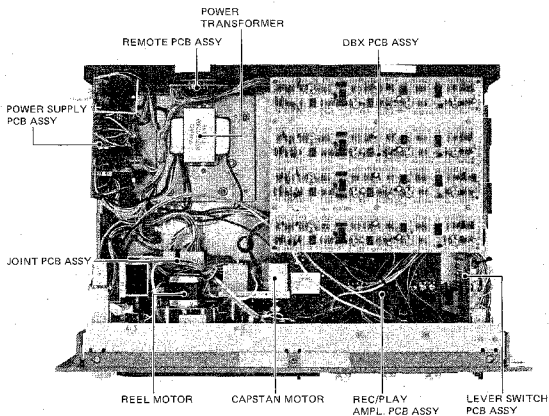

Fig. 2-1

Fig. 2-2

Fig. 2-3

## 4 MECHANICAL ADJUSTMENTS AND CHECKS

### 4-1 REEL TORQUE

1. Load the cassette torque meter on the deck and read the pointer indication on the dial scale for each tape transport operation.

The measured torque should be within the following values:

Take-up: 45 to 65 g-cm (0.62 to 0.90 oz-inch)

Supply: 3 to 8 g-cm (0.042 to 0.11 oz-inch)

F.F. and REW: 90 to 160 g-cm (1.25 to 2.22 oz-inch)

### 4-2 PINCH ROLLER PRESSURE

1. With the cassette holder shut and no tape loaded, put the deck in PLAY mode.
2. Hook a spring scale on the top of the pinch roller assembly plate, as shown in the illustration.
3. Pull the scale down until there is sufficient force to separate the pinch roller from the capstan shaft.
4. Ease pressure until the pinch roller makes just enough contact with the capstan shaft so that the pinch roller just begins to turn. At this point, note the reading on the scale. It should be from 390 g to 490 g (13.8 oz. to 17.3 oz.)
5. If the pressure is not within the prescribed specifications, it may be adjusted by first removing the pinch roller spring from the pinch roller assembly and then bending the spring as shown in the illustration.

Fig. 4-1

### 4-3 HEAD BASE PLATE POSITIONING

1. Set the deck in the PLAY mode.
2. Push the head base plate by hand in the direction of the arrow and check that the head base plate and the stopper portion of the mechanism chassis make contact.
3. If there is any clearance, loosen the two screws on the head base plate solenoid and reposition the solenoid until the clearance is eliminated.

Fig. 4-2

Fig. 4-3 Head base solenoid location

### 4-4 CAPSTAN ASSEMBLY THRUST

1. Turn the thrust adjusting screw so that thrust of the capstan shaft is within 0.05 mm to 0.15 mm.

Fig. 4-4

## 4-5 TAPE SPEED

1. Connect a frequency counter to the deck as shown in Fig. 4-5.
2. Play a tape for about five minutes to warm up the deck, then load a TEAC MTT-111 test tape containing a 3000-Hz test tone and play the test tape from the beginning.
3. While the tape is playing, use a common slotted screwdriver with the handle completely insulated from the blade, and adjust the control on the capstan motor (as far as possible) for a reading of 3000 Hz ( $\pm 5$  Hz) on the frequency counter.
4. Play the tape at the beginning and at the end, and check that the speed deviation is within the prescribed limits by observing that the reading on the frequency counter never deviates more than  $\pm 45$  Hz from 3000 Hz, nor drifts more than 30 Hz at any given time.
5. If the tape speed is not within the prescribed specifications, check the pinch roller pressure and the tape transport mechanism for any abnormality, and make sure the tape path is clean.

Fig. 4-5

Tape speed control

Fig. 4-6 Tape speed adjustment location

## 4-6 WOW AND FLUTTER

**Note:** These measurements should be made at the beginning, middle, and the end of the tape.

### 1) PLAYBACK

1. Connect a wow-and-flutter meter to the deck as shown in Fig. 4-5.
2. Load and play a TEAC MTT-111 test tape.
3. Check that the reading on the wow-and-flutter meter is within 0.08% (WRMS).

