_

The Ultra Compact **VX-8DR** (2.4"W x 3.7"H x 0.9"D) is thinner than the previous advanced model - It is packed with advanced technology and features, designed for outdoor operation. It is submersible and shockproof! The compact case combines a rugged die-cast chassis with the clean, tough polycarbonate resin front panel. Its shockproof versatility will allow you to operate the radio in the toughest environments.

The large High-resolution Dot Matrix LCD display provides clear, easy-to-read indication of both "A" (Main band) and "B" (Sub band) frequencies, the operating mode, and S-meters for both bands. When you engage the Spectrum Scope function, the high-resolution display will indicate relative signal strengths of up to ± 50 adjacent channels!

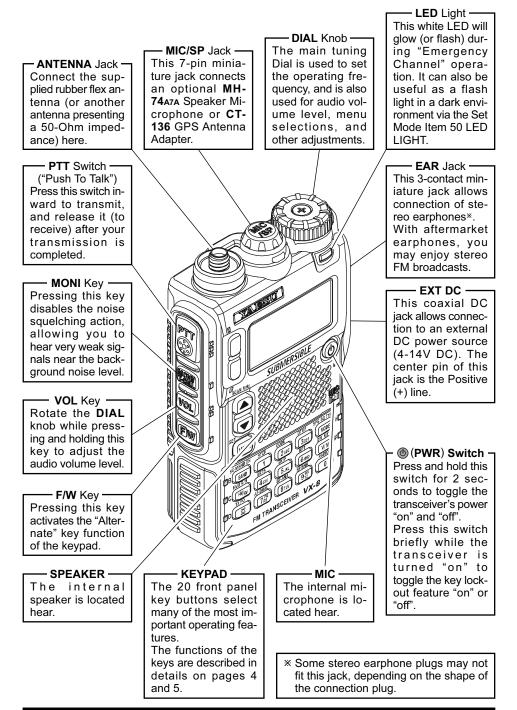

The *Bluetooth*[®] capabilities, already known and utilized among users and enthusiasts of the **FTM-10R/SR**, are also available with the **VX-8DR**. The optional *Bluetooth*[®] Unit **BU-1** makes it possible to operate Hands-free with the optional waterproof *Bluetooth*[®] headsets **BH-1A** (Stereo) or **BH-2A** (monaural).

The built-in worldwide standard AX.25 Data TNC Modem permits uncomplicated APRS® operation. (Automatic Packet/Position Reporting System: APRS® is a registered trademark of the APRS Software and Bob Bruninga, WB4APR.) The **VX-8DR** supports APRS® 1200/9600 bps data communication on the B band only. You may communicate your location to other APRS® stations along with the position, speed and heading displayed on your radio! You and others will be able to see your APRS® movement on the web! The **VX-8DR** displays the received station's positions, heading directions, messages, distances, icons (43 kinds), weather information, object, etc. With the list function you may automatically store and recall up to 20 messages and the APRS® data from up to 40 stations. The optional GPS Antenna Unit **FGPS-2** can provide you with your real time APRS® data. You may also send the information without the **FGPS-2** if you manually input your data in advance.

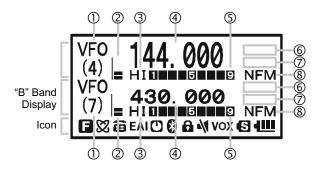

An Enhanced Paging and Code Squelch (EPCS) allows you to page a particular station and only receive calls from that station. A security Password may be set, which will allow you to turn on and operate the transceiver only after you enter the Password. A convenient key provides access to Vertex Standard's WIRESTM (Wide-Coverage Internet Repeater Enhancement System). The Emergency Automatic ID (EAI) function can automatically cause your **VX-8DR** to transmit your callsign and engage your rig's microphone, even if you are disabled and unable to press the PTT switch. Additional features include: transmit Time-Out Timer (TOT), Automatic Power-Off (APO), and Automatic Repeater Shift (ARS). Yaesu's exclusive ARTSTM (Auto-Range Transponder System) which "beeps" the user when you move out of communications range with another ARTSTM equipped station. There is provision to reduce the TX deviation for use in areas of high channel congestion. The squelch circuit allows adjusting the squelch to open at a programmable setting of the S-Meter, thus reducing guesswork in setting the squelch threshold. Provides a completely independent FM/AM broadcast receiver and an internal bar antenna for better AM broadcast reception. Listen to FM broadcasts in stereo with your stereo headset/earphone!

We appreciate your purchase of the **VX-8DR**, and encourage you to read this manual thoroughly, and learn about the many exciting features of your thrilling new Yaesu hand-held transceiver!

- *: "B" suffix is for use with 120 VAC (Type-A plug), "C" suffix is for use with 230 VAC (Type-C plug), and "U" suffix is for use with 230 VAC (Type-BF plug).

Availability of accessories may vary. Some accessories are supplied as standard per local requirements, while others may be unavailable in some regions. Consult your Yaesu Dealer for details regarding these and any newlyavailable options. Connection of any non-Yaesu approved accessory, should it cause damage, may void the Limited Warranty on this apparatus.

INSTALLATION OF ACCESSORIES

ANTENNA INSTALLATION

The supplied antenna provides good results over the entire frequency range of the transceiver. However, for enhanced base station medium-wave and shortwave reception, you may wish to connect an external (outside) antenna. The supplied antenna consists of two sections: the "Base Antenna" (used for operation above 50 MHz), and the "Extender Element" (used for monitoring of frequencies below 50 MHz).

TO INSTALL THE SUPPLIED ANTENNA

Hold the bottom end of the antenna, then screw it onto the mating connector on the transceiver until it is snug. Do not over-tighten by use of extreme force.

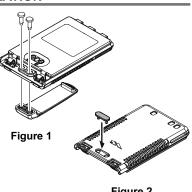

When operating the VX-8DR on the 50 MHz band and lower frequencies, disconnect the antenna cap from the base antenna, then screw the Extender Element onto the Antenna Base. Of course, the **VX-8DR** may be operated on frequencies higher than the 50 MHz band while the Extender Element is still attached to the Antenna Base.

Notes:

- **O** Never transmit without having an antenna connected.
- Carefully turn the supplied antenna onto the SMA jack. Never twist the upper part of the antenna while screwing it onto the mating connector of the transceiver.
- **O** If using an external antenna for transmission, ensure that the SWR presented to the transceiver is 1.5:1 or lower.
- **O** Take care, do not lose the antenna cap when removing it from the Base Antenna.

BELT CLIP INSTALLATION

- □ Install the supplied Belt Clip to the **FNB-101LI** Battery Pack using the supplied two screws (Figure 1). Use <u>only</u> the screws included with the Belt Clip to mount the Belt Clip to the back of the Battery Pack!
- □ If you do not need the Belt Clip, install the supplied Plastic Cap to the Battery Pack (Figure 2). If you install the belt clip later, push the Plastic Cap out with a small tool or screwdriver.

INSTALLATION OF FNB-101LI BATTERY PACK

The **FNB-101LI** is a high-performance Lithium-Ion battery providing high capacity in a very compact package. Under normal use, the **FNB-101LI** may be used for approximately 300 charge cycles, after which operating time may be expected to decrease. An old battery pack, which is displaying diminished capacity should be replaced with a new one.

- □ To install the **FNB-101LI** Battery Pack, carefully mate the battery's three alignment tabs with their corresponding alignment slots on the transceiver bottom case, then gently press the top side of the Battery Pack until it locks in place with a "*click*".
- □ To remove the Battery Pack, turn the transceiver off and remove any protective cases. Press the Battery Pack Release Knobs downward to unlock the latch, then remove the Battery Pack from the transceiver.

INSTALL

The VX-8DR battery must be correctly installed, to maintain the waterproof integrity.

If the battery has never been used, or its charge is depleted, it may be charged by connecting the **NC-86B/C** Battery Charger, as shown in the illustration, to the **EXT DC** jack. If only $12 \sim 16$ Volt DC power is available, the optional **E-DC-5B** DC Adapter (with its cigarette lighter plug) or **E-DC-6** DC Cable may also be used for charging the battery, as shown in the illustration.

While the battery is being charged, the display will indicate "CHARGING" and the B key will glow red. The S-meter will deflect according to the charging status. When charging is finished, the display will change to indicate "COMPLETE" and the B key will glow green.

VX-8DR OPERATING MANUAL

BATTERY LIFE INFORMATION

When the battery charge is almost depleted, a "Low Voltage" indicator will appear on the display. When this icon appears, it is recommended that you charge the battery soon.

222 MHz (1)	6.0 hours	11 hours	20 hours	I Low battery power
(USA version)				I Poor battery power
430 MHz (1)	5.0 hours	8.0 hours	16 hours	₄_(w/Blink): charge
Broadcast Band ⁽²⁾	13 hours	20 hours	20 hours	(or replace) the battery

(1) TX 6 sec., RX 6 sec. and Squelched 48 sec (continuous operating cycle).

(2) Continuous signal reception.

The present battery voltage can be displayed manually on the LCD, by following the instructions on page 119.

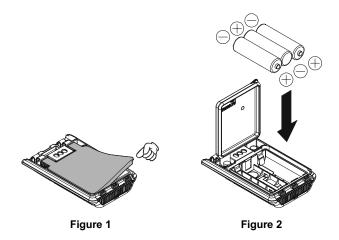

Battery capacity may be reduced during extremely cold weather. Keeping the radio inside your parka may help preserve the full charge capacity.

INSTALLATION OF FBA-39 ALKALINE BATTERY CASE (OPTION)

The optional **FBA-39** Battery Case allows receive monitoring using three "AA" size Alkaline batteries. Alkaline batteries can also be used for low power transmission in an emergency. The power output will only be selectable 1 W/50 mW (for 50/144/430 MHz FM) or 500 mW/50 mW (for 222 MHz FM), or 1 W fixed (for 50 MHz AM).

TO INSTALL ALKALINE BATTERIES INTO THE FBA-39

- 1. Lift up the lower right corner of the rubber cover, and then open the cover (Figure 1).
- 2. Referring to Figure 2, slide the batteries into the **FBA-39** as shown in the illustration, with the Negative [-] side of the batteries touching the spring connections inside the **FBA-39**.
- 3. Close the rubber cover.
- 4. Install the FBA-39 in the transceiver in the same manner as the FNB-101LI.

The **FBA-39** does not provide connections for charging, since Alkaline cells cannot be re-charged. Therefore, the **NC-86B/C**, **E-DC-5B**, or **E-DC-6** may safely be connected to the **EXT DC** jack when the **FBA-39** is installed.

Notes:

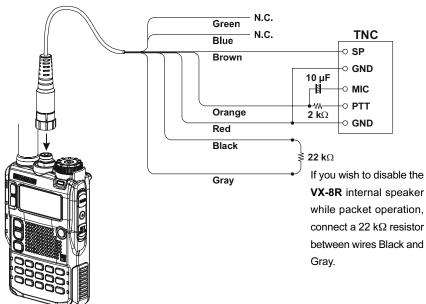

- O The **FBA-39** is designed for use only with AA-type Alkaline cells.
- If you do not use the VX-8DR for a long time, remove the Alkaline batteries from the FBA-39, as battery leakage could cause damage to the FBA-39 and/or the transceiver.

INTERFACE OF PACKET TNCs

The **VX-8DR** may be used for Packet operation, using the optional **CT-M11** MIC/SP Connection Cable (available from your Yaesu dealer) for easy interconnection to commonly-available connectors wired to your TNC.

The audio level from the receiver to the TNC may be adjusted by rotating the **DIAL** knob while pressing and holding the vol key, as with voice operation. The input level to the **VX-8DR** from the TNC should be adjusted at the TNC side; the optimum input voltage is approximately 5 mV at 2000 Ohms.

Be sure to turn the transceiver and TNC off before connecting the cables, to prevent voltage spikes from damaging your transceiver.

CT-M11 MIC/SP Connection Cable

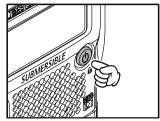

operating!

Hi! I'm R. F. Radio, and I'll be helping you along as you learn the many features of the VX-8DR. I know you're anxious to get on the air, but I encourage you to read the "Operation" section of this manual as thoroughly as possible, so you'll get the most out of this fantastic new transceiver. Now. . .let's get

SWITCHING POWER ON AND OFF

- Be sure the battery pack is installed, and that it is fully charged. Connect the antenna 1. to the top panel **ANTENNA** jack.
- Press and hold in the (**(PWR**) switch (on the right 2. side of the front panel) for 2 seconds. Two beeps will be heard when the switch has been held long enough. The opening message will appear briefly on the display, then the frequency display will appear. After another two seconds, the receive-mode Battery Saver function will become active, unless you have disabled it (see page 125).

To turn the **VX-8DR** off, press and hold in the (1) (**PWR**) switch again for 2 seconds. 3.

If you don't hear the two "Beep" tones when the radio comes on, the Beeper may have been disabled via the Menu system. See page 27, which tells you how to reactivate the Beeper.

ADJUSTING THE VOLUME LEVEL

Rotate the **DIAL** knob while pressing and holding the (VOL) key to set the desired audio level. Clockwise rotation increases the volume level.

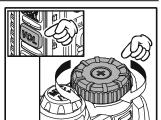

1) The Volume level may be set on the "A-Band" and "B-Band" separately.

2) You may set the Audio Output Level to the

Speaker, and the Earphone Output Level individually. The

"SP VOLUME" notation appears in the S- & PO meter area while adjusting the Speaker Output Level. The "HP VOLUME" notation appears in the S- & PO meter area while adjusting the Earphone Output Level.

3) Pressing the IBW key followed by the VOL key, the DIAL knob function changes to the Volume Level adjustment instead of the frequency control. In this case, the "Volume Level Indicator" on the display blinks. Pressing the $\square W$ key followed by the (VoL) key again, returns the DIAL knob function to the frequency control. You may also change the [Vol] key function via Set Mode Item 107: VOLUME MODE. See page 133 for details.

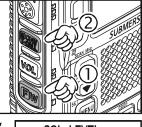

OPERATION

SQUELCH ADJUSTMENT

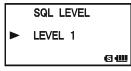

The **VX-8DR**'s Squelch system allows you to mute the background noise when no signal is being received. Not only does the Squelch system make "standby" operation more pleasant, it also significantly reduces battery current consumption.

The Squelch system may be adjusted independently for the FM and Wide-FM (FM Broadcast) modes.

- 1. Press the wey, then press the wey are the left side of the radio. This provides a "Short-cut" to Set Mode Item 92: SQL LEVEL.
- 2. Now, rotate the **DIAL** knob to the point where the background noise is just silenced (typically at a setting of about "3" or "4" on the scale); this is the point of maximum sensitivity to weak signals.
- 3. When you are satisfied with the Squelch threshold setting, press the **PTT** key briefly to save the new setting and exit to normal operation.

normal operation.4. You may also adjust the Squelch setting by using the "Set" (Menu) mode. See page 157 for details.

1) The Squelch level may be set on the "Main" and "Sub" bands separately. 2) If you're operating in an area of high RF pollution, you may need to consider "Tone Squelch" operation using the built-in CTCSS Decoder. This feature will keep your radio quiet until a call is received from a station sending a carrier which contains a matching (sub audible) CTCSS tone. Or if your friends have radios

equipped with DCS (Digital Coded Squelch) like your VX-8DR, try using that mode for silent monitoring of busy channels.

24-HOUR CLOCK

The **VX-8DR** has a 24-hour clock with a calendar which covers all dates from January 1, 2000 through December 31, 2099. Set the clock according to the "**Clock Set**" column on page 120.

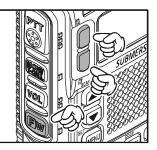

SELECTING THE OPERATING BAND

In the factory default configuration, the **VX-8DR** operates in the "Dual Receive" mode.

During Dual Receive operation, the "A-Band" frequency will be displayed on the upper part of the LCD, and the "B-Band" frequency will be displayed on the lower part. The "Operating" band (the band on which transmission and band/frequency changes are possible) is shown in *large* characters, and "Receive only" band is shown in *small* characters.

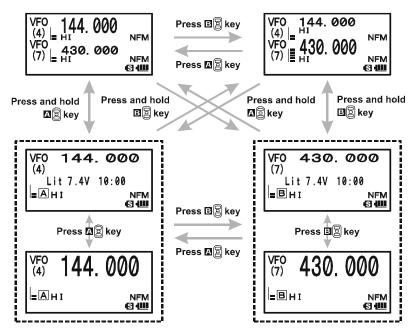

Press the 🖾 key briefly to engage the "A-Band" frequency as the "Operating" band. Alternatively, press the 🖻 key briefly to engage the "B-Band" frequency, as described previously.

Press and hold in the A or B key for 1/2 seconds to switch to Mono Band Operation. During Mono band operation, you may change the display between "*double-size character*" and "*large character*" by pressing the A / B key.

When monitoring the receive audio with stereo earphones, the audio from the "A-Band" is only heard in the left ear, and the audio from the "B-Band" is only heard in the right ear.

SELECTING THE FREQUENCY BAND

The **VX-8DR** covers an incredibly wide frequency range, over which a number of different operating modes are used. Therefore, the **VX-8DR**'s frequency coverage has been divided into different operating bands. Each band has its own preset channel steps and operating modes. You can change the channel steps and

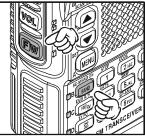

OPERATING BAND	FREQUENC	CY RANGE	
[BAND NUMBER]	"VFO-A"	"VFO-B"	
SW Band [1]	1.8-30 MHz	-	
50 MHz Band [2]	30-76 MHz	30-76 MHz	
AIR Band [3]	108-137 MHz	108-137 MHz	
VHF HAM Band [4]	137-174 MHz	137-174 MHz	
VHF TV Band [5]	174-222 MHz	174-222 MHz	
INFO 1 Band [6]	222-420 MHz	222-420 MHz	
UHF HAM Band [7]	420-470 MHz	420-470 MHz	
UHF TV Band [8]	470-774 MHz	470-580 MHz	
INFO 2 Band [9]	774-999.99 MHz*	-	
XUSA Version: Cellular Blocked			

- - .

operating modes later, if you like (see page 29).

TO CHANGE OPERATING BANDS

- 1. Press the ^{SCMBHDDM} key repeatedly. You will see the LCD indication change to a higher frequency band each time you press the ^{SCMBHDM} key. A Band Number according to the receiving frequency is also displayed.
- 2. If you wish to move the operating band selection downward (toward *lower* frequencies), press the key first, then press the (BAND) key.

- 3. The **VX-8DR** uses a dual VFO system (described previously). To switch TX/RX operation from the "VFO-A" to the "VFO-B" instantly, press the B key briefly. Pressing the B key will return TX/RX operation to "VFO-A". The frequency band shown in "*Large*" characters is the band on which transmission is possible; the band shown in "*Small*" characters may only be used for reception.
- 4. Once you have selected the desired band, you may initiate manual tuning (or scanning). See the discussions on the next page.

SW Band and Information Band reception is only possible on the "VFO-A".
 The VX-8DR has an AM/FM Broadcast band radio. You can receive these bands independently. See page 22 for details.

3) If desired, you may omit (skip) one or more bands from the band selection loop for faster recall of your favorite operating bands. See page 132 for details.

FREQUENCY NAVIGATION

The **VX-8DR** will initially be operating in the "VFO" mode, as just described. This is a frequency step system which allows free tuning throughout the currently-selected operating band.

Three basic frequency navigation methods are available on the VX-8DR:

1) TUNING DIAL

Rotation of the **DIAL** knob allows tuning in the pre-programmed steps established for the current operating band. Clockwise rotation of the **DIAL** knob causes the **VX-8DR** to be tuned toward a higher frequency, while counter-clockwise rotation will lower the operating frequency.

If you press the we briefly, then rotate the **DIAL** knob, frequency steps of 1 MHz will be selected. This feature is

extremely useful for making rapid frequency excursions over the wide tuning range of the **VX-8DR**.

2) DIRECT KEYPAD FREQUENCY ENTRY

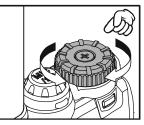

The desired operating frequency may be entered directly from the keypad.

The operating mode will automatically be set once the new frequency is entered via the keypad.

To enter a frequency from the keypad, just press the numbered digits on the keypad in the proper sequence. There is no "Decimal point" key on the **VX-8DR**, so if the frequency is below 100 MHz (e.g. 15.150 MHz), any required leading zeroes must be entered. However, there is a short-cut for frequencies ending in zero - press the \underbrace{VM}_{VM} key after the last non-zero digit.

Examples:

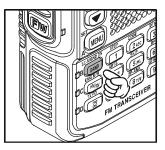

To enter 146.520 MHz, press $\stackrel{\text{STEP}}{1} \rightarrow \stackrel{\text{ARTS}}{4_{\text{GH}}} \rightarrow \stackrel{\text{RPT}}{\underline{6}_{\text{MNO}}} \rightarrow \stackrel{\text{SKIP}}{\underline{5}_{\text{JKI}}} \rightarrow \stackrel{\text{CODE}}{\underline{2}_{\text{ABC}}} \rightarrow \stackrel{\text{RODO}}{\underline{0}}$ To enter 15.255 MHz, press $\stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{STEP}}{1} \rightarrow \stackrel{\text{SKIP}}{\underline{5}_{\text{JKI}}} \rightarrow \stackrel{\text{CODE}}{\underline{2}_{\text{ABC}}} \rightarrow \stackrel{\text{SKIP}}{\underline{5}_{\text{JKI}}} \rightarrow \stackrel{\text{SKIP}}{\underline{5}_{\text{JKI}}}$ To enter 1.250 MHz (1250 kHz), press $\stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{STEP}}{\underline{1}} \rightarrow \stackrel{\text{CODE}}{\underline{2}_{\text{ABC}}} \rightarrow \stackrel{\text{SKIP}}{\underline{5}_{\text{JKI}}} \rightarrow \stackrel{\text{RODO}}{\underline{5}_{\text{JKI}}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{SKIP}}{\underline{1}} \rightarrow \stackrel{\text{CODE}}{\underline{5}_{\text{JKI}}} \rightarrow \stackrel{\text{SKIP}}{\underline{5}_{\text{JKI}}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{SKIP}}{\underline{0}} \rightarrow \stackrel{\text{SKIP}}{\underline{5}_{\text{JKI}}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{SKIP}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{SKIP}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}} \rightarrow \stackrel{\text{RODO}}}{\underline{0}}$

FREQUENCY NAVIGATION

3) SCANNING

From the VFO mode, press and hold in the (BAND) key for one second, and *while still holding in* the (BAND) key, rotate the **DIAL** knob to select the bandwidth for the VFO scanner. Release the (BAND) key to begin scanning toward a higher frequency. The scanner will stop when it receives a signal strong enough to break through the Squelch threshold. The **VX-8DR** will then hold on that frequency according to the setting of the "RESUME" mode (Menu Item 83: SCAN RE-SUME).

If you wish to reverse the direction of the scan (i.e. toward a lower frequency, instead of a higher frequency), just rotate the **DIAL** knob one click in the counter-clockwise direction while the **VX-8DR** is scanning. The scanning direction will be reversed. To revert to scanning toward a higher frequency once more, rotate the **DIAL** knob one click clockwise.

Press the **PTT** switch briefly to cancel the scanning. See page 60 for more details regarding Scan Operation.

You may initiate upward or downward scanning by pressing and holding either \frown or \bigtriangledown key for one second, respectively. In this case, the scanner scans the bandwidth that was previously selected.

Dual Receive Notice

The **VX-8DR** may receive very strong signals on the Image frequency, and/or the receiver sensitivity may be somewhat reduced by the combination of the "A-Band" and "B-Band" frequencies while Dual Receive operation is engaged.

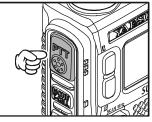

If you experience interference that you suspect may be coming in via an "Image" path, you may calculate the possible frequencies using the formulas below. This information may be used in the design of effective countermeasures such as traps, etc.

```
9.8304 MHz x n
9.8304 MHz x n
0 11.7 MHz x n
(n is an integer: 1, 2, 3, ...)
4.9152 MHz x n
6.1440 MHz x n
"A-Band" Freq. = ("B-Band" Freq. ± 46.35 MHz) x n
"B-Band" Freq. = ("A-Band" Freq. ± 47.25 MHz) x n (@ "A-Band" = NFM)
"B-Band" Freq. = ("A-Band" Freq. ± 45.8 MHz) x n (@ "A-Band" = WFM)
```

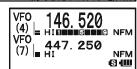

TRANSMISSION

Once you have set up an appropriate frequency inside one of the three (or four) Amateur bands on which the **VX-8DR** can transmit (50 MHz, 144 MHz, or 430 MHz, plus 222 MHz on the USA version), you're ready to transmit. These are the most basic steps; more advanced aspects of transmitter operation will be discussed later.

To transmit, press the PTT switch, and speak into the front panel microphone (located in the lower right-hand corner of the speaker grille) in a normal voice level. The LED of the A or B which is designated the "Main" band will glow red during transmission.

- To return to the receive mode, release the **PTT** switch.
 During transmission, the relative power level will be
 - indicated on the LCD. Additionally, the "L1", "L2", "L3", or "HI" icon will appear at the left side of the PO meter, corresponding with the "Power" Level setting.

1) If you're just talking to friends in the immediate

area, you'll get much longer battery life by switching to Low Power operation. To do this, press the RW key, then press the RW key so that the "Low Power" icon appears at the bottom of the display. And don't forget: <u>always</u> have an antenna connected when you transmit.

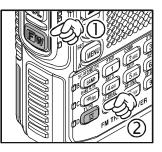

2) Transmission is not possible on "Sub" band and any operating bands other than the 50 MHz, 144 MHz, 222 MHz (USA version), and 430 MHz bands on the "Main" band.

CHANGING THE TRANSMITTER POWER LEVEL

You can select between a total of four transmitter power levels on your **VX-8R**. The exact power output will vary somewhat, depending on the voltage supplied to the transceiver. With the standard **FNB-101LI** Battery Pack and external DC source, the power output levels available are: "L1", "L2", "L3", or "HI"

To change the power level:

- The default setting for the power output is "High;" in this configuration, the display shows the "HI" icon. Pressing the ⓐw key, followed by the ﷺ key, causes the power level "L1", "L2", or "L3" to appear.
- Press the wey, followed by the wey (repeatedly, if necessary) to make the "HI" icon appear and restore "High Power" operation.

TRANSMISSION

1) The VX-8DR is smart! You can set up Low power on one band (like UHF), while leaving VHF on High power, and the radio will remember the different settings on each band. And when you store memories, you can store High and Low power settings separately in each memory, so you don't waste battery power when using very close-in repeaters!

2) When you are operating on one of the Low power settings, you can press the wey,

then press the PTT switch, to cause the VX-8DR to transmit (temporarily) on High power. After one transmission, the power level will revert to the previously-selected Low power setting.

	TRANSMIT POWER			
OPERATING BAND	FNB-101LI/-102LI or EXT DC (7.4 V)	FBA-39 (w/Fresh Batteries)		
50/144/430 MHz	HI: 5.0 W, L3: 2.5 W,	L2: 1.0 W,		
FM	L2: 1.0 W, L1: 0.05 W	L1: 0.05 W		
222 MHz FM	HI: 1.5 W, L3: 1.0 W,	L2: 0.5 W,		
	L2: 0.5 W, L1: 0.05 W	L1: 0.05 W		
50 MHz AM	1.0 W (Fixed)	1.0 W (Fixed)		

VOX OPERATION

The VOX system provides automatic transmit/receive switching based on voice input to the microphone. With the VOX system enabled, you do not need to press the PTT switch in order to transmit, and it is not necessary to use a VOX headset in order to utilize VOX operation.

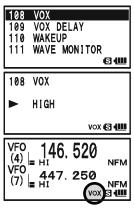

- 1. Press and hold in the WENU key for one second to enter the Set mode.
- Rotate the **DIAL** knob to select the Set Mode Item 108: VOX.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired VOX Gain level ("HIGH" or "LOW").
- 5. When you have made your choice, press the **PTT** switch to save the new setting and return to normal operation.
- Without pressing the PTT switch, speak into the VX-8DR microphone in a normal voice level. When you start speaking, the transmitter should be activated automatically. When you finish speaking, the transceiver should return to the receive mode (after a short delay).

To cancel VOX and return to PTT operation, just repeat the above procedures, selecting "OFF" in step 4 above.

When the VOX system is activated, the "VOX" icon will appear on the display.

The VOX is activated by the VX-8DR. The optional MH-74A7A Speaker/Microphone is ignored.

TRANSMISSION

Adjust the VOX "Hang-Time" (the transmit-receive delay after the cessation of speech) from the Set Mode Item 109: VOX DELAY. The default delay is 0.5 second. To set a different delay time:

- 1. Press and hold in the MENU key for one second to enter the Set mode.
- Rotate the **DIAL** knob to select the Set Mode Item 109: VOX DELAY.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the desired delay time ("0.5sec", "1.0sec", "1.5sec", "2.0sec", "2.5sec", or "3.0sec").
- 5. When you have made your choice, press the **PTT** switch to save the new setting and return to normal operation.

109	VOX DELAY
	0. 5sec
	S-W

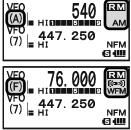

The **VX-8DR** includes provision for reception of AM and FM broadcasts. FM broadcast reception, utilizes a wide-bandwidth filter and stereo decoder which provides excellent fidelity.

The AM and FM Broadcast reception is only possible on "VFO-A".

- 1. Press the 🗖 🖹 key briefly to engage the "VFO-A" as the "Operating" band.
- Press the key, then press the observed key to enter the Broadcast Reception mode. The "RM" icon will appear on the display while in the Broadcast Reception mode.
- 3. Press the (BAND) key to toggle the receiver between the "AM broadcast" and "FM broadcast" bands.

The AM broadcast coverage is 510 to 1790 kHz. The Band Number changes to "A" (which means AM) and an Operating Mode icon changes to "AM".

The FM broadcast coverage is 76.00 to 107.90 MHz and utilizes Wide-FM mode. The Band Number changes to "F" (which means FM) and an Operating Mode icon changes to "WFM".

- 4. Rotate the **DIAL** knob to select the desired station. When receiving an FM stereo signal, "(***)" icon will appear on the display.
- 5. To exit to normal operation, press the BW key followed by the BD key.

ANTENNA SELECTION

To select the antenna for the AM Broadcast Reception:

- 1. Press and hold the \underbrace{MENU} key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 1: ANTENNA AM.
- 3. Press the MENU key briefly to enable the antenna selection.
- Rotate the **DIAL** knob to select the AM antenna to be used: "BAR ANTENNA" (Uses the internal Bar Antenna) or "BAR & EXT" (Uses both the internal Bar Antenna and the Rubber Flex Antenna).
- 5. When you finish the selection, press the **PTT** switch to exit from the Menu mode and return to the Broadcast Reception mode.

To select the antenna for the FM Broadcast Reception:

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 2: ANTENNA FM.
- 3. Press the MENU key briefly to enable the antenna selection.
- Rotate the **DIAL** knob to select the antenna to be used: "EXT ANTENNA" (Uses the Rubber Flex Antenna) or "EAR PHONE" (Uses the Earphone Antenna).
- 5. When you finish the selection, press the **PTT** switch to exit from the Menu mode and return to the Broadcast Reception mode.

If you wish to output the audio of the FM Broadcast station to the **VX-8DR** internal speaker while using the earphone antenna, select Set Mode Item 90: SPEAKER OUT to "SPEAKER".

AF-DUAL OPERATION

The AF-Dual Operation allows you to monitor *two* desired amateur band frequencies while also receiving an AM or FM broadcast station (Triple Watch functions!). When a signal is received in the amateur band, the amateur band audio is output instead of the AM or FM Broadcast station audio. When the amateur band signal drops, the AF-Dual Operation is resumed as determined by the user settings in the below procedures. Furthermore, you may transmit on the "Main" band amateur frequency by pressing the **PTT** switch at anytime. The "Main" band is selected by pressing the **A** \blacksquare **D** \blacksquare key as usual.

- 1. Set the **VX-8DR** to the desired amateur band frequencies by the VFO or Memory channel selections on both "A-Band" and "B-Band".
- 2. Select the "Main" Band you wish to use for transmit by pressing the \Box \exists B key.
- 3. Press the wey, then press the $\frac{\text{AF-DUAL}}{7 \text{ RS}}$ key to activate the AF Dual operation.
- Press the BAND key to toggle the receiver between "AM broadcast" and "FM broadcast".

