- Tighten the bolt to 6 Nm (4 lb.ft).

48. Connect the heater motor electrical connector.

49. Connect the ground cables to the lower A-pillar.

- Tighten the nut to 10 Nm (7 lb.ft).

50. Install the CJB bracket.

- Tighten the nuts to 10 Nm (7 lb.ft).
- Secure the clips.
- Connect the electrical connectors.
- Tighten the bolts to 25 Nm (18 lb.ft).

51. Install the CJB.

For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).

52. Connect the battery positive cable to the BJB.

- Tighten the nut to 25 Nm (18 lb.ft).

53. Install the BJB cover.

- Secure the clip.

54. Install the ECM cover.

- Install the ECM top cover.
- Tighten the Torx screws.

- Connect the electrical connectors.

- 56.** Install the auxiliary battery tray.
For additional information, refer to: [Auxiliary Battery Tray](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
- 57.** Install the battery tray.
For additional information, refer to: [Battery Tray](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
- 58.** Install the four-wheel drive control module.
For additional information, refer to: [Four-Wheel Drive \(4WD\) Control Module](#) (308-07A Four-Wheel Drive Systems, Removal and Installation).
- 59.** Install the air cleaner assembly.
For additional information, refer to: [Air Cleaner](#) (303-12A Intake Air Distribution and Filtering - TDV6 2.7L Diesel, Removal and Installation).
- 60.** Install the radiator grille.
For additional information, refer to: [Radiator Grille](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
- 61.** Install the engine cover.
For additional information, refer to: [Engine Cover - TDV6 3.0L Diesel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
- 62.** Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
- 63.** Check the headlamp beam alignment.
For additional information, refer to: [Headlamp Adjustment](#) (417-01 Exterior Lighting, General Procedures).

Module Communications Network - Battery Junction Box (BJB)TDV6 3.0L

Diesel

Removal and Installation

Removal

- NOTE: The BJB is an integral component of the engine compartment wiring harness and cannot be removed separately.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Make the SRS system safe.
For additional information, refer to: Standard Workshop Practices (100-00 General Information, Description and Operation).
3. Remove the engine cover.
For additional information, refer to: [Engine Cover - 2.7L V6 - TdV6](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove the radiator grille.
For additional information, refer to: Radiator Grille (501-08 Exterior Trim and Ornamentation, Removal and Installation).
5. Remove the air cleaner assembly.
6. Remove the four-wheel drive control module.
For additional information, refer to: Four-Wheel Drive (4WD) Control Module (308-07 Four-Wheel Drive Systems, Removal and Installation).
7. Remove the battery tray.
For additional information, refer to: [Battery Tray](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
8. Remove the auxiliary battery tray.
For additional information, refer to: [Auxiliary Battery Tray](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
9. Remove the ECM cover.
 - Disconnect 2 electrical connectors for access.
 - Disconnect the 2 ECM electrical connectors.
 - Remove the 4 Torx screws.

10. Remove the ECM.
 - Remove the ECM top cover.

11. Remove the BJB cover.
 - Release the clip.

12. Disconnect the battery positive cable from the BJB.

- Remove the nut.

13. Remove both cowl side trim panels.

For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

14. Remove the CJB.

For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).

15. Release the CJB bracket.

- Release the 3 upper wiring harness clips.
- Remove the 2 bolts.

16. Remove the CJB bracket.

- Disconnect the 2 electrical connectors.
- Release the 3 lower wiring harness clips.
- Remove the 2 nuts.

17. Release the 2 ground cables from the lower A-pillar.

- Remove the nut.

E55292

18. Disconnect the heater motor electrical connector.

E55293

19. Release the BJB from the bracket.

- Remove the bolt.

E55296

20. Remove the battery ground cable.

- Remove the nut.
- Release the additional ground cable.

21. Release the BJB wiring harness from the bulkhead.

- Disconnect the 6 electrical connectors.
- Release the grommet.

E55297

22. Raise and support the vehicle.

23. Remove both front fender splash shields.

For additional information, refer to: Fender Splash Shield (501-02 Front End Body Panels, Removal and Installation).

24. Remove both headlamps.

For additional information, refer to: Headlamp Assembly (417-01 Exterior Lighting, Removal and Installation).

25. Passenger side: Disconnect the engine wiring harness electrical connector.

26. Passenger side: Disconnect the transfer case electrical connector.

27. LH side: Release the wiring harness from the fuel fired heater.

- Disconnect the 3 electrical connectors.
- Release the 3 clips.

28. LH side: Disconnect the washer jet hose.

29. LH side: Disconnect the adaptive front lighting module electrical connector.

30. LH side: Disconnect the 3 body panel electrical connectors.

31. LH side: Release the 3 body panel ground cables.

- Remove the nut.

32. LH side: Release the 2 air suspension pipes from the wiring harness.

- Release the 7 clips.

33. LH side: Disconnect the ABS electrical connector.

34. LH side: Release 3 engine compartment ground cables.

- Remove the 3 nuts.
- Release the 2 clips.

E55302

35. LH side: Release the washer reservoir wiring harness.

- Disconnect the 3 electrical connectors.
- Disconnect the 2 washer jet hoses.

E55303

36. LH side: Disconnect the coolant expansion tank level switch electrical connector.

E55304

37. LH side: Disconnect the brake pad wear sensor electrical connector.

38. LH side: Release the wiring harness.

- Release the grommet.
- Release the 4 clips.

39. Remove the windshield wiper motor.

For additional information, refer to: [Windshield Wiper Motor \(501-16 Wipers and Washers, Removal and Installation\)](#).

40. Remove the hood pad.

- Remove the 11 clips.

41. Release the hood wiring harness.

- Disconnect the 2 washer jet hoses.
- Disconnect the 2 electrical connectors.
- Release the 10 clips.
- Remove the wiring harness cover.
- Release the grommet.

42. Disconnect the A/C pressure transducer electrical connector.

43. NOTE: 4.0L illustration shown, 2.7L Diesel is similar.

Disconnect the battery to engine compartment wiring harness electrical connector.

44. Release the wiring harness from the plenum.

- Remove the 3 nuts.
- Release the clip.

45. Disconnect the brake fluid reservoir electrical connector.

46. Disconnect the ABS module electrical connector.

47. Remove the air suspension control module.

For additional information, refer to: [Air Suspension Control Module](#) (204-05 Vehicle Dynamic Suspension, Removal and Installation).

48. Driver side: Disconnect 2 electrical connectors from the lower A-pillar.

49. Driver side: Release the wiring harness from the bulkhead.

- Release the grommet.

E55314

50. RH side: Disconnect the 3 body panel electrical connectors.

E60233

51. RH side: Release the 3 body panel ground cables.

- Remove the nut.

E55316

52. RH side: Disconnect the ABS electrical connector.

53. RH side front: Release the air suspension pipe from the wiring harness clip.

E55317

54. RH side: Release 2 engine compartment ground cables.

- Remove the 2 nuts.

E55318

55. Disconnect the ambient air temperature sensor electrical connector.

56. Disconnect both front impact severity sensor electrical connectors.

- Release the 3 clips.

E55319

57. RH side: Release the wiring harness.

- Release the 9 clips.

E55320

58. Disconnect the hood switch electrical connector.

59. Disconnect both horn electrical connectors.

E55331

60. If installed, disconnect the speed control module electrical connector.

61. If installed, disconnect the pollution sensor electrical connector.

- Release the clip.
- Release the grommet.

62. NOTE: 4.0L illustration shown, 2.7L Diesel is similar.

Release the hood release cable.

- Release from the 3 clips.

E55334

63. Disconnect the front bumper wiring harness electrical connector.

64. With assistance, remove the BJB and wiring harness.

Installation

1. With assistance, install the BJB and wiring harness.
2. Connect the front bumper wiring harness electrical connector.
3. Attach the hood release cable.
 - Secure with the clips.
4. If installed, connect the pollution sensor electrical connector.
 - Install the grommet.
 - Secure the clip.
5. If installed, connect the speed control module electrical connector.
6. Connect the horn electrical connectors.
7. Connect the hood switch electrical connector.
8. RH side: Secure the wiring harness.
 - Secure the clips.
9. Connect both front impact electrical connectors.
 - Secure the clips.
10. RH side: Attach the air suspension pipe.
11. Connect the ambient air temperature sensor electrical connector.
12. RH side: Attach the engine compartment ground cables.
 - Tighten the nuts to 25 Nm (18 lb.ft).
13. RH side: Connect the ABS electrical connector.
14. RH side: Attach the body panel ground cables.
 - Tighten the nut to 25 Nm (18 lb.ft).
15. RH side: Connect the body panel electrical connectors.
16. Driver side: Attach the wiring harness to the bulkhead.
 - Install the grommet.
17. Driver side: Connect the lower A-pillar electrical connectors.
18. Install the air suspension control module.
For additional information, refer to: [Air Suspension Control Module](#) (204-05 Vehicle Dynamic Suspension, Removal and Installation).
19. Connect the ABS module electrical connector.
20. Connect the brake fluid reservoir electrical connector.
21. Attach the wiring harness to the plenum.
22. Connect the battery to engine compartment wiring harness electrical connector.
 - Secure the clips.
23. Connect the A/C pressure transducer electrical connector.
 - Tighten the nuts to 4 Nm (3 lb.ft).

- 24.** Attach the hood wiring harness.
 - Install the grommet.
 - Install the cover.
 - Secure with the clips.
 - Connect the electrical connectors.
 - Connect the washer jet hoses.
- 25.** Install the hood pad.
 - Install the clips.
- 26.** Install the windshield wiper motor.
For additional information, refer to: [Windshield Wiper Motor \(501-16 Wipers and Washers, Removal and Installation\)](#).
- 27.** LH side: Attach the wiring harness.
 - Install the grommet.
 - Secure the clips.
- 28.** LH side: Connect the brake pad wear sensor electrical connector.
- 29.** LH side: Connect the coolant expansion tank level switch electrical connector.
- 30.** LH side: Attach the washer reservoir wiring harness.
 - Connect the washer jet hoses.
 - Connect the electrical connectors.
- 31.** LH side: Attach the engine compartment ground cables.
 - Secure the clips.
 - Tighten the nuts to 25 Nm (18 lb.ft).
- 32.** LH side: Connect the ABS electrical connector.
- 33.** LH side: Attach the air suspension pipes.
 - Secure the clips.
- 34.** LH side: Attach the body panel ground cables.
 - Tighten the nut to 25 Nm (18 lb.ft).
- 35.** LH side: Connect the body panel electrical connectors.
- 36.** LH side: Connect the adaptive front lighting module electrical connector.
- 37.** LH side: Connect the washer jet hose.
- 38.** LH side: Attach the wiring harness to the fuel fired heater.
 - Connect the electrical connectors.
 - Secure with the clips.
- 39.** Passenger side: Connect the transfer case electrical connector.
- 40.** Passenger side: Connect the engine wiring harness electrical connector.
- 41.** Install the headlamps.
For additional information, refer to: Headlamp Assembly (417-01 Exterior Lighting, Removal and Installation).
- 42.** Install the fender splash shields.
For additional information, refer to: Fender Splash Shield (501-02 Front End Body Panels, Removal and Installation).
- 43.** Attach the BJB wiring harness to the bulkhead.
 - Connect the electrical connectors.
 - Install the grommet.
- 44.** Install the battery ground cable.

