SERVICE INFORMATION

Publication AP6297

Introduction

This publication provides technical information on servicing the Allen & Heath **Xone:S6** rotary club mixer. Included are internal layout drawings, block diagrams and circuit schematics with board layouts. Also included is technical information on the **Xone:V6** EQ Isolator and Crossfader modules, which are compatible with the **Xone:S6**. Please note that the valve circuits from the **Xone:V6** are not compatible with the **S6** and fitting of these parts should not be attempted. The **Xone:S6 MPS7** power supply unit should be used only to power a **Xone:S6** console.

Whilst we believe this information to be reliable we do not assume responsibility for inaccuracies. We also reserve the right to make changes in the interest of further product development.

Servicing Precautions – General Notes

- Service personnel:** Service work should be carried out by technically qualified service personnel only. Mains power is dangerous and can kill. Do not attempt to work on a linear or switched mode power supply if you are not suitably qualified to do so. Do not attempt to repair surface mount circuit assemblies unless you are suitably qualified and have the necessary facilities to do so. Replacement circuit assemblies can be ordered.
- Service facilities:** Ensure a suitably sized work surface is available. Ensure this is clear of dirt, debris and obstructions which may damage the equipment surfaces. Ensure adequate lighting. Use the correct tools for the job and ensure they are in good working order. Ensure all workshop safety requirements are adhered to.
- Service information:** Check that you have all the information you need before starting the service job. Refer to the Allen & Heath web site or contact Allen & Heath technical support for details on the latest information. Full technical information can be downloaded from the web site Distributor Zone (password required).
- Mains power:** Connect the equipment to mains power only of the type described in the user guide and marked on the rear panel. The power source must provide a good ground connection. Ensure you always use an isolation transformer when working on any mains power supply unit.
- Mains cord and fuse:** Use the correct power cord as supplied with the equipment. Do not remove or tamper with the ground connection in the power cord. Heed the Important Mains Plug Wiring Instructions printed in the user guide if it is necessary to rewire the mains cord. Always replace the equipment mains fuse with the correct type and rating as described in the user guide and marked on the equipment panel.
- Opening the unit:** Switch off and remove the mains power cord before opening the equipment. Ensure all power supply covers and safety shields are in place before applying power with the unit open for diagnostic fault finding.
- Closing the unit:** Before finishing, check the quality and accuracy of the service work carried out. Remove any dirt or debris as this may cause equipment failure in the future. Ensure all assemblies, harnesses and connectors are correctly aligned and plugged in. Ensure that jumper settings and control configurations are correctly set according to the requirements of the customer.
- Testing the unit:** Before operating the equipment, read and adhere to the Important Safety Instructions printed in the user guide. Test that the service work has been successfully carried out.
- Shipping the unit:** Use adequate packing such as the original packaging or purpose designed flight case if you need to ship the unit. To avoid injury to yourself or damage to the equipment take care when lifting, moving or carrying the equipment.

Servicing Notes – Xone:S6

- User maintenance:** There are several user configurable jumper links inside. These are described in the user guide together with instructions on how to change the default settings.
- Technology:** The **Xone:S6** uses conventional thru-hole PCB technology with high grade discrete transistor audio circuits. It has an external linear power supply which should be serviced only by suitably qualified personnel.
- Operation:** The **Xone:S6** is an audiophile rotary club mixer. To ensure optimum performance and reliability it should be connected and operated as described in the user guide.
- Fault finding:** Refer to the system block diagram and circuit drawings to follow through the signal path during fault diagnosis. Replace suspected faulty components only with those specified by Allen & Heath. The use of lower grade alternatives may degrade the performance. Ensure the RCA phono insert jumper links are pressed fully in if fitted. If a fault with the power unit is found, make sure it has been positioned according to the instructions in the user guide when installed. VU meter bulb replacement is described in the user guide.