- 5. Rotate the **DIAL** knob to tune the desired Broadcast station.
- 6. When a signal is received in the amateur band, the amateur band audio is output to the speaker. The AM or FM Broadcast station will no longer be heard. Two seconds after the amateur band signal drops, the AF-Dual Operation is resumed and the AM or FM Broadcast station will be heard from the speaker, while the amateur band frequencies are monitored. You may change the default resume time (two seconds) via Set Mode Item 77: RX AF DUAL. See the box on the next page.
- 7. You may monitor the amateur band frequencies forcibly by holding the *MONU* switch.
- 8. Press the **PTT** switch to transmit on the "Main" band.
- 9. To disable the AF-Dual Operation, press the $\mathbb{E}W$ key, followed by the $\frac{\text{AF-DUAL}}{7 \text{ kg}}$ key.

1) You may change the "Main" band by pressing the A 🛛 / B 🔅 key.

2) You may change the "Main" band frequency by rotating the DIAL knob while pressing the $\widehat{Monthermodel}$ switch.

3) When the $\overrightarrow{V/M}$ key is pressed, only the AM and FM Broadcast station memories are recalled.

Advanced Operation

Now that you mastered the basics of **VX-8DR** operation, let's learn more about some of the really neat features.

KEYBOARD LOCKING

In order to prevent accidental frequency change or inadvertent transmission, various keys and switches may be locked out. The possible lockout combinations are:

KEY:	Just the front panel keys are locked out
DIAL:	Just the top panel DIAL is locked out
KEY&DIAL:	Both the DIAL knob and Keys are locked out
PTT:	The PTT switch is locked (TX not possible)
KEY&PTT:	Both the keys and PTT switch are locked out
DIAL&PTT:	Both the DIAL knob and PTT switch are locked out
ALL:	All of the above are locked out

To lock out some or all of the keys:

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 51: LOCK.
- 3. Press the MENU key briefly to enable selection of this Menu Item.
- 4. Rotate the **DIAL** knob to choose between one of the locking schemes as outlined above.
- 5. When you have made your selection, press the **PTT** switch to save the new setting and resume normal operation.

To activate the locking feature:

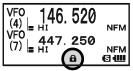

Press the 0 (**PWR**) switch briefly. The "1" icon will appear on the LCD. To cancel locking, press the 0 (**PWR**) switch again.

Even when "ALL" keys have been locked out, one key actually is not locked out: the (b) (PWR) switch

remains available so you can unlock your keypad when you want to!

			ଷେଷ୍

ADJUSTING THE KEYPAD BEEPER VOLUME LEVEL

A keypad beeper provides useful audible feed back whenever a key button is pressed. The keypad beeper level changes according to the receiver audio volume level setting. However, you may adjust the volume balance between the receiving audio and keypad beeper using Set Mode Item 11: BEEP LEVEL.

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 11: BEEP LEVEL.
- 3. Press the Key briefly to enable selection of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired level.
- 5. When you have made your choice, press the **PTT** switch to save the new setting and return to normal operation.

Additionally, if you want to turn the beep off:

- 1. Press and hold the \underbrace{MENU} key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 13: BEEP SELECT.
- 3. Press the Key briefly to enable selection of this Set Mode Item.
- 4. Rotate the **DIAL** knob to change the setting to "OFF".
- 5. When you have made your choice, press the **PTT** switch to save the new setting and return to normal operation.
- 6. If you wish to re-enable the Beeper, just repeat the above procedure, rotating the **DIAL** knob to select "KEY" or "KEY & SCAN" in step "4" above.

KEY: The beeper sounds when you press any key.

KEY & SCAN: The beeper sounds when you press a key or when the scanner stops.

SETTING THE FREQUENCY DISPLAY IMAGE SIZE

When operating in "Mono" band, pressing the A a or B key, causes the LCD to "toggle" between display of *double-size* characters and *large* characters. However, this feature does not work during Dual Receive operation, as two frequencies are displayed in that instance.

VFO 144.000	VFO 144.000 (4) Lit 7.4V 10:00	
∎AHI NFM GILL	■AHI NFM SI	
DOUBLE-SIZE CHARACTERS	LARGE CHARACTERS	

Advanced Operation

AUDIO MUTING

The Audio Mute feature is useful in situations where it would be helpful to reduce the audio level of the "Receive Only" band (*Small* character display) whenever you receive a signal on the "Main" band (*Large* character display) during Dual Receive operation.

To activate the Audio Mute feature:

- 1. Press and hold the \underbrace{MENU} key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 62: MUTE.
- 3. Press the Key briefly to enable selection of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired muting level (MUTE 30%, MUTE 50%, MUTE 100%, or OFF).
- 5. When you have made your choice, press the **PTT** switch to save the new setting and return to normal operation.

62 MUTE 63 OFF TIMER 64 ON TIMER 65 OPENING MESSAGE 6 62 MUTE MUTE 30% M 6 🕮 VFO 144,000 (4) NFM VFO 430. 000 (7) NFM 64

When the Audio Mute feature is activated, the " \checkmark " icon will appear on the display, and the " \checkmark " icon blinks while muting the "Receive Only" band audio.

KEYPAD/LCD ILLUMINATION

Your **VX-8DR** includes a reddish illumination lamp which aids in nighttime operation. The red illumination yields clear viewing of the display in a dark environment, with minimal degradation of your night vision. Three options for activating the lamp are provided:

KEY 2sec - KEY 10sec: Illuminates the Keypad/LCD for the selected illumination time when any key is pressed.

CONTINUOUS:Illuminates the Keypad/LCD continuously.OFF:Disables the Keypad/LCD lamp.

Here is the procedure for setting up the Lamp mode:

- 1. Press and hold the \underbrace{MENU} key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 46: LAMP.
- 3. Press the MENU key briefly to enable selection of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select one of the three modes described above.
- 5. When you have made your choice, press the **PTT** switch to save the new setting and return to normal operation.

CHANGING THE CHANNEL STEPS

The **VX-8DR**'s frequency synthesizer provides the option of utilizing tuning steps of 5, 6.25, 8.33, 9, 10, 12.5, 15, 20, 25, 50, 100, and 200 kHz per step. The **VX-8DR** is set up at the factory with different default steps for each operating band which are probably satisfactory for most operation. However, if you need to change the channel step increments, the procedure to do so is very easy.

- 1. Press the wey, then press the ^{STEP}/₁ key on the left side of the radio. This provides a "Short-cut" to Set Mode Item 96: STEP FREQUENCY. STEP FREQUENCY
- 2. Rotate the **DIAL** knob to select the desired step size.
- 3. Press the **PTT** switch to save the new setting and return to normal operation.

1) 9 kHz steps are available only when receiving on the BC band.

³ 2) 8.33 kHz steps are available only when receiving on the Air band.

7 3) While operating on the BC band, you may only select channel steps of 9 kHz or 10 kHz; the other step selections are disabled.

4) 5 kHz steps are not available for use on 250 - 300 MHz, nor above 580 MHz.

CHANGING THE RECEIVING MODE

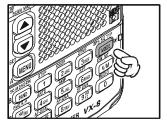

The **VX-8DR** provides for automatic mode changing when the radio is tuned to different operating frequencies. However, should an unusual receiving situation arise in which you need to change to a different receiving mode, just press the *work* key. The receiving modes available are:

- AUTO: The receive mode is automatically set according to the default values for the selected frequency range
- NFM: Narrow-bandwidth FM (used for voice communication)
- WFM: Wide-bandwidth FM (used for high-fidelity broadcasting)
- AM: Amplitude Modulation

1) The "WFM" mode cannot be selected on the "A-Band".

2) Unless you have a compelling reason to do so, leave the Automatic Mode

Selection feature on in order to save time and trouble when changing bands. If you make a mode change for a particular frequency or station, you can always store that one channel into memory, as the mode setting will be memorized along with the frequency information.

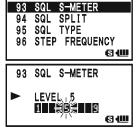

Advanced Operation

SQL S-METER

A special SQL (Squelch) S-meter feature is provided on this radio. This feature allows you to set the squelch so only signals exceeding a certain S-meter level will open the squelch.

To set up the S-meter squelch feature for operation, use the following procedure:

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 93: SQL S-METER.
- 3. Press the MENU key briefly to enable selection of this Set Mode Item.
- Rotate the **DIAL** knob to select the desired signal strength level for the squelch threshold (LEVEL1 - LEVEL9 or OFF).

5. When you have made your choice, press the **PTT** switch to save the new setting and return to normal operation.

1) When the SQL S-meter is activated, the S-meter segment corresponding to
 the squelch threshold which was set by step 4 above will blink.

7 3 2) The receiver's squelch will open based on the higher of the levels set by the Noise Squelch or the S-meter Squelch system.

For example:

a) If the Noise Squelch (SQL control) is set so that signals at a level of "S-3" will open the squelch, but the SQL S-meter (Set Mode Item 93) is set to "LEVEL 5," the squelch will only open on signals which are "S5" or stronger on the S-meter.

b) If the SQL S-meter is set to "S3," but the Noise Squelch is set to a high level which will only pass signals which are Full Scale on the S-meter, the squelch will only open on signals which are Full Scale on the S-meter. In this case, the Noise Squelch overrides the action of the S-meter Squelch.

GENERAL

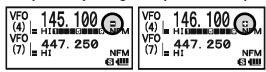

Repeater stations, usually located on mountaintops or other high locations, provide a dramatic extension of the communication range for low-powered hand-held or mobile transceivers. The **VX-8DR** includes a number of features, which make repeater operation simple and enjoyable.

REPEATER SHIFTS

Your **VX-8DR** has been configured, at the factory, for the repeater shifts customary in your country. For the 50 MHz band, this usually will be 1 MHz, while the 144 MHz shift will be 600 kHz; on 70 cm, the shift may be 1.6 MHz, 7.6 MHz, or 5 MHz (USA version).

Depending on the part of the band in which you are operating, the repeater shift may be

either downward (☐) or upward (☐), and one of these icons will appear at the bottom of the LCD when repeater shifts have been enabled.

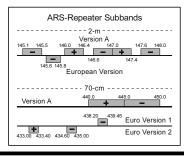

AUTOMATIC REPEATER SHIFT (ARS)

The **VX-8DR** provides a convenient Automatic Repeater Shift feature, which causes the appropriate repeater shift to be automatically applied whenever you tune into the designated repeater sub-bands in your country. These sub-bands are shown below.

If the ARS feature does not appear to be working, you may have accidentally disabled it.

To re-enable ARS:

- 1. Press and hold the (MENU) key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 74: RPT ARS.
- 3. Press the MENU key briefly to enable selection of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "ON"(to enable Automatic Repeater Shift).
- 5. When you have made your choice, press the **PTT** switch to save the new setting and return to normal operation.

VX-8DR OPERATING MANUAL

MANUAL REPEATER SHIFT ACTIVATION

If the ARS feature has been disabled, or if you need to set a repeater shift direction other than that established by the ARS, you may set the direction of the repeater shift manually.

To do this:

- Press the wey, then press the BRT (GMO) key. This provides a "Short-cut" to Set Mode Item 75: RPE SHIFT.
- 2. Rotate the **DIAL** knob to select the desired shift among "-RPT," "+RPT," and "SIMPLEX."
- 3. Press the **PTT** switch to save the new setting and exit to normal operation.

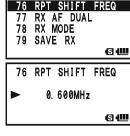

CHANGING THE DEFAULT REPEATER SHIFTS

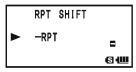

If you travel to a different region, you may need to change the default repeater shift, to ensure compatibility with local operating requirements.

To do this, follow the procedure below:

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 76: RPT SHIFT FREQ.
- 3. Press the key briefly to enable selection of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the new repeater shift magnitude.
- 5. Press the **PTT** switch to save the new setting and return to normal operation.

If you just have one "odd" split that you need to program, don't change the default repeater shift! Enter the transmit and receive frequencies separately, as shown on page 48.

CHECKING THE REPEATER UPLINK (INPUT) FREQUENCY

It often is helpful to be able to check the uplink (input) frequency of a repeater, to see if the calling station is within direct ("Simplex") range.

To do this, just press the M_{R} key. You'll notice that the display has shifted to the repeater

uplink frequency. Press the $\frac{\text{EMGR/H}}{(M/R)}$ key again to cause operation to return to normal monitoring of the repeater downlink (output) frequency. While you are listening on the input frequency of the repeater using the $\frac{\text{EMG R/H}}{\text{EM/RV}}$ key, the repeater offset icon (" \blacksquare " or \blacksquare ") will blink.

VFO 144.500	
(7) = HI HI	NFM (S) (IIII)

The configuration of *Mark* key may be set either to *RV* (for checking the input frequency of a repeater, or "HM" (for instant switching to the "Home" channel for the band you are operating on). To change the configuration of Wey, use Set Mode Item 39: HOME/REVERSE. See page 148.

CTCSS/DCS/EPCS OPERATION

CTCSS OPERATION

Many repeater systems require that a very-low-frequency audio tone be superimposed on your FM carrier in order to activate the repeater. This helps prevent false activation of the repeater by radar or spurious signals from other transmitters. This tone system, called "CTCSS" (Continuous Tone Coded Squelch System), is included in your **VX-8DR**, and is very easy to activate.

CTCSS setup involves two actions: setting the Tone Frequency and then setting the Tone Mode. These functions are set up using Set Mode Items 94: SQL TYP and 98: TONE FREQUENCY.

- 1. Press the wey, then press the MODE key. This provides a "Short-cut" to Set Mode Item 95: SQL TYPE.
- 2. Rotate the **DIAL** knob so that "TONE" appears on the display. This activates the CTCSS Encoder.

SQL TYPE	
TONE	τN
	69

- 3. Rotation of the **DIAL** knob one more "click" in step "2" above will also activate the "TSQL" decode function. When "TSQL" is displayed, the Tone Squelch system is active, which mutes your **VX-8DR**'s receiver until it receives a call from another radio sending out a matching CTCSS tone. This can helpful in a high RF congested location by keeping your radio quiet until a call is received from a specific station with a matching CTCSS tone.
 - You may notice an additional "DCS" indication appearing while you rotate the **DIAL** knob in step 3 above. We'll discuss the Digital Code Squelch system shortly.
 - ☐ You may notice "REV TONE" indication on the display while you rotate the **DIAL** knob in step 3 above. When the Reverse Tone Squelch system is active, the **VX-8DR**'s receiver is muted when it receives a call from a radio sending a matching CTCSS tone. The "RTN" icon will appear on the display when the Reverse Tone Squelch system is activated.
 - ❑ You may notice "PR FREQ" indication on the display while you rotate the DIAL knob in step 3 above, this means the user programmed Reverse CTCSS Decoder will mute your VX-8DR's receiver when it receives a call from a radio sending a CTCSS tone matching your programmed tone (determine by Set Mode Item 70: PR FREQUENCY). The "PR" icon will appear on the display when the Reverse CTCSS Decoder is activated.
 - □ You may notice "PAGER" and "MESSAGE" indication on the display while you rotate the **DIAL** knob in step 3 above. These appear when the "Enhanced Paging & Code Squelch" and the "Message Feature" are activated. We'll discuss these functions later.

CTCSS OPERATION

- 4. When you have made your selection of the CTCSS tone mode, press the MODE key to save the new setting and exit to normal operation.
- Press the wey, then press the coord (2 ABC) key. This provides a "Short-cut" to Set Mode Item 99: TONE FREQUENCY.
- 6. Rotate the **DIAL** knob until the display indicates the frequency of the CTCSS tone that you need to send on your transmission (ask the repeater owner/operator if you don't know the tone frequency).

TONE FREQUENCY
100.0Hz
64

7. When you have made your selection, press the ^{CODE}_(2ABC) key briefly to save the new setting and exit to normal operation. This is different from the usual method of restoring normal operation, and it applies only to the configuration of the CTCSS/DCS frequencies.

1) The repeater may or may not re-transmit a CTCSS tone - some systems just use CTCSS to control

access to the repeater, but do not pass it along when transmitting. If the S-Meter deflects, but you cannot hear the audio, repeat steps "1" through "4" above, but rotate the DIAL so that "TSQ" disappears - this will allow you to hear all traffic on the channel being received.

C	CTCSS TONE FREQUENCY (Hz)								
67.0	69.3	71.9	74.4	77.0	79.7				
82.5	85.4	88.5	91.5	94.8	97.4				
100.0	103.5	107.2	110.9	114.8	118.8				
123.0	127.3	131.8	136.5	141.3	146.2				
151.4	156.7	159.8	162.2	165.5	167.9				
171.3	173.8	177.3	179.9	183.5	186.2				
189.9	192.8	196.6	199.5	203.5	206.5				
210.7	218.1	225.7	229.1	233.6	241.8				
250.3	254.1	_	_	-	-				

2) During CTCSS operation, you may set up the VX-8DR so a ringing "bell" sound alerts you to an incoming call. See page 42 for details.

CTCSS/DCS/EPCS OPERATION

DCS OPERATION

Another form of tone access control is Digital Code Squelch, or DCS. It is a newer, more advanced tone system which generally provides more immunity from false paging than does CTCSS. The DCS Encoder/Decoder is built into your **VX-8DR**, and operation is very similar to that just described for CTCSS. Your repeater system may be configured for DCS. The DCS Squelch may be quite useful in Simplex operation if your friends use transceivers equipped with this advanced feature.

Note: Just as in CTCSS operation, DCS requires that you set the <u>Tone Mode</u> to DCS <u>and</u> that you select a DCS code.

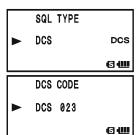

- 1. Press the wey, then press the MODE key. This provides a "Short-cut" to Set Mode Item 95: SQL TYPE.
- 2. Rotate the **DIAL** knob until "DCS" appears on the display; this activates the DCS Encoder/Decoder.
- 3. Press the (MODE) key to save the new setting and exit to normal operation.
- 4. Press the wey, then press the control of the provides a "Short-cut" to Set Mode Item 26: DCS CODE.
- Rotate the **DIAL** knob to select the desired DCS Code (a three-digit number). Ask the repeater owner/operator if you don't know DCS Code; if you are working simplex, just set up the DCS Code to be the same as that used by your friends.
- 6. When you have made your selection, press the ^{CODE}/_{2ABC} key to save the new settings and exit to normal operation.

Remember that the DCS is an Encode/Decode system, so your receiver will remain muted until

a matching DCS code is received on an incoming transmission. Switch the DCS off when you're just tuning around the band!

	DCS CODE									
023	025	026	031	032	036	043	047	051	053	
054	065	071	072	073	074	114	115	116	122

732	734	743	754	_	-	-	-	_	_	

DCS OPERATION

DCS CODE INVERSION

The DCS system was first introduced in the commercial LMR (Land Mobile Radio) service, where it is now in widespread use. DCS is sometime referred to by its different proprietary names, such as DPL[®] (Digital Private Line[®], a registered trademark of Motorola, Inc.).

DCS uses a codeword consisting of a 23-bit frame, transmitted (sub audible) at a data rate of 134.4 bps (bit/sec). Occasionally, signal inversion can result in the complement of a code being sent or received. This prevents the receiver's squelch from opening with DCS enabled, as the decoded bit sequence would not match that selected for operation.

Typical situations that might cause inversion to occur are:

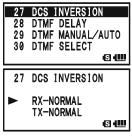

- **C** Connection of an external receiver preamplifier.
- □ Operating through a repeater.
- □ Connection of an external linear amplifier.

Note that code inversion does not mean that any of the above listed equipment is defective!

In certain amplifier configurations, the output signal (phase) is inverted from the input. Small signal or power amplifiers having an odd number (1, 3, 5, etc.) of amplification stages may result in inversion of a transmitted or received DCS code. While under most circumstances this should not occur (amplifier designs and industry standards take this into account), if you find that your receiver squelch does not open when both you and the other station are using a common DCS code, you or the other station (but not both) can try the following:

- 1. Press and hold the \overline{MENU} key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 27: DCS INVERSION.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select one of the following modes: RX-NORMAL, TX-NORMAL:

Receive and transmit the Normal DCS Tone. RX-INVERT, TX-NORMAL:

Receive the Inverted DCS Tone and transmit the Normal DCS Tone. RX-BOTH, TX-NORMAL:

Receive both Normal and Inverted DCS Tones and transmit the Normal DCS Tone.

RX-NORMAL, TX-INVERT:

Receive the Normal DCS Tone and transmit the Inverted DCS Tone.

CTCSS/DCS/EPCS OPERATION

DCS OPERATION

RX-INVERT, TX-INVERT:

Receive and transmit the Inverted DCS Tone.

RX-BOTH, TX-INVERT:

Receive both Normal and Inverted DCS Tones and transmit the Inverted DCS Tone.

5. When you have made your selection, press the **PTT** switch, to save the new settings and exit to normal operation.

This is different from the usual method of restoring normal operation, and it applies only to the configuration of the CTCSS/DCS frequencies. Remember to restore the default setting "R-N.T-N" (Receive and transmit the Normal DCS Tone) when done.

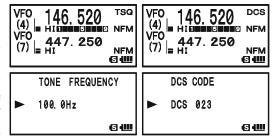

TONE SEARCH SCANNING

In operating situations where you don't know the CTCSS or DCS tone being used by another station, you can command the radio to listen to the incoming signal and scan in search of the tone being used. Two things must be remembered in this regard:

- You must be sure that your repeater uses the same tone type (CTCSS vs. DCS).
- Some repeaters do not pass the CTCSS tone; you may have to listen to the station transmitting on the repeater uplink (input) frequency in order to allow Tone Search Scanning to work.

To scan for the tone in use:

- Press the w key, then press the 2ABC key to recall the Set Mode Item 99: TONE FREQUENCY when CTCSS is selected, or Menu Item 26: DCS CODE during DCS operation.

- 3. Press the MENU key to enable adjustment of the selected Set Mode Item.
- 4. Press and hold in the ^{SCMBIDD} key, the "TONE SEARCH" notation will appear, release the ^{SCMBIDD} key to start scanning for the incoming CTCSS or DCS tone/code.
- 5. When the radio detects the correct tone or code, it will halt on that tone/code, and audio will be allowed to pass. Press the (BAND) key to lock in that tone/code, then press the (2ABC) key to exit to normal operation.

If the Tone Scan feature does not detect a tone or code, it will continue to scan indefinitely. When this happens, it may be that the other station is not sending any tone. You can press the PTT switch to halt the scan at any time.

You can also press the (MON) key during Tone Scanning to listen to the (muted) signal from the other station. When you release the (MON) key, Tone Scanning will resume after about a second.

Tone Scanning works either in the VFO or Memory modes.

CTCSS/DCS/EPCS OPERATION

EPCS (ENHANCED PAGING & CODE SQUELCH)

The VX-8DR includes an Enhanced CTCSS tone encoder/decoder and a dedicated microprocessor providing paging and selective calling features. This allows you to place a call to a specific station (Paging), and to receive calls of your choice directed only to you (Code Squelch).

The paging and code squelch systems use two pairs of (alternately switched) CTCSS tones which are stored in the pager memories. Basically, your receiver remains silent until it receives the CTCSS tone pair that matches those stored in the Receiving Pager Memory. The squelch then opens so the caller is heard, and the paging ringer immediately sounds, if activated. When you close the **PTT** switch to transmit, the CTCSS tone pair that is stored in the Transmitting Pager Memory will be transmitted automatically.

On the paged radio, the Code Squelch will close automatically after the incoming page ends. Meanwhile, on the paging radio, the Enhanced Paging and Code Squelch system will be disabled after the **PTT** switch is released after the paging transmission. You may re-activate the Enhanced Paging and Code Squelch system again.

68

67 PAGER CODE-RX

70 PR FREQUENCY

69 PASSWORD

PAGER CODE-TX

STORING THE CTCSS TONE PAIRS FOR EPCS OPERATION

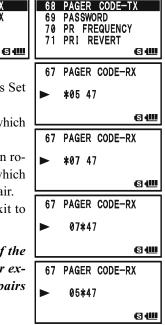

- Press and hold the (MENU key for one second to enter the Set Mode. 1.
- 2. Rotate the **DIAL** knob to select Set Mode Item 67: PAGER CODE-RX for the Receiving CTCSS Tone Pair or Set Mode Item 68: PAGER

CODE-TX for the Transmitting CTCSS Tone Pair.

- 3. Press the *MENU* key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to set the CTCSS Tone number which 4. corresponds to the first tone of the CTCSS Tone Pair.
- Press the MODE key ("*" icon moves to the right), then ro-5. tate the **DIAL** knob to set the CTCSS Tone number, which corresponds to the second tone of the CTCSS Tone Pair.
- 6. Press the **PTT** switch to save the new setting and exit to normal operation.

The VX-8DR does not recognize the order of the 1st tone and the 2nd tone. In other words, for example, the VX-8DR considers both CTCSS pairs "10, 35" and "35, 10" to be identical.

EPCS (ENHANCED PAGING & CODE SQUELCH)

ACTIVATING THE ENHANCED PAGING & CODE SQUELCH SYSTEM

- Press the key, then press the MODE key. This provides a "Short-cut" to Set Mode Item 95: SQL TYPE.
- 2. Rotate the **DIAL** knob until "PAGER" appears on the display; this activates the Enhanced Paging & Code Squelch.
- 3. Press the **PTT** switch to save the new setting and activate the Enhanced Paging & Code Squelch.

To disable the Enhanced Paging & Code Squelch, just repeat the above procedure, rotate the **DIAL** knob to select "OFF" in step 2 above.

When the Enhanced Paging & Code Squelch feature is activated, the "PAG" notation will appear on the display.

During Enhanced Paging & Code Squelch operation, you may set up the VX-8DR so that a ringing

"bell" sound alerts you when a call is coming in. See next page for details.

PAGING ANSWER BACK

When you press the **PTT** switch to respond to a page call, the **VX-8DR** transmits the same CTCSS tone pair. This tone pair will open the Code Squelch of the calling station. If you prefer, you can have the **VX-8DR** respond to page calls automatically ("transpond"). To enable this feature:

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 66: PAGER ANS-BACK.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "ON".
- 5. Press the **PTT** switch to save the new setting and exit to normal operation.

of "remote control" operation that may be restricted to certain frequencies. U.S. users should confirm the current status of §97.201(b) of the FCC's rules governing the Amateur service before utilizing this feature on the 144 MHz band.

CTCSS/DCS/EPCS OPERATION

CTCSS/DCS/EPCS Bell OPERATION

During CTCSS Decode, DCS, or EPCS operation, you may set up the **VX-8DR** so that a ringing "bell" sound alerts you that a call is coming in. Here is the procedure for activating the CTCSS/DCS/EPCS Bell:

- 1. Set the operating frequency to the desired channel.
- 2. Set the transceiver up for CTCSS Decode ("Tone Squelch"), DCS, or EPCS operation, as described previously.
- 3. Press and hold the \underbrace{MENU} key for one second to enter the Set Mode.
- 4. Rotate the **DIAL** knob to select Set Mode Item 15: BELL SELECT.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to set the desired "bell" sound. The available choices are BELL, USER BP1, USER BP2, USER BP3, or OFF (disable the Bell function).

Note: When User Beep (described later) does not register, USER BP1, USER BP2, or USER BP3 does not appear.

- Press the Key briefly, then rotate the **DIAL** knob one click counter-clockwise to select Set Mode Item 14: BELL RINGER.
- 8. Press the MENU key briefly to enable adjustment of this Menu Item.
- 9. Rotate the **DIAL** knob to set the desired number of rings of the Bell. The available choices are 1Time through 20Times or CONTINUOUS.
- 10. Press the \mathbf{PTT} switch briefly to save the new setting and exit to normal operation.

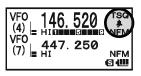

When you are called by a station whose transceiver is sending a CTCSS tone, DCS code, or CTCSS tone pair which matches that set into your Decoder, the Bell will ring in accordance with this programming.

When the CTCSS/DCS/EPCS Bell is activated, the "**‡**" icon will appear in the display.

To disable the CTCSS/DCS/EPCS Bell function, select the setting of Set Mode Item 15: BELL SELECT to "OFF".

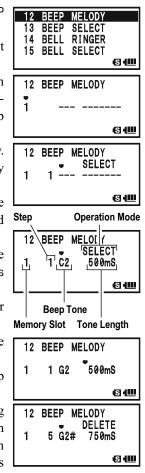

CTCSS/DCS/EPCS Bell OPERATION

PROGRAMMING THE USER MELODY

Three User Beep Memories are provided, allowing you to create unique original beep tone melodies.

Each User Beep Memory can store up to 64 steps with three octaves ("C1" through "B3").

- 1. Press and hold the (MENU) key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 12: BEEP MELODY.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the memory slot into which you wish to store your programmed beep melody. Available selections are 1, 2, and 3. The previously stored beep melody will be displayed.
- Press the MODE key to enable programming the beep melody.
 Press and hold the MODE key for one second to clear any previous beep melody, if desired.
- Rotate the **DIAL** knob to select the first beep tone of the User Beep Melody. Available selections are C1 - B3, and POS (rest).
- Press the MODE key, then rotate the DIAL knob to set the length of the first beep tone. Available selections are 10ms (10 msec) 2500ms (2.5 sec).
- Press the MODE key to accept the first beep tone of the User Beep Melody.
- 9. If you make a mistake, press the (BAND) key to back-space the cursor, then re-enter the correct beep tone or length.
- 10. Repeat steps 6 9 until you have completed the User Beep Melody.
- 11. When there is a beep tone, which you wish to delete, bring the cursor to that beep tone using the SELECT? Key, then press the V/M key repeatedly until the "SELECT" notation in the "Operation Mode" slot turns into "DELETE". Now, press and hold in the V/M key for one second to delete that beep tone.

VX-8DR OPERATING MANUAL

The **VX-8DR** can be operated in a Split Tone configuration via the Set mode.

- 2. Rotate the **DIAL** knob to select Set Mode Item 94: SQL SPLIT.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "ON" (to enable the Split Tone feature).
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

When the Split Tone feature is activated, you can see the following additional parameters after the "MESSAGE" parameter while selecting the Set Mode Item 95: SQL TYPE:

CTCSS/DCS/EPCS Bell Operation

strings, move the cursor to the place where you wish to enter the beep tone using the (BAND) / (MODE) key, then press the $\frac{W MT}{V/M}$ key repeatedly until the "SELECT" notation in the "Operation Mode" slot turns into "INSERT". Now, press and hold in the $\frac{W}{V/M}$ key for one second to add the new beep tone (Tone: "C2", Tone Length: "500mS").

12. When you wish to add a beep tone into the beep melody

- 13. Press and hold the $\frac{\text{EMGR}/H}{(\text{HW}/\text{RV})}$ key for one second to delete all data after the current position that may have previously been stored in the User Beep Melody.
- 14. When you have programmed User Beep Melody, press the PTT switch briefly to save the new setting and exit to normal operation.

You may check your work by monitoring the programmed User Beep Melody. To do this, repeat steps 1 - 4 above, then press the www.

SPLIT TONE OPERATION

- 1. Press and hold the MENU key for one second to enter the Set Mode.

DCS Encode only ("DC" icon will appear while operating) D CD: TONE-DCS: Encodes a CTCSS Tone and Decodes a DCS code (the "T-D" icon will appear during operation) D CD-TONE SQL: Encodes a DCS code and Decodes a CTCSS Tone (the "D-T" icon will appear during operation)

Select the desired operating mode from the selections shown above.

	SQL SPLIT SQL TYPE STEP FREQUENCY STEREO STEREO
94	SQL SPLIT
	ON
	6.0

12	BEEP	MELODY
1	3 E2	INSERT 500mS
		S III

TONE CALLING (1750 Hz)

If the repeaters in your country require a 1750-Hz burst tone for access (typically in Europe), you can set the free key to serve as a "Tone Call" switch instead. To change the configuration of this switch, we again use the Menu to help us.

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 61: MONI/T-CALL.
- Press the key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "T-CALL" on the display.
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

To access a repeater, press and hold in the $\widehat{\mathbb{M}_{\text{reall}}}$ key for the amount

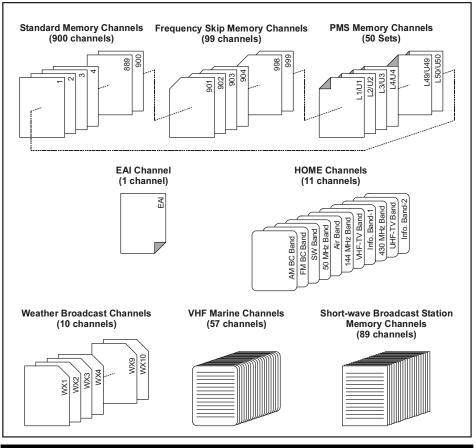

of time specified by the repeater owner/operator. The transmitter will automatically be activated, and a 1750-Hz audio tone will be superimposed on the carrier. Once access to the repeater has been gained, you may release the $\underbrace{\text{WALL}}_{\text{WALL}}$ key, and use the **PTT** switch for activating the transmitter.