- Attach the additional ground cable.
 - Tighten the nut to 25 Nm (18 lb.ft).
- 45.** Secure the BJB to the bracket.
- Tighten the bolt to 6 Nm (4 lb.ft).
- 46.** Connect the heater motor electrical connector.
- 47.** Connect the ground cables to the lower A-pillar.
- Tighten the nut to 10 Nm (7 lb.ft).
- 48.** Install the CJB bracket.
- Tighten the nuts to 10 Nm (7 lb.ft).
 - Secure the clips.
 - Connect the electrical connectors.
 - Tighten the bolts to 25 Nm (18 lb.ft).
- 49.** Install the CJB.
For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).
- 50.** Connect the battery positive cable to the BJB.
- Tighten the nut to 25 Nm (18 lb.ft).
- 51.** Install the BJB cover.
- Secure the clip.
- 52.** Install the ECM.
- Install the ECM top cover.
- 53.** Install the ECM cover.
- Tighten the Torx screws.
 - Connect the electrical connectors.
- 54.** Install the auxiliary battery tray.
For additional information, refer to: [Auxiliary Battery Tray](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
- 55.** Install the battery tray.
For additional information, refer to: [Battery Tray](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
- 56.** Install the four-wheel drive control module.
For additional information, refer to: [Four-Wheel Drive \(4WD\) Control Module](#) (308-07 Four-Wheel Drive Systems, Removal and Installation).
- 57.** Install the air cleaner assembly.
- 58.** Install the radiator grille.
For additional information, refer to: [Radiator Grille](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
- 59.** Install the engine cover.
For additional information, refer to: [Engine Cover - 2.7L V6 - TdV6](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
- 60.** Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Module Communications Network - Central Junction Box (CJB)

Removal and Installation

Removal

1. If the central junction box (CJB) is to be replaced, connect T4 to the vehicle.
2. Remove the glove compartment.
For additional information, refer to: [Glove Compartment](#) (501-12 Instrument Panel and Console, Removal and Installation).
3. Remove the passenger side closing trim panel.

- Release the clip.
- Remove the 2 screws.
- Disconnect the electrical connector.

E47530

4. Remove the CJB.

- Remove the 2 nuts.
- Disconnect the 6 electrical connectors.

E47609

Installation

1. Install the CJB.

- Connect the electrical connectors.
 - Tighten the nuts to 10 Nm (7 lb.ft).
2. Install the closing trim panel.
 - Connect the electrical connector.
 - Secure the clip.
 3. Install the glove compartment.
For additional information, refer to: [Glove Compartment](#)
(501-12 Instrument Panel and Console, Removal and Installation).
 4. Initiate a new CJB using T4.

Wiring Harnesses -

Torque Specifications

Description	Nm	lb-ft
Electrical harness bridge bolts - 4.0 Litre	45	33
Fusebox main feed cable bolt - 4.0 Litre	10	7

PAS pump mounting bracket bolts	25	18

* **Caution: damage to the internal connections will result if this torque is exceeded**

Wiring Harnesses - Wiring Harness

Description and Operation

Introduction

CAUTION: Do **not** use any other heat shrink sleeve other than the approved glue lined heat shrink sleeve mentioned in the repair procedure.

The purpose of this document is to promote quick and efficient minor repair to harness connectors or cables using approved methods and the wiring harness repair kit. Repairs may only be made to cables and connectors which have been mechanically, **not electrically** damaged. It also applies where the whole extent of the damage can be clearly identified and rectified.

Care and neatness are essential requirements in making a perfect repair.

Caution:

At the time of this first issue of the Harness Repair Guide, do not approve repairs to any of the following circuits:

- Any media orientated system transport network harnesses.
- Supplement restraint system (SRS) firing circuits (Air bags).
- Link lead assemblies, which are unique to safety critical circuits such as anti-lock brake system (ABS) and thermocouple circuits. An example of this is the ABS wheel speed sensors with moulded connectors.
- 4. Screened cables, leads and wiring harness(s).

If any harness(s) with defective electrical connector terminals or wires from the above circuits are a concern, new components must be installed.

Repair Kit

CAUTION: Where the repair procedure indicates that a glue lined heat shrink sleeve should be applied, apply sufficient heat to the glue lined heat shrink to melt the glue in order to provide a water tight seal. Do **not** over heat the glue lined heat shrink sleeve so that the wiring harness insulation becomes damaged.

The wiring harness repair kit has been produced which comprises:

- Pre-terminated wiring harness(s) of different sizes and types
- Three sizes of butt splice connectors
- A selection of colored cable identification sleeves
- Two sizes of glue lined heat shrink sleeves
- Crimping pliers
- A wire cutter and insulation stripper
- An electrical connector terminal extraction handle and tips

A suitable heat source, for shrinking heat shrink sleeves will be required.

The pre-insulated diamond grip range of electrical connector terminals and in-line, butt splice connectors contained within the wiring harness repair kit are the **only** acceptable product for the repairs of wiring harnesses. The butt connectors not only grip the wire but also the insulation, making a very secure joint.

If an electrical connector terminal is not included in the wiring harness repair kit then approval for the repair is **NOT** given and in these circumstances a new wiring harness must be installed.

Pre-Terminated Wiring Harness(s) and Butt Splice Connectors

All pre-terminated wiring harness(s) and butt splice connectors in the wiring harness repair kit are contained in bags which can be resealed after use. Each bag is marked with the part number of the items stored within the bag. Each storage compartment in the wiring harness repair kit is identified with the corresponding part number. Make sure that pre-terminated wiring harness(s) and connectors are not mixed up it is advisable to only open one bag at a time and to reseat the bag securely before opening another bag. Also, replace the bag in its mating part number compartment within the case.

The pre-terminated wiring harness(s) are supplied with the insulation in one of three colors, red, blue or yellow. The colors do not apply to any particular circuit but to the harness wire size. See the Relationship Table in the Repair Method section.

Butt splice connectors are also supplied with red, blue or yellow coverings, which must be matched to the pre-terminated wiring harness insulation color.

Pre-Terminated Wiring Harness(s)

E130741

The illustration shows:

- The pre-terminated wiring harness(s) which are included in the wiring harness repair kit
- The part number of the pre-terminated wiring harness
- The letter showing the extractor tip which must be used to remove this type of electrical connector terminal
- Those electrical connector terminals which are gold

Some of the pre-terminated wiring harness(s) have seals installed to the insulation for sealed connector applications. It is essential for prevention of moisture ingress that a sealed pre-terminated wiring harness must be used where a sealed terminal was removed.

CAUTION: Where the repair procedure indicates that a glue lined heat shrink sleeve should be applied, apply sufficient heat to the glue lined heat shrink to melt the glue in order to provide a water tight seal. Do **not** over heat the

glue lined heat shrink sleeve so that the wiring harness insulation becomes damaged.

Two sizes of heat shrink sleeving are supplied in the wiring harness repair kit. Each heat shrink sleeve contains a sealant glue. These must be used when connecting wiring harness(s) or electrical connector terminal(s) at all times. The smaller diameter heat shrink sleeve is to be used with the red and blue butt splice connectors and the larger diameter sleeve with the yellow butt splice connectors.

For ease and speed, some of the pre-terminated wiring harness(s) may already have the insulation partly stripped at the splice end. If the repair requires insulation to be stripped from the cable, refer to the Relationship Table for the correct length of insulation to be stripped.

The Pre-Terminated Wiring Harness(s) illustration shows the electrical connector terminal type, the part number of the pre-terminated wiring harness and the letter of the extractor tip which must be used to extract the electrical connector terminal from the connector housing. Additionally, those electrical connector terminal(s) which are gold are identified, all others are therefore, tinned and not gold.

Wiring Harness Cable Identification Sleeves

A selection of colored sleeves are contained in the wiring harness repair kit for maintaining the wiring harness cable identification on the pre-terminated wiring harness. Place the correct colored sleeve(s) over the pre-terminated wiring harness insulation as near to the electrical connector as possible with the main wiring harness cable color nearest to the electrical connector.

For example, if the original wiring harness cable color is pink with a black trace put the pink wiring harness cable identification sleeve on the pre-terminated wiring harness first followed by a black sleeve, and slide both along the wiring harness cable to the electrical connector terminal.

Extraction Handle and Tips

The extraction handle, in conjunction with the correct tip, is used to remove a terminal from an electrical connector. Each tip contained in the wiring harness repair kit is marked with an identification letter, A to K inclusive. Each tip has been specially designed to extract a particular type of electrical connector terminal. The use of any other tool is **not** recommended and is liable to cause damage to the electrical connector. The tip is fastened to the handle by a screw which holds the tip firmly yet allows it to be easily replaced.

Extraction Handle and Tips

E130742

Insulation Stripper

The moving jaw has an adjuster wheel which has a series of holes in it. Turning the wheel and placing the cable in the matching size hole will automatically adjust the jaw to the correct pressure. Note that some wiring harness(s) may have a harder insulation and slight adjustment of the wheel may be needed to make a clean strip but exercise care not to damage the wire.

Insulation Stripper

E130743

By pressing the outer edges of the wiring harness cable length stop together the adjuster can be slid up or down the jaw. This decreases or increases the length by which the wiring harness cable insulation will be stripped from the pre-terminated wiring harness or wiring harness wire. The adjuster has a position indicator to align with a graduated scale and this sets the correct length in millimetres, of insulation to be stripped is shown in the Relationship Table.

The illustration shows the insulation stripper tool and a wiring harness correctly gripped in the jaws. A wire cutter is provided on the outer side of the fixed jaw.

Cable Correctly Gripped in Stripper Blades

E130744

Crimping Pliers

Crimping Pliers

E130745

The crimping pliers have a moving jaw and a stationary jaw, with three different sized crimping enclosures. Each of the enclosures is identified by a red, blue or yellow coloured dot which corresponds to the three colours of the pre-terminated wiring harness(s) and butt splice connector colors.

List of Parts

Description	Part Number	Quantity
Wiring Harness Repair Kit	418-S065	1
Pre-Terminated Wiring Harness(s)	418-066 to 418-103 inclusive	10 each
Glue Lined Heat Shrink Pack – small diameter	418-104	25 per pack
Glue Lined Heat Shrink Pack – larger diameter	418-105	10 per pack
Case Assembly Comprising – carry case, lid, inner lid, base, insert, trays foam spacers	418-106	1
Butt Splice Connector – Red	418-107	50 per pack
Butt Splice Connector – Blue	418-108	50 per pack
Butt Splice Connector – Yellow	418-109	20 per pack
Extraction Tool Handle	418-110	1
Extraction Tip Pack consists of 2 spare screws plus	418-S111	1
Tip A	418-118	1
Tip B	418-119	1
Tip C	418-120	1
Tip D	418-121	1
Tip E	418-122	1
Tip F	418-123	1
Tip G	418-124	1
Tip H	418-125	1
Tip I	418-126	1
Tip J	418-127	1
Tip K	418-128	1
Sleeve Identification Pack – for Red insulation	418-112	500
Sleeve Identification Pack – for Blue insulation	418-113	500
Sleeve Identification Pack – for Yellow insulation	418-114	500
Instruction Manual	JTP 593	1
Crimping Pliers	YRW500010	1
Wire Stripping Tool	418-117	1

Repair Methods

CAUTION: Several different types and sizes of terminal may be found in a single electrical connector housing.

It is necessary to identify:

- The conductor (wire) size of the affected wiring harness
- The electrical connector range from which the damaged wiring harness is to be removed
- The terminal type

Use of the approved diagnostic tool will greatly assist in the quick identification of electrical connectors and faulty pin terminal(s).

Reference can also be made to the vehicle Electrical Guides, held by Dealers, to identify wiring harness(s) and electrical connector(s).

By using the Relationship Table, the wiring harness conductor (wire) size can be related to a suitable pre-terminated wiring harness by the color of the insulation. Also, the correct length of insulation to be stripped from the wiring harness lead is identified.

