radio.
With this switch at OFF, the power will not be turned on even if the ON button is pressed accidentally.

9 ON button
Press this button to turn the radio on.

10 SLEEP timer button
Press this button to set the sleep timer.

11 OFF button
Press this button to turn the radio off.

12 ENTER key
Used to input a station to one of the counter keys for preset tuning.

13 EXECUTE key
After inputting your desired band and frequency, press this key to complete your tuning.

14 FM/AM key
Used to input a frequency for direct tuning.

15 Counter keys
Used to input a frequency. If you punch in a frequency with the numbered keys, the frequency will appear in the frequency display.

16 BAND SELECT key
Used with \uparrow (plus) key or \downarrow (minus) key to continuously search a broadcast band such as FM, LW, MW and SW, or to search the meter bands of SW.

17 \uparrow (plus)/ \downarrow (minus) key
Used with the BAND SELECT key to search the desired broadcast band and tune the frequency in correctly for manual tuning.
If you press \uparrow key or \downarrow once, the tuned frequency will be increased or decreased by the following intervals:
FM: 0.1 MHz MW: 10 kHz
LW: 3 kHz SW: 5 kHz

If you keep the key depressed, the frequency changes continuously.
The MW interval of 9 kHz is preset at the factory but you can change to the interval of 10 kHz to match the MW frequency allocation system of the country where you will use the unit.

18 START/STOP key
If you press this key, the radio begins searching for a station, scanning the broadcast band of the frequency inputted by direct tuning or searched for by manual tuning. Scanning stops automatically for 1.5 seconds when a station is received. Press the START/STOP key again to stop the scanning.

19 FINE TUNING control

Adjust this control for better reception of LW, MW or SW.

20 AM MODE selector

NORM: Normally set the selector to this position.

FINE: Set to this position for better reception of LW, MW and SW and adjust the tuning with the FINE TUNING control.

SSB: For SSB/CW reception, set to this position and adjust the tuning with the FINE TUNING control.

21 TONE control

NEWS: For listening to news.

MUSIC: For listening to music.

22 VOLUME control

23 SENS (FM/AM sensitivity) selector

Normally set this selector to HIGH. Set it to LOW when the sound is distorted due to strong signals or when there is interference.

24 EXT ANT (external antenna) jack

Connect the supplied external antenna connector.

25 Recording output jack

For recording radio programs with a tape recorder, connect the optional RK-69A connecting cord.

26 Earphone jack

For private listening with an earphone. When the earphone is plugged in, the speaker is automatically disconnected.

27 DC IN 6V (external power input) jack

For operation from an external power source.

28 TIME SET button

Used with H and M button at the front to adjust the current time.

29 12/24 hour selector

You can choose either 12 hour indication or 24 hour indication by switching this selector.