### 2) SIMULTANEOUS RECORD/PLAYBACK METHOD STANDARD Speed

4. Load a TEAC MTT-501 test tape (blank) and record a 3000-Hz signal.
5. With the MONITOR switch in the TAPE position, note the reading on the wow-and-flutter meter, it should not be more than 0.25% (RMS).

### 3) NON-SIMULTANEOUS RECORD/PLAYBACK METHOD

6. Rewind the tape to the beginning of the recorded section previously made in step 4, and play it.
7. The wow and flutter should not be more than 0.25% (RMS).

## 4-7 MICROSWITCH (A) ASSEMBLY CLEARANCE

1. Insert a blank cassette and close the cassette holder.
2. Loosen the two screws on the microswitch (A).
3. Move the switch so that actuator of the switch contacts the safety lever.
4. Adjust the switch position to obtain a clearance of between 0.1 mm to 0.3 mm.
5. Retighten the screws.

Fig. 4-7

#### 4-8 MICROSWITCH (B) ASSEMBLY CLEARANCE

1. Push the EJECT button to open the cassette holder.
2. Loosen the two screws on the microswitch (B).
3. Move the switch so that switch actuator contacts the bent projecting portion of the eject lever.
4. Adjust the switch position to obtain a clearance of approximately 1 mm.
5. Retighten the screws.

Fig. 4-8

#### 4-9 LUBRICATION

Lubrication is only required when parts are replaced. For this purpose, use the oil and grease specified below.

**Oil:** TEAC spindle oil (from TEAC TZ-255 oil kit), Mobil D.T.E. Oil Light, or equivalent

**Grease:** ORE-LUBE G1/3 or equivalent

1. Apply a drop of oil with an oil applicator to a point about 1/3 the way down the shaft (from the free end) of the flywheel, then insert the shaft into the capstan housing.
2. Apply a suitable amount of light grease to the well of the flywheel bearing.

Fig. 4-9

#### 4-10 VOLTAGE SELECTION (FOR GENERAL EXPORT MODELS)

1. Always disconnect the power line cord before making these adjustments.
2. Remove the top cover of the deck by removing the screws from the sides.
3. Locate the voltage selector, shown in the illustration, to the front of the power transformer.
4. Loosen the two screws in the jumper bar and move the bar so that it jumps the opposing terminals marked with the required voltage (100, 120, 220 or 240).
5. Retighten the screws and replace the top cover.

#### 4-11 AC POWER LINE FREQUENCY

Since the C-3RX uses a DC servo motor, 50 Hz or 60 Hz operation is permitted without any change in power line frequency.

Fig. 4-10

## 5 ELECTRICAL ADJUSTMENTS AND CHECKS

## PRECAUTIONS

1. Before beginning any checks or adjustments, clean and demagnetize the entire tape path.
2. Make sure the deck is properly set for the voltage in your locality.
3. In general, adjustments and checks are done in the order of L-ch then R-ch. Double REF. NOs, and test point designations indicate L-ch/R-ch.  
(Example: R11/R21)
4. For this deck, 0 dB is referenced to 0.775 V. If you are using an AC voltmeter which references 0 dB to 1 V, appropriate compensation should be made.
5. The AC voltmeter used in the procedures must have an input impedance of 1M ohms or more.
6. Note the "Deck settings" at the top of each chart. These settings must be used for all the checks in each chart unless explicitly stated otherwise.

## -70 dB or more ... What does it mean?

In reference to some specifications, you may come across an expression like: "-70 dB or more". This means that the lower the value of this specification, the greater the absolute value of the specification and the better the performance of the deck. For instance, a noise floor of -76 dB is better than -70 dB, because this means that the level of noise is lower. So in this case, "-70 dB or more" means at least as good a value as -70 dB and maybe even better, i.e., -71 dB.