Relationship Table

CABLE RANGE	SPLICE	STRIP LENGTH
0.35 mm ² to 1.50 mm ²	RED	6.00 to 7.00 mm
1.00 mm ² to 2.50 mm ²	BLUE	6.00 to 7.00 mm
4.00 mm ² to 6.00 mm ²	YELLOW	9.00 to 9.50 mm

Electrical Connector Terminal Extraction

It must be noted that some electrical connector(s) have anti-backout devices which prevent the terminals from being removed from the electrical connector. Some examples of these are shown in following illustrations. The anti-backout device must be released before attempting to remove the terminal from the electrical connector. Some anti-backout devices require a special tip to release the device and these have been included in the kit. Most can be released by carefully using a suitable small screwdriver.

Various types of electrical connector have seals installed internally or externally to prevent moisture ingress. These normally do not have to be removed but make sure that they are installed when the electrical connectors are connected.

The illustrations show examples of each tip used on different types of electrical connector(s). There are a large number of different types of electrical connector used on vehicles therefore only one example using each tip is shown. Technicians experience and judgement will dictate which type of tip should be used for those electrical connector(s) which are not shown. Care should be exercised to avoid further damage when removing the terminals from the electrical connector.

- **NOTE: Examples of the extraction tips and anti-backout tips.**

Repair Procedure

• CAUTIONS:

Do not use crimping pliers, insulation strippers, butt splice connectors, heat shrink sleeves or pre-terminated wiring harness(s) that are not supplied with the Jaguar wiring harness repair kit. Each part has been designed to be used only with the other parts in this wiring harness repair kit.

Where the repair procedure indicates that a glue lined heat shrink sleeve should be applied, apply sufficient heat to the glue lined heat shrink to melt the glue in order to provide a water tight seal. Do **not** over heat the glue lined heat shrink sleeve so that the wiring harness insulation becomes damaged.

It is not correct to make more than five repair joints on the wiring harness to any electrical connector and if more damage is found at the same electrical connector then a new wiring harness must be installed.

- Remove the faulty terminal from the electrical connector using the extractor tool and correct tip. Make sure that any anti-backout device is released before trying to remove the terminal.
- **CAUTION:** : A number of electrical connector terminals are gold plated or gold flashed. When defective, they must be installed with a gold pre-terminated wiring harness(s) from the wiring harness repair kit. It is not always easy to identify the female as gold but the male pins are visually easier, therefore always check both male and female terminals to identify those which are gold. Under no circumstances are gold and tin terminals to be mixed as this will lead to early failure of the electrical contact.
 - **NOTE:** Never use a harness lead with a smaller diameter than the original harness lead.

Select the correct size and type of pre-terminated wiring harness and butt splice connector from the wiring harness repair kit.

- Using the wire cutter on the stripping tool, cut the pre-terminated wiring harness and the harness cable to the required length.
- **NOTE:** See illustration: **Stripping Insulation**

From the Relationship Table, find the correct length of insulation to be stripped from the pre-terminated wiring harness and set the adjustable cable length stop to the correct length. Place the pre-terminated wiring harness in the wire stripper and remove the insulation.

- Put the cable identification sleeve(s) on to the wiring harness with the main cable colour nearest to the terminal.
- During this next step do not overtighten. Place the selected butt splice connector in the crimping tool, matching the aperture and the butt connector colours. Make sure that the window indentation in the butt connector is resting over the guide bar on the lower jaw. Partially close the grip until the butt connector is securely held in the aperture. This will give support to the butt connector while the pre-terminated wiring harness is inserted into it.
- **NOTE:** See illustration: **Splice Correctly Located**

Insert the pre-terminated wiring harness into the butt connector and make sure that the wire is against the wire stop. Close the grip firmly, crimping the lead to the butt connector. When the handles have been completely closed the butt connector will be freed from the tool as the handles are released. If the handles have not been completely closed then the jaws will hold the butt connector and it cannot be removed from the tool until the crimp is fully made by closing the handles completely.

- Make sure that the harness cable has been squarely cut and the correct length of insulation removed. If more than one splice is needed the butt connectors must be not be crimped to the wiring harness at the same distance from the connector. The splices must be staggered to prevent a bulk of splices in the same area of the wiring harness.
- It is preferable to cover the butt splice joint with heat shrink sleeve. This is desirable not essential, except where the electrical connector is a sealed electrical connector. Use the smaller diameter sleeve for red and blue pre-terminated wiring harness(s) and the large diameter sleeve for the yellow pre-terminated wiring harness(s). It is advisable to place the heat shrink over the completed joint but in some instances the sleeve will not pass over the terminal. Check, and if required, place the correct size sleeve onto the harness cable or pre-terminated wiring harness before crimping the butt splice to the wiring harness.
- Place the harness cable into the butt splice with the splice window over the guide bar. Make sure that the cable harness wire is against the stop in the butt splice, crimp the butt splice connector to the wiring harness.
- Gently pull the harness cables each side of the butt splice to make sure that a secure joint has been made.
-  **WARNING:** Do not use a naked flame in areas where fuel or oil have been spilt. Clean the area of residual oil and fuel and wait until the fuel spill has fully evaporated.

• CAUTIONS:

When using a heat source make sure that it is localised and causes no damage to surrounding materials.

Where the repair procedure indicates that a glue lined heat shrink sleeve should be applied, apply sufficient heat to the glue lined heat shrink to melt the glue in order to provide a water tight seal. Do **not** over heat the glue lined heat shrink sleeve so that the wiring harness insulation becomes damaged.

Using a suitable heat source, shrink the sleeve over the butt splice.

- If further pre-terminated wiring harness(s) are to be installed to the same electrical connector, make sure that the lead is cut at a different length to the previous joint. This makes sure that the splices will, where possible, be staggered on the wiring harness and prevent a bulk of splices in one area.
- When all of the splices have been made, fit the terminal(s) to the electrical connector, taking care that the terminals are correctly orientated.
- Install the wiring harness cover and secure with adhesive electrical tape. Do not cover the wiring harness right to the electrical connector as the terminals must have a little movement and not be firmly bound to the electrical connector or wiring harness. Make sure that the cable identification sleeve(s) are showing at the wiring harness electrical connector.

Stripping Insulation

Wiring Harnesses - Wiring Harness Repair

General Procedures

1. For additional information, refer to: [Wiring Harness](#) (418-02 Wiring Harnesses, Description and Operation).

Wiring Harnesses - Engine Wiring Harness V6 4.0L Petrol

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the engine undershield.
For additional information, refer to: [Engine Undershield](#) (501-02 Front End Body Panels, Removal and Installation).
3. Remove the intake manifold.
For additional information, refer to: [Intake Manifold](#) (303-01C Engine - V6 4.0L Petrol, In-vehicle Repair).
4. Remove the battery.
For additional information, refer to: [Battery](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
5. Remove the engine compartment fuse box main feed cable.
 - Remove the bolt.

6. Remove the engine compartment upper heat shield.
 - Remove the screw.
 - Release the 2 mounting clips.

7. Remove the battery compartment side wall.
 - Release the battery positive cable and grommet.
 - Release the 4 clips.

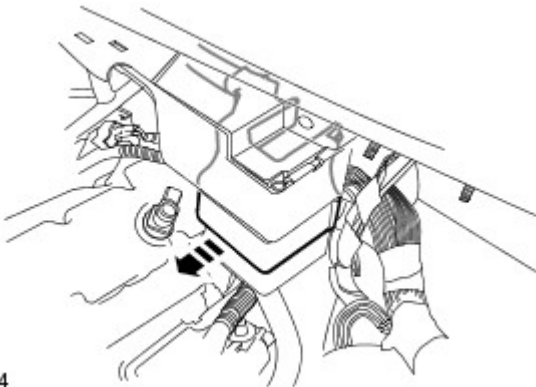

8. Release the engine harness from the battery compartment.

- Disconnect the 2 electrical connectors.

E55620

9. Release the 2 clips on the harness protective cover.

E55564

10. Disconnect the fuel injector electrical connectors.

- Release the 4 clips.

E55889

11. Disconnect the mass air flow (MAF) sensor electrical connector.

- Release the clip.

12. Disconnect the engine coolant temperature (ECT) sensor electrical connector.

13. Disconnect the generator connector.

14. Disconnect the knock sensor (KS) electrical connectors.

E 55892

15. Disconnect the cooling fan control electrical connector.

- Release the 2 clips.

E55893

16. Disconnect the camshaft position (CMP) sensor electrical connector.

- Release the clip.

E55894

17. Disconnect the purge control valve (PCV) electrical connector.

E55895

18. Disconnect the LH breather electrical connector.

E55896

19. Release the wiring harness bridge.

- Remove the 2 bolts.

E55897

20. Disconnect the LH HO2S and release the clip.

21. Disconnect the RH HO2S and release the clip.

22. Disconnect the crankshaft position (CKP) sensor electrical connector.

E55898

23. NOTE: Note the fitted position.

Remove the engine wiring harness.

Installation

1. NOTE: Align to the position noted on removal.

Install the engine wiring harness.

2. Connect the CKP sensor electrical connector.

3. Connect the HO2S electrical connectors.

4. Install the electrical harness bridge.

- Tighten the bolts to 45 Nm (33 lb.ft).

5. Connect the breather electrical connector.

6. Connect the PCV electrical connector.
7. Connect the CMP sensor electrical connector.
 - Secure the clip.
8. Connect the cooling fan electrical connector.
 - Carefully secure the clips.
9. Connect the KS electrical connectors.
10. Connect the generator.
11. Connect the ECT sensor electrical connector.
12. Connect the MAF sensor electrical connector.
 - Secure the clip.
13. Connect the fuel injector electrical connectors.
 - Carefully secure the clips.
14. Connect the engine wiring harness.
 - Install the clips on the harness protective cover.
 - Connect and secure the electrical connectors.
15. Install the battery compartment side wall.
 - Secure the clips.
 - Install the battery positive cable and grommet.
16. Install the engine compartment upper heat shield.
 - Secure the clips.
 - Tighten the screw.
17. Install the fusebox main feed cable.
 - Install the bolt and tighten to 10 Nm (7 lb.ft).
18. Install the battery.

For additional information, refer to: [Battery](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
19. Install the intake manifold.

For additional information, refer to: [Intake Manifold](#) (303-01C Engine - V6 4.0L Petrol, In-vehicle Repair).
20. Install the engine undershield.

For additional information, refer to: [Engine Undershield](#) (501-02 Front End Body Panels, Removal and Installation).
21. Connect the battery ground cable.

For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Release the engine wiring harness from the fuel supply manifolds.

E55231

9. Disconnect the RH EGR valve electrical connector.

E54930

10. Release the engine wiring harness from the timing cover.

E55343

11. Disconnect the engine coolant temperature (ECT) sensor electrical connector.

- Release the engine wiring harness from the engine lifting bracket.

12. Release the engine wiring harness from the timing cover.

13. Remove the LH exhaust gas recirculation (EGR) valve.
For additional information, refer to: [Exhaust Gas Recirculation \(EGR\) Valve LH - Vehicles Without Diesel Particulate Filter \(DPF\)](#) (303-08A Engine Emission Control - TDV6 2.7L Diesel, Removal and Installation).

14. Disconnect the camshaft position (CMP) sensor electrical connector.

15. Remove the power steering pump.
For additional information, refer to: [Power Steering Pump - 2.7L Diesel \(211-02, Removal and Installation\)](#).

16. Remove the power steering pump mounting bracket.

- Remove the three retaining bolts.

17. Disconnect the A/C compressor electrical connector.

18. Disconnect the turbocharger electrical connector.

19. Disconnect the crankshaft position (CKP) sensor electrical connector.

E54851

20. Remove the engine undershield.
For additional information, refer to: [Engine Undershield](#) (501-02 Front End Body Panels, Removal and Installation).