30 Radio battery compartment

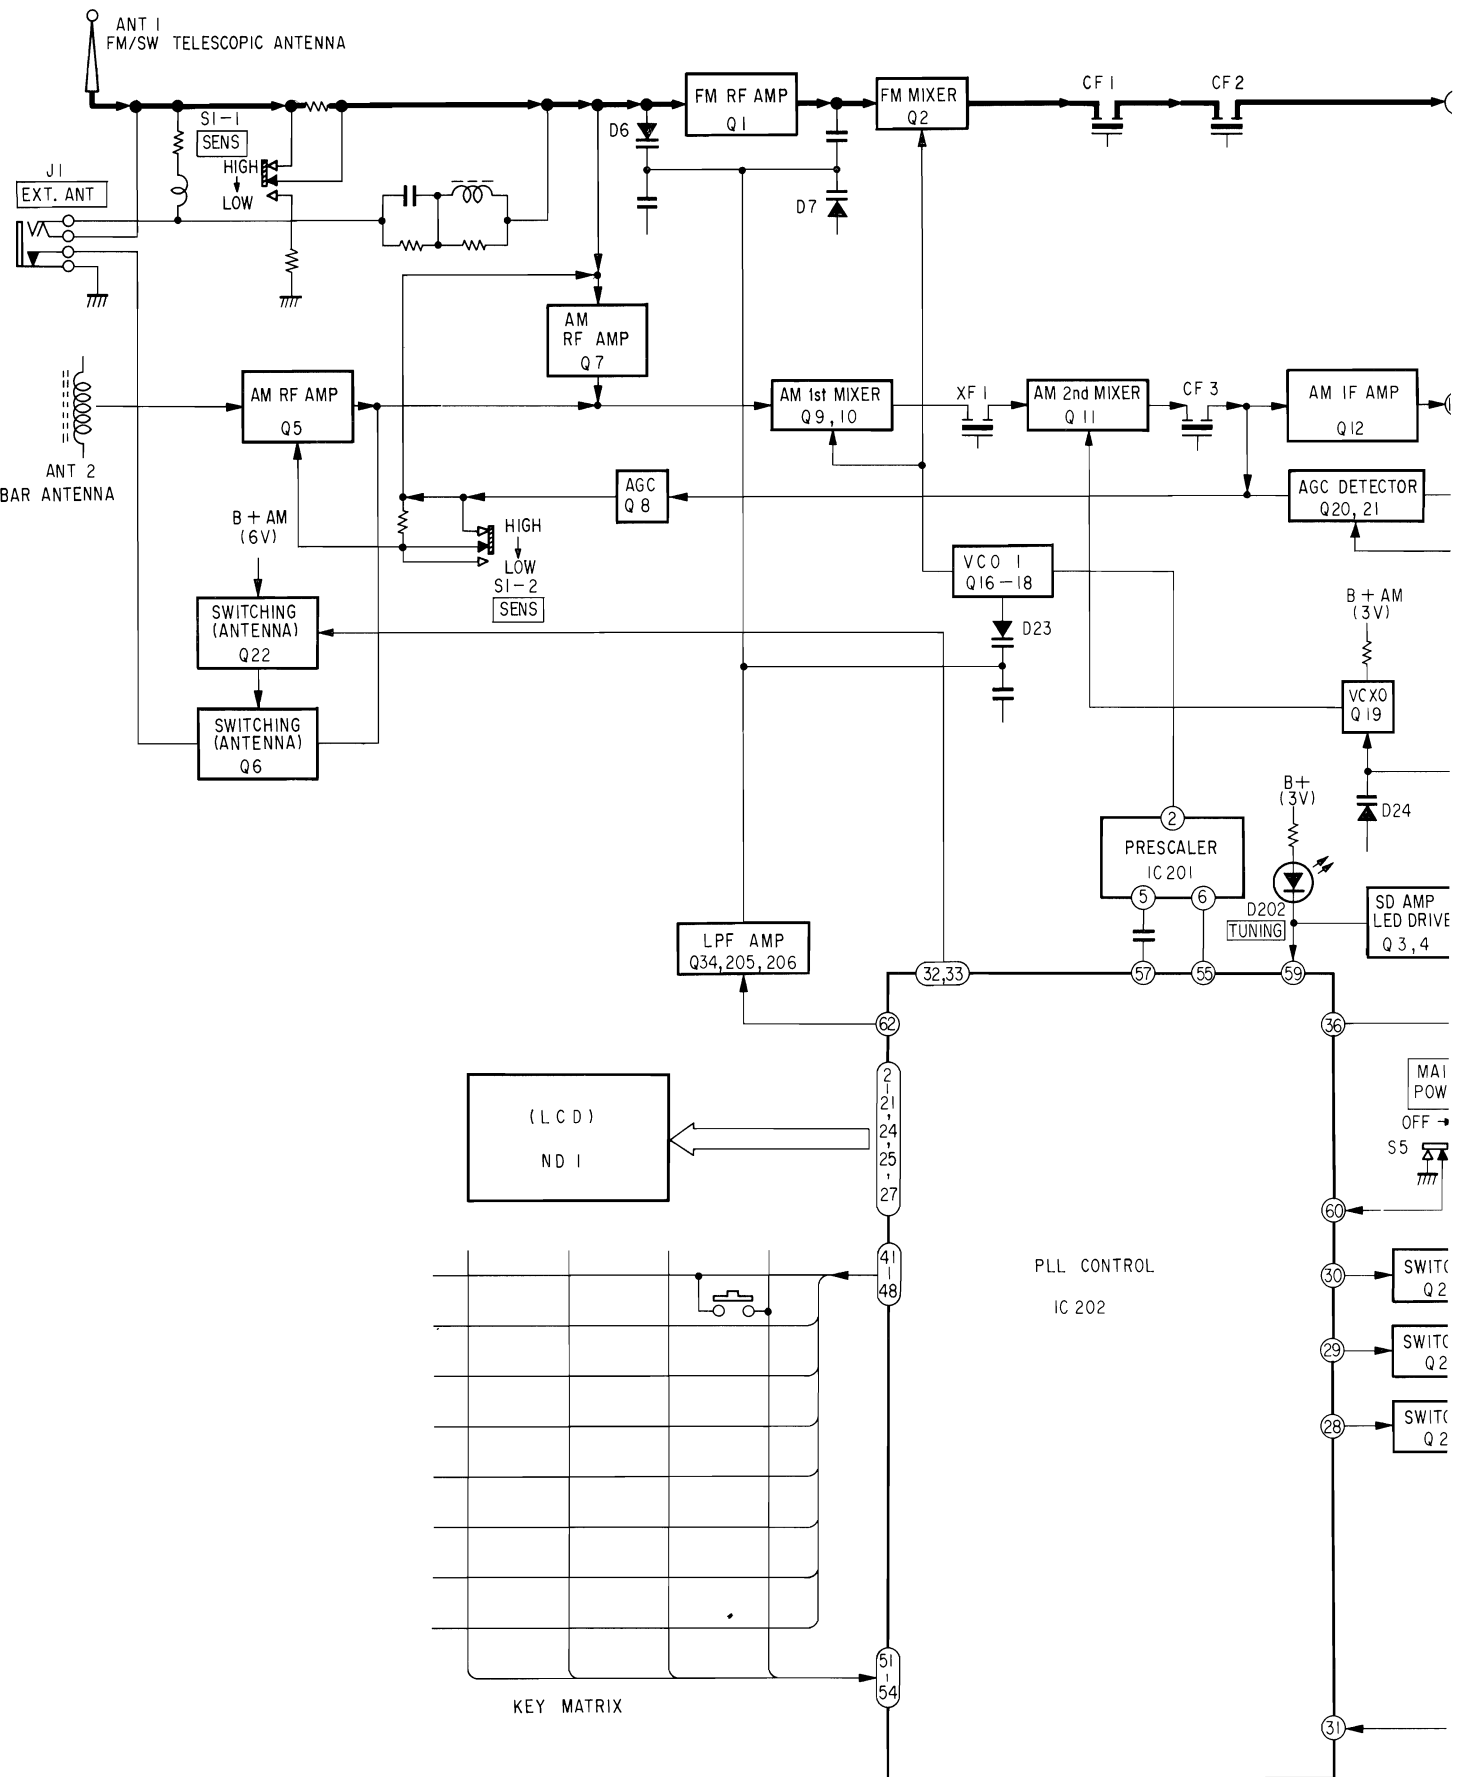

31 9 kHz/10 kHz selector (in the computer back up/clock battery compartment)