MEMORY MODE

The **VX-8DR** provides a wide variety of memory system resources. These include:

- **G** "Regular" Memory Channels, which include:
 - O 900 "Standard" memory channels, numbered "1" through "900."
 - O 99 "Frequency Skip Memories," numbered "901" through "999."
 - O 11 "Home" channels, providing storage and quick recall of one prime frequency on each operating band.
 - O 50 sets of band-edge memories, also known as "Programmable Memory Scan" channels, labeled "LO1/UO1" through "L50/U50."
 - O 24 Memory Banks, labeled "b 1" through "b24." Each Memory Bank can be assigned up to 100 channels from the "regular" memory channels.
- □ Special Memory Channels, which include:
 - O One "Emergency Automatic ID (EAI)" Channel.
 - O 10 "Weather Broadcast" Channels.
 - O 57 VHF Marine Channels.
 - O 89 popular Short-wave Broadcast Station Memory Channels.

MEMORY STORAGE

- 1. Select the desired frequency, while operating in the VFO mode. Be sure to set up any desired CTCSS or DCS tones, as well as any desired repeater offset. The power level may also be set at this time, if you wish to store it.
- Press and hold in the w key for 1/2 second. 2.
- Within five seconds of releasing the **E**W key, you need to make a decision regarding 3. channel storage. The microprocessor will automatically se-B lect the next-available "free" channel (a memory register on which no data has been stored). If you do not wish to make a change and accept the "free" channel, proceed to E

step 4. If you wish to select a different channel number into which to store the data, rotate the **DIAL** knob to select the desired memory channel.

Advice: You may jump 100 memory channels, if you're in a hurry $(101 \rightarrow 201 \rightarrow 301 \dots)$, by pressing the MENU key (multiple times, if necessary). If you see the "The icon at the upper left of the channel number, it means that the channel currently has no data written on it (i.e. the channel is "free": the occupied channel displays the "" icon).

- 4. Press the **w** key once more to store the frequency into memory.
- You still will be operating in the "VFO" mode, so you may now enter other frequen-5. cies, and store them into additional memory locations, by repeating the above process.

1) You may change the automatic memory channel selection feature to select the "next-highest memory channel above the last-stored memory channel" instead of the "next-available 'free' channel" via the Set Mode Item 56: MEMORY WRITE; see page 151.

2) You may disable the memory write function which prevents a memory write operation if you should accidentally perform a wrong key sequence via the Set Mode Item 54: MEMORY PROTECT. See page 151 for details. When the memory write protect is activated, the "PROTECT" notation appears on the display while a memory write operation is being performed.

3) You may change the duration time of the secondary function (press and holding the key) of the 🗊 key via the Set Mode Item 36: FW KEY HOLD TIME; see page 148.

IMPORTANT NOTE

On rare occasions the memorized data may become corrupted by miss operation, or static electricity. When repairs are made the memory data may be lost. Please write down or record the memorized information so you will be able to restore it if needed.

MEMORY STORAGE

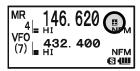

STORING INDEPENDENT TRANSMIT FREQUENCIES ("ODD SPLITS")

All memories can store an independent transmit frequency, for operation on repeaters with non-standard shift. To do this:

- 1. Store the receive frequency using the method already described under *MEMORY STOR-AGE* (it doesn't matter if a repeater offset is active).
- 2. Tune to the desired transmit frequency, then press and hold in the wey for 1/2 second.
- 3. Within five seconds of releasing the wey, rotate the **DIAL** knob to select the same memory channel number as used in step "1" above.
- 4. Press and hold in the **PTT** switch, then briefly press the **D** key once more while holding the **PTT** switch in (this does not key the transmitter).

Whenever you recall a memory, which contains independently-stored transmit and receive frequencies, the " I " indication will appear in the display.

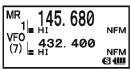

MEMORY RECALL

- 1. While operating in the VFO mode, press the $\underbrace{V/M}^{DW,WT}$ key to enter the Memory mode.
- 2. Rotate the **DIAL** knob to select the desired channel.
- 3. If you press the **I** key briefly, then rotate the **DIAL** knob, the memory channel will be selected in 10 channels per step.
- 4. To return to the VFO mode, press the $\frac{DW MT}{V/M}$ key.

1) When the radio is already set to the Memory mode, an easy way to recall memories is to key in the memory channel number, then press the $\underbrace{\mathbb{V}_{V,M}}_{W,M}$ key. For example, to recall memory channel #14, press $\binom{\text{STEP}}{1} \rightarrow \stackrel{\text{ARTS}}{(4\text{GH})} \rightarrow \stackrel{\text{DW}}{\mathbb{V}_{V,M}}$.

2) You may change the step of the fast channel selection mode (wey + DIAL knob) via Set Mode Item 52: MEMORY FAST STEP. See page 150 for details.

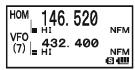

HOME CHANNEL MEMORY

A special one-touch "HOME" channel is available for each operating band, to allow quick recall of a favorite operating frequency on each band.

HOME CHANNEL RECALL

 Press the key, then press the Key to recall the Home Channel on the band group where you are currently operating.

2. Press the wey, then press the May key again to return to the previously-used frequency (either a VFO or a memory channel).

The transceiver switches to VFO mode if the **DIAL** knob is turned.

You may disable the above function (automatically switching to the VFO mode) using Set Mode Item 38: HOME VFO.

HOME CHANNEL FREQUENCY CHANGE

The factory defaults for the Home channels are listed below. You may re-program the Home channel in a manner identical to that used for the regular memories:

- 1. Select the desired frequency, while operating in the VFO mode. Be sure to set up any desired CTCSS or DCS tones, as well as any desired repeater offset. The power level may also be set at this time, if you wish to store it.
- 2. Press and hold in the BW key for 1/2 second.
- 3. While the memory channel number is blinking, just press the ^{EMG R/H}/_(M/R) key. The frequency and other data (if any) will now be stored in the special HOME channel register.
- 4. You may repeat this process on the other operating bands.

Note that the UHF HOME channel is the one used during "Emergency" operation. See page 107 for details regarding this feature.

DEFAULT HOME CHANNELS								
OPERATING BAND		FREQ	JENCY					
[BAND NUMBER]		USA VERSION	EXP VERSION					
SW Band	[1]	1.800 MHz	1.800 MHz					
50 MHz Ham Band	[2]	30.000 MHz	30.000 MHz					
Air Band	[3]	108.000 MHz	108.000 MHz					
144 MHz Ham Band	[4]	146.520 MHz	144.000 MHz					
VHF-TV Band	[5]	174.000 MHz	174.000 MHz					
Information Band 1	[6]	222.000 MHz	222.000 MHz					
430 MHz Ham Band	[7]	446.000 MHz	430.000 MHz					
UHF-TV Band	[8]	470.000 MHz	470.000 MHz					
Information Band 2	[9]	860.000 MHz	860.000 MHz					
AM Broadcast Band	[A]	0.540 MHz	0.540 MHz					
FM Broadcast Band	[F]	76.000 MHz	76.000 MHz					

LABELING MEMORIES

You may wish to append an alpha-numeric "Tag" (label) to a memory or memories, to aid in recollection of the channel's use (such as a club name, etc.). This is easily accomplished using the Set Mode.

- 1. Recall the memory channel on which you wish to append a label.
- 2. Press and hold the *MENU* key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 53: MEMORY NAME.
- Press the Key briefly to enable programming of the name tag. Press and hold the Key for two seconds to clear any previous name, if desired.
- 5. Rotate the **DIAL** knob, or press one of the keyboard keys, to select the first digit of the desired label.

Example 1: Rotate the **DIAL** knob to select any of the 61 available characters.

Example 2: Press the $(\mathcal{B}^{\text{SP-AMA}} | \mathcal{B}^{\text{TUV}})$ key repeatedly to toggle among the seven available characters associated with that key: $\mathbf{t} \rightarrow \mathbf{u} \rightarrow \mathbf{v} \rightarrow \mathbf{8} \rightarrow \mathbf{T} \rightarrow \mathbf{U} \rightarrow \mathbf{V}$

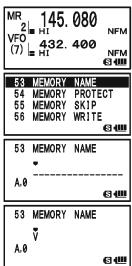

- 7. Repeat steps 5 and 6 to program the remaining letters, numbers, or symbols of the desired label. A total of 16 characters may be used in the creation of a label.
- 8. Press and hold the (HM RW) key for two seconds to delete all data after the cursor that may have been previously stored.
- 9. If you make a mistake, press the (BAND) key to backspace the cursor, then re-enter the correct letter, number, or symbol.
- 10. When you have completed the creation of the label, press the **PTT** switch briefly to save the label and exit to normal operation.

During Memory Recall ("MR") with Mono Band operation, the alphanumeric Tag will appear below the frequency display.

The alphanumeric Tag does not appear if you activate the Dual Receive Operation.

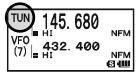

53	MEMORY	NAME
A.0	VERTEX	STANDARD
A,0		69

MR 2 Lit	VERTEX	080 STANDARD
∎Ан		NFM

MEMORY OFFSET TUNING

Once you have recalled a particular memory channel, you may easily tune off that channel, as though you were in the "VFO" mode.

- 1. With the **VX-8DR** in the Memory Recall ("MR") mode, select the desired memory channel.
- Now press the wey, then press V/V/M key. The "MR" indicator will be replaced by one which says "TUN" ("Memory Tuning").

- 3. Rotate the **DIAL**, as desired, to tune to a new frequency. The synthesizer steps selected for VFO operation on the current band will be the steps used during Memory Tuning.
- If you wish to return to the original memory frequency, press WMT key briefly. The "TUN" indicator will be replaced by "MR."
- 5. If you wish to store a new frequency set during Memory Tuning, just press and hold in the wey for one second, per normal memory storage procedure. The microprocessor will automatically set itself to the next-available clear memory location, and you then press the wey again, briefly to lock in the new frequency.

If you want to replace the original memory contents with the new frequency settings, be sure to rotate the DIAL to the original memory channel number!

Any required CTCSS/DCS changes, or repeater offset modifications, must be done before storing the data into the new (or original) memory channel location.

MASKING MEMORIES

There may be situations where you want to "Mask" memories so they are not visible during memory selection or scanning. For example, several memories used only in a city you visit infrequently may be stored, then "Masked" until you visit that city, at which time you can "Unmask" them for normal use (except for Memory Channel "1").

- 1. Press the $\frac{VW MT}{V/M}$ key, if needed, to enter the Memory Recall ("MR") mode.
- 2. Press and hold in the we key for 1/2 second, then rotate the **DIAL** to select the memory channel to be "Masked" from view.

Watch out! You can manually store data over a "Masked" memory, deleting previous data, if you're not careful. Use the "next available memory" storage technique to avoid over-writing a masked memory.

MEMORY BANK OPERATION

The large number of memories available in the **VX-8DR** could be difficult to utilize without some means of organizing them. Fortunately, the **VX-8DR** includes provision for dividing the memories into as many as 24 Memory Banks, so you can categorize the memories in a manner convenient to you. You may enter and exit the "Memory Bank" mode by a single press of the (BAND) key, as we shall see below.

ASSIGNING MEMORIES TO A MEMORY BANK

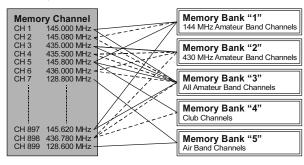

- 1. Recall the memory channel to be assigned to a Memory Bank.
- Press and hold in the wey for 1/2 second, then rotate the DIAL knob to select the Memory Bank number where you want to include this channel (Memory Bank numbers are found before memory channel "1"). The """ icon will appear at the upper left of the Memory Bank number if some channels have already been assigned to that Memory Bank

number. (If no channels are assigned to the Memory Bank, the "🗋" icon appears on the left of the Memory Bank number).

- 3. Press the **BW** key briefly.
- 4. At this point, the memory channel data is copied into the Memory Bank.

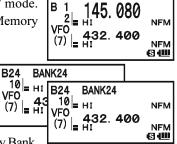

Memory Banks.

2) The PMS memory channels

(L1/U1 through L50/U50) may not be assigned to a Memory Bank.

Memory Bank Recall

- 1. Press the $\underbrace{V/M}_{V/M}$ key, if needed, to enter the MR mode.
- Press the ^{SCLEBID} key to activate the "Memory Bank" mode. The "MR" indicator will be replaced by one of the Memory Bank numbers ("B 1" through "B24").
- 3. Press the wey, and then press the key, then rotate the **DIAL** knob to select the desired Memory Bank.
- 4. Press the BAND key. Now, as you rotate the **DIAL** knob to select memories, you will observe that you can only select memory channels in the current Memory Bank.

MEMORY BANK OPERATION

- 5. To change to another Memory Bank, press the wey, then press the seven key. Now rotate the **DIAL** knob to select the new Memory Bank, then press the seven key again.
- 6. To exit from Memory Bank operation, just press the Key. The Memory Bank number will be replaced by the "MR", and you are now in the "regular" Memory Recall mode, without utilization of the Memory Banks. The memories stored in the various Banks will remain in those banks. You do not need to store them again.

REMOVING MEMORIES FROM A MEMORY BANK

- 1. Recall the memory channel to be removed from a Memory Bank.
- 2. Press and hold the key for 1/2 second, then press the key to remove the memory channel data from the Memory bank.

CHANGING A MEMORY BANK'S NAME

You may change the default Memory Bank Names, which are shown on the display while selecting the Memory Bank your desire.

- 1. Press and hold in the \overline{MENU} key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select the Set Mode Item 8: BANK NAME.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the memory bank on which you wish to change a label.
- Press the MODE key briefly to enable changing of the name tag. Press and hold the MORE key for two seconds to clear any previous name, if desired.
- 6. Rotate the **DIAL** knob, or press one of the keyboard keys, to select the first digit of the desired label.
 - *Example 1*: Rotate the **DIAL** knob to select any of the 61 available characters.
 - *Example 2*: Press the (2ABC) key repeatedly to toggle among the seven available characters associated with that key: $\mathbf{a} \rightarrow \mathbf{b} \rightarrow \mathbf{c} \rightarrow \mathbf{2} \rightarrow \mathbf{A} \rightarrow \mathbf{B} \rightarrow \mathbf{C}$

BANK NAME

BEEP LEVEL

69

8

11

9 BCLO 10 BEEP EDGE

- 7. Press the $\frac{\text{SFSSUTF}}{\text{MODE}}$ key to move to the next character, if needed.
- Repeat steps 6 and 7 to program the remaining letters, numbers, or symbols of the desired label. A total of 16 characters may be used in the creation of a label.
- 9. Press and hold the (HM RW) key for two seconds to delete all data after the cursor that may have been previously stored.

8	BANK NAME	
1 A.0	2m Amateur	Band
A, U		ଷେଷ୍ଟା

MEMORY BANK OPERATION

- 10. If you make a mistake, press the BAND key to backspace the cursor, then re-enter the correct letter, number, or symbol.
- 11. When you have completed the changes of the label, press the **PTT** switch to save the label and exit.

MOVING MEMORY DATA TO THE VFO

Data stored on memory channels can easily be moved to VFO, if you like.

- 1. Press the $\frac{W MT}{V/M}$ key, if needed, to enter the Memory Recall ("MR") mode.
- 2. Press and hold in the wey for 1/2 second, then rotate the **DIAL** knob to select the memory channel containing the frequency data to be moved to VFO.
- Press the (V/M) key. The confirmation message (OVER-WRITE?) will appear on the display. Press the (V/M) key once more, the data will now have been copied to VFO, although the original memory contents will remain intact on the previously stored channel. Press the **PTT** switch to cancel the Moving Memory Data procedure, if desired.

MEMORY ONLY MODE

Once memory channel programming has been completed, you may place the radio in a "Memory Only" mode, whereby VFO operation is impossible. This may be particularly useful during public-service events where a number of operators may be using the radio for the first time, and ultimate simplicity of channel selection is desired.

To place the radio into the Memory Only mode, turn the radio off. Now press and hold in the $\frac{DW MT}{(V/M)}$ key while turning the radio on.

To return to normal operation, repeat the above power-on procedure.

The **VX-8DR** provides Special Memory Channels, which are made up of:

- 10 Weather Broadcast Channels.
- 57 VHF Marine Channels
- 89 popular Short-wave Broadcast Station Memory Channels.

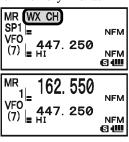

1) The Special Memory Channels are only recalled on the "A-Band"

2) You may assign the Special Memory Channels to a Memory Bank. See page 53 regarding Memory Bank Operation for details.

WEATHER BROADCAST CHANNELS

The VHF Weather Broadcast Station Memory Channel Bank has been pre-programmed at the factory, for quick selection of NOAA weather information stations.

- Press the A key briefly to set the "A-Band" to the "Operating" band. 1.
- Press the \overrightarrow{BW} key, then press the $\overrightarrow{9}^{\text{SP BNK}}_{\text{W}}$ key, to recall the Special Memory Menu. 2.
- Press the SCHEMED key, repeatedly if necessary to select the "WX 3. CH" (thus recalling the Weather Broadcast Memory Bank).
- Rotate the **DIAL** knob to select the desired Weather Broad-4. cast channel.
- 5. If you wish to scan this bank to search for louder stations, iust press the PTT switch. When the scanner pauses on a station, press the **PTT** switch once to halt the scan, or press it twice to restart the scan.

6. To exit to normal operation, press the $\frac{VW}{V/M}$ key, or press \mathbf{W} key followed by the $\frac{SP \text{ BMK}}{9 \text{ W}}$ key.

In the event of extreme weather disturbances, such as storms and hurricanes, the NOAA (National Oceanic and Atmospheric Administration) sends a weather alert accompanied by a 1050 Hz tone and subsequent weather report on one of the NOAA weather channels. You may disable the Weather Alert tone via Set Mode Item 111: WX ALERT, if desired. See page 160.

VHF MARINE MEMORY CHANNELS

The VHF Marine Channel Bank has been pre-programmed at the factory, for quick selection.

- 1. Press the 🖪 key briefly to set the "A-Band" to the "Operating" band.
- Press the vertice key, then press the set of the set
- 3. Press the BAND key, repeatedly if necessary to select the "INTVHF" (thus recalling the VHF Marine Channel Bank).
- 4. Rotate the **DIAL** to select any of the 57 available VHF Marine Channels.
- Press the MCR/H key to monitor the duplex frequency while recalling a semi-duplex channel (such as Channel "1"). Press the MCR/H key again to revert to simplex monitoring.
- 6. To exit to normal operation, press the $\underbrace{\mathbb{W}}_{V/M}^{W \text{ MT}}$ key, or press W key followed by the $\underbrace{\mathbb{G}}_{V/M}^{\text{SP BMK}}$ key.

CH	FREQUENCY CH FREQUENCY		UENCY	CH	Freq	UENCY	CH	Freq	UENCY

VHF MARINE CHANNEL FREQUENCY LIST

SHORT-WAVE BROADCAST STATION MEMORY CHANNELS

The Short-wave Broadcast Station Memory Channel Bank has been pre-programmed at the factory, for quick selection of Short-wave broadcast stations.

- 1. Press the 🖪 key briefly to set the "A-Band" to the "Operating" band.
- Press the vertice key, then press the vertice key, to recall the Special Memory Menu.
- Press the Science key, repeatedly if necessary to select the "RADIO" (thus recalling the Short-wave Broadcast Station Memory Channel Bank).
- 4. Rotate the **DIAL** to select any of the 89 available Shortwave Broadcast Stations.
- 5. When the radio is in Mono Band operation, the station "Tag" will be displayed.
- To exit to normal operation, press the V/M key, or press key followed by the SP BNK (V/M) key.

BROADCAST STATION FREQUENCY LIST

VX-8DR OPERATING MANUAL

GENERAL

The **VX-8DR** allows you to scan just the memory channels, the entire operating band, or a portion of that band. It will halt on signals encountered, so you can talk to the station(s) on that frequency, if you like.

Scanning operation is basically the same in each of the above modes. Before you begin, take a moment to select the way in which you would like the scanner to resume scanning after it halts on a signal.

SETTING THE SCAN-RESUME TECHNIQUE

Three options for the Scan-Resume mode are available:

2.0sec - 10.0sec:	In this mode, the scanner will halt on a signal it encounters, and will
	hold there for the selected resume time. If you do not take action to
	disable the scanner within that time period, the scanner will resume
	even if the station is still active.

- BUSY: In this mode, the scanner will halt on a signal it encounters. When the carrier has dropped because the other station ceased transmission, the scanner will resume. In the case of constant-carrier signals like Weather Station broadcasts, the scanner will likely remain on this frequency indefinitely. The Scan Re-start Delay time (default interval: 2 seconds) is set by Set Mode Item 82: SCAN RE-START.
- HOLD: In this mode, the scanner will halt on a signal it encounters. It will not restart automatically; you must manually re-initiate scanning if you wish to resume.

To set the Scan-Resume mode:

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 83: SCAN RESUME.
- Press the Key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired scan-resume mode.
- 5. Press the **PTT** switch to save the new setting and exit to normal operation.

The default condition for this Set Mode Item is "5.0sec".

GENERAL

To set the Scan-Restart Delay Time:

- 1. Press and hold the \overline{MENU} key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 82: SCAN RE-START.
- Press the key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the desired Scan-Restart Delay Time. Available selections are 0.1sec - 0.9sec (0.1sec/step) and 1.0sec - 10.0sec (0.5sec/step).
- 5. Press the **PTT** switch to save the new setting and exit to normal operation.

The default condition for this Set Mode Item is "2.0sec".

82	SCAN RE-START
83	SCAN RESUME
84	SENSOR DISPLAY
85	SENSOR INFO
	6.6
82	SCAN RE-START
82 ►	SCAN RE-START 2. Øsec

VFO SCANNING

This mode allows you to scan on the VFO mode.

- 1. Select the VFO mode by pressing the (V/M) key, if necessary.
- Press and hold in the SCHERD Key, then rotate the DIAL knob while holding in the BAND key (the current bandwidth for the VFO scanner will appear on the display) to select the bandwidth for the VFO scanner. Available selections are ±1 MHz, ±2 MHz, ±5 MHz, BAND, ALL, and PMS-X.

±1 MHz, ±2 MHz, ±5 MHz:	The scanner will sweep frequencies within the selected
	bandwidth.
BAND:	The scanner will sweep frequencies only on the cur-
	rent band.

- ALL: The scanner will sweep all frequencies between 1.8 MHz and 999.99 MHz (except the FM Broadcast Band: 76 - 107 MHz).
- PMS-X: The scanner will sweep frequencies within the currently-selected PMS frequency pair. See page 68 for details.
- 3. Release the $\frac{SC.MEND DA}{BAND}$ key to start scanning.
- 4. When the scanner encounters a signal strong enough to open the squelch, the scanner will halt temporarily; the decimal point of the frequency display will blink during this "Pause" condition.
- 5. The scanner will then resume according to the Scan-Resume mode selected in the previous section.
- 6. To cancel scanning, press the **PTT** switch or $\frac{DW MT}{V/M}$ key.

2) You may initiate upward or downward scanning in the previously selected bandwidth, by pressing and holding either () or () key for one second, respectively.

3) You may change the scanner's method of operation so the VFO frequency will jump to the low band edge of the next band when the VFO frequency reaches the high edge of the current band (or vice versa). See page 159 regarding Set Mode Item 105: VFO MODE.

VFO SCANNING

HOW TO SKIP (OMIT) A FREQUENCY DURING VFO SCAN

If the VFO scan stops on a frequency or frequencies that you do not need (such as a spurious radiation from a television), such frequencies can be "skipped" during VFO scanning. A special "Frequency Skip Memory" bank is reserved to store these frequencies.

To skip a frequency during VFO scanning:

- 1. While VFO scanning is stopped on the frequency that you do not need, press and hold the wey for one second, then rotate the **DIAL** knob to select the desired Frequency Skip Memory channel (900 999). The microprocessor will automatically select the next-available "free" Frequency Skip Memory channel (a memory register on which no data has been stored). If you see the "b" icon at the upper left of the channel number, it means that the channel currently has no data written on it (i.e. the channel is "free").
- 2. Press the we key to store the frequency into the Frequency Skip Memory. It will now be ignored during VFO scanning.

To re-institute a frequency into the VFO scan loop:

- 1. Press the $\frac{W MT}{V/M}$ key, if needed, to enter the Memory Recall ("MR") mode.
- 2. Press and hold in the **W** key for one second, then rotate the **DIAL** knob to select the memory channel to be re-instituted.
- Press the X key to delete the channel from the Frequency Skip Memory; this will restore the frequency into the VFO scan loop.

The VX-8DR has 100 VFO Frequency Skip Memory Channels.

SETTING THE SQUELCH LEVEL DURING ACTIVE SCANNING OPERATION

The **VX-8DR** allows adjustment of the Squelch level "on the fly" while you are scanning.

- 1. While the scanner is engaged, press the wey, then press the will key (the current squelch level will appear below the frequency display).
- 2. Rotate the **DIAL** to select the desired Squelch level.
- $\begin{array}{c|c} VFO & 146.520 \\ (4) & \text{sql level 2 NFM} \\ VFO & 447.250 \\ (7) & \text{HI} & \text{NFM} \\ \hline \textbf{G} \textbf{4} \end{array}$
- 3. Press the **PTT** switch briefly to save the new setting and exit to normal operation. In this case, pressing the **PTT** switch this one time will not causing scanning to stop.

Memory scanning is also easy to initiate:

- Set the radio to the Memory Recall ("MR") mode by pressing the $\frac{DW MT}{V/M}$ key, if neces-1. sary.
- Press and hold in the (BAND) key, then rotate the **DIAL** knob while holding in the (BAND) 2. key (the current Memory Scan mode will appear on the frequency display) to select the desired Memory Scan mode. Available selections are ALL CHANNEL, TAG1, TAG2, BAND, and PMS-X.

MR	ALL	CHANNEI	-
	HI		NFM
(7) ₌	432 HI	2. 400	NFM

ALL CHANNEL: The scanner sweeps all Memory channels.

- TAG1: The scanner sweeps only those Memory channels with the same first digit of the alpha/numeric tag as the first channel on which scanning started.
- TAG2: The scanner sweeps only those Memory channels with the same first and second digits of the alpha/numeric tag as the first channel on which scanning started.
- The scanner sweeps only those Memory channels which are memo-BAND: rized on the same operating band as the first channel on which scanning started.

PMS-X: The scanner will sweep frequencies within the currently-selected PMS frequency pair. See page 68 for details.

- Release the $\frac{SCMEND DA}{BAND}$ key to start scanning. 3.
- As with VFO scanning, the scanner will halt on any signal encountered that is strong 4. enough to open the squelch; it will then resume scanning according to the Scan-Resume mode set previously. When there are no memory channels corresponding to the selected Memory Scan mode, the "MS ERR" notation will appear on the display.
- To cancel scanning, press the **PTT** switch or $\frac{DW MT}{V/M}$ key. 5.

You may initiate the scanning in the previously selected Memory Scan Mode by pressing and holding either \frown or \bigtriangledown key for one second.

How to Skip (Omit) a Channel During Memory Scan

As mentioned previously, some continuous-carrier stations like a Weather Broadcast station will seriously impede scanner operation if you are using the "Carrier Drop" Scan-Resume mode, as the incoming signal will not pause long enough for the transceiver to resume scanning. Such channels may be "Skipped" during scanning, if you like:

- 1. Recall the Memory Channel to be skipped during scanning.
- 2. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 55: MEMORY SKIP.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 5. Rotate the **DIAL** knob to select "SKIP". The current Memory Channel will now be ignored during scanning. The "ONLY" selection is used for "Preferential Memory Scan", described in the next column.
- 6. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

When you recall the "skipped" memory channel manually, a small "◄" icon will appear at the left of the frequency display, indicating it is to be ignored during scanning.

To re-institute a channel into the scanning loop, select "OFF"

in step 5 above (the "Skipped" channel will, of course, still be accessible via manual channel selection methods using the **DIAL** knob in the Memory Recall ("MR") mode, whether or not it is locked out of the scanning loop).

MR 15 VFO (7)	145. 720 ні 432. 400 ні ым

VFO 432. 400 (7) _{≡ HI}	NFM Si 💷

PREFERENTIAL MEMORY SCAN

The **VX-8DR** also allows you to set up a "Preferential Scan List" of channels which you can "flag" within the memory system. These channels are designated by a blinking " \blacktriangleleft " icon when you have selected them, one by one, for the Preferential Scan List. When you initiate memory scanning on a channel with the blinking " \blacktriangleleft " icon appended, only those channels bearing the blinking " \blacktriangleleft " icon will be scanned. If you initiate scanning on a channel which does not have the blinking " \blacktriangleleft " icon appended, you will scan all channels including those with the blinking " \blacktriangleleft " icon appended.

Here is the procedure for setting up and using the Preferential Scan List:

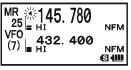

- 1. Recall the Memory Channel which you wish to add to the Preferential Scan List.
- 2. Press and hold the wenu key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 55: MEMORY SKIP.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 5. Rotate the **DIAL** knob to select "ONLY".
- 6. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

To initiate Preferential Memory Scan:

- Press the WMT key briefly to enter the Memory Recall ("MR") mode, if you are not using memories already.
- Rotate the DIAL knob to select any channel which has a blinking "◄" icon appended to the channel number.
- 3. Press and hold in the A/ key for one second to initiate Preferential Memory Scanning. Only the channels which

have a blinking "◀" icon appended to the channel number will be scanned.

MEMORY BANK SCAN

When the Memory Bank feature is engaged, the scanner sweeps only memory channels in the current Memory Bank. However, if the Memory Bank Link Scan feature is enabled, you may sweep the memory channels in several Memory Banks which you have selected.

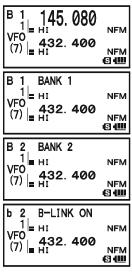

To enable the Memory Bank Link Scan feature:

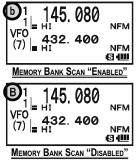

- Set the radio to the Memory Recall ("MR") mode by pressing the V/M key, if necessary.
- Press the (CAND) key to activate the "Memory Bank" mode. The "MR" indicator will be replaced by one of the Memory Bank numbers ("B 1" through "B24").
- 3. Press the wey followed by the CAND key. The Memory Bank number will begin to blink.
- Rotate the **DIAL** knob to select the first Memory Bank ("BANK 1" ~ "BANK24") you wish to sweep using Memory Bank Link Scan.
- Press the WMT Key briefly. A "B-LINK ON" notation will appear for two seconds on the display, indicating this Memory Bank will now be swept during Memory Bank Scan.
- 6. Repeat steps 4 and 5 above, to append the "B-LINK ON" notation to any other Memory Banks you wish to sweep.
- 7. Press the BAND key.
- 8. Now, press and hold in the (BAND) key for one second to initiate the Memory Bank Link Scan.
- 9. To remove a Memory Bank from the Memory Bank Link Scan, repeat steps 1 5 above, to change the "B-LINK ON" notation into "B-LINK OFF".

1) When the Memory Bank is enabled for Memory Bank scan, the Memory Bank number ("B x") indication turns into "bx" (capital "B" turns into small

2) You may enable/disable the Memory Bank scan via Set Mode Item 7: BANK LINK.

SCANNING

PROGRAMMABLE (BAND LIMIT) MEMORY SCAN (PMS)

This feature allows you to set sub-band limits for either scanning or manual VFO operation. For example, you might wish to set up a limit (in North America) of 144.300 MHz to 148.000 MHz to prevent encroachment into the SSB/CW "Weak Signal" portion of the band below 144.300 MHz. Here's how to do this:

- 1. Set the radio to the VFO mode by pressing the $\frac{DW MT}{V/M}$ key, if necessary.
- 2. Using the techniques learned earlier, store (per the above concept) 144.300 MHz into Memory Channel #L1 (the "L" designates the Lower sub-band limit).
- 3. Likewise, store 146.000 MHz into Memory Channel #U1 (the "U" designates the Upper sub-band limit).
- Press and hold in the (BAND) key for one second and rotate the DIAL knob while holding in the (BAND) key to select the desired PMS frequency pair (PMSxx).
- Release the (BAND) key to start scanning within the just-programmed range. The "VFO" label will be replaced by "PMS" and the Band number will be replaced by "Pxx". Tuning and scanning will now be limited within the just-programmed range.