21. Disconnect the engine oil temperature sensor electrical connector.

- Release the engine wiring harness from the oil pan.

E54123

22. Disconnect the starter motor solenoid electrical connector.

E56277

23. Disconnect the generator electrical connector.

E 55348

24. Remove the engine wiring harness.

Installation

1. Install the engine wiring harness.
2. Connect the generator electrical connector.
3. Connect the starter motor solenoid electrical connector.
 - Tighten to 7 Nm (5 lb.ft).
4. Connect the engine oil temperature sensor electrical connector.
 - Attach the engine wiring harness to the oil pan.
5. Install the engine undershield.
For additional information, refer to: [Engine Undershield](#) (501-02 Front End Body Panels, Removal and Installation).
6. Connect the CKP sensor electrical connector.
7. Connect the turbocharger electrical connector.
8. Connect the A/C compressor electrical connector.
9. Install the power steering pump mounting bracket.
 - Tighten the retaining bolts to 25 Nm (18 lb.ft).
10. Install the power steering pump.
For additional information, refer to: [Power Steering Pump - 2.7L Diesel \(211-02, Removal and Installation\)](#).
11. Connect the CMP sensor electrical connector.
12. Install the LH EGR valve.
For additional information, refer to: [Exhaust Gas Recirculation \(EGR\) Valve LH - Vehicles Without Diesel Particulate Filter \(DPF\)](#) (303-08A Engine Emission Control - TDV6 2.7L Diesel, Removal and Installation).
13. Attach the engine wiring harness to the timing cover.
14. Connect the ECT sensor electrical connector.
 - Attach the engine wiring harness to the engine lifting bracket.
15. Attach the engine wiring harness to the timing cover.
16. Connect the RH EGR valve electrical connector.
17. Attach the engine wiring harness to the fuel supply manifolds.
18. Connect the fuel injector electrical connectors.
19. Connect the KS electrical connectors.
20. Attach the engine wiring harness to the bulkhead.
21. Connect the three engine wiring harness electrical connectors.
22. Install the battery.
For additional information, refer to: [Battery](#) (414-01 Battery, Mounting and Cables, Removal and Installation).
23. Install the crankcase vent oil separator.
For additional information, refer to: [Crankcase Vent Oil Separator](#) (303-08, Removal and Installation).
24. Connect the battery ground cable.

- Remove the 4 bolts.

E93282

28. Release the frame wiring harness from the parking brake cable.

E92568

29. Vehicles with differential locking motor: Disconnect the 2 electrical connectors.

- Release the 2 wiring harness clips.

30. Release the parking brake emergency release cable.

- Release the 2 clips.

31. LH side: Release the frame wiring harness.

- Remove the bolt.

32. Disconnect the electrical connector from the rear LH height sensor.

- Release the 2 clips.

E92571

33. LH side rear: Disconnect the air suspension rear valve block electrical connector.

- Release the clip.

E92572

34. Release the valve block from its mounting bracket.

- Release the 3 grommets.

35. Reposition the frame wiring harness to above the frame.

36. LH side rear: Disconnect the 2 electrical connectors from the frame wiring harness.

- Release the 2 electrical connectors.

37. Disconnect the LH rear ABS sensor.

- Release the clip.

38. Release the parking brake actuator mount bracket.

39. Spare wheel aperture: Release the frame wiring harness.

- Release the 5 clips.

40. RH side rear: Disconnect the ABS sensor electrical connector.

- Release the 2 clips.

41. RH side rear: Disconnect the low brake pad warning lamp electrical connector.

- Release the 2 clips.

42. Disconnect the electronic parking brake actuator electrical connector.

- Release the clip.

43. Release the RH parking brake cable.

- Remove the bolt.
- Release the clip.

44. Release the fuel line support bracket.

- Remove the inner section of the fuel line support bracket.
- Release the clip.

45. Release the frame wiring harness from the parking brake cable.

46. RH side: Release the frame wiring harness from the frame.

47. Remove the transmission under shield.

- Remove the 6 bolts.

48. Remove the fuel tank heat shield.

- Remove the 3 bolts and 2 nuts.

49. Release the parking brake emergency release cable.

- Release the 4 clips

50.  **WARNING:** Secure the component to the transmission jack.

 **CAUTION:** Note the rear bolt is fitted with 2 washers.

Using a transmission jack, lower the fuel tank.

- Remove the 6 bolts.

51. Disconnect the fuel pump module electrical connector.

52. Release the frame wiring harness from the fuel tank.

53. Rear of fuel tank: Release the frame wiring harness from the top of the frame crossmember.

- Release the clip.

54. Secure the fuel tank.

55. Release the exhaust heat shield for access.

56. Release the brake pipes.

57. With assistance, remove the frame wiring harness.

- Position both ends of the frame wiring harness to the LH center body mount.
- Route the front end of the frame wiring harness between the body and center crossmember.
- With assistance, remove the frame wiring harness.

Installation

1. Check the old frame wiring harness against the new frame wiring harness to make sure that they are the same.
2. **NOTE:** Make sure the wiring harness is routed correctly.

With assistance, install the frame wiring harness.

- Route all of the frame wiring harness electrical connectors and clips into position.
3. Secure the brake pipes.
 4. Secure the exhaust heat shield.
 5.  **WARNING:** Secure the component to the transmission jack.

6. **CAUTION:** Note the rear bolt is fitted with 2 washers.

Using a transmission jack, lower the fuel tank.

- Remove the 4 bolts.
6. Connect the fuel pump module electrical connector.
 7. RH side: Secure the frame wiring harness to the fuel tank.
 8. Rear of fuel tank: Secure the frame wiring harness to the top of the frame crossmember.

9. **CAUTION:** Note the rear bolt is fitted with 2 washers.

Install the fuel tank.

- Tighten the bolts to 45 Nm (33 lb.ft).
10. Secure the parking brake emergency release cable.
 - Secure in the 4 clips.
 11. Install the fuel tank heat shield.
 - Tighten the bolts to 6 Nm (4 lb.ft).
 - Tighten the nuts to 3 Nm (2 lb.ft).
 12. Install the transmission under shield.
 - Tighten the bolts to 10 Nm (7 lb.ft).

13. RH side: Secure the frame wiring harness to the frame.
14. Secure the frame wiring harness to the RH parking brake

- cable.
- 15.** Secure the RH parking brake cable bracket.
 - Install the inner section of the parking brake cable bracket.
 - 16.** Secure the RH parking brake cable.
 - Secure the clip.
 - Tighten the new bolts to 22 Nm (16 lb.ft).
 - 17.** Connect the electronic parking brake actuator electrical connector.
 - Secure the clip.
 - 18.** RH side rear: Connect the low brake pad warning lamp electrical connector.
 - Secure the 2 clips.
 - 19.** RH side rear: Connect the ABS sensor electrical connector.
 - Secure the 2 clips.
 - 20.** Spare wheel aperture: Secure the frame wiring harness.
 - Secure the 5 clips.
 - 21.** Secure the parking brake actuator mount bracket.
 - Tighten the bolts to 22 Nm (16 lb.ft).
 - 22.** Connect the LH rear ABS sensor.
 - Secure the clip.
 - 23.** LH side rear: Connect the 2 electrical connectors to the frame wiring harness.
 - Secure the electrical connectors.
 - 24.** Reposition the rear valve block electrical connector.
 - 25.** Reposition the RH side rear height sensor electrical connector.
 - 26.** LH side rear: Connect the air suspension valve block electrical connector.
 - Secure the clip.
 - 27.** Connect the electrical connector to the rear LH height sensor.
 - Secure the clip.
 - 28.** Secure the valve block to its mounting.
 - 29.** LH side: Secure the frame wiring harness.
 - Tighten the bolt to 22 Nm (16 lb.ft).
 - 30.** Secure the parking brake emergency release cable.
 - Secure the clips.
 - 31.** Secure the frame wiring harness to the LH parking brake cable.
 - 32.** Attach both stabilizer bar links.
 - Tighten the nuts to 115 Nm (85 lb.ft).
 - 33.** Secure the stabilizer bar.
 - Tighten the bolts to 62 Nm (46 lb.ft).
 - 34.** Install the rear wheels and tires.
 - 35.** Secure the air suspension compressor valve block.
 - 36.** Connect the electrical connectors to the air suspension

solenoid.

37. Install the air suspension silencer.

For additional information, refer to: [Air Suspension Muffler](#) (204-05 Vehicle Dynamic Suspension, Removal and Installation).

38. LH side: Secure the air suspension line to the frame wiring harness.

39. LH side: Secure the frame wiring harness to the frame.

- Secure the 6 clips.

40. Install the air suspension reservoir.

For additional information, refer to: [Air Suspension Reservoir](#) (204-05 Vehicle Dynamic Suspension, Removal and Installation).

41. Connect the ground cable to the wheel arch earth stud.

- Tighten the nut to 25 Nm (18 lb.ft).
- Secure the 2 clips.

42. LH side front: Connect the height sensor electrical connector.

43. Install the frame wiring harness carrier.

- Install new tie straps.
- Secure to the clips.

44. LH side front: Secure the 2 windshield washer jet hoses.

45. Reposition the frame wiring harness through the inner fender.

46. LH side behind headlamp: Secure the 2 clips to the inner wing.

47. LH side behind the front panel: Connect the 2 electrical connectors to the frame wiring harness.

48. LH side behind the front headlamp: Connect the frame wiring harness electrical connector.

49. Install the windshield washer reservoir filler neck.

50. Install the LH front wheel arch liner.

For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).

51. Connect the battery ground cable.

For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Wiring Harnesses - Front Parking Aid Camera Wiring Harness - Front Section RHD AWD

Removal and Installation

Removal

CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

1. Remove the central junction box (CJB). For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).
2. **NOTE:** The left hand front camera wiring harness connectors are coloured magenta, the right hand front camera wiring harness connectors are coloured blue.

Disconnect the electrical connector.

3. Remove the battery. For additional information, refer to: [Battery](#) (414-01 Battery, Mounting and Cables, Removal and Installation).

4. Remove the battery compartment side wall.
 - Release the battery positive cable and grommet.
 - Release the 4 clips.

5. Release the engine compartment fuse box.

- Remove the bolt.

6. Remove the brake master cylinder cover.

7. Remove the air cleaner. For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - V6 4.0L Petrol, Removal and Installation).

8. Release the hood seal.

9. Release the wiring harness carrier.

- Remove the 4 nuts.

10. Release the 3 clips.

11. NOTE: The left hand front camera wiring harness connectors are coloured white, the right hand front camera wiring harness connectors are coloured green.

Disconnect the electrical connector.

Installation

1.  CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness

E135323

2. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

Remove the connector from the camera overlay wiring harness.

- Remove the locking tab.
- Carefully release the clip.
- Apply suitable tape to protect the end of the camera overlay wiring harness.

E133998

3. Using suitable tape, secure a suitable rod to the camera overlay wiring harness.

E134896

4. Carefully feed the camera overlay wiring harness under the bracket.

E134898

5. Carefully feed the camera overlay wiring harness through the wiring harness carrier.

E134897

6. Carefully feed the camera overlay wiring harness through the wiring harness carrier.

E134900

7. Using a suitable tool, make a hole in grommet in the position shown.

8. With the aid of another technician, carefully feed the camera overlay wiring harness through the grommet.

9. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

Install the connector to the camera overlay wiring harness.

- Remove the protective tape.
- Install the electrical connector.
- Secure the locking tab.

E134007

10. NOTE: The left hand front camera wiring harness connectors are coloured magenta, the right hand front camera wiring harness connectors are coloured blue.

Connect the electrical connector.

E134793

11. NOTE: The left hand front camera wiring harness connectors are coloured white, the right hand front camera wiring harness connectors are coloured green.