## 5-6 DBX PCB ADJUSTMENT

### NOTES:

1. This section adjustment is not usually needed unless any of adjuster(s) have been changed or any component(s) on the PCB have sustained damage, since both the ENCODER and DECODER sections have been precisely adjusted in the factory.
2. For this section adjustment, it is necessary to unsolder the wires from terminals A, C, B, D, F, I, H, and J on the dbx PCB. Turn the deck OFF to prevent accidental damage when unsoldering or resoldering.

3. Simply press the POWER switch to ON (all other switches and controls on the deck have no effect on this adjustment), then make this section adjustment.
4. The measurement equipment's GND (0 V) terminal should be connected to the dbx PCB's E terminal, except in steps 2 and 3, and 6 to 8 in both the ENCODER and DECODER adjustments.

## 5-7 ADJUSTMENT AND TEST POINT LOCATIONS (2)

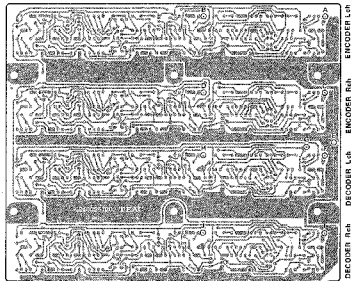

Fig. 5-11

Fig. 5-12 R78/R88 and R77/R87 settings (Incorrect)

Fig. 5-13 R78/R88 and R77/R87 settings (Correct)

## 5-6-1 ENCODER ADJUSTMENT

1. Preset all adjustors approximately to the center position.
2. Make the Fig. 5-14 connections, then feed 100 Hz,  $-8$  dB (308 mV) to A/C (INPUT) terminal.
3. Adjust R78/R88 to obtain a clear 200 Hz sine-wave on the oscilloscope. See Fig's 5-12 and 5-13.
4. Change the connections to Fig. 5-15, then feed a 1 kHz  $-8$  dB (308 mV) input signal to the INPUT terminal. Adjust R76/R86 so that AC voltmeter reads  $-8$  dB (308 mV).
5. With the conditions in step 4, adjust R74/R84 for minimum distortion (0.1% or less).
6. Like Fig. 5-16, connect a DC voltmeter between TP1 and TP9 for L-ch (or TP3 and TP11 for R-ch), then note the reading on the DC voltmeter with an input signal of 1 kHz  $-8$  dB (308 mV).
7. Cut off the input signal, then make the same measurement as in step 6 to adjust R75/R85 for the same level.

8. Repeat above steps 5 to 7 until the best results are obtained.
9. Check that when the input signal is 100 Hz  $-8$  dB (308 mV), then 10 kHz  $-8$  dB, the output signal from B/D (OUTPUT) terminal deviates by  $+0.5$  dB  $\pm 0.5$  dB, then  $-2.8$  dB  $\pm 0.5$  dB from  $-8$  dB (reference), 308 mV to 346 mV for 100 Hz, and 211 mV to 237 mV for 10 kHz.
10. Check that when 1 kHz  $-66$  dB (308  $\mu$ V) is applied, the output is  $-38$  dB  $\pm 0.5$  dB (9.21 mV to 10.3 mV).
11. Check that when the input signal is 1 kHz,  $+12$  dB (3.08 V), the output is  $+2$  dB  $\pm 0.5$  dB (0.921V to 1.03V) and distortion factor is 0.3% or less.

Fig. 5-14 Connections for ENCODER adjustment (1)

Fig. 5-15 Connections for ENCODER adjustment (2)

Fig. 5-16 Connections for ENCODER adjustment (3)