VFO PMS 1	
	NFM
(7) 432. 400	NFM (S) (IIII)
PMS 145.000	
$\begin{array}{c c} \begin{array}{c c} PMS & 145.000 \\ P & I_{\exists} & HI \\ VFO & 432.400 \\ (7) & HI \end{array}$	NFM

- 50 pairs of Band Limit memories, labeled L1/U1 through L50/U50 are available. You therefore can set upper and lower operation limits on a number of bands, if you like.
- 7. To exit to normal operation, press the $\binom{DW MT}{(V/M)}$ key.

"PRIORITY CHANNEL" SCANNING (DUAL WATCH)

The **VX-8DR**'s scanning features include a two-channel scanning capability which allows you to operate on a VFO or Memory channel, while periodically checking a userdefined Memory Channel for activity. If a station is received on the Memory Channel which is strong enough to open the Squelch, the scanner will pause on that station in accordance with the Scan-Resume mode set via Menu Item 83: SCAN RESUME. See page 60.

Here is the procedure for activating Priority Channel Dual Watch operation:

- Press the <u>V/M</u> key briefly to enter the Memory Recall ("MR") mode, if you are not using memories already.
- 2. Press and hold in the **(BW)** key for one second, then rotate the **DIAL** knob to select the memory channel you wish to be the "Priority" channel.
- Press the (BAND) key. The "P" icon will appear to the right of the "MR" label, indicating it is the Priority channel.
- 4. Now set the **VX-8R** for operation on another memory channel, or on a VFO frequency.
- Press and hold in the WMT key for one second. The display will remain on the VFO or memory channel selected. However, every five seconds the VX-8DR will check the Priority Channel for activity. The "MR" label will be replaced by

"MDW" while operating on the Memory channel or the "VFO" label will be replaced by "VDW" while operating on the VFO mode.

6. If a station appears on the Priority Channel, the radio will pause on that channel, as described previously.

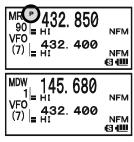

The receiving time interval (ratio) between the current channel (or VFO frequency) and Priority channel may be customized via Set Mode Item 72: PRI TIME.

To set the receiving time interval:

- 1. Press and hold the \underbrace{MENU} key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 72: PRI TIME.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired time interval. Available selections are 0.1sec - 0.9sec (0.1sec/step) and 1.0sec - 10.0sec (0.5sec/step).
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

The default condition for this Set Mode Item is "5.0sec".

"PRIORITY CHANNEL" SCANNING (DUAL WATCH)

PRIORITY REVERT MODE

During Priority channel operation (Dual Watch), a special feature is available which will allow you to move to the Priority Channel instantly, without waiting for activity to appear on the Priority Channel.

When this feature is enabled, and priority monitoring is engaged, just press the microphone's **PTT** switch. Operation will instantly revert to the Priority Channel.

To enable Priority Revert operation:

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 71: PRI RE-VERT.
- 3. Press the key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "ON".
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

71 72 73 74	PRI PRI PTT RPT	REVERT TIME DELAY ARS	
71	PRI	REVERT	64
	ON		
			6 📖

To disable Priority Revert operation, select "OFF" in step 4 above.

AUTOMATIC LAMP ILLUMINATION ON SCAN STOP

The **VX-8DR** will automatically illuminate the LCD Lamp whenever the scanner stops on a signal; this allows you to see the frequency of the incoming signal better at night. Note that this will, of course, increase battery consumption, so be sure to switch it off during the day (the default condition for this feature is "ON").

The procedure for disabling the Scan Lamp is:

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 81: SCAN LAMP.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "OFF".
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

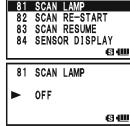

BAND EDGE BEEPER

The **VX-8DR** will automatically "beep" when a band edge is encountered during scanning (either in standard VFO scanning or during PMS operation). You may enable this feature (band edge beeper) when the frequency reaches the band edge while selecting the VFO frequency by the **DIAL** knob.

The procedure for enabling the Band-Edge Beeper is:

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 10: BEEP EDGE.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "ON".
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

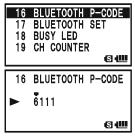

Bluetooth® OPERATION

Installation of the optional **BU-1** *Bluetooth*[®] Adapter Unit will enable, the **VX-8DR** to send/receive voice messages with the optional **BH-1A** or **BH-2A** *Bluetooth*[®] Headset via wireless links.

PAIRING

When using the **Bluetooth**[®] Headset for the first time, the **Bluetooth**[®] Headset and the **VX-8DR** must be paired.

- 1. Make sure that the **VX-8DR** and **BH-1A** (or **BH-2A**) are both off.
- 2. Press and hold in the 0 (**PWR**) switch for 2 seconds to turn the **VX-8R** on.
- 3. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 16: BLUETOOTH P-CODE.
- 5. Press the Key briefly to enable selection of this Set Mode Item.
- The default PIN code (6111) will appear. You may change the PIN code, if desired, before continuing with step 7.

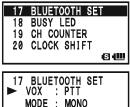

- 1) Press the $\frac{SHS SUTP}{MODE}$ key to enable changing of the PIN code.
- 2) Rotate the **DIAL** knob to set the first digit of the PIN code.
- 3) Press the MODE key to save the first digit of the PIN code and move on to the next place.
- 4) Repeat the previous steps to complete the PIN code. If you make a mistake, press the (BAND) key to move back to the incorrect number, then re-enter the correct number.
- Bring the BH-1A (or BH-2A) close to the VX-8DR, then press and hold in the POWER switch of the BH-1A (or BH-2A) until the LED indicator blinks red/blue alternately (approximately five seconds).
- 8. Press the $\frac{DW MT}{V/M}$ key to initiate the pairing.
- 9. If the pairing is successful (requires about 20 to 30 seconds), "§" icon will appear on the display of the **VX-8DR** and the LED indicator of the **BH-1A** (or **BH-2A**) will blink blue.
- 10. Press the **PTT** switch of the **VX-8DR** to save the new setting and return to normal operation.

ACTIVATION

- 1. Press and hold the went key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 17: BLUETOOTH SET.
- 3. Press the Key briefly to enable selection of this Set Mode Item.
- Rotate the **DIAL** knob to select the TX/RX switching circuit of the *Bluetooth*[®] function:

VOX: OFF: Disable the TX/RX switching circuit of the **Bluetooth**[®] function (RX only).

SAVE : OFF

ତେ 💷

VOX: PTT: Activates the *Bluetooth*[®] function for use with the PTT circuit.

VOX: VOX HIGH: Activates the **Bluetooth**[®] function with the VOX feature (VOX Gain: High).

- VOX: VOX LOW: Activates the **Bluetooth**[®] function with the VOX feature (VOX Gain: Low).
- 5. Press the key, then rotate the **DIAL** knob to select the receiver audio output mode of the *Bluetooth*[®] unit (this parameter is ignored when using the **BH-2A** *Bluetooth*[®] Headset):

MODE: STEREO: Outputs stereo receive audio while listening to the FM Broadcast band.

Note: When this mode is selected, the VOX function does not work even if the VOX function is selected in step 4. above. The TX/RX switching is performed by pressing the **PTT** switch.

MODE: MONO: Outputs monaural receive audio while listening to the FM Broadcast band.

- Press the key, then rotate the **DIAL** knob to select the Battery Saver function:
 - SAVE: ON: Activates the Battery Saver in the **BH-1A** (or **BH-2A**).

17	BLUE	T	DOTH	SET

	MODE		MONO)	
	SAVE	:	OFF		
					s III

If there has been no signal or key activity for 20 seconds, the Battery Saver automatically puts the **BH-1A** (or **BH-2A**) to "sleep", to conserve battery life. When a signal is received or the **PTT** switch is pressed, the **BH-1A** (or **BH-2A**) will wakeup and become active again.

Furthermore, if there has been no signal or key activity for 10 minutes, the **BH-1A** (or **BH-2A**) will turn off automatically.

SAVE: OFF: Disable the Battery Saver in the **BH-1A** (or **BH-2A**).

 If you wish to turn the *Bluetooth*[®] unit off to conserve transceiver battery power when you are not operating the *Bluetooth*[®] function, perform the following procedures, otherwise, skip to next step. Press the \bigcirc key, then rotate the **DIAL** knob to select the "POWR" parameter to "OFF".

8. Press the **PTT** switch of the **VX-8DR** to save the new setting and return to normal operation.

OPERATION

- When the BH-1A (or BH-2A) is correctly recognized by the VX-8DR, "^(*)" icon will appear on the display of the VX-8DR and the LED indicator of the BH-1A (or BH-2A) will blink blue.
- Adjust the receiver audio level using the [VOLUME(+)]/[VOLUME(-)] switches on the BH-1A (or BH-2A). Pressing the [VOLUME(+)] switch increases the receiver audio level. Pressing the [VOLUME(-)] switch decreases the receiver audio level.
- 3. Press the **PTT** switch on the **BH-1A** (or **BH-2A**) to transmit. Release the **PTT** switch to return to receive.
- You may adjust the microphone gain (Five steps) of the BH-2A by pressing the [VOLUME(+)]/[VOLUME(-)] switch while pressing and holding the PTT switch, if desired.

Pressing the **[VOLUME**(+)] switch while pressing and holding the **PTT** switch increases the microphone level. Pressing the **[VOLUME**(-)] switch while pressing and holding the **PTT** switch decreases the microphone level. When the microphone gain reaches maximum or minimum, a beep will be heard in the **BH-2A** speaker.

- 5. The communication range between the BH-1A (or BH-2A) and VX-8DR is around 1 m (3 ft). If you move out of range, a beep will be heard from the BH-1A (or BH-2A) to alert you. If you move back into range, the BH-1A (or BH-2A) will beep to alert you that you are back within range.
- 6. When the battery voltage of the **BH-1A** (or **BH-2A**) is low;
 - a. the LED will blink Red and Blue.
 - b. a beep will be heard from the **BH-1A** (or **BH-2A**).
 - c. the "S" icon on the **VX-8R** will be blinking fast.

Charge the **BH-1A**'s (or **BH-2A**'s) battery with the optional **CD-40** Charger Cradle.

When the BH-1A (or BH-2A) is correctly recognized, the VX-8DR's internal speaker and microphone are disabled.

OPERATING BAND	BATTERY LIFE (APPROX.)

				6

GPS OPERATION

The **VX-8DR** allows the display of your position (Longitude/Latitude) when using the optional FGPS-2 GPS Antenna Unit.

- Make sure that the transceiver is off. 1.
- 2. Connect the optional FGPS-2 GPS Antenna Unit to the MIC/SP jack of the transceiver via the optional MH-74A7A Waterproof Speaker Microphone or CT-136 GPS Antenna Adapter (see next page).
- Press and hold in the (b) (**PWR**) switch for 2 seconds to turn the transceiver on. 3.
- Press the MENU key until the GPS screen appears. 4.
- When the transceiver succeeds in receiving a valid GPS 5. signal, your current position (Longitude/Latitude), current time (UTC), and altitude will appear on the display. Rotate the **DIAL** knob (or press the $\boxed{}$ / $\boxed{}$ key) to scroll through additional lines of station text on the display.

The received satellite number appears at the lower right of compasses (In the example at the right, it is 4 satellites).

When receiving a signal from more than 3 satellites, the "" icon will appear on the display.

Advice: 1) When the **FGPS-2** GPS Antenna Unit is first turned on, it may take several minutes to compute a fix of your position. This is normal, as the GPS unit is downloading "almanac" information from the GPS satellites.

2) While the **VX-8DR** searches for a GPS signal, the compass icon does not appear on the display and the position information (Longitude/Latitude) blinks on the display.

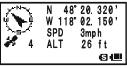

3) If the transceiver does not receive a valid GPS signal after three minutes have passed, you may be in a poor location for satellite reception, such as inside of a house or building; try moving to a less obstructed position.

- If you walk a few meters from your current location, your 6. course direction is displayed on the compass of the display and walking speed is displayed in the "SPD" column of the display.
- Press the ^{SYSSOTY?} key to toggle the GPS screen between "North Up" and "Course Up". 7. Your cause direction displays a black arrow in the "North Up" screen, and displays a white arrow in the "Cause Up" screen.
- To return to normal operation, press the MENU key several times until the normal screen 8. appears.

1) When the VX-8DR GPS signal is interrupted; such as when you enter into a an / tunnel, the compass icon disappears from the display but maintains the position 10 13 information (Longitude/Latitude) at the point where the GPS signal was lost.

2) When the FGPS-2 GPS Antenna Unit is activated, the current consumption increases approximately 40 mA. Therefore, battery life is reduced by approximately 20 % when the FGPS-2 GPS Antenna Unit is activated.

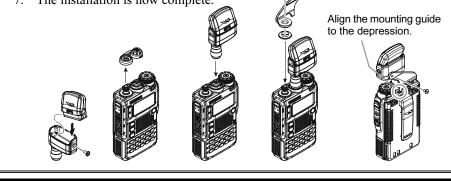

3) You may memorize your current position as plotted by the GPS (up to ten points can be saved) via the APRS/GPS Set Mode Item 21: MY POSITION. See page 165 for details.

FGPS-2 GPS Antenna Unit Installation

- □ Using the MH-74A7A Waterproof Speaker/Microphone
- 1. Remove the small screw affixing the Dummy Cap, then remove the Dummy Cap from the **MH-74**_{A7A}.
- 2. Install the **FGPS-2** to the **MH-74**ara as shown in illustration, then affix the **FGPS-2** using the small screw that was removed from the dummy cap.
- 3. Turn the transceiver off, remove the Rubber Cap from the **MIC/SP** jack of the transceiver.
- 4. Connect the Microphone plug to the **MIC/SP** jack of the transceiver, and then screw the ring of the Microphone plug tightly.
- 5. The installation is now complete.
- □ Using the CT-136 GPS Antenna Adapter
- 1. Install the **FGPS-2** to the **CT-136** as shown in the illustration, then affix the **FGPS-2** using the supplied screw.
- 2. Disconnect the antenna from the transceiver, and then remove the Rubber Cap from the transceiver.
- 3. Turn the transceiver off, connect the **CT-136** (with **FGPS-2**) to the **MIC/SP** jack of the transceiver, and then screw the ring of the Microphone plug tightly.
- 4. Insert the Mounting Plate and Plastic Plates to the antenna jack.
- 5. Align the mounting guide to the transceiver's depression, then affix the Mounting Plate to the **CT-136** using the supplied screw.
- 6. Connect the antenna to the antenna jack.
- 7. The installation is now complete.

VX-8DR OPERATING MANUAL

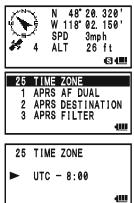

GPS OPERATION

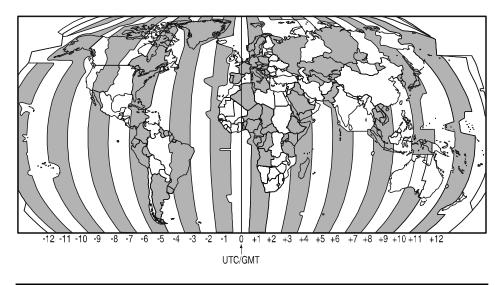

You may customize the Time Zone (Time Offset), Display Unit of the GPS screen, and GPS Datum for your own operating requirements via the APRS/GPS Set Mode.

SETTING THE TIME ZONE (TIME OFFSET)

Sets the time offset between your local time and UTC (Universal Time Coordinated or GMT: Greenwich Mean Time) shown on the display.

- 1. Press the MENU key several times until the GPS screen appears on the display.
- 2. Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- 3. Rotate the **DIAL** knob to select Set Mode Item 25: TIME ZONE.
- 4. Press the Key briefly to enable selection of this Set Mode Item.
- Rotate the **DIAL** knob to select the time offset from UTC. See illustration below to find your offset time from UTC. If "UTC +0:00" is assigned, the time is the same as UTC.
- 6. Press the **PTT** switch briefly to save the new setting and exit from the APRS/GPS Set Mode.

SELECTING THE DISPLAY UNITS OF THE GPS SCREEN

- 1. Press the MENU key until the GPS screen appears.
- Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 18: GPS UNIT.
- 4. Press the key briefly to enable adjustment of this Set Mode Item.
- 5. Rotate the **DIAL** knob to select the preferred unit for "Position" (.MMM' or 'SS").
- Press the key to change the cursor to "Speed", then rotate the **DIAL** knob to select the preferred unit (Km/h, mph, or Knot).
- Press the key to change the cursor to "Altitude", then rotate the **DIAL** knob to select the preferred unit (m or ft).
- 8. Press the **PTT** switch briefly to save the new setting and exit from the APRS/GPS Set Mode.

SELECTING THE MAP DATUM

While most operations (including APRS® operation) will utilize the default "WGS84" database of locations, you may use a different database.

Do not change the Map Datum while the GPS/APRS (described next chapter) in

- 1. Press the MENU key until the GPS screen appears.
- Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 16: GPS DATUM.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the database you wish to use. Available selections are WGS-84, Tokyo Mean, Tokyo Japan, Tokyo Korea, and Tokyo Okinawa.
- 6. Press the **PTT** switch briefly to save the new setting and exit from the APRS/GPS Set Mode.

in operation. The position indication will be incorrect.

APRS® OPERATION

The **VX-8DR** is equipped with a 1200/9600bps AX.25 Data Modem to enable APRS® (Automatic Packet Reporting System) operation. The Automatic Packet Reporting System (APRS®) is a software program and registered trademark of Bob Bruninga, WB4APR.

PREPARATIONS

Before performing any APRS® operations, set your callsign, symbol, and position (Longitude/Latitude) into the VX-8DR, and activate the AX.25 Data Modem via the APRS/ GPS Set Mode.

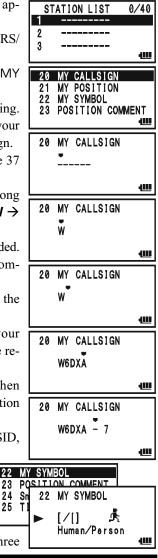

- 1. Press the MENU key repeatedly until "STATION LIST" appears on the display.
- 2. Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- 3. Rotate the **DIAL** knob to select Set Mode Item 20: MY CALLSIGN.
- 4. Press the MENU key briefly to enable Callsign programming.
- Rotate the **DIAL** knob or press the appropriate keys on your 5. keyboard to set the first letter or number in your callsign. Example 1: Rotate the DIAL knob to select any of the 37 available characters.

Example 2: Press the $9^{\text{SP BNK}}_{(9,\text{W})}$ key repeatedly to toggle among the five available characters associated with that key: $\mathbf{W} \rightarrow$ $X \rightarrow Y \rightarrow Z \rightarrow 9 \rightarrow W \cdots$

- Press the $\frac{SPS SQ TYP}{(MODE)}$ key to move on to the next character, if needed. 6.
- Repeat steps 5 and 6 as many times as necessary to com-7. plete your callsign.
- 8. If you make a mistake, press the $\frac{SCHENDON}{(BAND)}$ key to backspace the cursor and re-enter the correct letter/number. The callsign can consist of up to six characters. If your

callsign is less than six characters, enter spaces into the remaining digits.

- 9. Press the $\frac{\text{SPS SO TYP}}{|\text{MODE}|}$ key to move on to the next position, then rotate the **DIAL** knob to select the SSID (Secondary Station Identifier) if desired (see next page).
- 10. When you have completed entering your callsign and SSID, press the MENU key briefly to save the new setting.
- 11. Rotate the **DIAL** knob to select Set Mode Item 22: MY SYMBOL.
- 12. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 13. Rotate the **DIAL** knob to select the desired one of the three

22

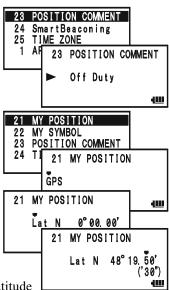

PREPARATIONS

preset icons. To choose another icon, press the ^{SC,MBND M} key, then rotate the **DIAL** knob to select the desired symbol after having selected the preset icon. When you have completed selecting the icon, press the (BAND) key again. You may choose 1 of 46 different symbols.

- 14. Press the *MENU* key briefly to save the new setting.
- 15. Rotate the **DIAL** knob to select Set Mode Item 23: POSITION COMMENT.
- 16. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 17. Rotate the **DIAL** knob to select the desired comment.
- 18. Press the *MENU* key briefly to save the new setting.
- 19. Rotate the **DIAL** knob to select Set Mode Item 21: MY POSITION.
- 20. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 21. When the optional FGPS-2 GPS Antenna Unit is connected to the transceiver, select "GPS" by rotating the **DIAL** knob and advance to the next step, otherwise, enter your position (Longitude/Latitude) manually.
 - 1) Select "Lat" by rotating the **DIAL** knob.
 - 2) Press the $\frac{SFS SQ TYF}{(MODE)}$ key to enable entering of your latitude using the Decimal system.
 - 3) Use the $\frac{SCHEMO D}{BAND}$ and $\frac{SPS SOTTF}{MODE}$ keys to navigation to each column and then use the **DIAL**

RECEIVING AN APRS BEACON

- Set the "B-Band" to the APRS frequency. 144.390 MHz is generally used in North America. If you don't know the APRS frequency of your country, ask your dealer. *The AX.25 modem cannot be activated in the "A-Band".*
- 2. Disable the Receiver Battery Saver via the Set Mode Item 79: SAVE RX. When the Receiver Battery Saver is turned on, the VX-8R can not reliably receive an APRS Beacon.
- 3. Press the MENU key several times until the "STATION LIST" screen appears on the display. The "STATION LIST" screen will save up to 50 stations. And the "STATION LIST" screen sorts each station according to the received time.
- 4. To confirm the details of the received beacon, rotate the DIAL knob (or press the A/ keys) to select the desired station, then press the AND key. The "Received Data and Time", "Distance and Direction of the station", and other information will be displayed.

When the "Status Text" is included in the Mic Encoder Station Beacon, the "a" icon appears at the upper right corner of the display.

STATION LIST CHARACTER

RECEIVED DATE & TIME DISTANCE TO THE RECEIVED STATION

- Rotate the **DIAL** knob (or press the keys) to scroll through additional lines or pages of the received information.
- 6. Press the (MODE) key to displays the "Raw" data of the received APRS beacon.
- 7. When the confirmation is finished, press the (BAND) key to return to the STATION LIST screen.

When the VX-8DR GPS signal is interrupted; such as when you enter into a tunnel, the dis-

✓ S→ play maintains the direction on the compass icon, distance to the received station and the position information (Longitude/Latitude) at the point where the GPS signal was lost.

APRS FILTER SETTING

The APRS filter option allows you to receive only specified types of the data.

- 1. Press the key several times until the STATION LIST screen appears on the display.
- 2. Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 3: APRS FILTER.
- 4. Press the key briefly to enable adjustment of this Set Mode Item.
- Press the ▲//▼ key to select the "Filter" you wish to exclude, then rotate the DIAL knob to select "OFF".
- 6. Repeat above steps and select "OFF" to any other filters you wish to exclude.
- 7. When you have completed your selection, press the **PTT** switch to save the new setting and exit to the STATION LIST screen.

TRANSMIT AN APRS BEACON

To transmit your APRS Beacon, just press the 🕅 kev.

The **VX-8DR** allows you to transmit your APRS Beacon automatically and repeatedly via the APRS/GPS Set Mode.

- Press the MENU key several times until the STATION LIST 1 screen appears on the display.
- 2 Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- 3. Rotate the **DIAL** knob to select Set Mode Item **14**: BEACON TX
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the desire "Auto" beacon mode. 5 **MANUAL** · Disable the Automatic Transmission Enable Automatic Transmission.

Transmits your APRS beacon in accordance with the interval determined by Set Mode Item 12: **BEACON INTERVAL.**

SMART: Enable Automatic Transmission.

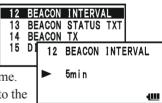

Transmits your APRS beacon in accordance with the interval determined by Set Mode Item **24: SmartBeaconings**. This selection is not appeared unless the Set Mode Item 24: SmartBeaconings is activated. See page 167 for details

- 6. Press the MENU key briefly, then rotate the **DIAL** knob to select Set Mode Item 12: BEACON INTERVAL.
- 7. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the desired interval time 8
- 9. Press the **PTT** switch to save the new setting and exit to the STATION LIST screen.

When the APRS Beacon mode is set to "OAUTO", the "O" icon will appear at the upper left corner of the display. Similarly, when the APRS Beacon mode is set to "OSMART", the "O" icon will appear at the upper left corner of the display.

> 1) You may toggle the APRS Beacon mode among "MANUAL", "AUTO", and "SMART" by pressing the MODE key.

2) When the APRS frequency is busy (Squelch is opened), the VX-8DR will not transmit an APRS Beacon in manual or automatic modes. Insure that the squelch is closed,

APRS® OPERATION

TRANSMIT AN APRS BEACON

You may store five Status Text Messages (up to the 60 characters for each memory), and you may transmit one of these Status Text Messages with the APRS Beacon.

- 1. Press the MENU key several times until the STATION LIST screen appears on the display.
- 2. Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- 3. Rotate the **DIAL** knob to select Set Mode Item **13: BEA-CON STATS TXT**.
- 4. Press the key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the Status Text register (1 5) you wish to store data to.
- 6. Press the MODE key briefly to begin comment entry into the selected resister.
- 7. Rotate the **DIAL** knob (or press the keyboard) to select the first character of the comment.
- 8. Press the $\frac{\text{SSSSITF}}{\text{MODE}}$ key to move to the next character.
- 9. Repeat steps 6 and 7 to program the remainder of the comment.
- 10. If you make a mistake, press the (BAND) key to back-space the cursor, then re-enter the correct character.
- 11. You may add/delete a character to a comment using the following technique.
 - If you want to clear any previous comments, press the ▲//▼ key to select the "ALL CLEAR" then press the ^{DW MT}/_{V/M} key.
 - 2) If you want to delete a previously-stored comment after the cursor, press the (▼) key to select "CLEAR" then press the ^{DW MT}/_{V/M} key.
 - If you want to add a character, press the ▲/ ▼ key to select "INSERT" then press the (V/M) key.

Note: Some transceivers cannot receive the full 60-character message. We recommend that you make the message as short as possible.

12. When you have completed your entry, press the **PTT** switch to save the new setting and exit to the STATION LIST screen.

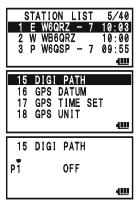

TRANSMIT AN APRS BEACON

DIGIPEATER PATH SETTING

The **VX-8DR** allows you to set up to eight digipeaters for the APRS Packet Path.

The **VX-8DR** is preset to "WIDE1-1" and "WIDE1-1, WIDE2-1" digi-path to insure that your transmitted APRS Beacon is repeated by the new-N paradigm digipeaters. We recommend that you use this setting by default.

- 1. Press the MENU key several times until the STATION LIST screen appears on the display.
- 2. Press and hold the (MENU key for one second to enter the APRS/ GPS Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 15: DIGI PATH.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the Pass Number (P1 P8) you wish to set.
- 6. Press the MODE key briefly to begin callsign entry into the selected path.
- 7. Rotate the **DIAL** knob (or press the keyboard) to select the first character of the callsign (with SSID) of the digipeater.
- 8. Press the (MODE) key to move to the next character.
- 9. Repeats steps 7 and 8 to program the remainder of the callsign.
- 10. If you make a mistake, press the BAND key to backspace the cursor, then re-enter the correct character.
- 11. When you have completed your entry, press the **PTT** switch to save the new setting and exit to the STATION LIST screen.

RECEIVING AN APRS MESSAGE

- Set the "B-Band" to the APRS frequency. 144.390 MHz is generally used in North America. If you don't know the APRS frequency for your country, ask your dealer. *The AX.25 modem is not activated in the "A-Band"*.
- 2. Disable the Receiver Battery Saver from Set Mode Item 79: SAVE RX. When the Receiver Battery Saver is turned on, the VX-8DR cannot reliably receive APRS Messages.
- 3. Press the key several times until the APRS MESSAGE screen appears on the display.

The APRS MESSAGE screen stores up to 30 messages. The messages are sorted according to the time the station message is received. The latest message is stored into the first message slot (First-in, First-out format).

- To confirm the received message, rotate the **DIAL** knob (or press the)/ keys) to select the desired message, then press the (RAND) key.
- 5. Rotate the **DIAL** knob (or press the)/ keys) to scroll through additional lines or pages of the received stations message.
- 6. Press the MODE key to displays the "Raw" data of the message.
- 7. When you have finished reading your message, press the (BAND) key to return to the APRS MESSAGE screen.

Delete the Received Message from the "APRS MESSAGE" Screen

- 1. Press the key several times until the APRS MESSAGE screen appears on the display.
- Rotate the **DIAL** knob (or press the)/ keys) to select the message to be deleted.
- Press the V/M key. The confirmation message (DELETE?) will appear on the display. Press the V/M key once more and the selected message will be deleted from the APRS MES-SAGE screen.

RECEIVING AN APRS MESSAGE

Message Group Setting

The Message Group option allows you to choose to receive only specific types of message information.

- 1. Press the MENU key several times until the APRS MESSAGE screen appears on the display.
- 2. Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 19: MSG GROUP.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 5. Press the ▲/ ▼ key to select the "Group" you wish to utilize (G1 ALL, G2 CQ, G3 QST, or G4 YAESU).

APRS MESSAGE

If you add a new message group code and/or bulletin group code, select "G5" (for message group code) or "B1" ~ "B3"
 (for bulletin group code) by rotating the **DIAL** know then provide the provided of the provided

(for bulletin group code) by rotating the **DIAL** knob, then press the $\frac{SPS SOTP}{MODE}$ key.

- Use the (MODE) and (BAND) keys to navigate to each column, then use the **DIAL** knob to select the desired characters/numbers in each column. Repeat for each column to complete the message (up to 9 characters) or bulletin (up to 5 characters).
- 8. When you have completed your selection, press the **PTT** switch to save the new setting and exit to the APRS MESSAGE screen.

TRANSMIT AN APRS MESSAGE

- 1. Press the MENU key several times until the APRS MESSAGE screen appears on the display.
- Press the $[HW_{RV}]$ key to enter the "EDIT" mode. 2.
- Any previously stored message may be cleared using the 3. following procedures.
 - 1) Press the BAND key
 - 2) Press the $(\frown)/(\bigtriangledown)$ key to select the "ALL CLEAR".
 - 3) Press the $\underbrace{V/M}_{V/M}$ key.
- 4. Enter the callsign (with SSID) of the station you wish to contact using the (BAND) / MODE key pad (select the cursor) or turn the **DIAL** knob (select the number/letter).
- 5. When you have completed entering the callsign (and SSID), press the (MODE) key briefly.
- Enter the message using the $\frac{SC MBNDD}{(BAND)} / \frac{SPS SQTYP}{(MODE)}$ key pad (select the 6. cursor) or turn the **DIAL** knob (select the number/letter). Available length is up to 67 characters. You may add/delete a message/character using the following procedure.
 - If you want to add a previously stored message (determined through APRS/GPS a. Set Mode item 6: APRS MSG TXT; see next page), press the \bigcirc / \bigcirc key to select the "MSG TXT 1" through "MSG TXT 5" then press the (V/M) key.
 - b. If you want to delete the message after the cursor, press the \triangle / \bigtriangledown key to select "CLEAR" then press the $\begin{bmatrix} DW & MT \\ V/M \end{bmatrix}$ key.
 - c. If you want to add a character, press the $\boxed{}$ / $\boxed{}$ key to select "INSERT" then press the V/M key.
- When the message entry is complete, press the $\bigotimes_{i=1}^{TXPO}$ key to 7. transmit the message and return to the APRS MESSAGE screen. The transmitted message is stored into the APRS MESSAGE screen.
- 8. When an acknowledgment packet ("ack") is received, the beeper will sound and "*" icon will appear on the display. If an acknowledgment packet ("ack") is not received, the APRS message is transmitted repeatedly five times, once each minute.
- 9. The remaining number of transmissions of the message is shown on the display. When there is no acknowledgment packet ("ack") even if the APRS message transmits five times, the "•" (period) icon (on the APRS MES-

TRANSMIT AN APRS MESSAGE

the display, instead of the remaining number of transmissions.

You may select the numbers and letters for the

 \sim callsign and message with the key buttons $\begin{pmatrix} \text{STEP} \\ 1 \end{pmatrix}$ through $\begin{pmatrix} \text{SPEBAK} \\ 9 \end{pmatrix}$, and $\begin{pmatrix} \text{RADIO} \\ 0 \end{pmatrix}$ in the same way as labeling memories.

STORE THE FIXED FORM MESSAGE

The **VX-8DR** allows you to store five fixed form messages (up to 16 characters for each message).