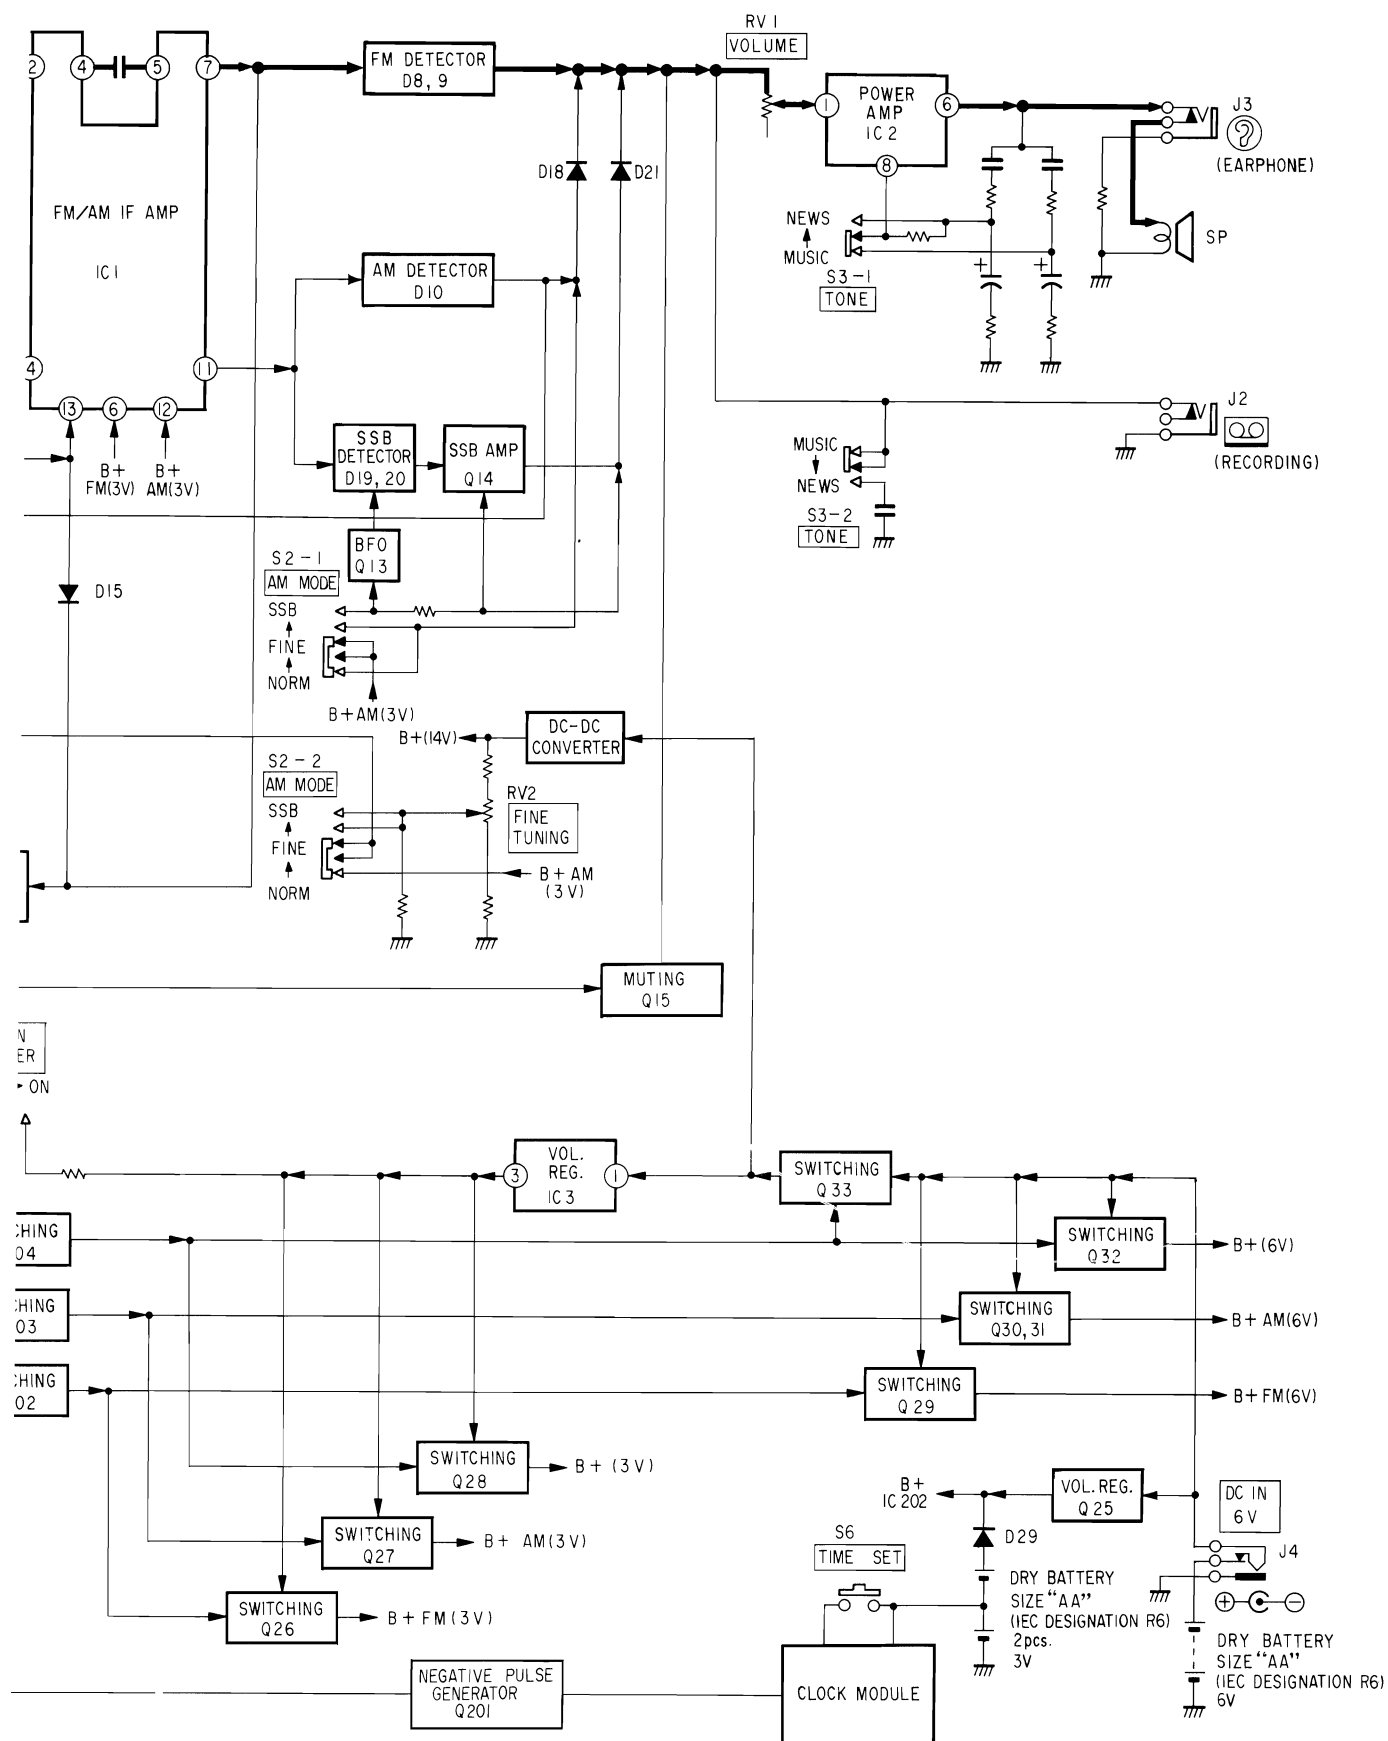

Set this selector according to the MW frequency allocation system of your country.

32 Computer back up/clock battery compartment

SECTION 2 DISASSEMBLY

- Follow the disassembly procedure in the numerical order given.

REAR CABINET

Note: Be careful not to break the lead wire of telescopic antenna when removing the rear cabinet.

FRONT CABINET/ANTENNA BOARD/JACK BOARD

Note: Jack board should be removed after the front cabinet is removed.

SWITCH BOARD

MAIN BOARD

Note: Be careful not to break the lead wire when removing the main board.