Connect the electrical connector.

E134994

12. ⚠ CAUTION: Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the harness.

Using suitable tie straps, secure the camera overlay wiring harness to the main body wiring harness.

13. Secure the 3 clips.

E134997

14. Secure the wiring harness carrier.

- Tighten the 4 nuts.

E134995

15. Secure the engine compartment fuse box.

- Tighten the bolt.

16. Install the battery compartment side wall.

- Secure the 4 clips.
- Install the battery positive cable and grommet.

17. Install the air cleaner. For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - V6 4.0L Petrol, Removal and Installation).

18. Install the brake master cylinder cover.

19. Secure the hood seal.

20. Install the CJB. For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).

21. Install the battery. For additional information, refer to: [Battery](#) (414-01 Battery, Mounting and Cables, Removal and Installation).

Wiring Harnesses - Front Parking Aid Camera Wiring Harness - Front Section LHD AWD

Removal and Installation

Removal

CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

1. Remove the central junction box (CJB). For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).

2. NOTE: RHD shown, LHD similar.

- NOTE: The left hand front camera wiring harness connectors are coloured magenta, the right hand front camera wiring harness connectors are coloured blue.

Disconnect the electrical connector.

E134793

3. Remove the battery. For additional information, refer to: [Battery](#) (414-01 Battery, Mounting and Cables, Removal and Installation).

4. Remove the battery compartment side wall.

- Release the battery positive cable and grommet.
- Release the 4 clips.

E46326

5. NOTE: RHD shown, LHD similar.

Release the engine compartment fuse box.

- Remove the bolt.

6. Remove the air cleaner. For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - V6 4.0L Petrol, Removal and Installation).

7. NOTE: The left hand front camera wiring harness connectors are coloured white, the right hand front camera wiring harness connectors are coloured green.

Disconnect the electrical connector.

Installation

1.  CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness

E135323

2. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

Remove the connector from the camera overlay wiring harness.

- Remove the locking tab.
- Carefully release the clip.
- Apply suitable tape to protect the end of the camera overlay wiring harness.

E133998

3. Using suitable tape, secure a suitable rod to the camera overlay wiring harness.

E134896

4. NOTE: RHD shown, LHD similar.

Using a suitable tool, make a hole in grommet in the position shown.

E134992

5. NOTE: RHD shown, LHD similar.

With the aid of another technician, carefully feed the camera overlay wiring harness through the grommet.

E134899

6. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

Install the connector to the camera overlay wiring harness.

- Remove the protective tape.
- Install the electrical connector.
- Secure the locking tab.

E134007

7. NOTE: RHD shown, LHD similar.

- NOTE: The left hand front camera wiring harness connectors are coloured magenta, the right hand front camera wiring harness connectors are coloured blue.

Connect the electrical connector.

8. NOTE: The left hand front camera wiring harness connectors are coloured white, the right hand front camera wiring harness connectors are coloured green.

Connect the electrical connector.

9.  CAUTION: Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the harness.

Using suitable tie straps, secure the camera overlay wiring harness to the main body wiring harness.

10. NOTE: RHD shown, LHD similar.

Secure the engine compartment fuse box.

- Tighten the bolt.

E134993

11. Install the battery compartment side wall.

- Secure the 4 clips.
- Install the battery positive cable and grommet.

E46326

12. Install the air cleaner. For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - V6 4.0L Petrol, Removal and Installation).

13. Install the CJB. For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).

14. Install the battery. For additional information, refer to: [Battery](#) (414-01 Battery, Mounting and Cables, Removal and Installation).

Removal and Installation

Removal

CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

1. Remove the LH front seat. For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
2. Remove the central junction box (CJB). For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).
3. Remove the LH scuff plate trim panel. For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Release the wiring harness cover.
 - Release the 3 clips.

E134771

E134793

5. **NOTE:** The left hand front camera wiring harness connectors are coloured magenta, the right hand front camera wiring harness connectors are coloured blue.

Disconnect the electrical connector.

6. NOTE: The left hand front camera wiring harness connectors are coloured white, the right hand front camera wiring harness connectors are coloured black.

Disconnect the electrical connector.

E134748

Installation

1.  CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness

E135323

2. NOTE: The left hand front camera wiring harness connectors are coloured magenta, the right hand front camera wiring harness connectors are coloured blue.

Connect the electrical connector.

3.  CAUTION: Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the harness.

Feed the camera overlay wiring harness along the main wiring harness to the camera module.

- Using suitable tie straps, secure the camera overlay wiring harness to the main body wiring harness.

4. NOTE: The left hand front camera wiring harness connectors are coloured white, the right hand front camera wiring harness connectors are coloured black.

Connect the electrical connector.

5. Install the wiring harness cover.

- Secure the 3 clips.

E134771

6. Install the LH scuff plate trim panel. For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
7. Install the CJB. For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).
8. Install the LH front seat. For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

Section LHD AWD

Removal and Installation

Removal

CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

1. Remove the LH front seat. For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
2. Repeat procedure for the other side.
3. Remove the floor console. For additional information, refer to: [Floor Console](#) (501-12 Instrument Panel and Console, Removal and Installation).
4. Remove the LH scuff plate trim panel. For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
5. Repeat procedure for the other side.
6. Release the wiring harness cover.
 - Release the 3 clips.

E134771

7. Repeat procedure for the other side.
8. Remove the central junction box (CJB). For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).

9. NOTE: RHD shown, LHD similar.
 10. Disconnect the 2 electrical connectors:

- Release the 2 clips.
- NOTE: The left hand front camera wiring harness connectors are coloured magenta, the right hand front camera wiring harness connectors are coloured blue.

Disconnect the electrical connector.

E135493

E135494

E135436

12. Release the wiring harness cover.

- Reposition the floor covering for access.
- Using a suitable tool, carefully cut through the wiring harness cover retaining tape.
- Release the 12 clips.

E134748

13. NOTE: The left hand front camera wiring harness connectors are coloured white, the right hand front camera wiring harness connectors are coloured black.

Disconnect the electrical connector.

Installation

1.  CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness

E135323

2.  CAUTION: Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the harness.

Carefully feed the camera overlay wiring harness along the main body wiring harness from the camera module to the RH A-pillar.

- Using suitable tie straps, secure the camera overlay wiring harness to the main body wiring harness.

3. NOTE: RHD shown, LHD similar.

- NOTE: The left hand front camera wiring harness connectors are coloured magenta, the right hand front camera wiring harness connectors are coloured blue.

Connect the electrical connector.

E134793

E135436

4. Secure the wiring harness cover.

- Secure the 12 clips.
- Re-apply suitable tape to the wiring harness cover in the positions previously secured.
- Install the floor covering.

E135494

5. Connect the 2 electrical connectors.

- Secure the 3 clips.

E135493

6. Connect the 2 electrical connectors.

- Secure the clip.

7. NOTE: The left hand front camera wiring harness connectors are coloured white, the right hand front camera wiring harness connectors are coloured black.

Connect the electrical connector.

E134748

8. Install the CJB. For additional information, refer to: [Central Junction Box \(CJB\)](#) (418-00 Module Communications Network, Removal and Installation).

9. Install the LH wiring harness cover.

- Secure the 3 clips.

E134771

10. Repeat procedure for the other side.

11. Install the LH scuff plate trim panel. For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

12. Repeat procedure for the other side.

13. Install the floor console. For additional information, refer to: [Floor Console](#) (501-12 Instrument Panel and Console, Removal and Installation).

14. Install the LH front seat. For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

15. Repeat procedure for the other side.

Wiring Harnesses - Left Hand Parking Aid Camera Wiring Harness

Removal and Installation

Removal

CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

1. Remove the closing trim panel.

- Release the clip.
- Remove the 2 screws.
- Disconnect the electrical connector.

E47530

2. Remove the cowl side trim panel. For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornammentation, Removal and Installation).

3. Remove the LH front seat. For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

4. Remove the LH scuff plate trim panel. For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornammentation, Removal and Installation).

5. Release the wiring harness cover.

- Release the 3 clips.

E134771

6. NOTE: Door shown removed for clarity.

Release the gaiter.

7. Remove the wiring harness cover.

- Release the 4 clips.

8. Disconnect the electrical connector.

- Release the electrical connector bracket.
- Release the 6 clips.

9. Disconnect the electrical connector.

E134750

Installation

1.  **CAUTION:** Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness.

E135323

2. Connect the electrical connector.

3. Install the wiring harness cover.

- Secure the 4 clips.

4. Install the gaiter.

5. Secure the bracket.

- Secure the 6 clips.

E134747

6.  CAUTION: Make sure that any tie straps used are not tightened excessively on the camera wiring harness and link leads. Failure to follow this instruction may result in damage to the harness.

Feed the camera overlay wiring harness along the main wiring harness to the parking aid camera module.

- Using suitable tie straps, secure the camera overlay wiring harness to the main body wiring harness.

7. Connect the electrical connector.

E134750

8. Install the wiring harness cover.

- Secure the 3 clips.

E134771

9. Install the LH scuff plate trim panel. For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

10. Install the LH front seat. For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

11. Install the cowl side trim panel. For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

12. Install the closing trim panel.

- Connect the electrical connector.
- Secure the clip.
- Tighten the screws.

E47530

Wiring Harnesses - Liftgate Wiring Harness

Removal and Installation

Removal

1. Open the liftgate and tailgate.
2. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
3. Remove the liftgate lower trim panel.
For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove the liftgate upper trim panel.
 - Release the 4 clips.

5. Remove the liftgate side trim panel.

- Release the 5 clips.
- Repeat the above procedure for the other side.

6. Remove the rear headliner trim panel.

- Release the 7 clips.
- Disconnect the electrical connector.

7. Release the liftgate wiring harness.

- Disconnect the 2 electrical connectors.
- Release the grommet.

E55538

8. Disconnect the high mounted stoplamp electrical connector.

E55539

9. Disconnect both heated rear window electrical connectors.

E48473

10. Disconnect the license plate lamp electrical connector.

E55540

11. Disconnect the wiper motor electrical connector.

12. If installed, disconnect the diversity amplifier electrical connector and antenna cable.

13. If installed, disconnect the navigation system traffic amplifier electrical connector and antenna cable.

14. Remove the liftgate wiring harness.

- Release the 15 clips.

Installation

1. Install the liftgate wiring harness.
 - If installed, connect the navigation system traffic amplifier electrical connector and antenna cable.
 - Secure the clips.

3. If installed, connect the diversity amplifier electrical connector and antenna cable.
4. Connect the wiper motor electrical connector.
5. Connect the license plate lamp electrical connector.
6. Connect the heated rear window electrical connectors.
7. Connect the high mounted stoplamp electrical connector.
8. Attach the liftgate wiring harness.
 - Install the grommet.
 - Connect the electrical connectors.
9. Install the rear headliner trim panel.
 - Connect the electrical connector.
 - Secure with the clips.
10. Install the liftgate side trim panel.
 - Secure with the clips.
 - Repeat the above procedure for the other side.
11. Install the liftgate upper trim panel.
 - Secure with the clips.
12. Install the liftgate lower trim panel.
For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
13. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Wiring Harnesses - Right Hand Parking Aid Camera Wiring Harness

Removal and Installation

Removal

CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

1. Remove the LH front seat. For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
2. Repeat procedure for the other side.
3. Remove the floor console. For additional information, refer to: [Floor Console](#) (501-12 Instrument Panel and Console, Removal and Installation).
4. Remove the LH scuff plate trim panel. For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
5. Repeat procedure for the other side.
6. Release the wiring harness cover.
 - Release the 3 clips.