- 1. Press the key several times until the APRS MESSAGE screen appears on the display.
- Press and hold the MENU key for one second to enter the APRS/ GPS Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 6: APRS MSG TXT.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the Message register (1 5) you wish to store your message to.
- 6. Press the MODE key briefly to begin message entry into the selected resister.
- 7. Rotate the **DIAL** knob (or press the keyboard) to select the first character of the message.
- 8. Press the (MODE) key to move to the next character.
- 9. Repeats steps 7 and 8 to program the remainder of the message.
- 10. If you make a mistake, press the (BAND) key to backspace the cursor and re-enter the correct character.
- 11. When you have completed your message entry, press the **PTT** switch to save the new setting and exit to the APRS MESSAGE screen.

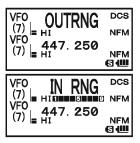

ARTSTM (Automatic Range Transponder System)

The ARTSTM feature uses DCS signaling to inform both parties when you and another ARTSTM-equipped station are within communications range. This may be particularly useful during Search-and Rescue situations, where it is important to stay in contact with other members of your group.

Both stations must set up their DCS codes to the same code number, then activate their ARTSTM feature using the command appropriate for their radio. Alert ringers may be activated, if desired.

Whenever you push the **PTT**, or every 25 (or 15) seconds after ARTSTM is activated, your radio will transmit a signal which includes a (subaudible) DCS signal for about 1 second. If the other radio is in range, the beeper will sound (if enabled) and the display will show "IN RANGE" as opposed to the out of range display "OUT RANGE" in which ARTSTM operation begins.

Whether you talk or not, the polling every 15 or 25 seconds will

continue until you de-activate ARTSTM. Every 10 minutes, moreover, you can have your radio transmit your callsign via CW, to comply with identification requirements. When ARTSTM is de-activated, DCS will also be deactivated (if you were not using it previously in non-ARTSTM operation).

If you move out of range for more than one minute (four pollings), your radio will sense that no signal has been received, three beeps will sound, and the display will revert to "OUT RANGE." If you move back into range, your radio will again beep, and the display will change back to the "IN RANGE" indication.

During ARTSTM operation, your operating frequency will continue to be displayed, but no changes may be made to it or other settings; you must terminate ARTSTM in order to resume normal operation. This is a safety feature designed to prevent accidental loss of contact due to channel change, etc.

BASIC ARTSTM SETUP AND OPERATION

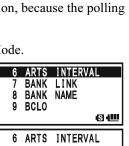

- 1. Set your radio and the other radio(s) to the same DCS code number, per the discussion on page 36.
- Press the wey, then press the ARTS (4 GH) key. You will observe the "OUT RANGE" display on the LCD below the operating frequency. ARTSTM operation has now commenced.
- Every 25 seconds, your radio will transmit a "polling" call to the other station. When that station responds with its own ARTSTM polling signal, the display will change to "IN RANGE" to confirm that the other station's polling code was received in response to yours.
- 4. Press the ARTS (A GH) key to exit ARTSTM operation and resume normal functioning of the transceiver.

ARTSTM won't work if you have used the Lock feature to disable the PTT!

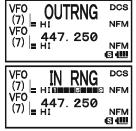

ARTSTM POLLING TIME OPTIONS

The ARTSTM feature may be programmed to poll every 25 seconds (default value) or 15 seconds. The default value provides maximum battery conservation, because the polling signal is sent out less frequently. To change the polling interval:

- 1. Press and hold the (MENU) key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 6: ARTS INTERVAL.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the desired polling interval (25sec or 15sec).
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

25sec

<u>ы</u>

ARTSTM (Automatic Range Transponder System)

ARTSTM ALERT BEEP OPTIONS

The ARTSTM feature allows two kinds of alert beeps (with the additional option of turning them off), to alert you to the current status of ARTSTM operation. Depending on your location and the potential annoyance associated with frequent beeps, you may choose the Beep mode which best suits your needs. The choices are:

- IN RANGE: The beeps are issued only when the radio first confirms that you are within range, but does not re-confirm with beeps thereafter.
- ALWAYS: Every time a polling transmission is received from the other station, the alert beeps will be heard.
- OFF: No alert beeps will be heard; you must look at the display to confirm current ARTSTM status.

To set the ARTSTM Beep mode, use the following procedure:

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 5: ARTS BEEP.
- 3. Press the key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired ARTS Beep mode (see above).
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

CW IDENTIFIER SETUP

The ARTSTM feature includes a CW identifier, as discussed previously. Every ten minutes during ARTSTM operation, the radio can be instructed to send "**DE** (*your callsign*) **K**" if this feature is enabled. The callsign field may contain up to 16 characters.

Here is how to program the CW Identifier:

- 1. Press and hold the $\overbrace{\text{MENU}}$ key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 21: CW ID.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select "ON" (to activate the CW ID function).
- Press the MODE key to enable programming your callsign.
 Press and hold the MODE key for two seconds to clear any previous callsign, if desired.
- 6. Rotate the **DIAL** knob or press the keyboard to set the first letter or number in your callsign.

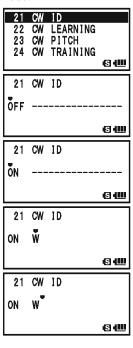

Example 1: Rotate the **DIAL** knob to select any of the 37 available characters.

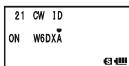

Example 2: Press the (9 WZ) key repeatedly to toggle among the five available characters associated with that key: $W \rightarrow X \rightarrow Y \rightarrow Z \rightarrow 9 \rightarrow W \cdots$

- 7. Press the MODE key to move on to the next character, if needed.
- 8. Repeat steps 6 and 7 as many times as necessary to complete your callsign. Note that the "slant bar" $(- \cdot \cdot)$ is among the available characters, should you be a "portable" station.
- 9. Press and hold the ^{ENG R/H}/_(M/R) key for two seconds to delete all data after the cursor that may have been previously stored.
- 10. If you make a mistake, press the BAND key to backspace the cursor, then re-enter the correct letter/number.
- 11. When you have entered your entire callsign, press the **MENU** key briefly to confirm the callsign, then press the **PTT** switch to save the settings and exit to normal operation.

 $1 \neq 1$) You may check your work by monitoring the entered callsign. To do this, $1 \neq 1$ repeat steps 1 - 3 above, then press the $1 \neq 1$ wey.

786 2) You may adjust the monitoring tone (CW sidetone pitch) via Set Mode Item 23: CW PITCH. Available selections are 400 - 1000 Hz (50 Hz/step).

SPECTRUM ANALYZER OPERATION

The Spectrum Analyzer allows viewing operating activity on channels above or below the current operating channel in the VFO mode.

The display indicates the relative signal strength on channels immediately adjacent to the current operating frequency.

The Spectrum Analyzer feature can be activated only on the "A-Band" while the VX-8DR is in the "Mono" band operation.

Three basic operating modes for the Spectrum Analyzer are available:

1 Time: In this mode, the transceiver sweeps the current band once.

CONTINUOUS: In this mode, the transceiver sweeps the current band repeatedly until the $\frac{DW MT}{(V/M)}$ key is pressed, or the Spectrum Analyzer is turned off.

Full Time: This mode is activated similar to a "CONTINUOUS" mode. However, the transceiver outputs the audio of the center frequency ($\mathbf{\nabla}$) from a speaker when the Spectrum Analyzer is activated between 30 ~ 580 MHz (except FM Broadcast Band).

SETTING UP THE SPECTRUM ANALYZER MODE:

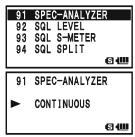

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 91: SPEC-ANALYZER.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired Spectrum Analyzer mode (see above).
- 5. Press the **PTT** switch momentarily to save the new setting and exit to normal operation.

TO ACTIVATE THE SPECTRUM ANALYZER:

- 1. Set the radio to the VFO mode on the "A-Band" in the "Mono" band mode.
- Press the key, then press the BTUN key to activate the Spectrum Analyzer.
- When the Spectrum Analyzer is activated, press the ▲ or
 ♦ key to change the visible bandwidth. Available selec-

tions are ± 5 , ± 9 , ± 16 , ± 24 , and ± 50 channels (default: ± 16 channels). The visible bandwidth, however, depends on the selected channel step size, so match the default channel steps with the amateur band you are using.

To turn the Spectrum Analyzer off and operate on the center (displayed) channel, press the V/M key to stop the sweep, if needed, then press the W key followed by BP-AMA (BTU) key.

CHANNEL COUNTER OPERATION

The Channel Counter allows measuring of the frequency of a nearby transmitter, without knowing that frequency in advance. The frequency can be measured by bringing the **VX-8DR** close to the transceiver which is transmitting.

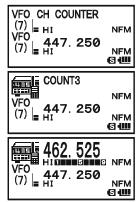

The **VX-8DR** performs a high-speed search within a ± 5 MHz range from the frequency displayed on the LCD. When the strongest signal in that range is identified, the **VX-8DR** displays the frequency of that (strongest) signal, and writes it into the special "Channel Counter" memory.

Note: This Channel Counter is designed to provide an *indication* of the operating frequency of the incoming signal, one that is close enough to allow the user to tune precisely to the other station's frequency. This feature is not, however, designed to provide a precise determination of the other station's frequency.

f The Channel Counter feature can only be activated while the VX-8DR is oper *d* ating in the "A-Band".

- 1. Set the "A-Band" to the VFO mode in the predicted frequency range for the transmitter to be measured, then set the "A-Band" to the "Operating" band (indicated in *large* characters).
- 2. Bring the **VX-8DR** into close proximity to the transmitter to be measured.
- Rotate the **DIAL** knob, while pressing and holding in the MODE key, to select the "CH COUNTER" mode.
- 4. Release the MODE key to begin the Channel Counter; the frequency of the nearby station will be displayed. When the channel counter is active, a 50 dB receiver front-end attenuator will be engaged. Therefore, only stations in close proximity may have their frequencies measured using this feature.
- 5. If it isn't possible to determine the signal's frequency, the "- NO - -" notation appears for two seconds, then the transceiver will return to the frequency on which you were operating when you started Channel Counter operation.
- When you are finished, press the MODE key. The radio will exit from Channel Counter operation.

SETTING THE CHANNEL COUNTER SWEEP WIDTH

You may change the bandwidth of the Channel Counter. Available selections are $\pm 5, \pm 10, \pm 50$, and ± 100 MHz (default: ± 5 MHz).

Here is the procedure for setting the Channel Counter Bandwidth:

- 1. Press and hold the (MENU) key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 19: CH COUNTER.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired bandwidth (see above).
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

SMART SEARCH OPERATION

The Smart Search feature allows you to load frequencies automatically according to where activity is encountered by your radio. When Smart Search is engaged, the transceiver will search above and below your current frequency, storing active frequencies as it goes (without stopping on them even briefly); these frequencies are stored into a special Smart Search memory band, consisting of 31 memories (15 above the current frequency, 15 below the current frequency, plus the current frequency itself).

Two basic operating modes for Smart Search are available:

- SINGLE: In this mode, the transceiver will sweep the current band once in each direction starting on the current frequency. All channels where activity is present will be loaded into the Smart Search memories; whether or not all 31 memories are filled, the search will stop after one sweep in each direction.
- CONTINUOUS: In this mode, the transceiver will make one pass in each direction as with One-Shot searching; if all 31 channels are not filled after the first sweep, however, the radio will continue sweeping until they are all filled.

The Smart Search feature can only be activated while the VX-8DR is operating in the Mono band mode.

SETTING THE SMART SEARCH MODE

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 88: SMART SEARCH.
- 3. Press the key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired Smart Search mode (see above).
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

STORING SMART SEARCH MEMORIES

- 1. Set the radio to the VFO mode in the "Mono" band mode. Be sure that you have the Squelch adjusted properly (so that band noise is quieted).
- Rotate the **DIAL** knob, while pressing and holding in the MODE key, to select the "SMART SEARCH" mode.
- 3. Release the MODE key to begin the Channel Counter.
- 4. As active channels are detected, you will observe the number of "loaded" channels increasing in the regular memory channel window.
- 5. Depending on the mode you set for Smart Search operation ("SINGLE" or "CON-TINUOUS"), the Smart Search scan will eventually terminate, and the LCD will revert to Smart Search Memory Channel "C."

88 89 90 91	SMART SEARCH S-METER SYMBOL Speaker Out Spec-Analyzer States
88	SMART SEARCH
	SINGLE

- 6. To recall the Smart Search memories, rotate the **DIAL** to choose from among the Smart Search memories.
- 7. To return to normal operation, press the $\frac{\text{systart}}{\text{MODE}}$ key.

Smart Search is a great tool when visiting a city for the first time. You don't need to spend hours looking up repeater frequencies from a reference guidebook...just ask your VX-8DR where the action is!

GENERAL

The **VX-8DR** provides a message feature, which sends a message (up to 16 characters) instead of sending a voice. 20 different messages can be programmed, any one of them can be selected and transmitted with your ID.

Note

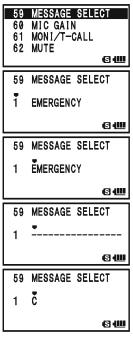

- The Message Feature requires that all members (1) use the Yaesu VX-8DR, VX-8R, VX-3R, or FTM-10R/SR transceiver, (2) store the same messages into the message slots, (3) store the same member list into the member box, and (4) set the same frequency.
- \square Does not send the Message through a repeater.

PROGRAMMING A MESSAGE

(Requires all members set the same messages into the same message slots in the same order.)

The **VX-8DR** has 20 message slots, including a factory-programmed message (EMER-GENCY). The factory-programmed message of course can be overwritten at any time with personalized messages.

- 1. Press and hold the \underbrace{MENU} key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 59: MES-SAGE SELECT.
- Press the key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired Message slot into which you wish to store a message. The LCD displays the previously stored message.
- 5. Press the MODE key briefly to enable programming of the message.
- 6. Press and hold in the HARM key for one second to clear the previously stored message, if desired.
- 7. Rotate the **DIAL** knob or press the keyboard to set the first character of the message you wish to store.
 - *Example 1*: Rotate the **DIAL** knob to select any of the 61 available characters.
 - *Example 2*: Press the $\boxed{2 \text{ ABC}}$ key repeatedly to toggle among the four available characters associated with that key: $\mathbf{a} \rightarrow \mathbf{b} \rightarrow \mathbf{c} \rightarrow \mathbf{A} \rightarrow \mathbf{B} \rightarrow \mathbf{C} \rightarrow \mathbf{2} \rightarrow \mathbf{a} \cdots$
- 8. Press the $\frac{SPS SQ TYP}{(MODE)}$ key to move on to the next character, if needed.

59

1 C

PROGRAMMING A MESSAGE

- 9. Repeat steps 7 and 8 above to complete the message (up to 16 characters). If you make a mistake, press the **EAND** key to move back to the incorrect character, then re-enter the correct character.
- 10. Press and hold in the HARM key for one second to delete all data after the cursor that may have been previously stored.
- 11. When the Message entry is complete, press the key briefly to save the new setting.
- 12. If you wish to store another message, repeat steps 3 through 11 above.
- 13. Press the **PTT** switch to exit to normal operation.

PROGRAMMING A MEMBER LIST

(Requires all members set the same member list (includes own ID) into the same member box in the same order.)

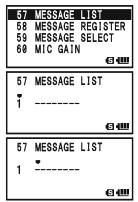

It is possible to register a maximum of 20 persons, in order to identify the sender. When you receive a message transfer, you will know who sent the message by the ID in the register. In addition, your ID can be sent to the members when you transmit any messages to them.

If all the members share the register information (ID), the message sender ID will be shown on the display when receiving the message.

Even if no IDs are registered, the message function can work. However, in this case, "MESSAGE1" though "MESSAGE2O" will be displayed when receiving a message.

We recommend that you use your call sign for the member list.

- 1. Press and hold the $\overbrace{\text{MENU}}$ key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 57: MES-SAGE LIST.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the desired member box (1 ~ 20) into which you wish to store a member ID. The LCD will display the previously stored personal ID.
- 5. Press the MODE key briefly to enable programming of the personal ID.
- 6. Press and hold in the ^{EMGR/H}/_(M/R) key for two seconds to clear the previously stored personal ID, if desired.
- 7. Rotate the **DIAL** knob or press the keyboard to set the first

6

Sending a Message

The registered message can be sent to the members who are receiving on the coordination frequency. When a message is sent, the transmitter's ID will be sent also, and the receiver can identify who sent the message.

The "Personal ID" setting (described in the previous paragraph) is required for the transmitter's ID to be shown with the received message.

- 1. Set the radio to the coordination frequency.
- 2. Press and hold the (MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 59: MES-SAGE SELECT.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 5. Rotate the **DIAL** knob to select the desired Message slot you wish to send.
- 6. Press the **PTT** switch to exit to normal operation.
- Press the wey, then press the MODE key. This provides a "Short-cut" to Menu Item 95: SQL TYPE.
- 8. Rotate the **DIAL** knob until "MESSAGE" appears on the display; this activates the Message feature.
- 9. Press the **PTT** switch to exit from the Menu mode and activate the Message feature. When the Message feature is activated, the "MSG" notation will appear on the display.
- 10. Press the **PTT** switch again (without speaking into the microphone) to transmit the selected message on the coordination frequency. It takes approximately 6 seconds to transmit the message.

Message Feature

RECEIVING A **M**ESSAGE

- 1. Set the radio to the coordination frequency.
- Press the wey, then press the MODE key. This provides a "Short-cut" to Set Mode Item 95: SQL TYPE.
- 3. Rotate the **DIAL** knob until "MESSAGE" appears on the display; this activates the Message feature.
- 4. Press the **PTT** switch to exit from the Set Mode and activate the Message feature. When the Message feature is activated, the "MSG" notation will appear on the display.

- 5. When you receive a message: a beep sounds, the **LED** light blinks white, and ["Message" FROM "sending station's ID"] scrolls on the display.
- 6. Press any key (except VOL key) to clear the received message, and wait for a new message.

To disable the Message feature, repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step 3 above.

If you enable the CTCSS/DCS/EPCS Bell feature (described previously), you can tell that you are receiving a message by the ringing "bell" sound alert.

EMERGENCY CHANNEL OPERATION

The VX-8DR includes an "Emergency" feature, which may be useful if you have someone monitoring on the same frequency as your transceiver's UHF "Home" channel. See page 49 for details on setting the Home channel.

The "Emergency" feature is activated by pressing and holding in the $[HU_{RV}]^{EMGR/H}$ key for one second.

When this is done, (A) the radio is placed on the UHF amateur band Home channel, (B) it emits a loud "Alarm" sound (the volume is controlled by rotating the **DIAL** knob while pressing and holding the vol key), (C) it flashes the **LED** light in white, (D) if you press the **PTT** switch, you will disable the Emergency feature temporarily. You can then transmit on the UHF Home channel, and (E) two seconds after the **PTT** switch release, the Emergency feature will resume.

To disable the "Emergency" feature, press and hold the $\frac{\text{EMG R/H}}{|\text{FM}/\text{Ry}|}$ key for one second or turn the radio Off by pressing and holding in the 🔘 (**PWR**) switch for one second.

Use this feature if you are out for a walk and want a quick way of alerting a family member to a dangerous situation. The alarm sound may discourage an attacker and allow you to escape.

1) Be sure to arrange with a friend or family member to be monitoring on the same frequency, as there will be no identification sent via the Emergency alarm sound. And do not transmit the alarm tone except in a true emergency! 2) The LED light may be changed to another function via Set Mode Item 34: EMER-

GENCY SELECT; see page 147.

EMERGENCY FEATURE

EMERGENCY AUTOMATIC ID (EAI) FEATURE

The Emergency Automatic ID (EAI) feature can be used to aid in searching for persons who are incapacitated in disasters like earthquakes, especially search-and-rescue personnel who may have become injured in a debris field. When using the EAI feature, a searcher transmits a unique command (CTCSS tone pair), which will automatically cause the injured party's radio to transmit, so others may perform direction-finding and effect a rescue. The incapacitated party may not be able to speak or even press the **PTT** switch. The callsign of the incapacitated person will also be transmitted, to assist the rescue team.

If an emergency group is working in a dangerous area, all members should engage the EAI feature on their transceiver, so that others can assist a fallen team member, if necessary.

The Emergency Automatic ID (EAI) Feature has two operating modes: (1) Interval mode and (2) Continuous mode.

In the Interval mode (when the **VX-8DR** receives the CTCSS tone pair), the radio will automatically transmit a brief (0.5 second) beep tone every 2.5 seconds until the EAI timer expiration.

In the continuous mode, the radio will automatically transmit continuously (with maximum microphone gain), until the EAI timer expiration.

The EIA is activated when the CTCSS tone pair stored in the Receiving Pager Code Memory (configured via Set Mode Item 67: PAGE CODE-RX) is received for 5 seconds on the frequency, which is stored in Memory Channel "EAI". It is NOT necessary for the incapacitated person to press the **PTT** switch.

If your call sign is stored in the radio and the CW identifier is enabled via Set Mode Item 21: CW ID, the radio will transmit your callsign on the air when the EAI feature is first activated by the remote page, and every 10 minutes thereafter. The "callsign" ID can be changed to any desired sequence of characters, such as a name. After sending the callsign or name, the radio will repeatedly transmit three tones for a user-defined period of time (between 1 and 30 minutes). The callsign or name will be transmitted every 10 minutes.

The Emergency Automatic ID (EAI) Feature requires that you (1) store the CTCSS Tone Pair into the Receiving Pager Memory (see page 40 for procedure), and (2) store the desired UHF coordination frequency into Memory Channel "EAI" (see page 47 for procedure).

EMERGENCY AUTOMATIC ID (EAI) FEATURE

SELECTING THE EAI MODE AND ITS TRANSMIT TIME

- Press and hold the MENU key for one second to enter the Set Mode. 1.
- 2. Rotate the **DIAL** knob to select Set Mode Item 33: EAI TIME.
- Press the MENU key briefly to enable adjustment of this Set 3. Mode Item.
- 4. Rotate the **DIAL** knob to select the desired EAI mode (Interval EAI "INT" or Continuous EAI "CON") and transmit time (1-10, 15, 20, 30, 40, and 50 minutes).
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

ACTIVATING THE EAI FEATURE

- Press and hold the MENU key for one second to enter the Set Mode. 1.
- Rotate the **DIAL** knob to select Set Mode Item 32: EAI. 2.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "ON" (thus activating the EAI feature).
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation (with EAI feature "ON").

When the EAI feature is activated, the "EAI" icon and the Band

Number (or memory channel number) will appear alternately in the Memory Channel Number Display Slot of the display.

To disable the EAI feature, just repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step "4" above.

The VX-8DR will ignore the EAI feature when (1) the squelch is open, (2) there is an incoming signal on the operating frequency, (3) the operating frequency is the same as the frequency which is stored in the Memory Channel "EAI," or (4) a VHF frequency is stored in Memory Channel "EAI."

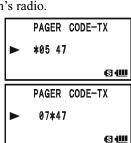

EMERGENCY AUTOMATIC ID (EAI) FEATURE

TO LOCATE AN UNRESPONSIVE OPERATOR USING THE EAI FEATURE

- Recall the Memory Channel "EAI" (must be the same as the 1. searched person's radio), which is found in the next to the last "regular" memory channel.
- (7) **447**. 250 2. Set the CTCSS tone pair to the same CTCSS tone pair stored in the Receiving Pager Code Memory of the missing person's radio.
 - 1) Press the \boxed{BW} key, then press the $\frac{code}{2 \text{ ABC}}$ key. This provides a "Short-cut" to Set Mode Item 68: PAGE CODE-TX.
 - 2) Rotate the **DIAL** knob to select the first tone.
 - 3) Press the MODE key.
 - 4) Rotate the **DIAL** knob to select the second tone.
 - 5) Press the $\frac{\text{code}}{2\text{ABC}}$ key to save the new setting and exit from setting mode.
- 3. Press and hold in the **PTT** switch for five seconds. If the EAI signal is received by a VX-8DR transceiver programmed with matching EAI CTCSS tones the EAI feature will activate. The lost operator's radio will beep loudly, and its transmitter will respond repeatedly. You may now begin direction-finding efforts.
- The ATT (Front End Attenuator) is often useful in locating 4. the missing person's radio, as peaks in weaker signals are more easily observed. You may select the ATT level "ATT 1 (10 dB)," "ATT 2 (50 dB)," and "ATT OFF" by pressing the (BAND) key to reduce the signal.
- 5. Press the $\frac{DW MT}{V/M}$ key to exit to normal operation.

GENERAL

The **VX-8DR** can be used to access a "node" (repeater or base station) which is tied into the Vertex Standard WIRES[™] (Wide-Coverage Internet Repeater Enhancement System) network, operating in the "SRG" (Sister Radio Group) mode. Details may be found at the WIRES-II Web site: http://www.vxstd.com/en/wiresinfo-en/. This feature may also be used to access other systems, as described below.

SRG ("SISTER RADIO GROUP") MODE

- Press the ^{™PO} (𝔅) key to activate the Internet Connection feature. The "𝔅" icon will appear in the lower left corner of the display.
- Rotate the **DIAL** knob, while pressing and holding in the ^{IXPO} key, to select the access number ("DTMF O" - "DTMF 9", "DTMF A", "DTMF B", "DTMF C", "DTMF D", "DTMF *", "DTMF #") corresponding to the WIRESTM repeater to which you wish to establish an Internet link (ask your re-

VF0 (7) ■ HI VF0 (7) ■ HI (7) ■ HI HI 8 8	NFM NFM
VFO DTMF 1 (4) _{= HI} VFO 447. 250 (7) _{= HI}	NFM NFM

peater owner/operator if you don't know the access numbers in the network). Now press the **PTT** switch to exit from the selection mode.

- 3. With the Internet Connection feature activated (as in step 1 above), the **VX-8DR** will generate a brief (0.1 second) DTMF tone according to your selection in step 2. This DTMF tone is sent at the beginning of every transmission to establish or maintain the link to the remote WIRESTM repeater operating in the SRG mode.
- To disable the Internet Connection feature, press the ^{TXPO} (𝔅) key again (The "𝔅" icon disappear from the display.

If other users report that you always have a DTMF "beep" at the beginning of each transmission, and you are not operating in conjunction with Internet access, disable this function via step 4 above.

INTERNET CONNECTION FEATURE

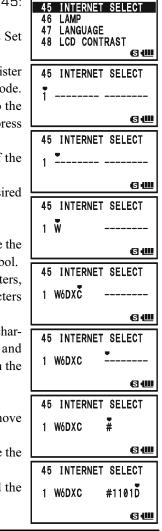

FRG ("FRIENDLY RADIO GROUP") MODE

You may access other Internet Link Systems (including WIRES[™] in the FRG mode) that use a DTMF string for access.

PROGRAMMING THE FRG CODE

Load the DTMF tones which you wish to use for Internet-link access into an Internet Memory Register. For purposes of this example, we will use "#1101D" as the access code of the W6DXC node.

- 1. Press and hold the (MENU) key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 45: INTERNET SELECT.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the DTMF Memory register ("1" "64") into which you wish to store the access code.
- 5. If you wish to attach an alpha/numeric name "Tag" to the Internet Memory, proceed to the next step; otherwise press the GAND key then skip to step 13.
- 6. Press the (MODE) key briefly to enable programming of the name tag.
- 7. Rotate the **DIAL** knob to select the first digit of the desired label.
- 8. Press the $\frac{\text{SPS SOTYP}}{\text{MODE}}$ key to move to the next character.
- 9. If you make a mistake, press the BAND key to back-space the cursor, then re-enter the correct letter, number, or symbol.
- 10. Repeat steps 7 through 9 to program the remaining letters, numbers, or symbols of the desired label. Eight characters may be used in the creation of a label.
- When you have programmed a label that is less than 8 characters, press the (MODE) key *twice* to confirm the label and enable storing the access code; otherwise, just program the 8 character label and press the (MODE) key *one time*.
- 12. Rotate the **DIAL** knob to select "#".
- 13. Press the MODE key briefly to accept the first digit and move to the second digit of the DTMF string.
- 14. If you make a mistake, press the (RAND) key to backspace the cursor, then re-enter the correct letter or number.
- 15. Repeat steps 12 through 14 until you have completed the access code ("#1101D").

FRG ("FRIENDLY RADIO GROUP") MODE

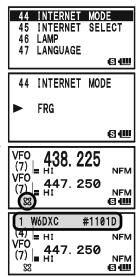

- 16. When you have stored an access code that is less than 8 digits, press the more key twice to confirm the code and enable storing the access code; otherwise, just enter the 8 digits and press the more key one time.
- 17. Repeat steps 4 through 16 to store other access codes, if so desired.
- 18. Press the **PTT** switch to save the settings and exit to normal operation.

OPERATION (ACCESSING AN FRG NODE)

- 1. Press and hold the (MENU) key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 44: INTERNET MODE.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to set this Set Mode Item to "FRG" (thus activating the "Other Internet Link System" mode).
- 5. Press the **PTT** switch to save the new settings.
- Press the (☆) key briefly to activate the Internet Connection feature. The "♥" icon will appear in the lower left of the display.
- Rotate the **DIAL** knob while pressing the ^{TXF0} (S key to select the Internet Memory register number ("1" "64") corresponding to the Internet link repeater to which you wish to establish an Internet link, then press the **PTT** switch briefly to lock in the selected access number.

9. To return to the WIRES[™] SRG mode, repeat steps 1 - 5 above, selecting "SRG" in step 4.

DTMF OPERATION

The **VX-8DR**'s keypad allows easy DTMF dialing for Autopatch, repeater control, or Internet-link access purposes. Besides numerical digits [**0**] through [**9**], the keypad includes the [*****] and [**#**] digits, plus the [**A**], [**B**], [**C**], and [**D**] tones often used for repeater control.

MANUAL DTMF TONE GENERATION

You can generate DTMF tones during transmission manually.

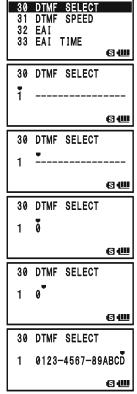

- 1. Press the **PTT** switch to begin transmission.
- 2. While transmitting, press the desired numbers on the keypad.
- 3. When you have sent all the digits desired, release the **PTT** key.

DTMF AUTODIALER

Nine DTMF Autodial memories are provided, allowing you to store telephone numbers for autopatch use. You can also store short autopatch or Internet-link access code streams to avoid having to send them manually.

Here is the DTMF Autodial storage procedure:

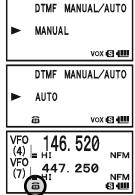

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 30: DTMF SELECT.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the DTMF Memory register (1 - 10) into which you wish to store this DTMF string.
- 5. Press the MODE key briefly to begin DTMF Memory entry into the selected register.
- 6. Press and hold in the (MRV) key for two seconds to clear the previously-stored data, if desired.
- Rotate the **DIAL** knob to select the first digit of the DTMF string. Selectable entries are O 9, A D, ★, and #. You may select "-" to store a "Pause", if needed.
- 8. Press the (MODE) key to move to the next character.
- 9. Repeats steps 7 and 8 to program the remaining the DTMF string.
- 10. Press and hold in the $\frac{EMG R/H}{MM_{RV}}$ key for two seconds to delete the previously-stored data after the cursor.
- 11. If you make a mistake, press the BAND key to back-space the cursor, re-enter the correct number.
- 12. Press the **PTT** switch briefly to save the new setting and exit to normal operation. To store other numbers, repeat this process, using a different DTMF memory register.

You may check your work by monitoring the entered DTMF string. To do this, repeat steps 1 - 4 above, then press the wey.

To send a telephone number:

- Press the key, then press the defined key. This provides a "Short-cut" to Set Mode Item 29: DTMF MANUAL/AUTO.
- 2. Rotate the **DIAL** knob to select "AUTO" (to activate the DTMF Autodialer function).
- Press the PTT switch to exit to normal operation and activate the DTMF Autodialer function (the "a" icon will appear).
- 4. In the Autodialer function mode, first press the **PTT** key, then press the numerical key (<u>step</u> through <u>step</u>, and <u>nable</u>, representing "10") corresponding to the DTMF memory string you wish to send. Once the string begins, you may release the **PTT** key, as the transmitter will be held "on the air" until the DTMF string is completed.

To disable the DTMF Autodialer, just repeat the above procedure, rotating the **DIAL** knob to select "MANUAL" in step "2" above.

1) You can change the DTMF Autodialer sending speed, using Set Mode Item 31: DTMF SPEED, see page 146 for details.

2) You can also set a longer delay between the time your transmitter is keyed and the first DTMF digit is sent, using Set Mode Item 28: DTMF DELAY, see page 146 for details.

CW LEARNING FEATURE

The **VX-8DR** provides a CW learning feature, which sends the designated Morse Code via the sidetone (heard in the speaker) to help your CW learning.