## 5-6-2 DECODER ADJUSTMENT

1. Preset all adjustors approximately to the center position.
2. Make the Fig. 5-17 connections, then feed 100 Hz,  $-8$  dB (308 mV) to the F/I (INPUT) terminal.
3. Adjust R77/R87 to obtain a clear 200 Hz sine-wave on the oscilloscope. See Fig's 5-12 and 5-13.
4. Change the connections to Fig. 5-18, then feed a 1 kHz/ $-8$  dB (308 mV) input signal to the INPUT terminal. Adjust R73/R83 so that AC voltmeter reads  $-8$  dB (308 mV).
5. With the conditions in step 4, adjust R71/R81 for minimum distortion (0.1% or less).
6. Like Fig. 5-19, connect a DC voltmeter between TP5 and TP13 for L-ch (or TP7 and TP15 for R-ch), then note the reading on the DC voltmeter with an input signal of 1 kHz/ $-8$  dB (308 mV).
7. Cut off the input signal, connect TP6/TP8 to the E (0 V) terminal, then make the same measurement as in step 6 to adjust R72/R82 for the same level.
8. Repeat above steps 5 to 7 until the best results are obtained.
9. Check that when the input signal is 100 Hz/ $-8$  dB (308 mV), then 10 kHz/ $-8$  dB, the output signal from H/J (OUTPUT) terminal deviates by  $-1$  dB  $\pm 0.5$  dB, then  $+5$  dB  $\pm 0.5$  dB from  $-8$  dB (reference), respectively . . . so that output, as a voltage value, should be 652 mV to 731 mV for 100 Hz, and 1.38 V to 1.55 V for 10 kHz.
10. Check that when 1 kHz/ $-38$  dB (9.75 mV) is applied, the output is  $-68$  dB  $\pm 1$  dB (275  $\mu$ V to 346  $\mu$ V).
11. Check that when the input signal is 1 kHz,  $+2$  dB (0.975 V), the output is  $+12$  dB  $\pm 1$  dB (2.75 V to 3.46 V) and the distortion factor is 0.3% or less.

Fig. 5-19 Connections for DECODER adjustment (3)

## 6 EXPLODED VIEWS AND PARTS LIST

## EXPLODED VIEW - 1

## EXPLODED VIEW - 1

Parts marked with \*require longer delivery time.

REF. NO.	PARTS NO.	DESCRIPTION	REMARKS
1 - 1	*5800060300	Cover, Top [All except L]	C-3X
1 - 2	*5122225000	Connector, Socket; 6P (BLK)	
1 - 3	*5122222000	Connector, Socket; 3P (BLK)	
1 - 4	*5555570000	Cushion; Top Cover; B	
1 - 5	*5122172000	Connector, Socket; 10P (WHT)	
1 - 6	*5122167000	Connector, Socket; 5P (WHT)	
1 - 7	*5800059401	Bracket, Handle; BL	C-3X
1 - 8	*5800063400	Escutcheon Assy, Cassette	C-3X
1 - 9	*5122174000	Connector, Socket; 12P (WHT)	
1 - 10	*5785603025	Spacer	
1 - 11	5504712000	Knob Assy, TIMER	C-3
1 - 12	*5640018600	Panel Assy, Front	C-1
1 - 13	5543027100	Knob, VR	C-1
1 - 14	5534521000	Knob, Lever Switch	A-500
1 - 15	*5552340202	Chassis, Rear [All except L]	
	*5502229002	Chassis Assy, Rear [L]	
1 - 16	*5504676000	Foot [All except L]	A-500
1 - 17	*5800059501	Bracket, Handle; BR	C-3X
1 - 18	*5800064800	Cabinet Assy [L]	C-3X
1 - 19	*5555526000	Washer [L]	
1 - 20	*5800060400	Cover, Top; Shield [L]	C-3X
1 - 21	*5800059800	Sash, Side; L [L]	
1 - 22	*5800059900	Sash, Side; R [L]	
1 - 23	5138009000	Key Unit	122
1 - 24	5800133600	Cover Assy, Cassette	

## INCLUDED ACCESSORIES

Parts marked with \*require longer delivery time.

REF. NO.	PARTS NO.	DESCRIPTION	REMARKS
	5128065000	Cord Assy, Input-output Connection	
	5101345000	Information Supplement, Cassette [U]	
	5101495000	Information Supplement, Cassette [All except L]	C-3X
	5740005000	Plate Assy, Side; B [All except L]	C-1
	5544995000	Washer x 4 [All except L]	
	5534659000	Spacer x 4 [All except L]	C-1
	5780215015	Screw, M5 x 15 (Ni) x 4 [All except L]	
	5564682000	Seal, MEMORY [All except L]	C-3
	5700014800	C-3RX Owner's Manual [U]

# 7 PC BOARDS AND PARTS LIST

PC Boards shown viewed from foil side.