E134771

7. Repeat procedure for the other side.
8. Remove the RH cowl side trim panel. For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
9. Remove the accelerator pedal assembly. For additional information, refer to: [Accelerator Pedal](#) (310-02A Acceleration Control - TDV6 2.7L Diesel, Removal and Installation).

E135435

10. Remove the dynamic response module.

- Remove the 2 bolts.
- Disconnect the 2 electrical connectors.

E135494

11. Disconnect the 2 electrical connectors.

- Release the 3 clips.

12. Disconnect the 2 electrical connectors.

- Release the clip.

13. Release the wiring harness cover.

- Reposition the floor covering for access.
- Using a suitable tool, carefully cut through the wiring harness cover retaining tape.
- Release the 12 clips.

14. NOTE: Door shown removed for clarity.

- NOTE: Left-hand shown, right-hand similar.
- Release the gaiter.

15. NOTE: Left-hand shown, right-hand similar.

Remove the wiring harness cover.

- Release the 4 clips.

E134745

16. NOTE: Left-hand shown, right-hand similar.

Disconnect the electrical connector.

- Release the electrical connector bracket.
- Release the 6 clips.

E134743

17. Disconnect the electrical connector.

E134752

Installation

E135323

1.  **CAUTION:** Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness

2.  **CAUTION:** Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the vehicle.

Carefully feed the camera overlay wiring harness along the main body wiring harness from the camera module to the RH A-pillar.

- Using suitable tie straps, secure the camera overlay wiring harness to the main body wiring harness.

3. **NOTE:** Left-hand shown, right-hand similar.

Connect the electrical connector.

E135444

4. NOTE: Left-hand shown, right-hand similar.

Install the wiring harness cover.

- Secure the 4 clips.

5. NOTE: Left-hand shown, right-hand similar.

Install the gaiter.

6. NOTE: Left-hand shown, right-hand similar.

Secure the bracket.

- Secure the 6 clips.

E135435

7. Install the dynamic response module.

- Connect the 2 electrical connectors.
- Tighten the 2 bolts.

E135436

8. Secure the wiring harness cover.

- Secure the 12 clips.
- Re-apply suitable tape to the wiring harness cover in the positions previously secured.
- Install the floor covering.

9. Connect the 2 electrical connectors.

- Secure the 3 clips.

E135494

10. Connect the 2 electrical connectors.

- Secure the clip.

E135493

11. Connect the electrical connector.

E134752

12. Install the accelerator pedal assembly. For additional information, refer to: [Accelerator Pedal](#) (310-02A Acceleration Control - TDV6 2.7L Diesel, Removal and Installation).

13. Install the RH cowl side trim panel. For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

14. Install the LH wiring harness cover.

- Secure the 3 clips.

E134771

15. Repeat procedure for the other side.

16. Install the LH scuff plate trim panel. For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

17. Repeat procedure for the other side.

18. Install the floor console. For additional information, refer to: [Floor Console](#) (501-12 Instrument Panel and Console, Removal and Installation).

19. Install the LH front seat. For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

20. Repeat procedure for the other side.

Wiring Harnesses - Rear Parking Aid Camera Wiring Harness

Removal and Installation

Removal

CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

1. Remove the LH D-pillar trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the rear headliner trim panel.

E49690

- Release the 7 clips.
- Disconnect the electrical connector.

3. Disconnect the electrical connector.

E135785

4. Remove the LH front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
5. Remove the LH scuff plate trim panel.
For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

6. Release the wiring harness cover.

- Release the 3 clips.

E134771

7. Disconnect the electrical connector.

E134749

Installation

1.  CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness

E135323

2. Feed the camera overlay wiring harness along the main wiring harness to the parking aid camera module.

3.  CAUTION: Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the harness.

Using suitable tie straps, secure the camera overlay wiring harness to the main body wiring harness.

4. Connect the electrical connector.

E135785

5. Install the LH D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

E49690

6. Install the rear headliner trim panel.
 - Connect the electrical connector.
 - Secure the 7 clips.

E134749

7. Connect the electrical connector.

E134771

8. Secure the wiring harness cover.
 - Secure the 3 clips.

9. Install the LH scuff plate trim panel.
For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
10. Install the LH front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

Wiring Harnesses - Parking Aid Camera Signal Filter

Removal and Installation

Removal

• NOTE: Identify the correct parking aid camera wiring harness:

- The LH front camera has white connectors.
- The rear camera has blue connectors.
- The LH side view camera has green connectors.
- The RH front camera has black connectors.
- The RH side view camera has magenta connectors.

1. Re-position the LH front seat to the full forward and full height position.

2. CAUTIONS:

 Make sure that the camera wiring harness and link leads are not bent excessively during these procedures. Failure to follow this instruction may result in damage to the harness.

 Make sure that any tie straps used are not tightened excessively on the camera wiring harness and link leads, Failure to follow this instruction may result in damage to the harness.

Take care when handling the wiring harness and link lead.

E135323

3. NOTE: RH front camera shown, other parking aid cameras similar.

• NOTE: LH front seat shown removed for clarity.

Disconnect the appropriate electrical connector.

E134751

Installation

1. NOTE: Make sure that the dual lock tape is adhered to the side of the parking aid camera signal filter that has writing on.

Secure one piece of the dual lock tape to the parking aid camera signal filter.

- Remove the backing strip from the dual lock tape.

2.  CAUTION: Do not remove the backing strip from the second piece of dual lock tape.

Secure another piece of the dual lock tape to the parking aid camera signal filter.

3. NOTE: RH front camera, LH front camera and rear camera only.

Install the link lead to the parking aid camera signal filter.

4. NOTE: RH front camera, LH front camera and rear camera only.

• NOTE: RH front camera shown, LH front camera and rear camera similar.

Connect the parking aid camera signal filter assembly to the camera wiring harness.

5. NOTE: RH front camera, LH front camera and rear camera only.

- NOTE: RH front camera shown, LH front camera and rear camera similar.

Connect the camera wiring harness link lead to the module.

6. NOTE: RH front camera only

- NOTE: Make sure that the parking aid camera signal filter is in the correct position before securing the dual lock tape to the seat base.

Secure the parking aid camera signal filter to the seat base in the position shown.

- Remove the backing strip from the dual lock tape.

7. NOTE: LH front camera only

- NOTE: Make sure that the parking aid camera signal filter is in the correct position before securing the dual lock tape to the seat base.

Secure the parking aid camera signal filter to the seat base in the position shown.

- Remove the backing strip from the dual lock tape.

8. NOTE: Rear camera only

- NOTE: Make sure that the parking aid camera signal filter is in the correct position before securing the dual lock tape to the seat base.

Secure the parking aid camera signal filter to the seat base in the position shown.

- Remove the backing strip from the dual lock tape.

9. NOTE: RH side view camera and LH side view camera only

Install the longer link lead to the parking aid camera signal filter.

10. NOTE: RH side view camera and LH side view camera only

• NOTE: RH side view camera shown, LH side view camera similar.

Install the shorter link lead to the camera wiring harness.

11. NOTE: RH side view camera only.

• NOTE: Make sure that the parking aid camera signal filter is in the correct position before securing the dual lock tape to the vehicle.

Install the parking aid camera signal filter assembly.

- Connect the parking aid camera signal filter assembly to the module.
- Connect the parking aid camera signal filter assembly to the camera wiring harness link lead.
- Remove the backing strip from the dual lock tape.
- Secure the parking aid camera signal filter to the vehicle in the position shown.

12. NOTE: RH side view camera only.

Using a suitable tie strap, secure the camera wiring harness to the seat base in the position shown.

13. NOTE: LH side view camera only.

- NOTE: Make sure that the parking aid camera signal filter is in the correct position before securing the dual lock tape to the vehicle.

Install the parking aid camera signal filter assembly.

- Connect the parking aid camera signal filter assembly to the module.
- Connect the parking aid camera signal filter assembly to the camera wiring harness link lead.
- Remove the backing strip from the dual lock tape.
- Secure the parking aid camera signal filter to the vehicle in the position shown.

14. NOTE: LH side view camera only.

Using a suitable tie strap, secure the camera wiring harness to the seat base in the position shown.

15. NOTE: RH side view camera and LH side view camera only

Make sure that the wiring harness is correctly routed and does not contact against the modules in the positions shown.

Wiring Harnesses - Front Parking Aid Camera Wiring Harness – Bumper Section

Removal and Installation

Removal

1.  **WARNING:** Make sure to support the vehicle with axle stands.

Raise and support the vehicle.

2. Remove the front bumper cover.
For additional information, refer to: [Front Bumper Cover \(501-19 Bumpers, Removal and Installation\)](#).
3. **NOTE:** Some variation in the illustrations may occur, but the essential information is always correct.

- **NOTE:** Left-hand shown, right-hand similar.

Disconnect the electrical connector.

E136379

Installation

1.  CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the wiring harness

E135323

2. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

- NOTE: Left-hand shown, right-hand similar.

Connect the electrical connector.

E 136379

3.  CAUTION: Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the vehicle.

Using suitable tie straps, secure the camera overlay wiring harness to the bumper wiring harness.

4. Install the front bumper cover.
For additional information, refer to: [Front Bumper Cover](#) (501-19 Bumpers, Removal and Installation).

Wiring Harnesses - Rear Parking Aid Camera Wiring Harness – Liftgate

Section

Removal and Installation

Removal

CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

1. Remove the rear headliner trim panel.
 - Release the 7 clips.
 - Disconnect the electrical connector.

2. Disconnect the electrical connector.

3. Remove the liftgate lower trim panel.
For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Oramentation, Removal and Installation).
4. Remove the liftgate upper trim panel.
 - Release the 4 clips.

5. Remove the liftgate side trim panel.

- Release the 5 clips.

E48472

6. Disconnect the electrical connector.

E136296

7. Release the liftgate conduit.

E136294

Installation

1.  CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness.

E135323

E136297

2. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

Remove the electrical connector from the camera overlay wiring harness.

- Align the camera wiring harness tang with the electrical connector clip.
- Carefully release the clip.
- Apply suitable tape to protect the end of the camera overlay wiring harness.

E134896

3. Using suitable tape, secure a suitable rod to the camera overlay wiring harness.

4. Carefully feed the camera overlay wiring harness through the conduit.

5. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

Install the connector to the camera overlay wiring harness.

- Remove the protective tape.
- Align the camera wiring harness tang with the electrical connector clip.
- Install the electrical connector.

E136298

6. Connect the electrical connector.

7.  CAUTION: Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the vehicle.

Using suitable tie straps, secure the camera overlay wiring harness to the tailgate harness.

8. Connect the electrical connector.

9. Secure the liftgate conduit.

10. Install the liftgate side trim panel.

- Secure the 5 clips.

11. Install the liftgate upper trim panel.

- Secure the 4 clips.

12. Install the liftgate lower trim panel.

For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

13. Install the rear headliner trim panel.

- Connect the electrical connector.
- Secure the 7 clips.

Wiring Harnesses - Side Parking Aid Camera Wiring Harness – Front Door Section

Removal and Installation

Removal

1. Remove the closing trim panel.

- Release the clip.
- Remove the 2 screws.
- Disconnect the electrical connector.

E47530

2. Remove the cowl side trim panel.

For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

3. NOTE: RHD shown, LHD is similar.

If equipped, remove the dynamic stability control module.

- Disconnect the 2 electrical connectors.
- Remove the 2 bolts.

E135435

4. NOTE: Door shown removed for clarity.

Release the gaiter.

5. Remove the wiring harness cover.

- Release the 4 clips.

6. Disconnect the electrical connector.

- Release the electrical connector bracket.
- Release the 6 clips.