- Press and hold the MENU key for one second to enter the Set Mode. 1.
- 2. Rotate the **DIAL** knob to select Set Mode Item 22: CW LEARNING.
- 3. Press the (MENU) key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the Training mode (displayed in fine print at the upper edge of the LCD):

ALPHA: Sends the Alphabet characters ALPHA AUTO: Sends the Alphabet characters (move to next character automatically)

NUMBER: Sends the Numeric characters

NUMBER AUTO: Sends the Numeric characters (move to ne ally) SYMBL: Sends the Symbol characters

SYMBL AUTO: Sends the Symbol characters (move to ne ally)

- 5. Press the \bigcirc key to change the cursor to "CHR", then rotation elect the CW code which you want to learn.
- Press the \bigcirc key to change the cursor to "SPED", then 6. rotate the **DIAL** knob to select the Morse speed. You may select the units of the code speed in either "CPM (characters per minute)" or "WPM (Words per minute)" by using the **DIAL** knob from Set Item "FORM".
- 7. Press the vertex to change the cursor to "REPT", then rotate the **DIAL** knob to select the sending repetition (1 - 9).
- 8. Press the \checkmark key to change the cursor to "PTCH", then rotate the **DIAL** knob to adjust the CW sidetone pitch (400 - 1000 Hz, 50 Hz/step).
- 9. Press the \bigcirc key to change the cursor to "LED", then rotate the **DIAL** knob to switch the flashing of the (white) LED light "on" and "off".
- 10. Press the **w** key to begin generating the selected code characters the designated number of times (Only the speaker CW sidetone is heard, the radio does not transmit).
- 11. You may adjust the CW sidetone audio level by rotating the **DIAL** knob while pressing and holding the **VOL** key.
- 12. If one of the "AUTO" modes is not selected in step 4 above, press the wey to send again, or select another code by rotating the **DIAL** knob from "CHR" item and press the **G** key to begin generation.
- 13. To stop CW generation, press the **GW** key again.
- 14. To disable CW learning feature, press the **PTT** switch.

The "CPM" selection is based on the international "PARIS" standard, which stipulates five characters per word.

CW TRAINING FEATURE

The **VX-8DR** provides another CW learning feature; call it a CW Training feature, which sends random Morse Code via the sidetone (heard in the speaker), so you can improve your CW proficiency.

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 24: CW TRAINING.
- Press the key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the Training mode (displayed in fine print at the upper edge of the LCD):
 - ALPHA 5CHR: Sends five Alphabet characters only
 - ALPHA REPT: Sends Alphabet characters only (Repeatedly)

NUMBER 5CHR: Sends five Numeric characters only

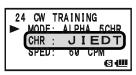

NUMBER REPT: Sends Numeric characters only (Repeatedly)

- MIX 5CHR: Sends five Alphabet, Numeric, "?", and "/" characters (Mixed)
- MIX REPT: Sends Alphabet, Numeric, "?", and "/" characters (Mixed, Continuously in groups of five)
- Press the vector key to change the cursor to "SPED", then rotate the DIAL knob to select the Morse speed. You may select the units of the code speed between "CPM (characters per minute)" and "WPM (Words per minute)" by the DIAL knob from Set Item "FORM".
- 6. Press the wey to change the cursor to "PTCH", then rotate the **DIAL** knob to adjust the CW sidetone pitch (400 1000 Hz, 50 Hz/step).

- Press the key to change the cursor to "LED", then rotate
 the DIAL knob to switch the flashing of the (white) LED light "on" and "off".
- 8. Press the \bigcirc/\bigcirc key to change the cursor to "SPED.
- 9. Press the we key to begin generation of the code characters (CW sidetone only, the radio does not transmit); the generated characters will appear at the right of the "CHR" item.
- 10. You may adjust the CW sidetone audio level by rotating the **DIAL** knob while pressing and holding the **VOL** key.
- 11. If one of the "5CHR" modes is selected in step 4 above, press the wey to send another code group.
- 12. To stop CW generation, press the we again.
- 13. To disable CW training feature, press the **PTT** switch.

The "CPM" selection is based on the international "PARIS" standard, which stipulates five characters per word.

SENSOR MODE

The **VX-8DR** always displays the "Battery Voltage" and "Current Time" while the **VX-8DR** is operating in the "Mono" band mode with the *Large* characters, the **VX-8DR** can

display various information provided by internal sensors. Available selections are "Battery Voltage", "Temperature", "Audio Wave-form", "Current Barometric Pressure", "Current Altitude", and "off".

The Barometric Pressure sensor requires calibration of the "offset" parameters, so that differences in pressure can be used to calculate altitude. This procedure requires that you have a calibrated barometer, and that you know your current altitude. If you are at sea level, of course, the latter parameter requires no research.

> The Sensor mode is only displayed while the VX-8DR is operating in the Mono band mode with the Large characters. The internal sensor takes measurements continuously unless the Sensor mode is disabled.

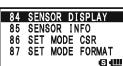

To display the sensor information:

- 1. Press and hold the *MENU* key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 84: SEN-2. SOR DISPLAY.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the sensor mode you wish to display.
 - DC: Indicates the battery voltage and battery type.
 - TEMP: Indicates the current temperature inside the transceiver's case.
 - WAVE: Depicts the (RX and TX) audio wave-form.
 - BARO: Indicates the Barometric Pressure.
 - ALTI: Indicates the Altitude.
 - OFF: Disables the sensor information (Indicates the "Current Time" only).

5. Press the **PTT** switch briefly to exit to normal operation and display the sensor information on the display.

SENSOR MODE

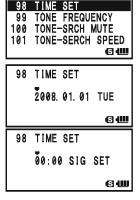

SENSOR MODE OPTIONS

CLOCK SET

The **VX-8DR** has a 24-hour clock with a calendar which covers all dates from January 1, 2000 through December 31, 2099 (accuracy: ± 30 sec/month).

To set the clock:

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 98: TIME SET.
- 3. Press the Key briefly to enable adjustment of this Menu Item.
- 4. Rotate the **DIAL** knob to select the "*year*" setting.
- Press the MODE key briefly, then rotate the DIAL knob to select the "month" setting.
- 6. Repeat the above step to set the "*day*," "*day of the week*," "*hour*," and "*minute*" selections.
- Press the MODE key briefly, then rotate the **DIAL** knob to set "Timer Signal" On (SIG) or Off (--). In the "SIG" mode, a double-beep will be emitted from the speaker at the top of each hour, as long as the transceiver is turned on.

- 8. Press the $\frac{8830}{V/M}$ key briefly, press the $\frac{VW MT}{V/M}$ key to start the clock from "00" seconds.
- 9. When you have finished the time setup, press the **PTT** switch to save the new setting and return to normal operation.

The VX-8DR has a rechargeable Li-Ion battery cell used just for the clock. Therefore, the VX-8DR can maintain its clock data for approximately two months without using the main battery pack or external DC power.

SENSOR MODE OPTIONS

SELECTING THE MEASUREMENT UNITS OF THE SENSOR UNIT

- 1. Press and hold the Kew key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 104: UNIT SELECT.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the preferred unit ($^{\circ}C$ or $^{\circ}F$).
- Press the key to change the cursor to "BARO", then rotate the **DIAL** knob to select the preferred unit (hPa, mb, mmHg, or inch).
- 6. Press the vertex key to change the cursor to "ALTI", then rotate the **DIAL** knob to select the preferred unit (m or ft).
- 7. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

CORRECTING THE SENSOR UNIT

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 103: UNIT
 OFFSET.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to adjust the **VX-8DR** display to the *calibrated* barometer value.

Note: The offset value appears in an "OFST" row.

Press the key to change the cursor to "ALTI", then rotate the **DIAL** knob to adjust the **VX-8R** display to the true altitude at your current location.

Note: The offset value appears in an "OFST" row.

6. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

The VX-8DR's altimeter calculates from atmospheric pressure. Therefore, you must perform the Barometric correction first.

MISCELLANEOUS SETTING

Password

The **VX-8DR** provides a password feature which can minimize the chance that your transceiver could be used by an unauthorized party.

When the password feature is activated, the radio will ask for the four digit password to be

entered when the radio is first turned on. You must enter the four digit password from the keypad. If the wrong password is entered, the microprocessor will shut down the radio automatically.

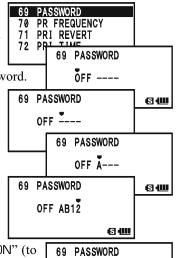

To enter and activate the password use the following procedure:

- 1. Press and hold the $\overbrace{\text{MENU}}$ key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 69: PASSWORD.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Press the $\frac{\text{SPS SQTYP}}{\text{MODE}}$ key to enable programming the password.
- Rotate the **DIAL** knob to select the first digit of the desired number/letter (O - 9, A, B, C, D, *, and #).
- 6. Press the $\frac{SPS SQ TYP}{MODE}$ key to move to the next digit.
- 7. Repeat steps 5 and 6 to program the remaining numbers/letters of the desired password.
- 8. If you make a mistake, press the (BAND) key to move back to the previous digit, then select the correct number/letter.
- When you have finished entering the password, press
 the MODE key and rotate the DIAL knob to select "ON" (to activate the password feature).
- 10. Press the **PTT** switch to save the new setting and exit to normal operation.

If you wish to disable the Password feature, repeat steps 1 - 3 above. Rotate the **DIAL** knob to select "OFF", then press the **PTT** switch.

1) We recommend that you write down the password number, and keep it in a safe place where you can easily find if you forget your password.

2) If you forget the password number, you may turn on the transceiver by performing the "Microprocessor Resetting" procedure (see page 134). However, the VX-8DR will clear the password, as well as all memories, and will restore all other settings to factory defaults.

ON AB12

6 III

The Internet Key is the factory default ("primary" press key) function of the $\bigotimes_{i=1}^{TXPO}$ key.

However, you may change the "primary" (press key) function of the $\textcircled{\text{TXPO}}{\boxtimes}$ key to another function via the Menu mode.

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 43: INTERNET KEY.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired function: INTERNET: Activates/Disables the internet feature.
 - INT MR: Recalls the Internet Access Number (SRG) or Access String (FRG). Select the SRG number or FRG string via Menu Item 44: INTERNET MODE.

- SET MODE: A short cut path to recall one of the Menu Items. See box below for programming.
- 5. When you have made your selection, press the **PTT** switch briefly to save the new setting and exit to normal operation.

When "INT MR" or "SET MODE" is assigned to the $\overset{\text{IXPO}}{\boxtimes}$ key, the INTERNET function may be activated/disabled via Set Mode Item 41: INTERNET.

ASSIGN THE SET MODE ITEM TO THE 🕱 KEY

- Change ("primary" press key) function of the xie key to "SET MODE", using Set Mode Item 43: INTERNET KEY, as descried above.
- 2. Press and hold in the were key for one second to enter the Set Mode again.
- Rotate the **DIAL** knob to select the Set Mode Item which you wish to assign to the xie key as a short-cut.
- Press and hold in the ^{TKPO} key for one second to assign the Set Mode Item to the ^{TKPO} key. "MY KEY" will appear on the display, to confirm that the command was executed.
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

Now, briefly pressing of the $\bigotimes_{i \in I}^{\text{TKPO}}$ key will immediately recall the selected Menu Item. You must press the $\bigotimes_{i \in I}^{\text{TKPO}}$ key again to exit to normal operation.

MISCELLANEOUS SETTING

ATT (FRONT END ATTENUATOR)

The attenuator will reduce all signals (and noise) by 10 dB, and it may be used to make reception more pleasant under extremely noisy conditions.

- 1. Set a band ("A-Band" or "B-Band") on which you wish to activate the "attenuator" to the "Operating" Band (indicated in *large* character).
- 2. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 3: ANTENNA ATT.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 5. Rotate the **DIAL** knob to change the setting from "OFF" to "ON".
- 6. When you have made your selection, press the **PTT** key to save the new setting and exit to normal operation.
- 7. If you wish to disable the attenuator, just repeat the above procedure, rotate the **DIAL** knob to select "OFF" in step "5" above.

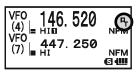

1) When the attenuator is activated, the " Π " icon will appear on the display.

7 Colored 2) The attenuator does not activate on the AM/FM Broadcast Bands.

3) The attenuator can be set independently on each operating band of the "A-Band" and "B-Band".

RECEIVE BATTERY SAVER SETUP

An important feature of the **VX-8DR** is its Receive Battery Saver, which "puts the radio to sleep" for a time interval, periodically "waking it up" to check for activity. If somebody is talking on the channel, the **VX-8DR** will remain in the "active" mode, then resume its "sleep" cycles. This feature significantly reduces quiescent battery drain, and you may change the amount of "sleep" time between activity checks using the Menu System:

- 1. Press and hold the (MENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 79: SAVE RX.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the desired "sleep" duration. The selections available are 0.2sec 0.9sec (0.1sec/step), 1.0sec 9.5sec (0.5sec/step), 10.0sec 60.0sec (5sec/step), or OFF. The default value is 0.2sec.

5. When you have made your selection, press the **PTT** switch to save the new setting and exit to normal operation.

When you are operating on Packet, switch the Receive Battery Saver OFF, as the sleep cycle may "collide" with the beginning of an incoming Packet transmission, causing your TNC not to receive the full data burst.

TX BATTERY SAVER

The **VX-8DR** also includes a useful Transmit Battery Saver, which will automatically lower the power output level when the last signal received was very strong. For example, when you are in the immediate vicinity of a repeater station, there generally is no reason to use the full 5 Watts of power output in order to achieve full-quieting access to the repeater. With the Transmit Battery Saver, the automatic selection of Low Power operation conserves battery drain significantly.

To activate the Transmit Battery Saver:

- 1. Press and hold the (MENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 80: SAVE TX.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to set this Set Mode Item to "ON" (thus activating the Transmit Battery Saver).
- 5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

To disable the Transmit Battery Saver, just repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step 4 above.

DISABLING THE BUSY INDICATOR

Further battery conservation may be accomplished by disabling the **BUSY** indicator (the green LED inside the \square and \square key) while receiving a signal. Use the following procedure:

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 18: BUSY LED.
- 3. Press the key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to set this Set Mode Item to "OFF" (thus disabling the **BUSY** lamp).
- 5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

To enable the **BUSY** indicator, just repeat the above procedure, rotating the **DIAL** knob to select "ON" in step 4 above.

AUTOMATIC POWER-OFF (APO) FEATURE

The APO feature helps conserve battery life by automatically turning the radio off after a user-defined period of time within which there has been no dial or key activity.

The available selections for the time before power-off are 0.5 - 12.0 hour, as well as APO Off. The default condition for the APO is OFF, and here is the procedure for activating it:

- 1. Press and hold the (MENU) key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 4: APO.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired time period after which the radio will automatically shut down.
- 5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

When the APO is activated, the "**O**" icon will appear at the center bottom on the LCD. If there is no action by you within the time interval programmed, the microprocessor will shut down the radio automatically.

Just press and hold in the O (**PWR**) switch for 2 seconds to turn the transceiver back on after an APO shutdown, as usual.

To disable the APO, just repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step 4 above.

	BUSY LED CH COUNTER CLOCK SHIFT CW ID

4 5 6 7	APO ARTS BEEP ARTS INTE BANK LINK	RVAL
4	APO	
	0. 5hour	
	C	64
VFO (4) VFO	146.52 447.25	

TRANSMITTER TIME-OUT TIMER (TOT)

The TOT feature provides a safety switch which limits transmission to a pre-programmed value. This will promote battery conservation by not allowing you to make excessively long transmissions, and in the event of a stuck **PTT** switch (perhaps if the radio or a Speaker/Mic is wedged between car seats) it can prevent interference to other users as well as battery depletion. As configured at the factory the TOT feature is set to OFF, and here is the procedure for activating it:

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 102: TOT.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to set the Time-Out Timer to the desired "Maximum TX" time. The available selections are 0.5 10.0 minutes (0.5 minute/step).
- 5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

	TOT UNIT OFFSET UNIT SELECT VFO MODE	
		<u>с</u>
102	TOT	
	3.0m in	
	0.0000	

To disable the Time-Out Timer, just repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step 4 above.

1) When your transmission time is within 10 seconds of the Time-Out Timer expiration, an Alert bell will provide an audible warning from the speaker.
 2) Since brief transmissions are the mark of a good operator, try setting up your radio's TOT feature for a maximum transmission time of 1 minute. This will sig-

nificantly improve battery life, too!

ON/OFF PRESET TIMER

The **VX-8DR** includes the capability to turn itself on/off at preset time. If you use these features, you must first set the **VX-8DR**'s clock, as described previously (page 120).

ON TIMER

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 64: ON TIMER.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to set the "*hour*" at which you want the radio to switch on.
- 5. Press the MODE key, then rotate the **DIAL** knob to set the "*minute*" at which you want the radio to switch on.
- 6. Press the MODE key, then rotate the **DIAL** knob to set this Menu Item to "ON".
- 7. When you have made your selections, press the **PTT** switch to save the new setting and exit to normal operation.

To disable the ON Timer, just repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step 6 above.

OFF TIMER

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 63: OFF TIMER.
- Press the Key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to set the "*hour*" at which you want the radio to switch off.
- 5. Press the (MODE) key, then rotate the **DIAL** knob to set the "*minute*" at which you want the radio to switch off.
- 6. Press the MODE key, then rotate the **DIAL** knob to set this Menu Item to "ON".
- 7. When you have made your selections, press the **PTT** switch to save the new setting and exit to normal operation.

To disable the OFF Timer, just repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step 6 above.

BUSY CHANNEL LOCK-OUT (BCLO)

The BCLO feature prevents the radio's transmitter from being activated if a signal strong enough to break through the "noise" squelch is present. On a frequency where stations using different CTCSS or DCS codes may be active, BCLO prevents you from disrupting their communications accidentally (because your radio may be muted by its own Tone Decoder). The default setting for the BCLO is OFF, and here is how to change that setting:

- Press and hold the *MENU* key for one second to enter the Set Mode. 1.
- 2. Rotate the **DIAL** knob to select Set Mode Item 9: BCLO.
- Press the MENU key briefly to enable adjustment of this Set 3. Mode Item.
- 4. Rotate the **DIAL** knob to set this Set Mode Item to "ON" (thus activating the BCLO feature).
- When you have completed your selection, press the PTT 5. switch to save the new setting and exit to normal operation.

To disable the BCLO feature, just repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step 4 above.

CHANGING THE TX DEVIATION LEVEL

In many areas of the world, channel congestion has required that operating channels be closely spaced. In such operating environments, it is often required that operators use reduced deviation levels, to reduce the potential for interference to users on adjacent channels. The **VX-8DR** includes a simple method of accomplishing this:

- Press and hold the *MENU* key for one second to enter the Set Mode. 1.
- 2. Rotate the **DIAL** knob to select Set Mode Item 37: HALF DEVIATION.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to change this Set Mode Item to "ON". 4. In this configuration (HALF DEVIATION active), the transmitter's deviation will be approximately ± 2.5 kHz.
- 5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

CHANGING THE MICROPHONE GAIN

At the factory, a microphone gain has been programmed that should be satisfactory for the internal microphone. If you use the radio under the noisy environment, you may wish to set a different microphone gain level.

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 60: MIC GAIN.
- Press the Key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to select the desired microphone level. The available selections are LEVEL 1 - LEVEL 9 (factory default: LEVEL 5).
- 5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

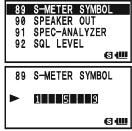

S-AND TX POWER METER SYMBOLS

The **VX-8DR** has four types of S- (Signal Strength) and TX Power Meter symbol formats available. You may change the default setting to any of the available symbols.

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 89: S-METER SYMBOL.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired meter symbol type.

00000000, ____00000, >>>>>>>, or exampled

5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

DISPLAY CONTRAST

The LCD's contrast may be adjusted for best viewing in sunlight or darkness allowing for best readability using the Set Mode Item.

- 1. Press and hold the (MENU) key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item 48: LCD CONTRAST.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to adjust the contrast. As you make the adjustment, you will be able to see the effects of your changes. The available selections are LEVEL 12 - LEVEL 32 (factory default: LEVEL 24).
- 5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

DISPLAY DIMMER

The LCD and keypad illumination may be adjusted using the Set Mode Item, as well.

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 49: LCD DIMMER.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- Rotate the **DIAL** knob to adjust the display illumination for a comfortable brightness level. As you make the adjustment, you will be able to see the effects of your changes. The available selections are LEVEL 1 - LEVEL 4 (factory default: LEVEL 4).
- 5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

MISCELLANEOUS SETTING

MY BANDS OPERATION

The "My Bands" feature allows you to select several operating bands, and make only those bands available for selection via the (BAND) key.

For example, if you do not need the reception of the SW and Air bands, you may skip (omit) these bands from the band selection loop.

My Bands Setup

- 1. Set the **VX-8R** to the VFO mode.
- 2. Press and hold the (MENU key for one second to enter the Set Mode.
- 3. Rotate the **DIAL** knob to select Set Mode Item 106: VFO SKIP.
- 4. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 5. Rotate the **DIAL** knob to choose a band number (see chart below) you wish to omit (skip) form the band selection loop.
- Press the MODE key, then rotate the DIAL knob to select "ON" and omit (skip) the band from the band selection loop. *Note*: The band presently in use cannot be turned "ON".
- 7. Press the MODE key again.
- 8. Repeat steps 5 through 7 above to select as many bands as you like.
- 9. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

To re-institute a band into the band selection loop, repeat the above procedure, rotating the **DIAL** knob to select "OFF" in step 6.

BAND NUMBER CHART

If you wish to skip (omit) the AM or FM Broadcast band, enter the Broadcast Reception mode by pressing the W key followed by 0 key first, then perform the above procedure.

	DAND	NUMBER CHART	
BAND			CY RANGE
NUMBER		"VFO-A"	"VFO-B"

CHANGING THE STATUS OF THE VOL KEY

By factory default, the vol key keeps the status while pressing and holding the vol key down. You may change the status of the vol key to keep the status for approximately three seconds after pressing the vol key, after which time it reverts back to its previous status.

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 107: VOL-UME MODE.
- 3. Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired mode.
 - NORMAL: The vol key keeps the status while pressing and holding the vol key down.

AUTO BACK: The **vol** key keeps its status for approximately three seconds after pressing the **vol** key.

5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

Reset Procedures

In some instances of erratic or unpredictable operation, the cause may be corruption of data in the microprocessor (due to static electricity, etc.). If this happens, resetting of the microprocessor may restore normal operation.

Note that all memories will be erased if you do a complete microprocessor reset, as described below.

MICROPROCESSOR RESETTING

To clear all memories and other settings to factory defaults:

- 1. Turn the radio off.
- Press and hold in the $\frac{SCMBHODA}{(BAND)}$, $\frac{EMG R/H}{(HM/RV)}$, and $\frac{TXPO}{(X)}$ keys while turning the radio on. 2.
- 3. Press the **G** key briefly to reset all settings to their factory defaults (press any other key to cancel the Reset procedure).

SET MODE RESETTING

To reset the Set Mode (includes the APRS®/GPS Set Mode) settings to their factory defaults:

- 1. Turn the radio off.
- Press and hold in the $\frac{SCMENDA}{(BAND)}$ and $\frac{DW MT}{(V/M)}$ keys while turning the radio on. 2.
- Press the **EW** key briefly to reset the Set Mode Item^{*} settings to their factory defaults 3. (press any other key to cancel the Reset procedure).

*: Except the following Set Mode Items.

Set Mode 8: BANK NAME, 20: CLOCK SHIFT, 21: CW ID, 26: DCS CODE, 27: DCS INVERSION, 30: DTMF SELECT, 34: EMERGENCY SELECT, 37: HALF DEVIATION, 42: INTERNET CODE, 45: INTERNET SELECT, 52: MEMORY FIRST STEP, 53: MEMORY NAME, 55: MEMORY SKIP, 59: MESSAGE SELECT, 67: PAGER CODE-RX, 68: PAGER CODE-TX, 75: RPT SHIFT, 76: RPT SHIFT FREQ, 95: SQL TYPE, 99: TONE FREQUENCY, APRS®/GPS Set Mode 6: APRS MSG FLASH, 15: DIGI PASS, 19: MSG FILTER, 20: MY CALLSIGN, 21: MY POSITION, 22: MY SYMBOL

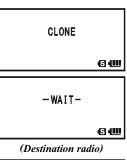

The **VX-8DR** includes a convenient "Clone" feature, which allows the memory and configuration data from one transceiver to be transferred to another **VX-8DR**. This can be particularly useful when configuring a number of transceivers for a public service operation. Here is the procedure for Cloning one radio's data to another:

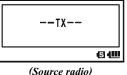

- 1. Turn both radios off.
- Connect the optional CT-134 Clone Cable between the MIC/SP jacks of the two radios.
- Press and hold in the very while turning the radios on. Do this for both radios (the order of switch-on does not matter). "CLONE" will appear on the displays of both radios when the Clone mode is successfully activated in this step.
- 4. On the *Destination radio*, press the MODE key ("- WAIT -" will appear on the LCD).
- Press the ^{SCUBRODA} key on the *Source radio*; "- TX -" will appear on the Source radio, and the data from this radio will be transferred to the other radio.
- If there is a problem during the cloning process, "ERROR" will be displayed. Check your cable connections and battery voltage, and try again.
- 7. If the data transfer is successful, "CLONE" will reappear on both displays. Turn both radios off and disconnect the Clone Cable. You can then turn the radios back on, and begin normal operation.

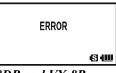

Can not perform the cloning operation between the VX-8DR and VX-8R.

VX-8DR OPERATING MANUAL

GENERAL

The **VX-8DR** Set Mode, already described in parts of many previous chapters, is easy to activate and set. It may be used for configuration of a wide variety of transceiver parameters, some of which have not been detailed previously. Use the following procedure to activate the Set Mode:

- 1. Press and hold the WENU key for one second to enter the Set Mode.
- 2. Rotate the **DIAL** knob to select Set Mode Item to be adjusted.
- Press the key briefly to enable adjustment of the Set Mode Item.
- 4. Rotate the **DIAL** knob to adjust or select the parameter to be changed on the Set Mode Item selected in above step.
- 5. After completing your selection and adjustment, press the **PTT** switch briefly to save the new setting and exit to normal operation.

Some Set Mode Items (like Set Mode Item 99: TONE FREQUENCY) require that the MENU key be pressed after setting of the parameter, and before exiting to normal operation.

CHANGING THE DISPLAY FORMAT OF THE SET MODE ITEM

By factory default setting, the **VX-8DR** displays the Set Mode Item with "**List**" format in a Set Mode. You may change the display format of the Set Mode to our traditional "**Item**" format.

- 1. Press and hold the MENU key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 87: SET MODE FORMAT.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "ITEM".
- 5. Press the **PTT** switch briefly to save the new setting and exit to normal operation.

To return the display format to the "List", repeat the above procedure, rotating the **DIAL** knob to select "LIST" in step 4.

VX-8DR OPERATING MANUAL

GENERAL

CHANGING THE SET MODE CURSOR

The **VX-8DR** has nine types of cursor symbol formats for the Set Mode operation. You may change the default setting to any of the available symbols.

- 1. Press and hold the \overline{MENU} key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 86: SET MODE CSR.
- 3. Press the (MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the desired cursor symbol type.

```
\blacktriangleright, \triangleright, \blacklozenge, \clubsuit, \diamondsuit, \textcircled{p}, \rule{p}, \rule
```

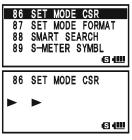

5. When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

Masking the Set Mode Items

There may be situations where you want to "Mask" Set Mode Items so they are not recalled during Set Mode Item selection.

- 1. Press and hold the $\overbrace{\text{MENU}}$ key for one second to enter the Set Mode.
- Rotate the **DIAL** knob to select Set Mode Item 35: EX-TENDED MENU.
- Press the MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select "ON", then press the key briefly.
- Rotate the **DIAL** knob to select the Set Mode Item to be "Masked".
- Press the wey briefly. A "#" icon will appear at the right side of the Set Mode Item Number in the display, indicating the Set Mode Item is to be Masked.
- Repeat steps 5 and 6 above, to append the "#" icon to any other Set Mode Item you wish to "Masked".
- 8 When you have completed your selection, press the **PTT** switch to save the new setting and exit to normal operation.

To unmask the hidden Set Mode Item, repeat the above procedure. In step 4 above select "OFF" and in step 6 above the "#" icon will disappear from the Menu Item you wish to unmask.

IIIuminates the white LED light continuously (useful as emergency flashlight at hight). Selects the Control Locking lockout combination.	KEY / DIAL / KEY&DIAL / PTT / KEY&PTT /
	52: MEMORY FAST STEP		
	53: MEMORY NAME	Stores "Alpha-Numeric" tags for the Memory channels.	
54: MEMORY PROTECT Enables/Disables the Memory Write Protector. ON / OFF			ON / OFF

Set Mode

Set Mode Item	FUNCTION	Available Values (Defalt: Underlined Bold)
55: MEMORY SKIP	Selects the Memory Scan channel-selection mode.	OFF / SKIP / ONLY
56: MEMORY WRITE	Determines the method of selecting channels for Memory Storage.	NEXT / LOWER
57: MESSAGE LIST	Programming a Member List for the Message feature.	
58: MESSAGE REGISTER 59: MESSAGE SELECT	Selects your Personal ID for the Message feature. Programming a Message for the Message feature.	1
60: MIC GAIN	Adjusts the microphone gain level.	
61: MONI/T-CALL	Selects the MONI key (just below the PTT switch) function.	MONI / T-CALL×1
62: MUTE	Adjusts the receiver audio output level when the MUTE function was activated.	MUTE 30%, MUTE 50%,
		MUTE 100%, or OFF
63: OFF TIMER	Set the OFF Timer time.	-
64: ON TIMER	Set the ON Timer time.	
65: OPENING MESSAGE	Selects the Opening Message that appears when the radio is powered on.	NORMAL / OFF / DC / MESSAGE ON / OFF
66: PAGER ANS-BACK 67: PAGER CODE-RX	Enables/Disables the Answer Back function of the Enhanced CTCSS Paging & Code Squelch. Sets the Receiver Pager Code for the Enhanced CTCSS Paging & Code Squelch.	
68: PAGER CODE-TX	Sets the Transmitting Pager Code for the Enhanced CTCSS Paging & Code Squeich.	-
69: PASSWORD	Programming and activating the Password feature.	
70: PR FREQUENCY	Program the CTCSS Tone Frequency for the User Programmed Reverse CTCSS Decoder.	300Hz ~ 3000Hz (1000Hz/step) (1600Hz)
71: PRI REVERT	Enables/Disables the Priority Revert feature.	ON / OFF
72: PRI TIME	Selects the time between the Priority (Dual Watch) channel checks, when the feature is	0.1sec ~ 0.9sec (0.1sec/step) or
	active.	1.0sec ~ 10.0sec (0.5sec/step) (5.0sec)
73: PTT DELAY	Selects the time delay before the carrier is transmitted, when the PTT switch is pressed.	OFF / 20ms / 50ms / 100ms / 200ms
74: RPT ARS 75: RPT SHIFT	Enables/Disables the Automatic Repeater Shift function. Sets the Repeater Shift Direction.	ON / OFF SIMPLEX / -RPT / +RPT
76: RPT SHIFT FREQ	Sets the magnitude of the Repeater Shift.	0.000MHz ~ 150.000MHz (50 kHz/step) ^{×2}
77: RX AF DUAL	Select the resume mode of the AF-Dual Operation.	TRX 1sec ~ TRX 10sec / HOLD /
		TX 1sec ~ TX 10sec (TRX 2sec)
78: RX MODE	Sets the receiving mode.	AUTO / NFM / AM / WFM
79: SAVE RX	Selects the Receive-mode Battery Saver interval ("sleep" ratio).	0.2sec ~ 0.9sec (0.1sec/step), 1.0sec ~ 9.5sec
		(0.5sec/step), or 10.0sec ~ 60.0sec (5sec/step) ON / OFF
80: SAVE TX 81: SCAN LAMP	Enables/Disables the Transmitter Battery Saver.	ON / OFF
81: SCAN LAMP 82: SCAN RE-START	Enables/Disables the Scan Lamp (while scanner is paused). Selects the Scan Re-start Delay time.	0.1sec ~ 0.9sec (0.1sec/step) or
02. SUAN RE-START	Selects the Scall Re-start Delay time.	1.0sec ~ 10.0sec (0.1sec/step) 01
83: SCAN RESUME	Selects the Scan Resume mode.	2.0sec ~ 10.0sec (0.5sec/step) (BUSY /
00.00/11/1200/112		HOLD (5.0sec)
84: SENSOR DISPLAY	Selects the sensor information when the transceiver is operating in the "Mono" band mode with large characters.	DC / TEMP / WAVE / BARO / ALTI / OFF
85: SENSOR INFORMATION	Indicates the Information of the internal sensors.	-
86: SET MODE CSR	Selects the Set Mode Cursor.	Nine patterns
87: SET MODE FORMAT	Selects the display format of the Set Mode operation.	LIST / ITEM
88: SMART SEARCH	Selects the Smart Search Sweep mode.	SINGLE / CONTINUOUS
89: S-METER SYMBOL 90: SPEAKER OUT	Selects the S-&TX PO meter Symbol. Enables/Disables the FM Broadcast audio output to the internal speaker when using the earphone antenna.	Four patterns AUTO / SPEAKER
91: SPEC-ANALYZER	Selects the Spectrum Analyzer sweep mode.	1Time / CONTINUOUS / Full Time
92: SQL LEVEL	Sets the Squeich threshold level.	LEVEL 0 ~ LEVEL 15 (<i>LEVEL 1</i>) (AM and Narrow FM), LEVEL 0 ~ LEVEL 8 (<i>LEVEL 2</i>) (Wide FM and AM Broadcast)
93: SQL S-METER	Adjusts the Squelch threshold level to the S-meter level.	OFF / LEVEL 0 ~ LEVEL 9
94: SQL SPLIT	Enables/disables split CTCSS/DCS coding.	OFF / ON
95: SQL TYPE	Selects the Tone Encoder and/or Decoder mode.	OFF / TONE / TONE SQL / DCS /
96: STEP FREQUENCY	Catting of the DIAL frequency change	REV TONE / PR FREQ / PAGER / MESSAGE AUTO / 5.0 / 6.25 / 8.33 / 9.0 / 10.0 / 12.5 /
	Setting of the DIAL frequency steps.	15.0 / 20.0 / 25.0 / 50.0 / 100.0 kHz
97: STEREO 98: TIME SET	Enables/Disables the stereo output while receiving the FM Broadcast band.	STEREO / MONO
90: TIME SET 99: TONE FREQUENCY	Sets the Clock time. Setting of the CTCSS Tone Frequency	 50 standard CTCSS tones (100.0Hz)
100: TONE-SRCH MUTE	Enables/Disables the receiver audio output while the Tone Search Scanner is activated.	ON / OFF
101: TONE-SRCH SPEED	Selects the Tone Search Scanner speed.	FAST (2.5 tone/sec) / SLOW (1.25 tone/sec)
102: TOT	Setting of the TOT time	OFF / 0.5min ~ 10.0min (0.5min/step)
103: UNIT OFFSET	Correcting the Sensor Unit.	(3.0min) BARO: -1000 ~ 0 ~ +1000
		ALTI: -1000 ~ 0 ~ +1000
104: UNIT SELECT	Select the measurement units of the Sensor Unit.	TEMP: °C / °F*1 BARO: hPa / mb / mmHg / inch*1
105: VFO MODE	Selects or disables the VFO band edge limiting for the current band.	ALTI: m / ft×1 ALL / BAND
105: VFO WODE	Selects of disables the VPO band edge limiting for the current band.	
107: VOLUME MODE	Select the [VOL] key function.	NORMAL / AUTO BACK
	Enables/Disables VOX operation; sets VOX sensitivity.	OFF / HIGH / LOW
108: VOX	Selects the VOX delay ("hang") time.	0.5sec / 1.0sec / 1.5sec /
109: VOX DELAY	colocid the vorticity (hang) time.	
109: VOX DELAY	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	2.0sec / 2.5sec / 3.0sec
	Selects the Wave-Form display while indicating the Wave-Form via Set Mode Item 84: SEN- SOR DISPLAY.	