## LEVER SWITCH PCB ASSY

REC/PLAY AMPL PCB ASSY

NOTES

1. PC Boards shown viewed from foil side.
2. The colors used on the PCB illustrations have the following significance:  
 : +B power supply circuit  
 : GND  
 : Other
3. Resistor values are in ohms ( $k = 1,000$  ohms).
4. All capacitor values are in microfarads ( $\mu = \text{picofarads}$ ).

POWER SUPPLY PCB ASSY

MIC JACK PCB ASSY

JOINT PCB ASSY

DBX PCB ASSY

## LEVER SWITCH PCB ASSY

## ASSEMBLING HARDWARE CODING LIST

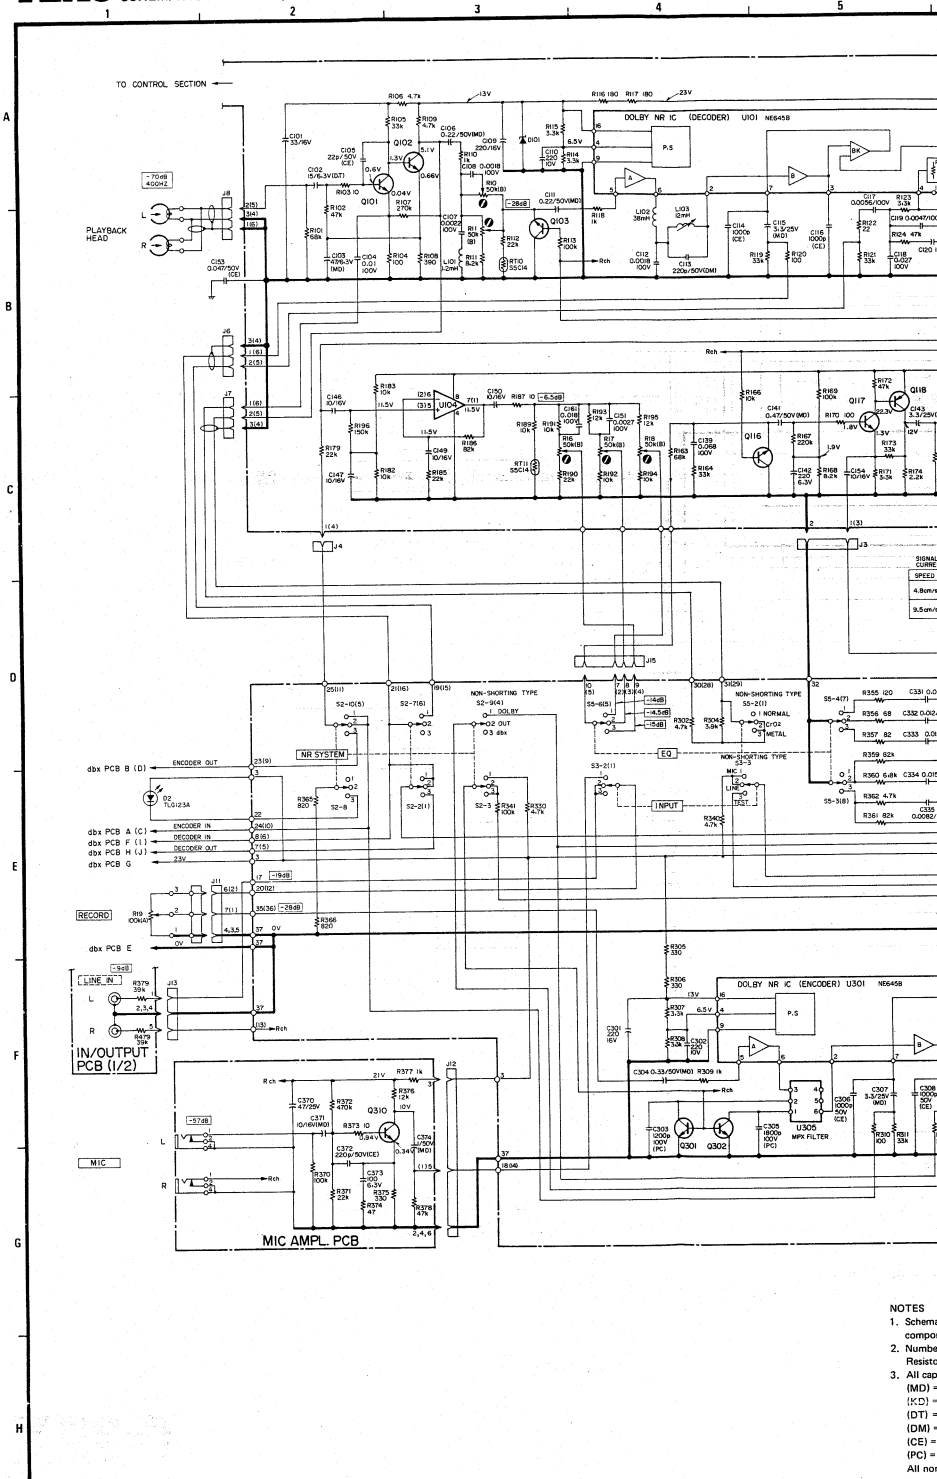

All screws conform to ISO standards, and have crossrecessed heads, unless otherwise noted.  
 ISO screws have the head inscribed with a point as in the figure to the right.

FOR EXAMPLE:

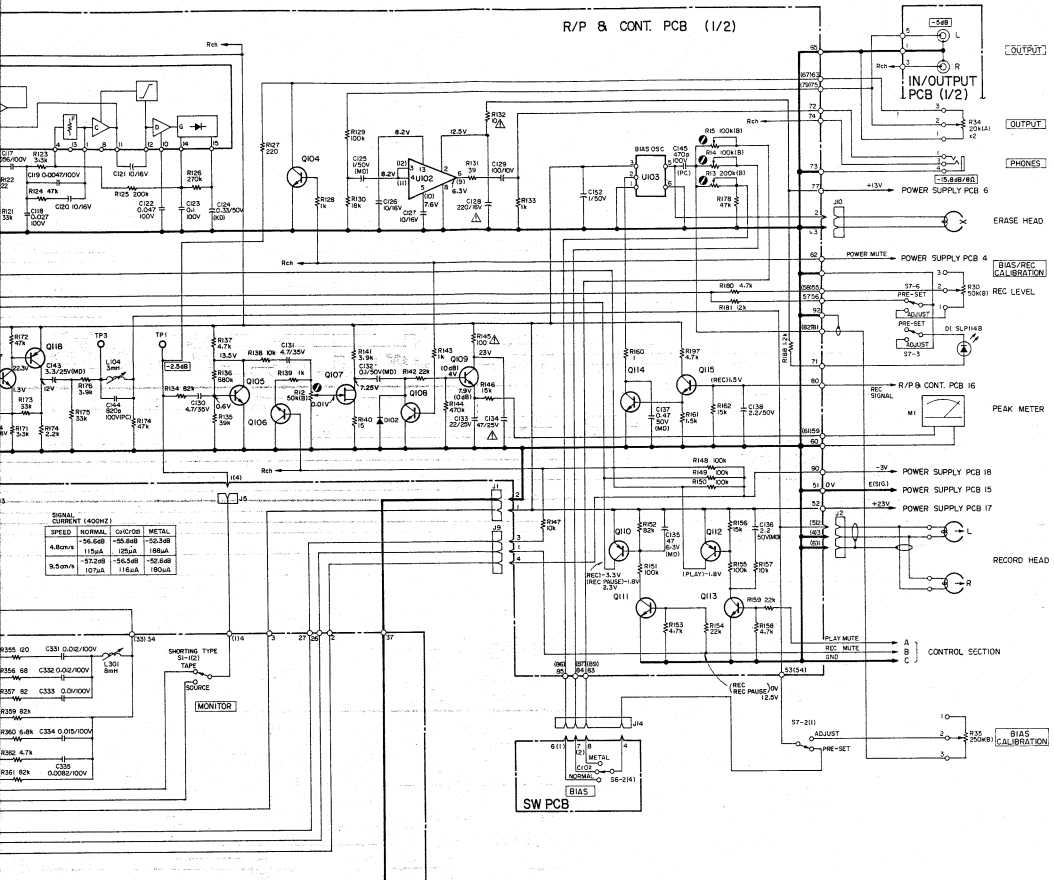

\* Inner dia. for washers and nuts

	Code	Name	Type		Code	Name	Type	
MACHINE SCREW	<b>R</b>	Round Head Screw		TAPPING SCREW	<b>BTA</b>	Binding Head Tapping Screw(A Type)		
	<b>P</b>	Pan Head Screw			<b>BTB</b>	Binding Head Tapping Screw(B Type)		
	<b>T</b>	Stove Head Screw (Truss)			<b>RTA</b>	Round Head Tapping Screw(A Type)		
	<b>B</b>	Binding Head Screw			<b>RTB</b>	Round Head Tapping Screw(B Type)		
	<b>F</b>	Flat Countersunk Head Screw			SETScrew	<b>SF</b>	Hex Socket Setscrew(Flat Point)	
	<b>O</b>	Oval Countersunk Head Screw				<b>SC</b>	Hex Socket Setscrew(Cup Point)	
WOOD SCREW	<b>RW</b>	Round Head Wood Screw		<b>SS</b>		Slotted Socket Setscrew(Flat Point)		
	TAPTITE SCREW	<b>PTT</b>	Pan Head Tapitite Screw		WASHER	<b>E</b>	E-Ring (Retaining Washer)	
<b>WTT</b>		Washer Head Tapitite Screw		<b>W</b>		Flat Washer (Plain)		
SEMS SCREW	<b>BSA</b>	Binding Head SEMS Screw(A Type)		<b>SW</b>		Lock Washer (Spring)		
	<b>BSB</b>	Binding Head SEMS Screw(B Type)		<b>LWI</b>		Lock Washer (Internal Teeth)		
	<b>BSF</b>	Binding Head SEMS Screw(F Type)		<b>LWE</b>		Lock Washer (External Teeth)		
	<b>PSA</b>	Pan Head SEMS Screw(A Type)		<b>TW</b>		Trim Washer (Countersunk)		
	<b>PSB</b>	Pan Head SEMS Screw(B Type)		NUT	<b>N</b>	Hex Nut

- NOTES
- Schematic diagram shown for left channel except for some of the components.