7. Remove the front door trim panel.

For additional information, refer to: [Front Door Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

8. Disconnect the electrical connector.

Installation

1. Release the grommet.

2. Using a suitable tool, make a hole in grommet in the position shown.

3.  CAUTION: Make sure that the camera overlay wiring harness is not bent excessively during this procedure. Failure to follow this instruction may result in damage to the harness.

Install the camera overlay wiring harness.

E135323

4. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

Remove the connector from the camera wiring harness.

- Remove the locking tab.
- Carefully release the clip.
- Apply suitable tape to protect the end of the camera wiring harness.

E133998

5. Using suitable tape, secure a suitable rod to the camera overlay wiring harness.

6. Carefully feed the wiring harness through the grommet.

7. Carefully feed the camera overlay wiring harness through the gaiter.

8. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

Install the connector to the camera wiring harness.

- Remove the protective tape.
- Install the electrical connector.
- Secure the locking tab.

E134007

9. Connect the electrical connector.

E135444

10. Install the wiring harness cover.

- Secure the 4 clips.

11. Install the gaiter.

12. Secure the bracket.

- Secure the 6 clips.

13. CAUTIONS:

 Make sure that excessive force is not used when installing the tie straps to the wiring harness. Failure to follow this instruction may result in damage to the vehicle.

 Make sure that the camera overlay harness is correctly routed and clear of the front door window regulator and motor. Failure to follow this instruction may result in damage to the vehicle.

Using suitable tie straps, secure the camera overlay harness to the door wiring harness.

14. Secure the grommet.

15. NOTE: RHD shown, LHD is similar.

If equipped, install the dynamic response control module.

- Tighten the 2 bolts.
- Connect the 2 electrical connectors.

16. Install the cowl side trim panel.

For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

17. Install the closing trim panel.

- Connect the electrical connector.
- Secure the clip.
- Tighten the screws.

E47530

18. Connect the electrical connector.

E136438

19. Install the front door trim panel.

For additional information, refer to: [Front Door Trim Panel](#) (501-05 Interior Trim and Ornammentation, Removal and Installation).

16	-	Instrument cluster

OVERVIEW

The active anti-theft system is available with three different levels of vehicle protection depending on market specification:

- Hinged panel sensing
- Hinged panel and intrusion sensing
- Hinged panel, intrusion and inclination sensing.

The system is controlled by software in the [CJB \(central junction box\)](#) which indicates an alarm trigger condition:

- Visually, using the direction indicators.
- Audibly, using the vehicle horn and, depending on market specification, either a passive or active sounder.

The passive sounder is an anti-theft disc horn and the active sounder is a BBUS (battery backed-up sounder).

The BBUS is an intelligent unit which communicates to the [CJB](#) over a [LIN \(local interconnect network\)](#) connection. The BBUS is fitted with an inclination sensor.

Monitoring of the hinged panels is carried out using switches located in each door latch assembly, the hood latch assembly, and the tailgate latch assembly. The condition of the switches is monitored by the [CJB](#).

Monitoring of front door lock status is carried out using switches located in the door latch mechanisms. The condition of the switches is monitored by the front door modules and transmitted to the [CJB](#) over the medium-speed [CAN \(controller area network\)](#).

Monitoring of the cabin interior is carried out using an interior motion sensor, which comprises an ultrasonic sound wave sensor to determine if there is movement within the cabin. Information from the interior motion sensor is communicated to the [CJB](#) over a [LIN](#) connection.

When armed, the active anti-theft system can be triggered in one of the following ways:

- A door ajar switch indicates a door is open.
- The hood or upper tailgate ajar switches indicate that either is open.
- Either front door latch mechanism indicates a door has been unlocked.
- The emergency key blade is used to open the [LH \(left-hand\)](#) front door.
- The [CJB](#) is disconnected (this may result in only a partial trigger).
- An attempt is made to start the engine without a valid signal from the Smart Key.
- The BBUS is disconnected (partial trigger only).
- The vehicle battery is disconnected on a vehicle fitted with a BBUS (partial trigger only).
- The inclination sensor detects a change in vehicle attitude.
- The interior motion sensor detects movement within the cabin.
- Panic alarm from the Smart Key.

• **CAUTIONS:**

The interior motion sensor electrical connections, particularly those to the sensors mounted in the roof console, are very delicate and must be handled with care.

The interior motion sensor is an electro-statically sensitive part and should only be handled in an electro-statically controlled environment.

Alarm Indicator

The alarm indicator is a [LED \(light emitting diode\)](#) located in the instrument cluster, operation of the alarm indicator is controlled by a hardwired input the [CJB](#). When the ignition is off the indicator gives a visual indication of the active anti-theft system to show if the alarm system is active or not active.

The alarm [LED](#) will begin to flash once every 2 seconds to indicate that the vehicle alarm is armed.

Door Modules

The door modules provide the interface between the door latch-motors, the door latch-switches and the [CJB](#). The door modules provide door switch status information and enable the door latch-motors on request from the [CJB](#) or the keyless vehicle module.

Keyless Vehicle Module

The Keyless Vehicle Module interfaces with the Central locking, RF (radio frequency) receiver and collects RF signal information which is transmitted from the Smart Key. This information is translated into commands which are passed on the medium-speed [CAN](#) to the:

- [CJB](#),
- front door modules, and
- instrument cluster.

The keyless vehicle module also monitors:

- four interior antennas,
- two load-space antennas,
- four door handle antennas and one rear bumper antenna, if passive entry is fitted.

On vehicles with passive entry, the additional fast latch motors are controlled via the keyless vehicle module and the locking status is passed to the [CJB](#) on the medium speed [CAN](#).

Passive Anti-Theft Horn

The passive anti-theft horn is hardwired to the [CJB](#) and activates when the alarm is triggered.

Battery Backed-Up Sounder (BBUS)

The BBUS uses an integral sounder to produce an audio warning when the alarm is triggered. An inclination sensor is incorporated into the BBUS, to monitor vehicle attitude, see Inclination Sensor.

Operation of the BBUS is controlled by the [CJB](#) via exchange signals on the [LIN](#). Under normal operation the BBUS is powered by a permanent battery power supply from the [CJB](#). However, if the power feed is disrupted an integral rechargeable battery powers the BBUS.

On receipt of the arming signals, the BBUS sounder and the inclination sensor respond with a status signal. If there is no response to the arming signals within 12 seconds, the [CJB](#) assumes there is a fault and sends a disarm signal to the sounder or the inclination sensor, as appropriate. The [CJB](#) also stores a related fault code.

If the alarm is subsequently triggered, with the BBUS sounder disarmed, the [CJB](#) uses the passive anti-theft horn or vehicle horn to sound the audio warning.

Inclination Sensor

The inclination sensor measures the longitudinal and lateral angle of the vehicle over a range of $\pm 16^\circ$ from the horizontal. When the anti-theft alarm system is armed in the intrusion detection mode, the BBUS stores the current angles in memory and monitors the inclination sensor readings. If the vehicle attitude changes in either direction by more than the alarm limit, the BBUS activates the sounder.

Interior Motion Sensor

When the vehicle is double locked, the interior motion sensor monitors for movement in the vehicle's cabin.

The interior motion sensor consists of a micro-controller, two acoustic transmitters and one acoustic receiver. The receiver and one of the transmitters face forward and the other transmitter faces rearward to ensure complete coverage of the vehicle's cabin.

The interior motion sensor is powered by a feed from the [CJB](#) and activates and de-activates the interior motion sensor. When the interior motion sensor is active it outputs ultrasonic pulses from the transmitters and checks the echoes picked up by the receiver for changes to the passenger compartment profile. If it detects a change of profile, indicating movement in the passenger compartment, the interior motion sensor reports the alarm to the [CJB](#).

Each time the interior motion sensor is armed, it performs a self test. If there are no faults the interior motion sensor sends an acknowledgment signal to the [CJB](#). If the [CJB](#) does not receive the acknowledgment signal it de-activates the interior motion sensor.

CONTROL DIAGRAM

23	-	CJB

PRINCIPLES OF OPERATION

The active anti-theft system arms and disarms in conjunction with the locking and unlocking of the central locking system. For additional information, refer to: [Handles, Locks, Latches and Entry Systems](#) (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Depending on the configuration of the [CJB](#), the active anti-theft system can be armed and disarmed when the locking system is activated with the Smart Key. Visual and audible confirmation of the arming and disarming is provided by the direction indicators and the BBUS.

On vehicles not fitted with the interior motion sensor and BBUS, the anti-theft alarm system is armed in the perimeter mode when the vehicle is either single or double locked.

On vehicles with the interior motion sensor the anti-theft alarm system is armed in one of two modes:

- Single Locking: only the hinged panels are monitored.
- Double Locking: the hinged panels the vehicle interior, and if the BBUS is incorporated the vehicle attitude, are monitored.

When the vehicle is double-locked, the [CJB](#) sends an arming signal to the BBUS and interior motion sensor. If the [CJB](#) does not receive an acknowledgment signal from the BBUS and the interior motion sensor, the [CJB](#) disables the associated alarm feature for the remainder of the armed cycle.

Locking and Arming the Vehicle

• **NOTE:** The vehicle will only lock, if all door, tailgate and hood apertures are closed. If a lock attempt is made when an aperture is open, the vehicle will not lock and two audible error warnings will sound.

Single locking:

- Pressing the lock button briefly on either the door handle or Smart Key, will initiate the [CJB](#) to arm the anti-theft alarm system in the perimeter mode and send an arming signal to the sounder in the BBUS. This secures the vehicle and prevents the doors being opened from outside of the vehicle; however they can still be unlocked and opened from inside the vehicle. The hazard warning lamps will flash once as confirmation and 'if enabled' an audible warning will also sound. The alarm indicator in the instrument cluster will flash continuously.

Double locking:

- Pressing the lock button twice within three seconds on either the door handle or Smart Key, will initiate the [CJB](#) to arm the anti-theft alarm system in the perimeter mode and interior motion detection mode. The [CJB](#) will also send an arming signal to the BBUS. Double locking secures the vehicle and prevents the doors being unlocked or opened from inside or outside of the vehicle, except with a recognized Smart Key. The perimeter alarm and interior motion protection are turned on. The hazard warning lamps will flash twice, with a long second flash as confirmation and if enabled an audible warning will also sound.
- The vehicle set-up menu in the message center allows the intrusion detection and inclination protection to be temporarily disabled the next time the vehicle is locked using the Smart Key. This feature prevents accidental triggering of the active anti-theft system during transportation of the vehicle or if a pet is left in the vehicle. The sensor override functionality will be active for one lock/unlock cycle only and will default back to sensor active mode automatically.

Emergency Disarming

If the alarm has been triggered and cannot be disarmed with the Smart Key, it can be disarmed using the emergency Smart Key blade. This is achieved by unlocking the left-hand front door with the key blade and deactivating the alarm by:

- pressing the unlock button on the Smart Key, or by
- pressing the engine START/STOP button with the Smart Key inside the vehicle.

Anti-Theft - Active - Hood Switch

Removal and Installation

Removal

• **NOTE:** Before installing a new hood switch, diagnose the hood switch by using a digital multimeter. Make sure that continuity through hood switch is present when the switch is pressed (hood closed condition). Repeat the test to make sure continuity IS NOT present when the switch IS NOT pressed. If the hood switch continuity is NOT present, continue with this procedure. If the continuity is present, install the original hood switch to the vehicle.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Release the RH hood latch.

- Remove the 2 Torx bolts.
- Disconnect the electrical connector.

3. Remove the hood switch.

Installation

1. Install the hood switch.
2. Install the RH hood latch.
 - Connect the electrical connector.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
3. Open and close the hood to check the hood latch operation.
4. Adjust the hood latch.
 - Loosen the 2 hood latch Torx bolts.
 - Lower the hood and check for alignment.
 - Open the hood and tighten the Torx bolts to 10 Nm (7 lb.ft).
 - Check for the correct operation of the hood safety catch.
 - If necessary, repeat the above adjustment procedure.