*2: Depends on the operating band and transceiver version.

Set Mode

Repeater Setting	Set Mode Item	Available Values (Default: Bold Italic)
Enables/Disables the Automatic Repeater Shift function.	74: RPT ARS	ON / OFF
Sets the Repeater Shift Direction.	75: RPT SHIFT	SIMPLEX / -RPT / +RPT
Sets the magnitude of the Repeater Shift.	76: RPT SHIFT FREQ	0.000MHz ~ 150.000MHz (50 kHz/step)×1
CTCSS/DCS/EPCS SETTING	Set Mode Item	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
Selects the number of Bell ringer repetitions. Enables/Disables the Bell ringer function and its sound selection.	14: BELL RINGER 15: BELL SELECT	1time - 20times / CONTINUOUS OFF / BELL / USER BP1 / USER BP2 / USER BP3
 Setting of the DCS code. Enables/Disables the "Inverted" DCS tone. 	26: DCS CODE 27: DCS INVERSION	104 standard DCS codes (DCS 023) RX-NORMAL, TX-NORMAL / RX-INVERT, TX-NORMAL / RX-BOTH, TX-NORMAL / RX-NORMAL, TX-INVERT /
Enables/Disables the Answer Back function of the Enhanced CTCSS Paging & Code Squelch. Sets the Receiver Pager Code for the Enhanced CTCSS Paging & Code Squelch. Sets the Transmitting Pager Code for the Enhanced CTCSS Paging & Code Squelch. Program the CTCSS Tone Frequency for the User Programmed Reverse CTCSS Decoder. Enables/Disables split CTCSSIDCS coding. Selects the Tone Encoder and/or Decoder mode.	66: PAGER ANS-BACK 67: PAGER CODE-RX 68: PAGER CODE-TX 70: PR FREQUENCY 94: SQL SPLIT 95: SQL TYPE	RX-INVERT, TX-INVERT / RX-BOTH, TX-INVERT ON / OFF 300 Hz ~ 3000 Hz (1000 Hz/step) (1600 Hz) OFF / ON OFF / TONE / TONE SQL / DCS / REV TONE / DP CPC0 UNCED / MEGO LOSS / REV TONE /
Setting of the CTCSS Tone Frequency Enables/Disables the receiver audio output while the Tone Search Scanner is activated. Selects the Tone Search Scanner speed.	99: TONE FREQUENCY 100: TONE-SRCH MUTE 101: TONE-SRCH SPEED	PR FREQ / PAGER / MESSAGE 50 standard CTCSS tones (100.0Hz) ON / OFF FAST (2.5 tone/sec) / SLOW (1.25 tone/sec)
ARTSTM SETTING	Set Mode Item	Available Values (Default: Bold Italic)
 Select the Beep option during ARTS[™] operation. Select the Polling Interval during ARTS[™] operation. Program and activate the CW Identifier (used during ARTS[™] operation). 	5: ARTS BEEP 6: ARTS INTERVAL 21: CW ID	IN RANGE / ALWAYS / OFF 15sec / 25sec
MEMORY SETTING Chables the Memory Bank Link Scan. Stores Alpha-Numeric Tag' for the Memory Bank.	SET MODE ITEM 7: BANK LINK 8: BANK NAME	Available Values (Default: Bold Italic)
Selects the channel step for the fast channel selection mode while in the Memory Recall mode. Stores "Alpha-Numeric" tags for the Memory channels. Enables/Disables the Memory Write Protector.	52: MEMORY FAST STEP 53: MEMORY NAME 54: MEMORY PROTECT	
Determines the method of selecting channels for Memory Storage.	56: MEMORY WRITE	NEXT / LOWER
SCAN SETTING	SET MODE ITEM	Available Values (Default: Bold Italic)
 Selects the Memory Scan channel-selection mode. Enables/Disables the Scan Lamp (while scanner is paused). Selects the Scan Re-start Delay time. 	55: MEMORY SKIP 81: SCAN LAMP 82: SCAN RE-START	OFF / SKIP / ONLY ON / OFF 0.1sec ~ 0.9sec (0.1sec/step) or
□ Selects the Receive-mode Battery Saver interval ("sleep" ratio).	83: SCAN RESUME	1.0sec ~ 10.0sec (0.5sec/step) (5.0sec) 2.0sec ~ 10.0sec (0.5sec/step) / BUSY / HOLD (5.0sec)
 Enables/Disables the Priority Revert feature. Selects the time between the Priority (Dual Watch) channel checks, when the feature is active. 	71: PRI REVERT 72: PRI TIME	ON / OFF 0.1sec ~ 0.9sec (0.1sec/step) or 1.0sec ~ 10.0sec (0.5sec/step) (5.0sec)
BATTERY SAVING SETTING	SET MODE ITEM	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
Setting of the Automatic Power-Off time.	4: APO	0.5hour - 12.0hour / OFF
Enables/Disables the BUSY LED while the squelch is open. Selects the Receive-mode Battery Saver interval ("sleep" ratio).	18: BUSY LED 79: SAVE RX	ON / OFF 0.2sec ~ 0.9sec (0.1sec/step), 1.0sec ~ 9.5sec (0.5sec/step), or 10.0sec ~ 60.0sec (5sec/step)
Enables/Disables the Transmitter Battery Saver.	80: SAVE TX	ON / OFF
Message Setting	SET MODE ITEM	Available Values (Default: Bold Italic)
Corgaraming a Member List for the Message feature. Selects your Personal ID for the Message feature. Programming a Message for the Message feature.	57: MESSAGE LIST 58: MESSAGE REGISTER 59: MESSAGE SELECT	-
WIRESTM SETTING	Set Mode Item	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
Enables/Disables the DTMF Autodialer feature while using the Internet Connection feature (WIRES TM). Enables/Disables the Internet Connection feature (WIRES TM). Selects the Access Number (DTMF digit) for SRG operation of the Internet Connection feature (WIRES TM).	40: INT MANUAL/AUTO 41: INTERNET 42: INTERNET CODE	MANUAL / AUTO ON / OFF DTMF 0 ~ DTMF 9, DTMF A ~ DTMF D, DTMF *,
Selects the primary function of the [INTERNET] key. Selects the operating mode of the Internet Connection feature (WIRESTM). Programming of the Access Number (IDTMF code) for the FRG station of the WIRES TM (or non WIRES TM Internet Link System) access.	43: INTERNET KEY 44: INTERNET MODE 45: INTERNET SELECT	or DTMF #(DTMF 1) INTERNET / INT SELECT / SET MODE FRG / SRG
EAI SETTING	SET MODE ITEM	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
 Enables/Disables the Emergency Automatic ID (EAI) feature. Sets the Emergency Automatic ID (EAI) operating mode and its transmit time. 	32: EAI 33: EAI TIME	ON / OFF INT 1min ~ INT 9min, INT10min, INT15min, INT20min, INT30min, INT40min, INT50min, CON 1min ~ CON 9min, CON10min, CON15min, CON20min, CON30min, CON40min, CON50min,
□ Select the alarms utilized when the Emergency function is engaged.	34: EMERGENCY SELECT	(CON 5 min) BEEP / STROBE / BEEP & STROBE / BEAM / BEEP & BEAM / CW / BEEP & CW / CW-ID TX
Bluetooth® Setting	Set Mode Item	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
Paining the Bluetooth [®] unit and setting the Pin Code. Select the operating mode of the optional BH-1A/BH-2A Bluetooth [®] Headset.	16: BLUETOOTH P-CODE 17: BLUETOOTH SET	0000 - 9999 (6111) VOX: <i>PTT</i> / VOX HIGH / VOX LOW, MODE: <i>MONO</i> / STEREO, SAVE: ON / <i>OFF</i>

SET MODE

DTMF Setting	Set Mode Item	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
Selects the DTMF Autodialer Delay Time.	28: DTMF DELAY	50ms / 250ms / 450ms / 750ms / 1000ms
Enables/Disables the DTMF Autodial feature.	29: DTMF MANUAL/AUTO	MANUAL / AUTO
Programming the DTMF Autodialer.	30: DTMF SELECT	-
Selects the DTMF Autodialer Sending Speed.	31: DTMF SPEED	50mS / 100mS
SWITCH/KNOB SETTING	Set Mode Item	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
Set the duration that a secondary function of the [F/W] key (press and holding the [F/W] key) is hel determines the function they activate.		0.3sec / 0.5sec / 0.7sec / 1.0sec / 1.5sec
Selects the function of the [H/M] key.	39: HOME/REVERSE	HOME / REV
Selects the Control Locking lockout combination.	51: LOCK	KEY / DIAL / KEY&DIAL / PTT / KEY&PTT / DIAL&PTT / ALL
Selects the MONI key (just below the PTT switch) function.	61: MONI/T-CALL	MONI / T-CALL*2
Selects the time delay before the carrier is transmitted, when the PTT switch is pressed.	73: PTT DELAY	OFF / 20ms / 50ms / 100ms / 200ms
Select the [VOL] key function.	107: VOLUME MODE	NORMAL / AUTO BACK
DISPLAY SETTING	Set Mode Item	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
Indicates the DC Supply Voltage.	25: DC VOLTAGE	-
Selects the LCD/Keypad Lamp mode.	46: LAMP	KEY 2sec - KEY 10sec / CONTINUOUS /
		OFF (KEY 5sec)
Setting the Display contrast level.	48: LCD CONTRAST	LEVEL 12 ~ LEVEL32 (<i>LEVEL24</i>)
Setting the Display brightness level.	49: LCD DIMMER	LEVEL 1 ~ LEVEL 4
Illuminates the white LED light continuously (useful as emergency flashlight at night).	50: LED LIGHT	
Selects the Opening Message that appears when the radio is powered on. Selects the senergy information when the transactiver is executing in the "Mane" hand made with large	65: OPENING MESSAGE	NORMAL / OFF / DC / MESSAGE DC / TEMP / WAVE / BARO / ALTI / WX / OFF
Selects the sensor information when the transceiver is operating in the "Mono" band mode with larg character.	8 04. SENSOR DISPLAT	DC / TEMP / WAVE / BARO / ALTI / WX / OFF
Displays internal sensor information.	85: SENSOR INFORMATION	
Selects the S- & TX PO meter Symbol.	89: S-METER SYMBOL	Four patterns
Selects the Spectrum Analyzer sweep mode.	91: SPEC-ANALYZER	1Time / Continuous / Full Time
Calibrating the Sensor Unit.	103: UNIT OFFSET	BARO: -1000 ~ 0 ~ +1000, ALTI: -1000 ~ 0 ~ +1000
Selects the measurement units of the Sensor Unit.	104: UNIT SELECT	TEMP: °C / °F ×2,
	IGH. BINT BELEDT	BARO: hPa / mb / mmHg / inch*2,
		ALTI: m / ft×2
Selects the Wave-Form display while indicating the Wave-Form via Set Mode Item 84: SENSOR DISPLAY	. 110: WAVE MONITOR	ALL / RX SIGNAL / TX MODULATION
BEEP SETTING	Set Mode Item	AVAILABLE VALUES (DEFAULT: BOLD ITALIC)
DEEP GETTING Enables/Disables the Band-edge beeper while selecting the frequency with the DIAL knob.	10: BEEP EDGE	ON / OFF
 Adjust the Beep volume level. 	11: BEEP LEVEL	LEVEL 1 - LEVEL 9 (LEVEL 5)
Create the Beep Melody for Bell ringer function.	12: BEEP MELODY	-
		KEV & COAN UKEV LOFE
Enables/Disables the keypad beeper.	13: BEEP SELECT	KEY & SCAN / KEY / OFF
 Enables/Disables the Keypad beeper. Select the CW tone pitch for the CW Learning, CW Training, and CW Identifier functions. 	23: CW PITCH	400 - 1000 Hz (50 Hz/step) (700 Hz)
Select the CW tone pitch for the CW Learning, CW Training, and CW Identifier functions.		400 - 1000 Hz (50 Hz/step) (700 Hz)

SET MODE SELECTION DETAILS

SET MODE ITEM 1: ANTENNA AM

Function: Select the antenna to be used for the AM Broadcast listening.

Available Values: BAR & EXT / BAR ANTENNA

Default: BAR & EXT

BAR & EXT: Use both the internal Bar Antenna and the Rubber Flex Antenna.

BAR ANTENNA: Use the internal Bar Antenna only.

Note: The Bar Antenna is directional; rotate the **VX-8DR** for best reception.

SET MODE ITEM 2: ANTENNA FM

Function: Select the antenna to be used for the FM Broadcast listening.

Available Values: EXT ANTENNA / EAR PHONE

Default: EXT ANTENNA

EXT ANTENNA: Use the Rubber Flex Antenna.

EAR PHONE: Use the Earphone Antenna. When receiving a weak signal, reception may be noisy.

SET MODE ITEM 3: ANTENNA ATT

Function: Enables/Disables the receiver Front-end Attenuator.

Available Values: ON / OFF

Default: OFF

Note: This Menu Item can select and set to each operating band and frequency band individually.

SET MODE ITEM 4: APO

Function: Setting of the Automatic Power-Off time. **Available Values**: 0.5hour ~ 12.0hour / OFF **Default**: OFF

SET MODE ITEM 5: ARTS BEEP

Function: Select the Beep option during ARTS operation.
Available Values: IN RANGE / ALWAYS / OFF
Default: IN RANGE
IN RANGE: Beeps sound only when the radio first detects that you are within range.
ALWAYS: Beeps sound every time a polling transmission is received from the other station (every 15 or 25 seconds when in range).
OFF: No alert beeps sound.

SET MODE ITEM 6: ARTS INTERVAL

Function: Select the Polling Interval during ARTS operation.

Available Values: 15sec / 25sec

Default: 25sec

This setting determines how often the other station will be polled during ARTS operation.

SET MODE ITEM 7: BANK LINK

Function: Enables/Disables the Memory Bank Link Scan. See page 67 for details.

SET MODE ITEM 8: BANK NAME

Function: Stores Alpha-Numeric "Tag" for the Memory Bank. See page 50 for details.

SET MODE ITEM 9: BCLO

Function: Enables/Disables the Busy Channel Lock-Out feature. **Available Values**: ON / OFF **Default**: OFF

SET MODE ITEM 10: BEEP EDGE

Function: Enables/Disables the Band-edge beeper while selecting the frequency by the **DIAL** knob.

Available Values: ON / OFF

Default: OFF

Note: When this Set Mode Item is set to "ON", a beep will sound when the frequency reaches the band edge while selecting the VFO frequency with the **DIAL** knob.

SET MODE ITEM 11: BEEP LEVEL

Function: Adjust the Beep volume level. **Available Values**: LEVEL 1 ~ LEVEL 9 **Default**: LEVEL 5

SET MODE ITEM 12: BEEP MELODY

Function: Create the Beep Melody for Bell ringer function. See page 43 for details.

SET MODE ITEM 13: BEEP SELECT

Function: Enables/Disables the keypad beeper.Available Values: KEY & SCAN / KEY / OFFDefault: KEY & SCANKEY & SCAN:The beeper sounds when you press a key or when the scanner stops.KEY:The beeper sounds when you press a key.OFF:The beeper is disabled.

SET MODE ITEM 14: BELL RINGER

Function: Selects the number of Bell ringer repetitions. **Available Values**: 1Time ~ 20Times / CONTINUOUS **Default**: 1Time

SET MODE ITEM 15: BELL SELECT

Function: Enables/Disables the Bell ringer function and its sound selection. **Available Values**: OFF / BELL / USER BP1 / USER BP2 / USER BP3 **Default**: OFF

SET MODE ITEM 16: BLUETOOTH P-CODE

Function: Pairing the *Bluetooth*[®] unit and setting the Pin Code.
Available Values: 0000 ~ 9999
Default: 6111
See page 72 for details.

SET MODE ITEM 17: BLUETOOTH SET

Function: Select the operating mode of the optional BH-1A/BH-2A Bluetooth® Headset. Available Values: VOX: PTT / VOX HIGH / VOX LOW, MODE: MONO / STEREO, SAVE: ON / OFF. POWR: ON / OFF Default: VOX: PTT, MODE: MONO, SAVE: OFF POWR: ON / OFF VOX: PTT: Activates the **Bluetooth®** function without the VOX feature. VOX: VOX HIGH: Activates the **Bluetooth®** function with the VOX feature (VOX gain set to "High"). VOX: VOX LOW: Activates the **Bluetooth®** function with the VOX feature (VOX gain set to "Low"). MODE: MONO: Disable the stereo output to the BH-1A Bluetooth® Headset while receiving the FM Broadcast band. MODE: STEREO: Enable the stereo output to the BH-1A Bluetooth® Headset while receiving the FM Broadcast band. SAVE: ON: Activates the Battery Save function of the BH-1A/BH-2A Bluetooth® Headset. If there has been no signal or key activity for 20 seconds, the Battery Saver automatically puts the BH-1A/BH-2A Bluetooth® Headset to "sleep", to conserve life. When signal is received or the **PTT** switch is pressed, the BH-1A/BH-2A Bluetooth® Headset will be active again.

SAVE: OFF:	Disable the Battery Save function of the BH-1A/BH-2A Bluetooth®
	Headset.
POWR: ON:	Enable the BU-1 <i>Bluetooth</i> [®] Unit.
POWR: OFF:	Disable the BU-1 <i>Bluetooth</i> [®] Unit.

SET MODE ITEM 18: BUSY LED

Function: Enables/Disables the **BUSY** LED while the squelch is open. **Available Values**: ON / OFF **Default**: ON

SET MODE ITEM 19: CH COUNTER

Function: Selects the Channel Counter Search Width. Available Values: ±5MHz / ±10MHz / ±50MHz / ±100MHz Default: ±5MHz

SET MODE ITEM 20: CLOCK SHIFT

Function: Shifting of CPU clock frequency.

Available Values: ON / OFF

Default: OFF

Note: This function is only used to move a spurious response "birdie", should it fall on a desired frequency.

SET MODE ITEM 21: CW ID

Function: Program and activate the CW Identifier (used during ARTS[™] operation). See page 95 for details.

SET MODE ITEM 22: CW LEARNING

Function: Enables/Disables the CW Learning feature. See page 116 for details.

SET MODE ITEM 23: CW PITCH

Function: Select the CW tone pitch for the CW Learning, CW Training, and CW Identifier functions.

Available Values: 400 ~ 1000 Hz (50 Hz/step) Default: 700Hz

SET MODE ITEM 24: CW TRAINING

Function: Enables/Disables the CW Training feature. See page 118 for details.

SET MODE ITEM 25: DC VOLTAGE

Function: Indicates the DC Supply Voltage.

Set Mode

SET MODE SELECTION DETAILS

SET MODE ITEM 26: DCS CODE

Function: Setting of the DCS code. **Available Values**: 104 standard DCS codes. **Default**: DCS 023

SET MODE ITEM 27: DCS INVERSION

Function: Enables/Disables the "Inverted" DCS tone.

Available Values: RX-NORMAL, TX-NOR-MAL / RX-INVERT, TX-NORMAL / RX-BOTH, TX-NORMAL / RX-NORMAL, TX-INVERT / RX-INVERT, TX-INVERT / RX-BOTH, TX-INVERT

DCS CODE									
023	025	026	031	032	036	043	047	051	053
054	065	071	072	073	074	114	115	116	122

732	734	743	754	-	-	-	-	-	-

Default: RX-NORMAL, TX-NORMAL

RX-NORMAL, TX-NORMAL: Receive and transmit the Normal DCS Tone.

<u>RX-INVERT, TX-NORMAL</u>: Receive the Inverted DCS Tone and transmit the Normal DCS Tone.

<u>RX-BOTH, TX-NORMAL</u>: Receive both Normal and Inverted DCS Tones and transmit the Normal DCS Tone.

<u>RX-NORMAL, TX-INVERT</u>: Receive the Normal DCS Tone and transmit the Inverted DCS Tone.

RX-INVERT, TX-INVERT: Receive and transmit the Inverted DCS Tone.

<u>RX-BOTH, TX-INVERT</u>: Receive both Normal and Inverted DCS Tones and transmit the Inverted DCS Tone.

SET MODE ITEM 28: DTMF DELAY

Function: Selects the DTMF Autodialer Delay Time. **Available Values**: 50ms / 250ms / 450ms / 750ms / 1000ms **Default**: 450ms

SET MODE ITEM 29: DTMF MANUAL/AUTO

Function: Enables/Disables the DTMF Autodial feature. **Available Values**: MANUAL / AUTO **Default**: MANUAL

SET MODE ITEM 30: DTMF SELECT

Function: Programming of the DTMF Autodialer. See page 114 for details.

SET MODE ITEM 31: DTMF SPEED

Function: Selects the DTMF Autodialer Sending Speed. **Available Values**: 50mS / 100mS **Default**: 50mS

SET MODE ITEM 32: EAI

Function: Enables/Disables the Emergency Automatic ID (EAI) feature. **Available Values**: ON / OFF **Default**: OFF

SET MODE ITEM 33: EAI TIME

Function: Sets the Emergency Automatic ID (EAI) operating mode and its transmit time. Available Values: INT 1min ~ INT 9min / INT10min / INT15min / INT20min / INT30min / INT40min / INT50min / CON 1min ~ CON 9min / CON10min / CON15min / CON20min / CON30min / CON40min / CON50min Default: CON 5min INT: Interval Mode CON: Continuous Mode

SET MODE ITEM 34: EMERGENCY SELECT

Function: Select the alarms utilized when the Emergency function is engaged. **Available Values**: BEEP / STROBE / BEEP&STROBE / BEAM / BEEP&BEAM / CW / BEEP&CW / CW-ID TX

Default: BEEP & STROBE

Deliunt. DELLI Co	TROBE
BEEP:	Loud "Alarm" sounds.
STROBE:	Flashes the white LED light.
BEEP&STROBE:	Loud "Alarm" sounds along with flashing of the white LED light.
BEAM:	The white LED light glows continuously.
BEEP&BEAM:	Loud "Alarm" sounds and the white LED light glows continuously.
<u>CW</u> :	The white LED light flashes according to the programmed Emer-
	gency message (Morse Code)* at a rate of five words per minute.
BEEP&CW:	Sounds tones via the speaker, and flashes the white LED light, ac-
	cording to the programmed Emergency message (Morse Code) ^x at a
	rate of five words per minute.
<u>CW-ID TX</u> :	Transmits the programmed Emergency message (Morse Code)* and
	flashes the white LED light, according to the programmed Emergency
	message (Morse Code)* on the air beginning one minute after activa-
	tion of the Emergency function.

*: The internationally-recognized Morse Code "S.O.S" message (•••---••) is programmed at the factory for the Emergency message.

Here's how to program the Emergency Message:

- 1. Press the MODE key to display any previously-stored emergency message.
- 2. Press and hold the $\underbrace{\text{HM}_{RV}}_{\text{HM}_{RV}}$ key for two seconds to clear any previous emergency message, if desired.

3. Rotate the **DIAL** knob, or press one of the keyboard keys, to select the first letter/ number of the message.

Example 1: Rotate the **DIAL** knob to select any of the 39 available characters.

Example 2: Press the $2^{\text{code}}_{\text{(2ABC)}}$ key repeatedly to toggle among the seven available characters associated with that key: $A \rightarrow B \rightarrow C \rightarrow 2$

- 4. Press the $\frac{SFS SQ TYP}{(MODE)}$ key to move to the next character, if needed.
- 5. Repeat the previous steps 3 and 4 to complete the message (up to 16 characters).
- 6. If you make a mistake, press the BAND key to backspace the cursor; now re-enter the correct letter/number.
- 7. Press and hold the $\frac{EMG R/H}{HM/RV}$ key for two seconds to delete all data after the cursor that may have been previously stored erroneously.
- 8. When you have entered the message, press the MODE key again to confirm the message, then press the **PTT** switch to save the settings and exit to normal operation.

SET MODE ITEM 35: EXTENDED MENU

Function: Enables/Disables the extended Set Mode Menu. Available Values: ON / OFF Default: OFF

SET MODE ITEM 36: FW KEY HOLD TIME

Function: Set the duration time that the **w** key must be held to activate the secondary function.

Available Values: FW0.3sec / FW0.5sec / FW0.7sec / FW1.0sec / FW1.5sec Default: FW0.5sec

SET MODE ITEM 37: HALF DEVIATION

Function: Reducing the Deviation level by 50 %. **Available Values**: ON/OFF **Default**: OFF

SET MODE ITEM 38: HOME VFO

Function: Enables/Disables the function of the VFO **DIAL** knob, while in the Home Channel mode.

Available Values: DISABLE / ENABLE Default: ENABLE

SET MODE ITEM 39: HOME/REVERSE

Function: Selects the function of the $\mathbb{H}_{RV}^{EMGR/H}$ key.

Available Values: HOME / REV

Default: REV

<u>HOME</u>: Pressing the $\mathbb{H}_{RV}^{\text{EMGR/H}}$ key instantly recalls a favorite "Home" channel.

<u>**REV</u></u>: Pressing the \underbrace{HM_{RV}}_{(HM/RV)} key reverses transmit and receive frequencies during repeater operation.</u>**

SET MODE ITEM 40: INT MANUAL/AUTO

Function: Enables/Disables the DTMF Autodialer feature while using the Internet Connection feature (WIRESTM).

Available Values: MANUAL / AUTO

Default: MANUAL

SET MODE ITEM 41: INTERNET

Function: Enables/Disables the Internet Connection feature (WIRESTM). **Available Values**: ON / OFF **Default**: OFF

SET MODE ITEM 42: INTERNET CODE

Function: Selects the Access Number (DTMF digit) for SRG operation of the Internet Connection feature (WIRESTM).

Available Values: DTMF 0 ~ DTMF 9, DTMF A ~ DTMF D, DTMF *, or DTMF # **Default**: DTMF 1

SET MODE ITEM 43: INTERNET KEY

Tunction: Selects the primary function of the B key.Available Values: INTERNET / INTERNET SELECT / SET MODEDefault: INTERNETINTERNET:The B key Enables/Disables the internet feature.INTERNET:The B key recalls the Internet Access Number (SRG) or Access
String (FRG). (SRG) or (FRG) is determined via Set Mode Item
49: INTERNET MODE.SET MODE:The B key is the Short-cut path to recall one of the Set Mode
Items. See page 123 for programming.

SET MODE ITEM 44: INTERNET MODE

Function: Selects the operating mode of the Internet Connection feature (WIRESTM). **Available Values**: FRG / SRG

Default: SRG

SET MODE ITEM 45: INTERNET SELECT

Function: Programming of the Access Number (DTMF code) for the FRG station of the WIRESTM (or non WIRESTM Internet Link System) access. See page 112 for details.

SET MODE ITEM 46: LAMP

 Function: Selects the LCD/Keypad Lamp mode.

 Available Values: KEY 2sec ~ KEY10sec / CONTINUOUS / OFF

 Default: KEY 5sec

 KEY 2sec ~ KEY10sec: Illuminates the LCD/Keypad for the selected time, when any key is pressed.

 CONTINUOUS:
 Illuminates the LCD/Keypad continuously.

 OFF:
 Disables the LCD/Keypad illumination

SET MODE ITEM 47: LANGUAGE

Function: Selects the language for the Set Mode selections. Available Values: ENGLISH / JAPANESE Default: ENGLISH

SET MODE ITEM 48: LCD CONTRAST

Function: Setting of the Display contrast level. **Available Values**: LEVEL 12 ~ LEVEL32 **Default**: LEVEL24

SET MODE ITEM 49: LCD DIMMER

Function: Setting of the Display brightness level. **Available Values**: LEVEL 1 ~ LEVEL 4 **Default**: LEVEL 4

SET MODE ITEM 50: LED LIGHT

Function: Illuminates the white LED light continuously (useful as emergency flashlight at night).

SET MODE ITEM 51: LOCK

Function: Selects the combination of key buttons that are locked out by the LOCK function.

Available Values: KEY / DIAL / KEY&DIAL / PTT / KEY&PTT / DIAL&PTT / ALL Default: KEY&DIAL

SET MODE ITEM 52: MEMORY FAST STEP

Function: Selects the channel step for the fast channel selection mode while in the Memory Recall mode.

Available Values: 10CH / 20CH / 50CH / 100CH **Default:** 10CH

SET MODE ITEM 53: MEMORY NAME

Function: Stores "Alpha-Numeric" tags for the Memory channels. See page 50 for details.

SET MODE ITEM 54: MEMORY PROTECT

Function: Enables/Disables the Memory Write Protector.Available Values: ON/OFFDefault: OFFNote: When this Set Mode Item is set to "ON", the memory write operation is ignored.

SET MODE ITEM 55: MEMORY SKIP

Function: Selects the Memory Scan channel-selection mode.

Available Values: OFF / SKIP / ONLY

Default: OFF

OFF: All memory channels will be scanned (the "flag" will be ignored).

SKIP: The scanner will "skip" the flagged channels during scanning.

ONLY: The scanner will only scan channels that are flagged (Preferential Scan List).

SET MODE ITEM 56: MEMORY WRITE

Function: Determines the method of selecting channels for Memory Storage.

Available Values: NEXT / LOWER

Default: NEXT

NEXT: Stores the data into the memory channel, which is next highest from the laststored memory channel.