  - Numbers in parentheses indicate right channel terminals. Resistor values are in ohms (k = 1,000 ohms).
  - All capacitor values are in microfarads (u = picofarads).  
 (MD) = Electrolytic capacitor MD series  
 (XD) = Electrolytic capacitor KD series  
 (DT) = Dip. Tantal  
 (DM) = Dip. Mica  
 (CE) = Ceramic  
 (PC) = Polystyrene  
 All non-polarized capacitors are 55% mylar unless otherwise specified.

- Parts marked with this sign are safety critical components. They must always be replaced with identical components - refer to the TEAC parts list and ensure exact replacement.
- Voltage and level values are for reference only.  
 0dB = 0.775V  
 Indicated values are those existing when the peak level meter indicates 0 dB

NOTES

- All resistors are 1/4 watt, 5%, unless marked otherwise. Resistor values are in ohms (k = 1,000 ohms).
  - All capacitor values are in microfarads (p = picofarads). (MD) = Electrolytic capacitor MD series
  - All non-polarized capacitors are 25% mylar unless otherwise specified.
  - Parts marked with this sign are safety critical components. They must always be replaced with identical components - refer to the TEAC parts list and ensure exact replacement.
  - Each Voltage value shown above is the one measured in STOP position and each mode.
- ST : STOP    PY : PLAY    PS : PAUSE  
 FF : FIRST FORWARD    RW : REWIND  
 RC : REC PLAY    RM : REC MUTING