SECTION 3 ADJUSTMENTS

3-1. ELECTRICAL ADJUSTMENTS

PLL FREQUENCY/LPF OUTPUT LEVEL CHECK

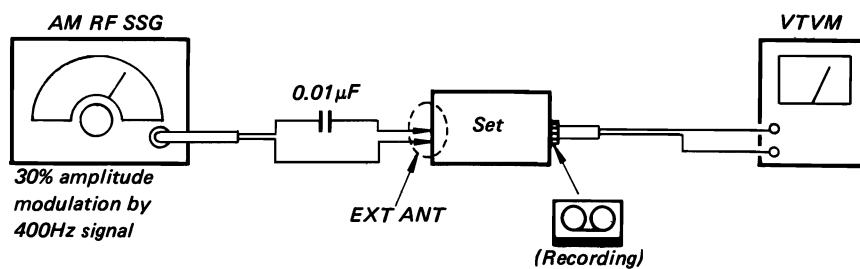

1. Confirm the frequency counter reading is 100MHz when tuned to FM 89.3 MHz.

2. Confirm the 9-11V reading on VOM when tuned to FM 108 MHz.

AM IF ALIGNMENT

AM 1st IF ALIGNMENT	
Adjust for a maximum reading on VTVM.	
T8	L19

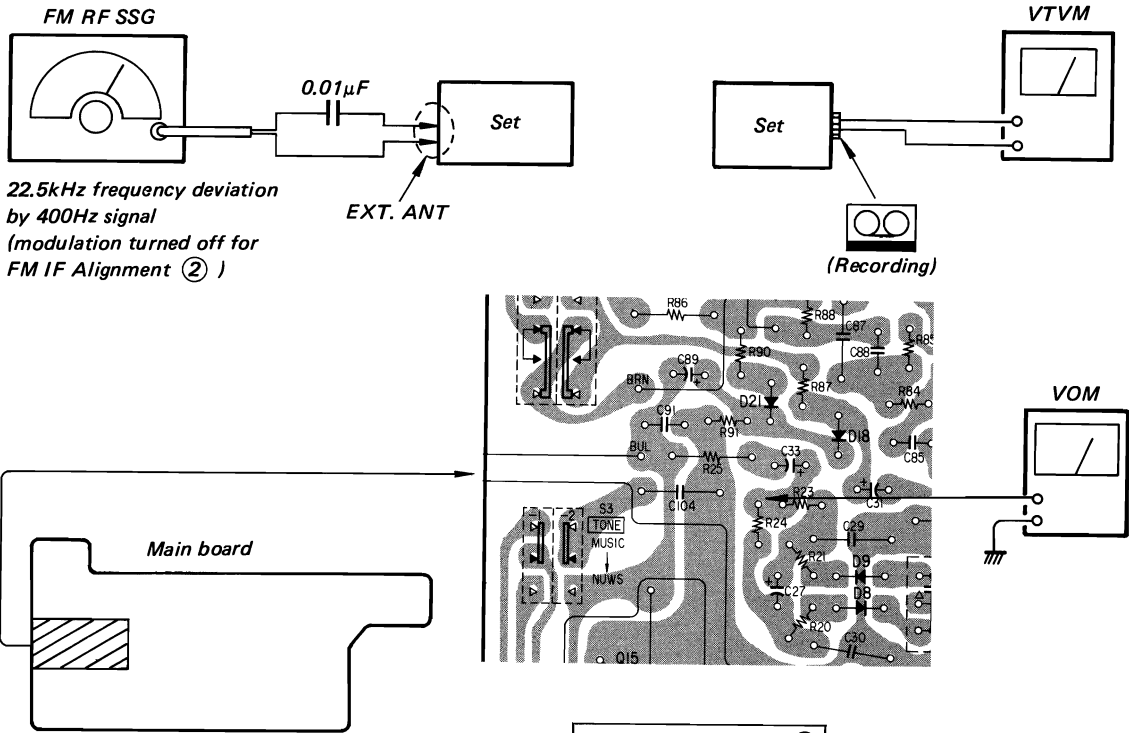

T9	T6
Adjust for a maximum reading on VTVM.	
AM 2nd IF ALIGNMENT	

AM 2nd IF VCXO ADJUSTMENT

Adjust T11 for 55,395MHz reading on the frequency counter.

FM IF ALIGNMENT

FM IF ALIGNMENT ①
Adjust for a maximum
reading on VTVM.

T3	T4
----	----

T5

Adjust for a 0V DC.
reading on VOM.

FM IF ALIGNMENT ②

FM TRACKING ADJUSTMENT

• Note for FM narrow band set
When FM narrow band set is adjusted,
unsolder the bridge (A).
After adjustment, solder the bridge (A).

FM TRACKING ADJUSTMENT	
Adjust for a maximum reading on VTVM.	
102 MHz	
CT1	CT2

T1	L20
81 MHz	
Adjust for a maximum reading on VTVM.	
FM TRACKING ADJUSTMENT	

• See page 38 for semiconductor lead layouts.