LOWER: Stores the data into the next-available "free" channel.

SET MODE ITEM 57: MESSAGE LIST

Function: Programming a Member List for the Message feature. See page 103 for details.

SET MODE ITEM 58: MESSAGE REGISTER

Function: Selects your Personal ID for the Message feature. See page 104 for details.

SET MODE ITEM 59: MESSAGE SELECT

Function: Programming a Message for the Message feature. See page 102 for details.

SET MODE ITEM 60: MIC GAIN

Function: Adjusts the microphone gain level. **Available Values**: LEVEL 1 ~ LEVEL 9 **Default**: LEVEL 5

SET MODE ITEM 61: MONI/T-CALL

Function: Selects the MONI key (just below the PTT switch) function.

Available Values: MONI/T-CALL

Default: Depends on the transceiver version.

- MONI: Pressing the **MONI** key causes the Noise/Tone Squelch to be over-ridden, allowing you to listen for weak (or non-encoded) signals.
- <u>T-CALL</u>: Pressing the **MONI** key activates a 1750-Hz burst tone, used for repeater access in many countries.

SET MODE ITEM 62: MUTE

Function: Adjusts the receiver audio output level when the MUTE function was activated.

Available Values: MUTE 30%, MUTE 50%, MUTE 100%, or OFF **Default**: OFF

SET MODE ITEM 63: OFF TIMER

Function: Set the OFF Timer time.

The OFF Timer turns the radio off at the programmed time. See page 128 for details.

SET MODE ITEM 64: ON TIMER

Function: Set the ON Timer time.

The ON Timer turns the radio on at the programmed time. See page 128 for details.

SET MODE ITEM 65: OPENING MESSAGE

Function: Selects the Opening Message that appears when the radio is powered on.

Available Values: NORMAL / OFF / DC / MESSAGE

Default: NORMAL

- NORMAL: Appears the Vertex Standard Logo.
- OFF: No Opening Message.
- <u>DC</u>: Appears the Vertex Standard Logo with the current time and the power supply voltage.
- MESSAGE: The Vertex Standard Logo appears along with your message. See the following procedure for creating a message.

Here's how to program the Opening Message.

- 1. Select this Set Mode Item to "MESSAGE".
- 2. Press the MODE key to enable programming of the Opening Message. You will notice the first character entry location blinking.
- 3. Rotate the **DIAL** knob, or press one of the keyboard keys, to select the first letter, number, or symbol of the message.

Example 1: Rotate the **DIAL** knob to select any of the 61 available characters. *Example 2*: Press the $\frac{CODE}{(2ABC)}$ key repeatedly to toggle among the seven available characters associated with that key: $\mathbf{a} \rightarrow \mathbf{b} \rightarrow \mathbf{c} \rightarrow \mathbf{2} \rightarrow \mathbf{A} \rightarrow \mathbf{B} \rightarrow \mathbf{C}$

- 4. Press the $\frac{885 \text{ so TV}^2}{(\text{MODE})}$ key to move to the next character, if needed.
- 5. Repeat the previous steps 3 and 4 to complete the message (up to 16 characters).
- 6. If you make a mistake, press the (BAND) key to back-space the cursor; now re-enter the correct letter, number, or symbol.
- 7. When you have entered the desired Opening Message, press the MENU key to save the new settings.

SET MODE ITEM 66: PAGER ANS-BACK

Function: Enables/Disables the Answer Back function of the Enhanced CTCSS Paging & Code Squelch.

Available Values: ON / OFF Default: OFF

SET MODE ITEM 67: PAGER CODE-RX

Function: Sets the Receiver Pager Code for the Enhanced CTCSS Paging & Code Squelch. See page 40 for details.

SET MODE ITEM 68: PAGER CODE-TX

Function: Sets the Transmitting Pager Code for the Enhanced CTCSS Paging & Code Squelch.

See page 40 for details.

SET MODE ITEM 69: PASSWORD

Function: Programming and activating the Password feature. See page 122 for details.

SET MODE ITEM 70: PR FREQUENCY

Function: Program the CTCSS Tone Frequency for the User Programmed Reverse CTCSS Decoder. **Available Values**: 300 Hz ~ 3000 Hz (100 Hz/step) **Default**: 1600 Hz

SET MODE ITEM 71: PRI REVERT

Function: Enables/Disables the Priority Revert feature. **Available Values**: ON / OFF **Default**: OFF

SET MODE ITEM 72: PRI TIME

Function: Selects the time between the Priority (Dual Watch) channel checks, when the feature is active.

Available Values: 0.1sec ~ 0.9sec (0.1sec/step) or 1.0sec ~ 10.0sec (0.5sec/step) Default: 5.0sec

SET MODE ITEM 73: PTT DELAY

Function: Selects the time delay before the carrier is transmitted, when the **PTT** switch is pressed.

Available Values: OFF / 20ms / 50ms / 100ms / 200ms Default: OFF

SET MODE ITEM 74: RPT ARS

Function: Enables/Disables the Automatic Repeater Shift function. **Available Values**: ON / OFF **Default**: ON

SET MODE ITEM 75: RPT SHIFT

Function: Sets the Repeater Shift Direction. Available Values: SIMPLEX / -RPT / +RPT Default: SIMPLEX

SET MODE ITEM 76: RPT SHIFT FREQ

Function: Sets the magnitude of the Repeater Shift. **Available Values**: 0.000MHz ~ 150.000MHz (50 kHz/step) **Default**: Depends on the operating band and transceiver version.

SET MODE ITEM 77: RX AF DUAL

Function: Select the resume mode of the AF-Dual Operation. **Available Values**: TRX 1sec ~ TRX 10sec / HOLD / TX 1sec ~ TX 10sec **Default**: TRX 2sec

SET MODE ITEM 78: RX MODE

Function: Sets the receiving mode.Available Values: AUTO / NFM / AM / WFMDefault: AUTO (Mode automatically changes according to operating frequency).

SET MODE ITEM 79: SAVE RX

Function: Selects the Receive-mode Battery Saver interval ("sleep" ratio).
Available Values: 0.2sec ~ 0.9sec (0.1sec/step), 1.0sec ~ 9.5sec (0.5sec/step), or 10.0sec ~ 60.0sec (5sec/step)
Default: 0.2sec

SET MODE ITEM 80: SAVE TX

Function: Enables/Disables the Transmitter Battery Saver. **Available Values**: ON / OFF **Default**: OFF

SET MODE ITEM 81: SCAN LAMP

Function: Enables/Disables the Scan Lamp (while scanner is paused).Available Values: ON / OFFDefault: ON

SET MODE ITEM 82: SCAN RE-START

Function: Selects the Scan Re-start Delay time. **Available Values**: 0.1sec ~ 0.9sec (0.1sec/step) or 1.0sec ~ 10.0sec (0.5sec/step) **Default**: 2.0sec

SET MODE ITEM 83: SCAN RESUME

Function: Selects the Scan Resume mode.

Available Values: 2.0sec ~ 10.0sec (0.5sec/step) /BUSY / HOLD

Default: 5.0sec

- 2.0sec 10.0sec: The scanner will halt on a signal it encounters, and will hold there for the selected resume time. If you do not take action to disable the scanner within that time period, the scanner will resume even if the station is still active.
- BUSY:The scanner will halt on a signal it encounters. When the signal drops,
the scanner will resume. The Scan resume time (default 2 seconds) is
controlled set by the Set Mode Item 82: SCAN RE-START.
- <u>HOLD</u>: The scanner will halt on a signal it encounters. It will not restart automatically; you must manually re-initiate scanning if you wish to resume.

SET MODE ITEM 84: SENSOR DISPLAY

Function: Selects the sensor information when the transceiver is operating in the "Mono" band mode with large characters.

Available Values: DC / TEMP / WAVE / BARO / ALTI / OFF

Default: DC

- DC: Indicates the battery voltage and battery type.
- TEMP: Indicates the current temperature inside the transceiver's case.
- WAVE: Depicts the (RX and TX) audio wave-form.
- BARO: Indicates the Barometric Pressure and relative changes in the pressure (two bars per hour).
- ALTI: Indicates the Altitude.
- OFF: Disables the sensor information (Indicates the "Current Time" only).

SET MODE ITEM 85: SENSOR INFORMATION

Function: Indicates the information of the internal sensors.

SET MODE ITEM 86: SET MODE CSR

Function: Selects the Set Mode Cursor.

SET MODE ITEM 87: SET MODE FORMAT

Function: Selects the display format of the Set Mode operation. **Available Values**: LIST / ITEM **Default**: LIST

SET MODE ITEM 88: SMART SEARCH

Function: Selects the Smart Search Sweep mode.

Available Values: SINGLE / CONTINUOUS

Default: SINGLE

- SINGLE: The transceiver sweeps the current band once in each direction starting on the current frequency. All channels where activity is present (up to 15 in each direction) are loaded into the Smart Search memories. Whether or not all 31 memories are filled, the search stops after one sweep in each direction.
- <u>CONTINUOUS</u>: The transceiver makes a sweep in each direction as with the "SINGLE" mode, but if all 31 channels are not filled after the first sweep, the radio continues sweeping until they are all filled.

SET MODE ITEM 89: S-METER SYMBOL

Function: Selects the S- & TX PO meter Symbol.

SET MODE ITEM 90: SPEAKER OUT

Function: Enables/Disables the FM Broadcast audio output to the internal speaker when using the earphone antenna.

Available Values: AUTO / SPEAKER

Default: AUTO

- <u>AUTO</u>: The FM Broadcast audio output is selected automatically depending on the connection of the earphone antenna.
- SPEAKER: Routes the FM Broadcast audio output to the internal speaker and the earphone.

SET MODE ITEM 91: SPEC-ANALYZER

Function: Selects the Spectrum Analyzer sweep mode.

Available Values: 1Time / CONTINUOUS / Full Time

Default: 1time

<u>1Time</u>: The receiver sweeps the current band once.

<u>CONTINUOUS</u>: The receiver sweeps the current band repeatedly until the Spectrum Analyzer is turned off.

Full Time:This mode is activated similar to a "Continuous" mode. However, the
transceiver outputs audio on the center frequency $(\mathbf{\nabla})$ through the speaker
when Spectrum Analyzer is activated.

SET MODE ITEM 92: SQL LEVEL

Function: Sets the Squelch threshold level.

Available Values: LEVEL 0 ~ LEVEL 15 (AM and Narrow FM), LEVEL 0 ~ LEVEL 15 (Wide FM and AM Broadcast)

Default: LEVEL 1 (AM and Narrow FM), LEVEL 2 (Wide FM and AM Broadcast)

SET MODE ITEM 93: SQL S-METER

Function: Adjusts the Squelch threshold level to the S-meter level. **Available Values**: OFF / LEVEL 1 ~ LEVEL 9 **Default**: OFF

SET MODE ITEM 94: SQL SPLIT

 Function: Enables/Disables split CTCSS/DCS coding.

 Available Values: OFF / ON

 Default: OFF

 When this Set Mode Item is set to "ON", you can see the following additional parameters after the "MESSAGE" parameter while selecting the Set Mode Item 97: SQL TYPE:

 D CD:
 DCS Encode only ("DC" icon will appear while operating)

 TONE-DCS:
 Encodes a CTCSS Tone and Decodes a DCS code (the "T-D" icon will appear during operation)

 D CD-TONE SQL:
 Encodes a DCS code and Decodes a CTCSS Tone (the "D-T" icon will appear during operation)

Select the desired operating mode from the selections shown above.

SET MODE ITEM 95: SQL TYPE

Function: Selects the Tone Encoder and/or Decoder mode.

Available Values: OFF / TONE / TONE SQL / DCS / REV TONE / PR FREQ / PAGER / MESSAGE Default: OFF TONE: Activates the CTCSS Encoder TONE SOL: Activates the CTCSS Encoder/Decoder DCS: Activates the Digital Coded Squelch Encoder/Decoder **<u>REV TONE</u>**: Activates the Reverse CTCSS Encoder/Decoder (Mutes the receiver when the matching tone is received). PR FREO: Activates the User Programmed Reverse CTCSS Encoder/Decoder (Mutes the receiver when the matching tone with Set Mode Item 76: PR FRE-QUENCY is received). PAGER: Activates the Enhanced Paging & Code Squelch. MESSAGE: Activates the Message feature.

Note: See also Set Mode Item 94: SQL SPLIT regarding additional selections available during "Split Tone" operation.

SET MODE ITEM 96: STEP FREQUENCY

Function: Setting of the DIAL frequency steps.

Available Values: AUTO / 5.0 / 6.25 / 8.33 / 9.0 / 10.0 / 12.5 / 15.0 / 20.0 / 25.0 / 50.0 / 100.0 kHz

Default: AUTO (Step automatically changes according to operating frequency.)

Note: 1) This Set Mode Item can select and set the Dial frequency steps to individual memory channels when Memory Offset Tuning is enabled as shown on page 51.

2) 9.0 kHz steps are available only when receiving on the AM Broadcast band.

3) 8.33 kHz steps are available only when receiving on the Air band.

4) While operating on the AM Broadcast band, you may only select channel steps of 9.0 kHz or 10.0 kHz; the other step selections are disabled.

5) 5.0 kHz steps are not available for use on 250 - 300 MHz, nor above 580 MHz.

SET MODE ITEM 97: STEREO

Function: Enables/Disables the stereo output while receiving the FM Broadcast band. Available Values: STEREO / MONO **Default:** STEREO

SET MODE ITEM 98: TIME SET

Function: Sets the Clock time. See page 120 for details.

SET MODE ITEM 99: TONE FREQUENCY

Function: Setting of the CTCSS Tone Frequency **Available Values**: 50 standard CTCSS tones **Default**: 100.0 Hz

SET MODE ITEM 100: TONE-SRCH MUTE

Function: Enables/Disables the receiver audio output while the Tone Search Scanner is activated.

Available Values: ON / OFF Default: ON

SET MODE ITEM 101: TONE-SRCH SPEED

Function: Selects the Tone Search Scanner speed. **Available Values**: FAST (2.5 tone/sec) / SLOW (1.25 tone/sec) **Default**: FAST (2.5 tone/sec)

SET MODE ITEM 102: TOT

Function: Setting of the TOT time **Available Values**: OFF / 0.5min - 10.0min (0.5min/step) **Default**: 3.0min (3 minutes) The time-out timer shuts off the transmitter after a continuous transmission which is equal to the programmed time.

SET MODE ITEM 103: UNIT OFFSET

Function: Caribrating the Sensor Unit. **Available Values**: BARO: -1000 ~ +1000, ALTI: -1000 ~ +1000 **Default**: BARO: 0, ALTITUDE: 0

SET MODE ITEM 104: UNIT SELECT

Function: Select the measurement units of the Sensor Unit. **Available Values**: TEMP: °C / °F, BARO: hPa / mb / mmHg / inch, ALTI: m / ft **Default**: Depends on the transceiver version

SET MODE ITEM 105: VFO MODE

Function: Selects or disables the VFO band edge limiting for the current band. Available Values: ALL / BAND Default: BAND

- <u>ALL</u>: When the VFO frequency reaches the high edge of the current band, the VFO frequency will jump to the low band edge of the next band (or vice versa).
- BAND: When the VFO frequency reaches the high band edge of the current band, the VFO frequency will jump to the low band edge of the current band (or vice versa).

SET MODE ITEM 106: VFO SKIP

Function: Set the My Band.

Available Values: ON/OFF

Default: OFF

The "My Band" feature allows you to select several operating bands, and make only those bands available for selection via the [BAND] key.

ON: Only the bands that are turned on will be shown when pushing the (BAND) key.

OFF: When the BAND key is pressed, the bands that are turned "OFF" will not be shown. See page 100 for details.

SET MODE ITEM 107: VOLUME MODE

 Function: Select the vol key function.

 Available Values: NORMAL / AUTO BACK

 Default: NORMAL

 NORMAL:
 The vol key keeps the status while pressing the vol key.

 AUTO BACK:
 The vol key keeps the status for approximately three seconds after pressing the vol key.

SET MODE ITEM 108: VOX

Function: Enables/Disables VOX operation; sets VOX sensitivity. **Available Values**: OFF / HIGH / LOW **Default**: OFF

SET MODE ITEM 109: VOX DELAY

Function: Selects the VOX delay ("hang") time. Available Values: 0.5sec / 1.0sec / 1.5sec / 2.0sec / 2.5sec / 3.0sec Default: 0.5sec

SET MODE ITEM 110: WAVE MONITOR

Function: Selects the Wave-Form function while displaying the Wave-Form via Set Mode Item 85: SENSOR DISPLAY.

Available Values: ALL / RX SIGNAL / TX MODULATION

Default: OFF

ALL: Displays the RX Audio wave form and TX Audio modulation wave form.

<u>RX SIGNAL</u>: Displays the RX Audio wave form.

TX MODULATION: Displays the TX Audio modulation wave form.

SET MODE ITEM 111: WX ALERT

Function: Enables/disables the Weather Alert Feature **Available Values**: ON/OFF **Default**: OFF

VX-8DR OPERATING MANUAL

APRS/GPS SET MODE

Set Mode Item	FUNCTION	Available Values (Defalt: Bold Italic)
1: APRS AF DUAL	Enables/Disables the AF DUAL function when the APRS signal is received.	ON / OFF
2: APRS DESTINATION	Indicates the model code of this transceiver.	APY008 (Fixed)
3: APRS FILTER	Selects the filter type option allowing you to receive the only specified types of APRS Beacon	Mic-E: ON / OFF POSITION: ON / OFF
	data.	WEATHER: ON / OFF
		OBJECT: ON/OFF
		ITEM: ON/OFF
		STATUS: ON / OFF
		OTHER: ON / OFF
4: APRS MODEM	Enables/Disables the APRS modem (AX25 Data modem) and its Baud Rate.	OFF / 1200bps / 9600bps
5: APRS MSG FLASH	Enables/Disables the white LED light when the APRS message is received.	ON / OFF
6: APRS MSG TXT	Programming the Fixed form APRS Message.	-
7: APRS MUTE	Enables/Disables the audio output of the "B-Band" during APRS operation.	ON / OFF
8: APRS RINGER MSG	Enables/Disables the alert ringer when the APRS message is received.	ON/OFF
9: APRS RINGER BCON	Enables/Disables the alert ringer when the APRS beacon is received.	ON / OFF
10: APRS UNIT	Selects the unit for the APRS Beacon information.	Position: MM.MM' / MM'SS"
		Distance: km / mile
		Speed: km/h / knot / mph
		Altitude: m / ft Temp: °C / °F
		Rain: mm / <i>inch</i>
		Wind: m / s / mph
11: APRS TX DELAY	Select the transmission delay time between transmitting the APRS data and transmitting a	100ms / 150 ms / 200ms / 250ms / 300ms /
	preamble (flag code) prior to the APRS data.	400ms / 500ms / 750ms / 1000ms
12: BEACON INTERVAL	Select the Beacon Interval time during APRS operation	30sec / 1min / 2min / 3min / 5min / 10min /
	• •	15min / 20min / 30min / 60min
13: BEACON STATS TXT	Store the message for the APRS Beacon	
14: BEACON TX	Enables/Disables the automatic transmission of the APRS Beacon.	MANUAL / OAUTO / OSMART
15: DIGI PATH	Sets the APRS packet path you wish to path through.	P1 OFF
		P2 1 WIDE1-1 P3 1 WIDE1-1, 2 WIDE2-1
		P3 1 WIDE1-1, 2 WIDE2-1
		P5 1 2
		P6 1 2
		P7 1 2
		P8 1 2
16: GPS DATUM	Select the GPS Datum.	WGS-84 / Tokyo Mean / Tokyo Japan /
		Tokyo Korea / Tokyo Okinawa
17: GPS TIME SET	Enables/Disables the GPS clock data to be used.	AUTO / MANUAL
18: GPS UNIT	Selects the units for the GPS information.	Position: .MMM' / 'SS"
		Speed: km/h / knot / mph
		Altitude: m / ft
19: MSG GROUP	Selects the filter type option allowing you to receive only specified types of APRS Message	G1 ~ G5, B1 ~ B3
00 M/ 0411 010M	information.	(G1: ALL, G2: CQ, G3: QST, G4: YAESU)
20: MY CALLSIGN 21: MY POSITION	Program your callsign.	 GPS / Lat / Lon / P1 ~ P10
21: MY POSITION 22: MY SYMBOL	Determine and memorize your location (Lat/Log). Selects your icon which will be displayed on the monitors of other stations as you.	more than 180 symbols
22: WIT STWBOL 23: POSITION COMMENT	Selects your con which will be displayed on the monitors of other stations as you. Selects position comment depending on your situation.	Off Duty / En Route / In Service / Returning /
	ociolo position comment depending on your situation.	Committed / Special / Priority /
1		Custom 0 ~ Custom 6 / EMERGENCY!
24: SmartBeaconing	Set the SmartBeaconing™ feature. (SmartBeaconing™ from HamHUD Nichetronix) Set the time offset between the local time and UTC.	OFF/TYPE1/TYPE2/TYPE3
25: TIME ZONE	Set the time offset between the local time and UTC.	UTC -13:00H ~ UTC +13:00H (0.5H / step)

APRS/GPS Set Mode Item 1: APRS AF DUAL

Function: Enables/Disables the AF DUAL function when the APRS signal is received. **Available Values**: ON/OFF

Default: OFF

APRS/GPS Set Mode Item 2: APRS DESTINATION

Function: Indicates the model code of this transceiver. **Default**: APY008 This model code can not be changed.

APRS/GPS Set Mode Item 3: APRS FILTER

Function: Selects the filter type option allowing you to receive only the specified types of APRS Beacon data.

Available Values: Mic-E, POSITION, WEATHER, OBJECT, ITEM, STATUS, OTHER **Default**: Mic-E: ON, POSITION: ON, WEATHER: ON, OBJECT: ON, ITEM: ON, STATUS: ON, OTHER: OFF

APRS/GPS Set Mode Item 4: APRS MODEM

Function: Enables/Disables the APRS modem (AX.25 Data modem) and its Baud Rate. **Available Values**: OFF/1200bps/9600bps **Default**: OFF

APRS/GPS Set Mode Item 5: APRS MSG FLASH

Function: Enables/Disables the white LED light when the APRS message is received. **Available Values**: ON/OFF

Default: ON

When this Set Mode Item is set to "ON", the white LED light flashes when receive the APRS message.

APRS/GPS Set Mode Item 6: APRS MSG TXT

Function: Programming the Fixed form APRS Message. See page 91 for details.

APRS/GPS Set Mode Item 7: APRS MUTE

Function: Enables/Disables audio output of the "B-Band" during APRS operation. **Available Values**: ON/OFF **Default**: OFF

APRS/GPS Set Mode Item 8: APRS RINGER MSG

Function: Enables/Disables the alert ringer when the APRS message is received. **Available Values**: ON/OFF **Default**: ON

APRS/GPS Set Mode Item 9: APRS RINGER BCON

Function: Enables/Disables the alert ringer when the APRS beacon is received. **Available Values**: ON/OFF **Default**: ON

APRS/GPS Set Mode Item 10: APRS UNIT

Function: Selects the unit for the APRS Beacon information.
Available Values: Position: MM.MM'/MM'SS", Distance: km/mile,
Speed: km/h/knot/mph, Altitude: m/ft, Temp: °C/°F, Rain: mm/inch, Wind: m/s/mph
Default: Position: MM.MM', Distance: mile, Speed: mph, Altitude: ft, Temp: °F,
Rain: inch, Wind: mph

APRS/GPS Set Mode Item 11: APRS TX DELAY

Function: Select the transmission delay time between transmitting the APRS data and transmitting a preamble (flag code) prior to the APRS data.

Available Values: 100ms/150ms/200ms/250ms/300ms/400ms/500ms/750ms/1000ms Default: 300ms

PRS/GPS Set Mode Item 12: BEACON INTERVAL

Function: Select the Beacon Interval time during APRS operation **Available Values**: 30sec/1min/2min/3min/5min/10min/15min/20min/30min/60min **Default**: 5min

APRS/GPS Set Mode Item 13: BEACON STATS TXT

Function: Store the message for the APRS Beacon See page 85 for details.

APRS/GPS Set Mode Item 14: BEACON TX

Function: Enables/Disables the automatic transmission of the APRS Beacon.

Available Values: MANUAL/@AUTO/OSMART

Default: MANUAL

- <u>MANUAL</u>: The **VX-8DR** does not transmit the APRS beacon automatically. To transmit the APRS beacon, just press the \bigotimes_{\boxtimes} key.
- AUTO: The **VX-8DR** transmits the APRS beacon automatically at the time interval which is set in Set Mode Item 11: BEACON INTERVAL.
- <u>OSMART</u>: The **VX-8DR** transmits the APRS beacon automatically when the event that set in Set Mode Item 24: SmartBeaconing occures.

APRS/GPS Set Mode Item 15: DIGI PATH

Function: Sets the APRS packet path you wish to path through. **Available Values**: P1 ~ P8 **Default**: P1: OFF, P2: WIDE1-1, P3: WIDE1-1/WIDE2 -1, P4 ~ P8: non

APRS/GPS Set Mode Item 16: GPS DATUM

Function: Select the GPS Datum. Available Values: WGS-84/Tokyo Mean/Tokyo Japan/Tokyo Korea/Tokyo Okinawa Default: WGS-84

APRS/GPS Set Mode Item 17: GPS TIME SET

Function: Enables/Disables the GPS clock data to be used. **Available Values**: AUTO/MANUAL **Default**: AUTO

APRS/GPS Set Mode Item 18: GPS UNIT

Function: Selects the units for GPS information.

Available Values: Position: .MMM'/ 'SS", Speed: km/h/knot/mph, Altitude: m/ft

Default: Position: .MMM', Speed: mph, Altitude: ft

Note: The "Position" item selects the coordinate system. When the "Position" item is set to ".MMM", the **VX-8DR** displays the location (Lat/Lon) in "ddd° mm. mmm" (Decimal system). When the "Position" item is set to "SS"", the **VX-8DR** displays the location (Lat/Lon) in "ddd° mm ss" (Sexagesimal System). The position information used during APRS operation is used to display the location (Lat/Lon) in Sexagesimal System, regardless of this Set Mode setting.

APRS/GPS Set Mode Item 19: MSG GROUP

Function: Selects the filter type option allowing you to receive only the specified types of APRS Message information.

Available Values: G1 ~ G5, B1 ~ B3

Default: G1: ALL, G2: CQ, G3: QST, G4: YAESU, G5: non, B1 ~ B3: non

APRS/GPS Set Mode Item 20: MY CALLSIGN

Function: Program your callsign. See page 80 for details.

APRS/GPS Set Mode Item 21: MY POSITION

Function: Determine and memorize your location (Lat/Lon).

Available Values: GPS/Lat/Lon/P1 ~ P10

Default: GPS

<u>GPS</u>: Your location is determined by the optional **FGPS-2** GPS Unit. When the **FGPS-2** is connected to the transceiver, select this item.

Lat/Lon: Your location can be entered manually (See page 81 for details).

<u>P1 ~ P10</u>: Memory Slot for your location (Lat/Lon) as measured with the GPS.

To memorize the location:

- 1. Receive the GPS signal.
- 2. Recall the APRS/GPS Set Mode Item 21: MY POSITION.
- 3. Press the (MENU key briefly to enable adjustment of this Set Mode Item.
- 4. Rotate the **DIAL** knob to select the memory slot (1 10) you wish to memorize your location into.
- 5. Press and hold the $\underbrace{\text{EMGR/H}}_{(M/RV)}$ key for one second to memorize your location (Lat/Lon) into the slot.

Note: Remember to return this Set Mode Item to "Auto" after you have finished entering your position data into memory. If not then the **VX-8DR** always transmits the position data stored in memory and not your true GPS position data.

APRS/GPS Set Mode Item 22: MY SYMBOL

Function: Select your icon which will be displayed on the monitors of other stations as you.

Available Values: more than 46 symbols

Default: YY: Yaesu Radios

APRS/GPS Set Mode Item 23: POSITION COMMENT

Function: Selects position comment depending on your situation.

Available Values: Off Duty, En Route, In Service, Returning, Committed, Special, Priority, Custom 0 ~ Custom 6, EMERGENCY!

Default: Off Duty

APRS/GPS Set Mode Item 24: SmartBeaconing

Function : Selects the various parameter of the SmartBeaconing TM . The VX-8DR trans-				
mits the APRS be	mits the APRS beacon automatically when each parameter value exceed the set point.			
Available Values	S: OFF, TYPE1, TYPE2	, or TYPE3		
LOW SPEED: 2	~ 30 mph			
HIGH SPEED: 3	$\sim 70 \text{ mph}$			
SLOW RATE: 1	$\min \sim 100 \min$			
FAST RATE: 10	$\sec \sim 180 \sec$			
TURN ANGLE:	$5^{\circ} \sim 90^{\circ}$			
TURN SLOPE: 1	~ 255			
TURN TIME: 5 s	$\sec \sim 180 \sec$			
Default:	TYPE1 (for warking)	TYPE2 (for Bicycle)	TYEP3 (for Vehicle)	
LOW SPEED:	5 mph	3 mph	2 mph	
HIGH SPEED:	70 mph	30 mph	12 mph	
SLOW RATE:	30 min	30 min	30 min	
FAST RATE:	120 sec	120 sec	120 sec	
TURN ANGLE:	28°	28°	28°	
TURN SLOPE:	26	11	7	
TURN TIME:	30 sec	30 sec	30sec	
Press the $$ / $$ key to select each parameter, then rotate the DIAL knob to set the				

Press the ()/() key to select each parameter, then rotate the **DIAL** knob to set the values of its parameter.

The units of the speed depend on the transceiver versions. SmartBeaconing[™] from HamHUD Nichetronix.

APRS/GPS Set Mode Item 25: TIME ZONE

Function: Set the time offset between the local time and UTC. **Available Values**: UTC -13:00H ~ UTC +13:00H (0.5H/step) **Default**: UTC +0:00H

SmartBeaconingTM is an algorithm created by Tony Arnerich KD7TA and Steve Bragg KA9MVA of HamHUD for adjusting the transmit rate using the speed and heading changes of the vehicle.

Visit <u>www.hamhud.net</u> for more information about SmartBeaconingTM.

SPECIFICATIONS

GENERAL

Frequency Ranges:	A (Main) Band RX: 0.5-1.8 MHz (AM Radio) 1.8-30 MHz (SW Band) 30-76 MHz (50 MHz HAM) 76-108 MHz (FM Radio) 108-137 MHz (Air Band) 137-174 MHz (144 MHz HAM) 174-222 MHz (VHF-TV) 222-420 MHz (General 1) 420-470 MHz (430 MHz HAM) 470-774 MHz (UHF-TV) 774-999.90 MHz (General 2, Cellular Blo

AF Output:	200 mW @ 8 Ohms fo	r 10 % THD (@ 7.4 V DC)		
-	400 mW @ 8 Ohms fo	r 10 % THD (@ 13.8 V DC)		

Specifications are subject to change without notice, and are guaranteed within the 50/144/222/ 430 MHz amateur bands only.

Cellular Blocked per FCC rule Part 15.121, may not receive 900 MHz Amateur band.

INSTALLATION OF THE BU-1 (OPTION)

- 1. Make sure that the transceiver is off. Remove the hard or soft case, if used.
- 2. Remove the battery pack.
- 3. Locate the connector for the **BU-1** under the Caution Seal in the battery compartment on the back of the transceiver, just peel off the Caution Seal (**Figure 1**). *Cleanly remove the old Caution Seal and adhesive to preserve the submersible performance.*
- Gently install the supplied Connector Board to the transceiver's connector, then align the connector on the **BU-1** with the connector of the Connector Board and gently press the **BU-1** into place (Figure 2).
- 5. Affix the new (supplied) Caution Seal, and replace the battery pack.
- 6. Installation is now complete.

Figure 1

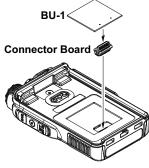

Figure 2

1. Changes or modifications to this device not expressly approved by VERTEX STANDARD could void the user's authorization to operate this device.

- 2. This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions; (1) this device may not cause harmful interference, and (2) this device must accept any interference including interference that may cause undesired operation.
- The scanning receiver in this equipment is incapable of tuning, or readily being altered, by the User to operate within the frequency bands allocated to the Domestic public Cellular Telecommunications Service in Part 22.

DECLARATION BY MANUFACTURER

The Scanner receiver is not a digital scanner and is incapable of being converted or modified to a digital scanner receiver by any user.

WARNING: MODIFICATION OF THIS DEVICE TO RECEIVE CELLULAR RADIOTELEPHONE SERVICE SIGNALS IS PROHIBITED UNDER FCC RULES AND FEDERAL LAW.