RIAA disable

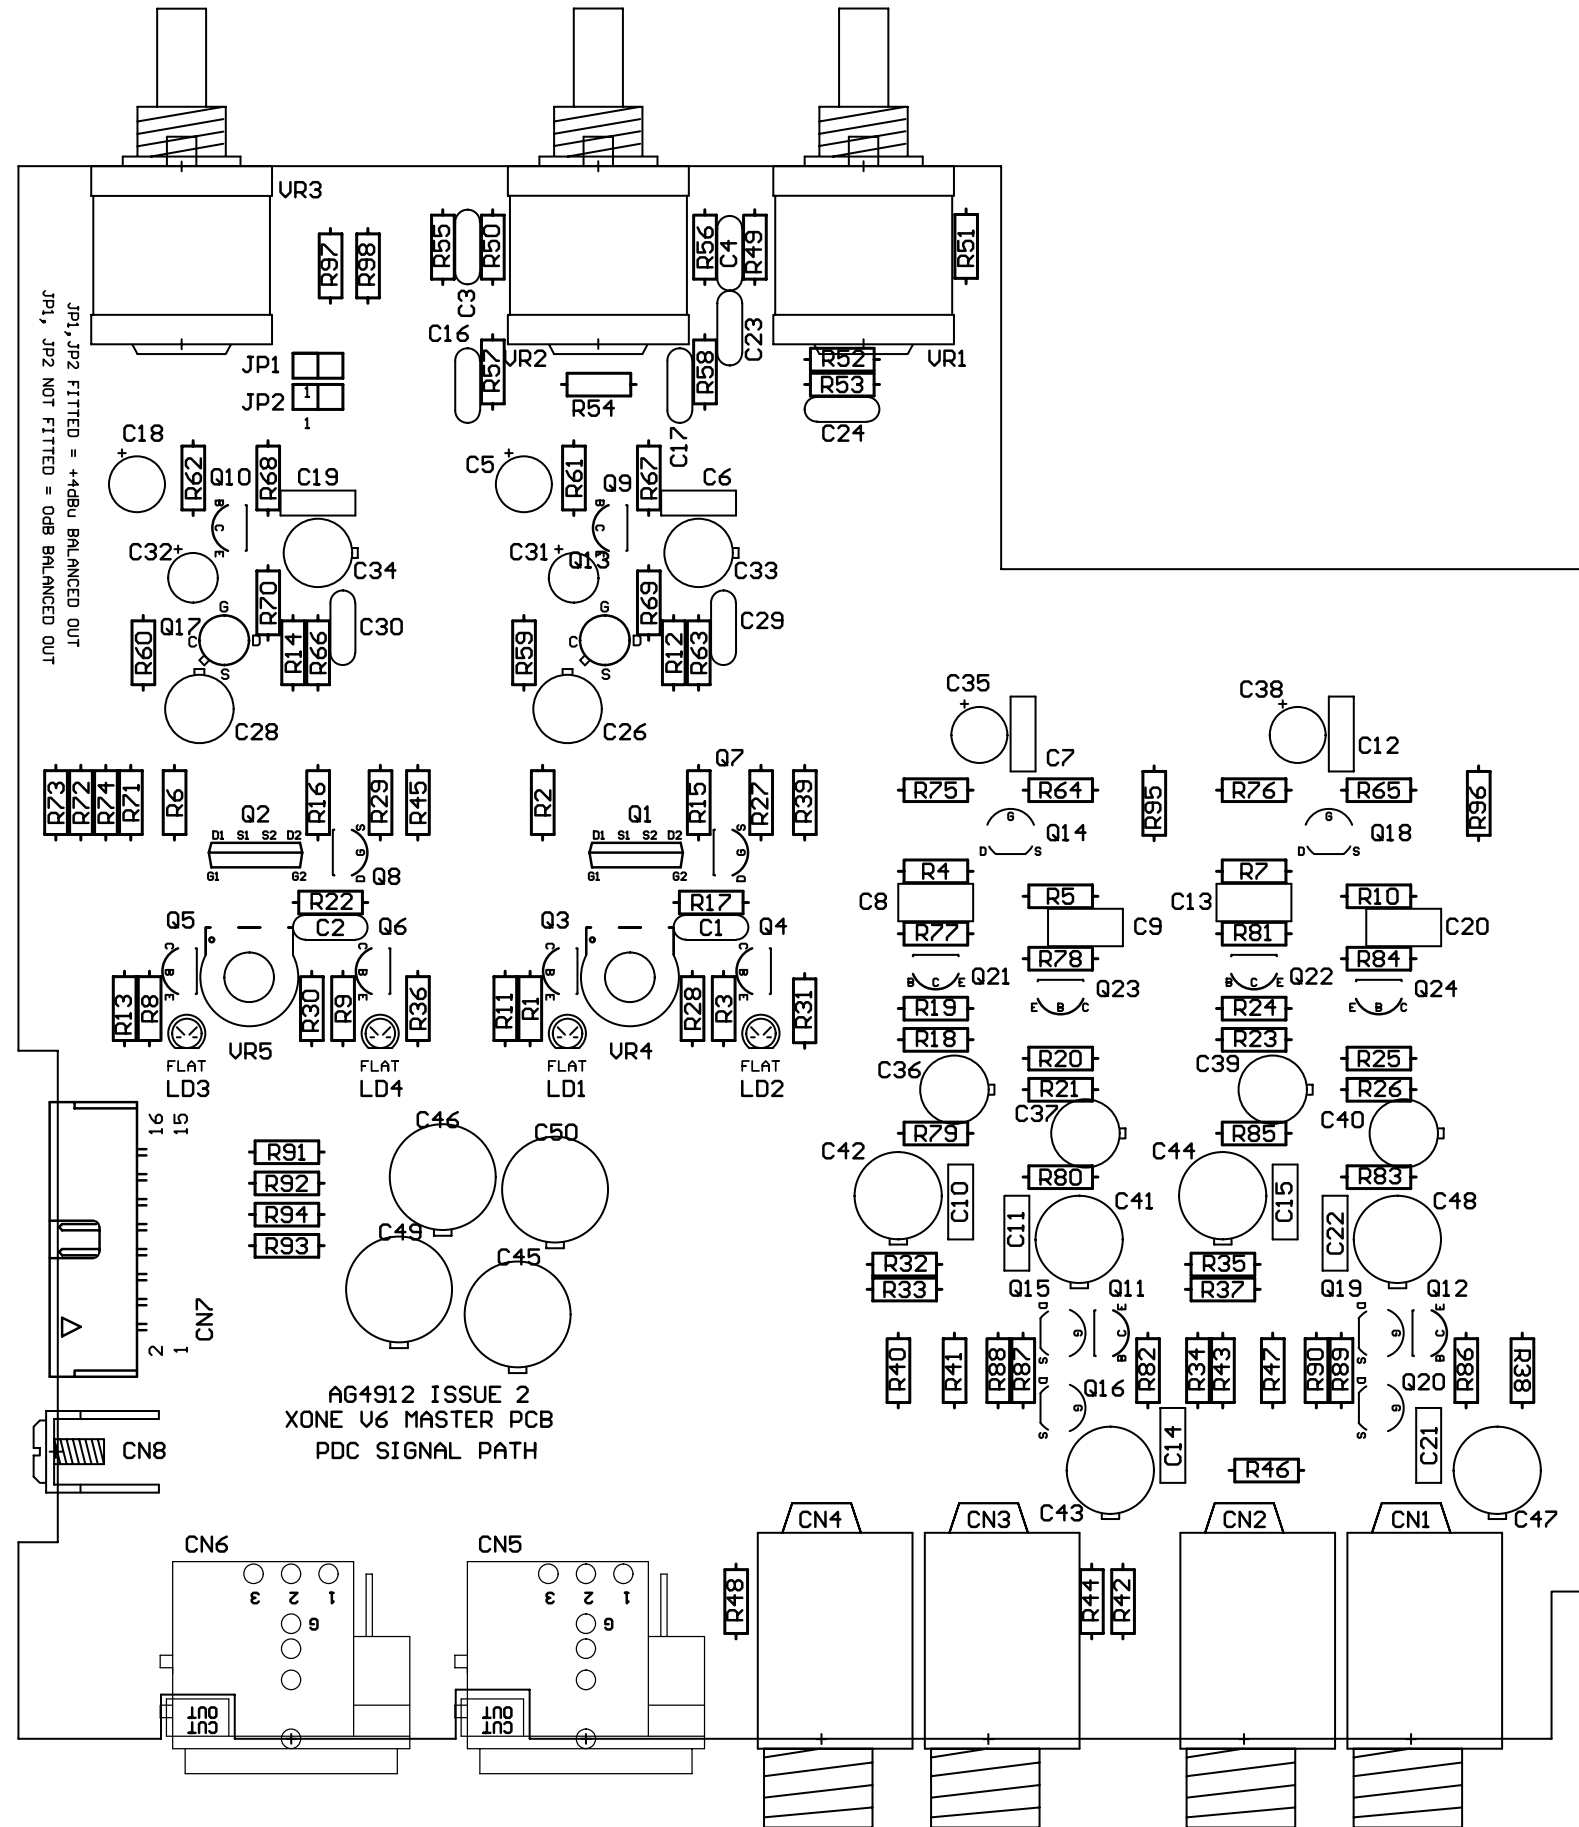

CH1-3. For RIAA gain and equalisation JP2, JP3, JP4 and JP8 are fitted. This is the factory default setting. To disable RIAA and use these inputs with line sources, remove those jumpers and fit JP1 and JP7 instead.