G-AEP MODEL

G-AEP MODEL

The schematic diagram illustrates the internal circuitry of the radio receiver, divided into three main functional blocks:

- AM DETECTOR (Left):** This section includes the AM detector (T6) and a diode (D10). It features a network of resistors (R18, R22, R27, R28, R29, R30, R31) and capacitors (C25, C26, C28, C31) for signal processing and tuning. A 2.9V reference voltage is indicated.
- FM DISCRIMINATOR (Middle):** This section contains two FM discriminator stages (T4 and T5) and a diode (D8). It includes resistors (R20, R21, R23, R24, R25) and capacitors (C27, C29, C30, C33) for frequency discrimination and signal conditioning.
- MUTING (Right):** This section features a muting transistor (Q15, 2SC2458) and a diode (D18). It includes resistors (R87, R91) and capacitors (C89, C90) for muting control. The muting signal is derived from the FM discriminator stage.

The diagram also shows various power supply connections, including a 6.3V AC input and a 0V ground reference. The components are labeled with their respective values and part numbers, such as T4 FM DISCRIM 1st, T5 FM DISCRIM 2nd, D8, R20, R21, R23, R24, R25, R27, R28, R29, R30, R31, C25, C26, C27, C28, C29, C30, C31, C33, D10, D18, Q15, R91, C89, C90, and R87.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:

MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms.
- F : nonflammable

COILS

MMH : mH, UH : μH

SEMICONDUCTORS

In each case, U : μ, for example:

UA...: μA..., UPA...: μPA..., UPC...: μPC,

UPD...: μPD...

The components identified by shading and mark ▲ are critical for safety. Replace only with part number specified.

ELECTRICAL PARTS

Ref.No.	Part No.	Description			
R230	1-247-903-00	CARBON	1M	5%	1/6W
R231	1-247-855-00	CARBON	10K	5%	1/6W
R232	1-247-803-00	CARBON	68	5%	1/6W
R234	1-247-831-00	CARBON	1K	5%	1/6W
R233	1-247-795-00	CARBON	33	5%	1/6W
R235	1-247-855-00	CARBON	10K	5%	1/6W
R236	1-247-837-00	CARBON	1.8K	5%	1/6W
R237	1-247-831-00	CARBON	1K	5%	1/6W
R238	1-247-843-00	CARBON	3.3K	5%	1/6W
R239	1-247-855-00	CARBON	10K	5%	1/6W
R240	1-247-855-00	CARBON	10K	5%	1/6W
RV1	1-230-042-00	RES, VAR, SLIDE 20K (VOLUME)			
RV2	1-230-065-00	RES, VAR, CARBON 100K (FINE TUNING)			
S1	1-554-462-00	SWITCH, SLIDE (SENS)			
S2	1-553-989-00	SWITCH, SLIDE (AM MODE)			
S3	1-554-078-00	SWITCH, SLIDE (TONE)			
S5	1-553-510-00	SWITCH, SLIDE (MAIN POWER)			
S6	1-554-371-00	SWITCH, TACT (TIME SET)			
S7	1-554-604-00	SWITCH, RUBBER KEY (COUNTER KEYS)			
S8	1-553-977-00	SWITCH, SLIDE (9KHz-10KHz)			
SP	1-502-631-00	SPEAKER			
T1	1-459-458-00	COIL (WITH CORE)			
T3	1-404-126-00	IFT (SMALL TYPE)			
T4	1-404-130-00	TRANSFORMER, DISCRI			
T5	1-404-131-00	TRANSFORMER, DISCRI			
T6	1-404-127-00	IFT (SMALL TYPE)			
T7	1-426-136-00	TRANSFORMER, HF			
T8	1-404-448-00	TRANSFORMER, IF			
T9	1-404-191-00	TRANSFORMER, IF			
T10	1-404-447-00	(ME:NOT USED)...TRANSFORMER, IF			
T11	1-406-052-00	COIL (OSC)			
X1	1-567-108-00	VIBRATOR, CRYSTAL			
X2	1-567-105-00	(ME:NOT USED)...OSCILLATOR, CERAMIC			
X3	1-567-109-00	VIBRATOR, CRYSTAL			
XF1	1-527-372-00	FILTER, CRYSTAL			

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "●" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:

MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms.
- F : nonflammable

COILS

- MMH : mH, UH : μH

SEMICONDUCTORS

In each case, U : μ, for example:

UA....: μA..., UPA....: μPA..., UPC....: μPC,

UPD....: μPD...