Gain setting

CH1-6. The maximum preamp gain available is set using these jumpers. For +10dB gain all four jumpers JP5, JP6, JP9 and JP10 are fitted. This is the factory default setting. To change this to +6dB gain fit JP5 and JP9 only. For 0dB gain remove all four jumpers.

Master output level

The output level with MASTER control at maximum position and VU meters reading '0' is +4dBu with JP1 and JP2 fitted. This is the default factory setting. To change this to 0dBu remove JP1 and JP2. Access these jumpers from below the console.

Phantom power

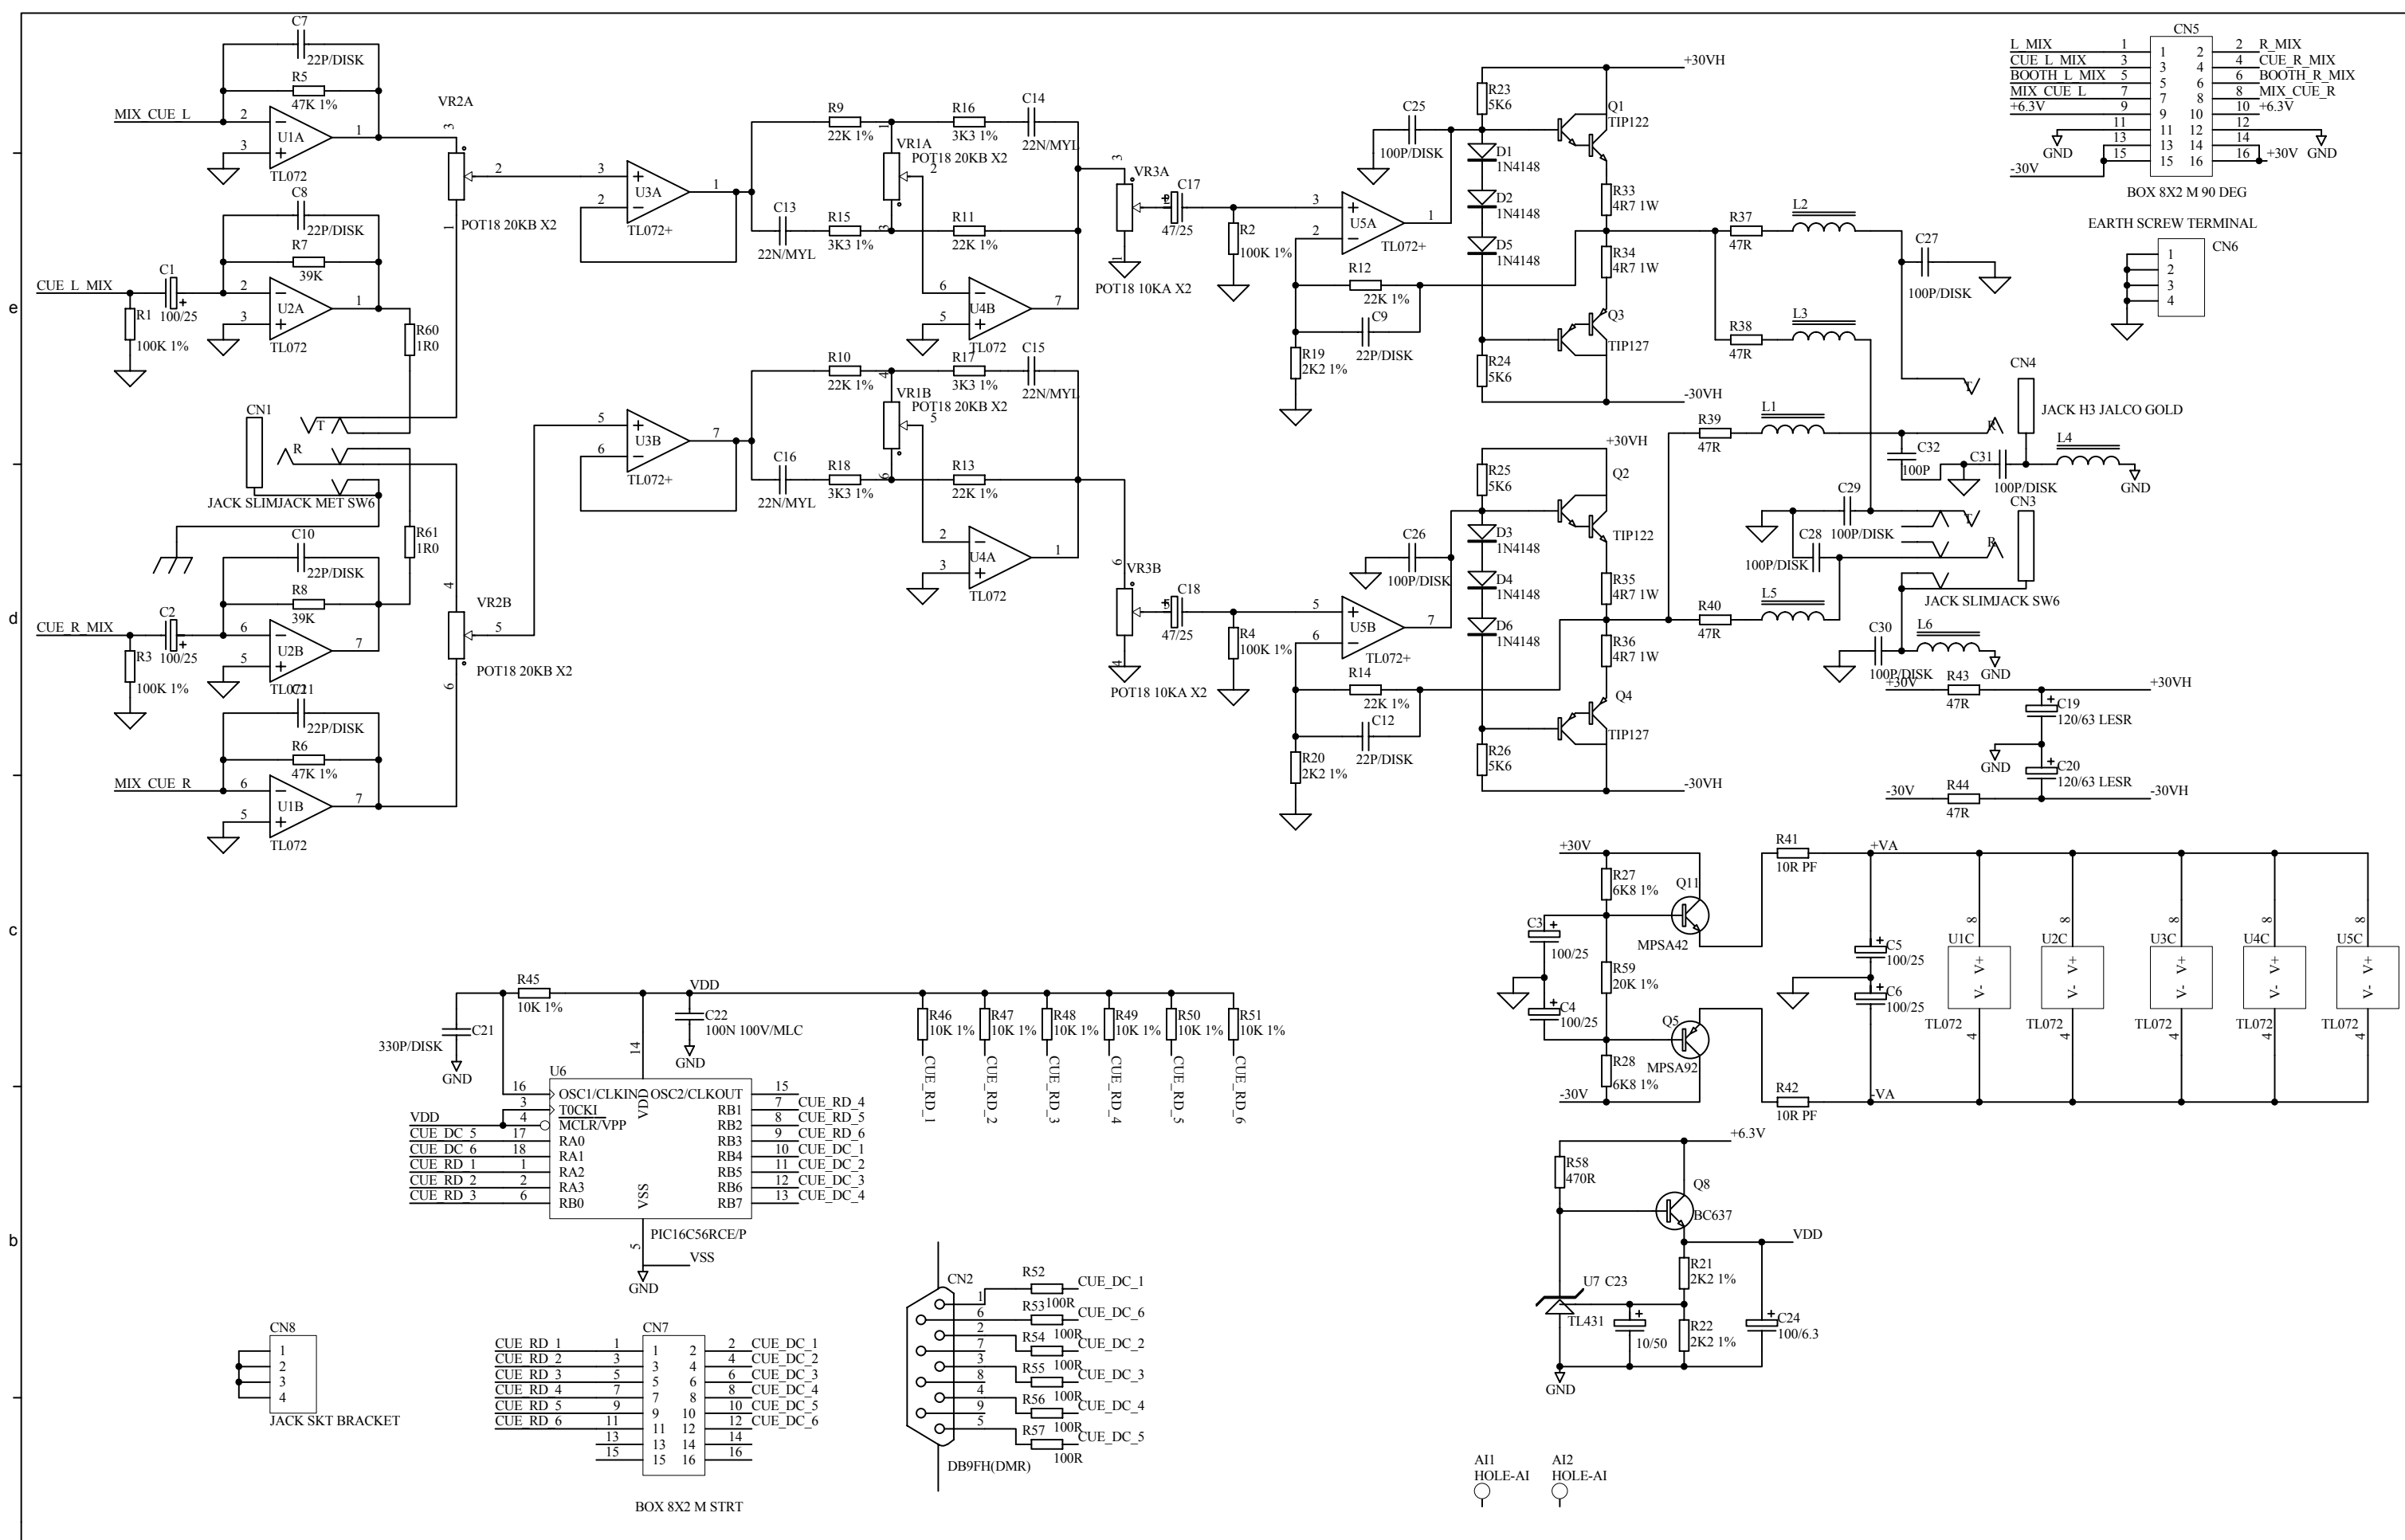

30V phantom power is disabled when JP1 is fitted. This is the default factory setting. Plug the jumper on to JP2 instead if you wish to turn phantom power on.