Anti-Theft - Active - Antenna

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the RH A-pillar upper trim panel.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove the RH B-pillar upper trim panel.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove the RH C-pillar upper trim panel.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
5. Remove the RH sun visor.
 - Remove the screw covers.
 - Remove the 2 screws.
 - Release and disconnect the electrical connector.

E49687

6. Remove the sun visor retaining clip.
 - Release the screw cover.
 - Remove the screw.

E49688

7. Remove the RH passenger assist handles.
 - Carefully release the 6 screw covers.
 - Remove the 6 screws.

E49689

8. Release the RH side of the headliner.

- Release the 6 clips.

9. Remove the alarm antenna.

- Disconnect the electrical connector.
- Remove the 2 bolts.

Installation

1. Install the alarm antenna.

- Connect the electrical connector.
- Tighten the bolts to 10 Nm (7 lb.ft).

2. Secure the RH side of the headliner.

- Carefully secure the clips.

3. Install the RH passenger assist handles.

- Install the screws.
- Install the screw covers.

4. Install the sun visor retaining clip.

- Install the screw.
- Install the screw cover.

5. Install the RH sun visor.

- Connect and secure the electrical connector.
- Install the screws.
- Install the screw covers.

6. Install the RH C-pillar upper trim panel.

For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

7. Install the RH B-pillar upper trim panel.

For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

8. Install the LH A-pillar upper trim panel.

For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

9. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Anti-Theft - Active - Anti-Theft Alarm Horn with Integral Battery

Removal and Installation

Removal

1. Remove the auxiliary battery box cover.

- Release the 2 clips.

E47557

2. Remove the anti-theft alarm horn.

- Disconnect the electrical connector.
- Remove the 2 bolts.

E59107

Installation

1. Install the anti-theft alarm horn.

- Tighten the bolts to 10 Nm (7 lb.ft).
- Connect the electrical connector.

2. Install the auxiliary battery box cover.

Anti-Theft - Passive - Anti-Theft - Passive

Description and Operation

COMPONENT LOCATION

E129817

Item	Part Number	Description
1	-	Instrument cluster

9	-	Interior Antenna – luggage compartment
10	-	Interior Antenna – front compartment
11	-	Interior Antenna – front compartment
12	-	Start/Stop Switch

OVERVIEW

Passive Start

The passive start system relies on the detection of a uniquely coded Smart Key and low frequency antennas strategically

situated within the vehicle. The antennas ensure the Smart Key is always within the active transmission zone of the antennas wherever the Smart Key is placed inside the vehicle. For this reason the orientation and positioning of the antennas is critical to the correct functioning of the system. The Smart Key also operates the passive entry system. For additional information, refer to: [Handles, Locks, Latches and Entry Systems](#) (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

The system provides a secure interface between the [CJB \(central junction box\)](#) and the [ECM \(engine control module\)](#) to prevent unauthorized starting of the engine. This is achieved by immobilization of the engine crank system and the fuel system, using encoded data exchange between the Smart Key and multiple control modules.

Engine starting is initiated when the encoded data exchange between the Smart Key and the control modules is verified. The engine management system will then allow engine crank and fueling when an authorization data message is received from the [CJB](#).

The engine can be started by pressing the start/stop button and depending on the type of transmission:

- Automatic; when the drive selector is in the 'Park' position and the brake pedal is pressed.
- Manual; when the gear selector is in 'Neutral' and the clutch pedal is pressed.

COMPONENT DESCRIPTION

Immobilizer Antenna Unit

The IAU (immobilizer antenna unit) is used if the keyless vehicle module is unable to authorize the Smart Key. If the keyless vehicle module is unable to identify the Smart Key, for example if the Smart Key battery voltage is low or there is local RF interference, the transponder within the Smart Key can be read in the conventional manner. The driver will be alerted to this by a chime and a message in the instrument cluster message center 'SMART KEY NOT FOUND REFER TO HANDBOOK'.

Refer to Keyless Start Backup section.

Low Frequency Antenna

Six LF (low Frequency) antennas for the passive start system are positioned in specific locations within the vehicle.

The keyless vehicle module transmits an LF signal via the antennas which is received by the Smart Key. The Smart Key then responds by transmitting a RF (radio Frequency) signal which is received by the RF receiver and passed to the KVM (Keyless Vehicle Module) for authorization.

Keyless Vehicle Module

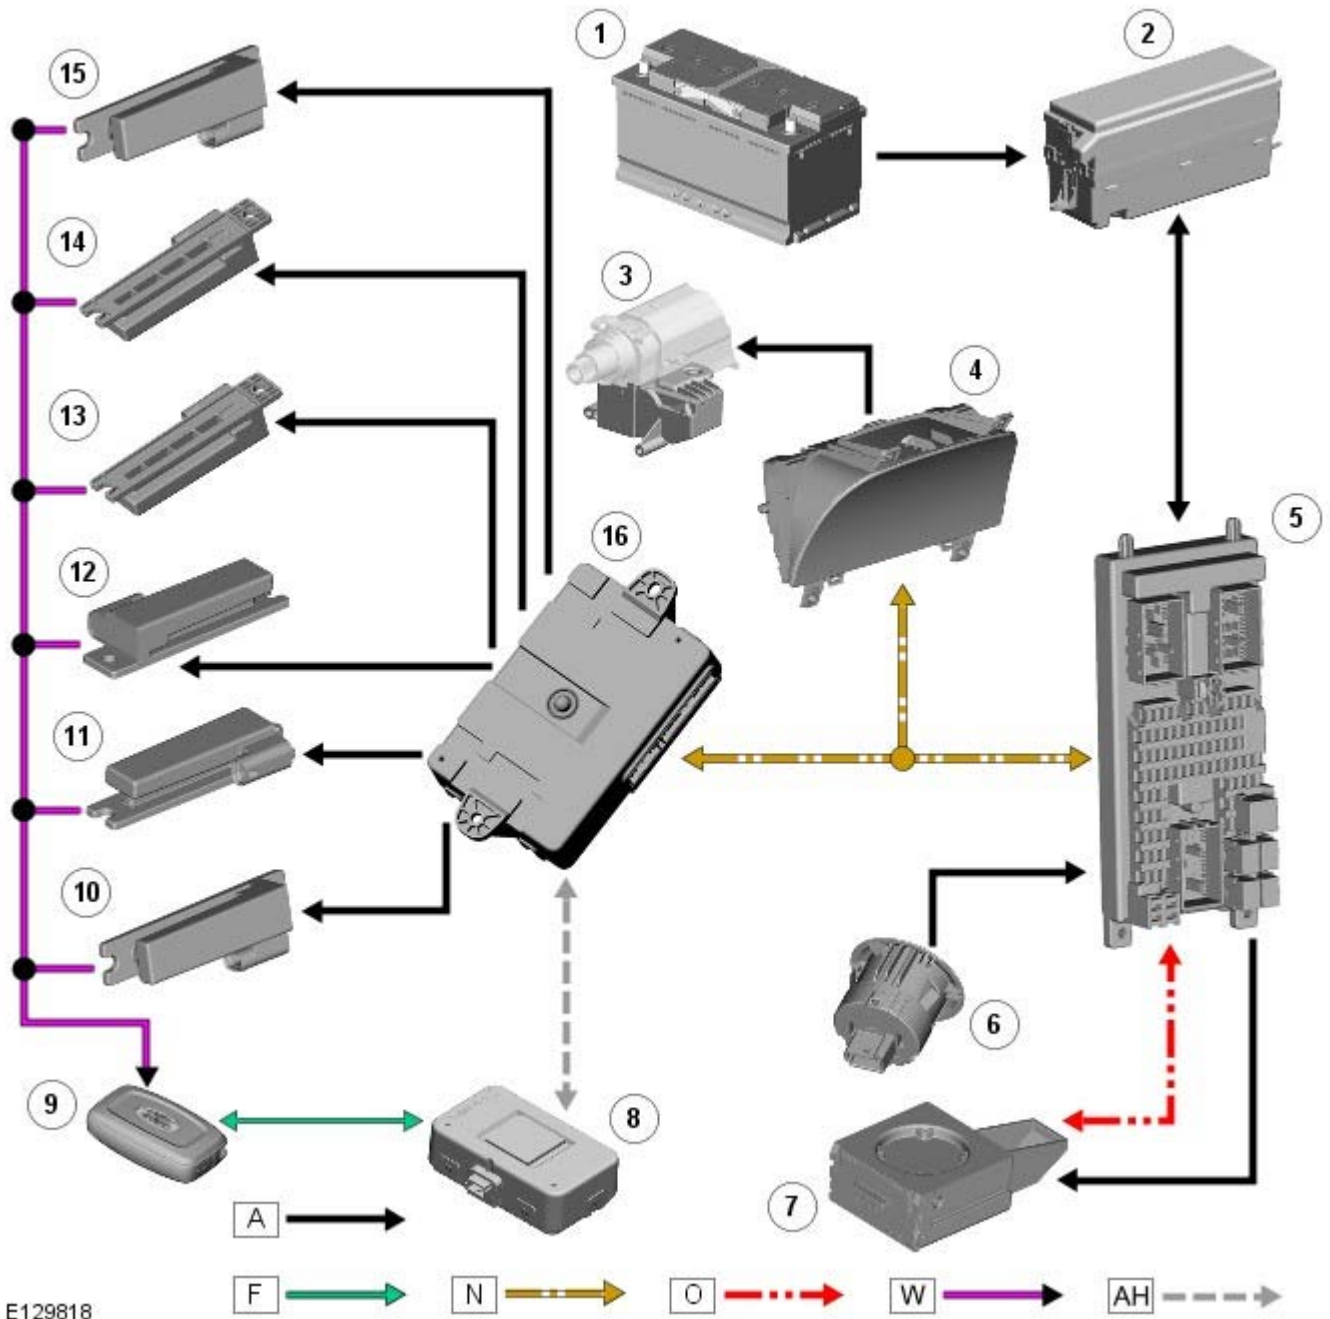

The keyless vehicle module controls signal transmissions to and from the Smart Key and provides authorization to allow the vehicle to be started. The module has a medium-speed [CAN \(controller area network\)](#) connection to the [CJB](#) for authorizing vehicle starting.

Radio Frequency Receiver

The RF (radio frequency) receiver transmission is received from the Smart Key to enable key identification.

CONTROL DIAGRAM

• NOTE: **A** = Hardwired connection; **F** = RF Transmission; **N** = Medium speed CAN bus; **O** LIN bus; **W** = LF Transmission; **AH** = Serial Communications Link

E129818

Item	Part Number	Description
1	-	Battery
2	-	EJB (engine junction box)
3	-	Steering column lock
4	-	Instrument cluster
5	-	CJB
6	-	Start/Stop Switch
7	-	Immobilizer antenna unit
8	-	Radio frequency receiver
9	-	Smart Key
10	-	Interior Antenna – roof lining
11	-	Interior Antenna – roof lining
12	-	Interior Antenna – luggage compartment
13	-	Interior Antenna – luggage compartment
14	-	Interior Antenna – front compartment
15	-	Interior Antenna – front compartment
16	-	KVM (Keyless Vehicle Module)

PRINCIPLES OF OPERATION

Passive Start

At the request of the [CJB](#) the KVM (Keyless Vehicle Module) prompts each of the internal low-frequency antennas to output a signal. When the Smart Key is in the vehicle cabin, it detects the low-frequency signals and responds with a RF radio frequency data-identification signal back to the KVM via the RF receiver.

If the data received matches that stored in the KVM it continues the passive start process by communicating a 'Smart Key valid' signal to the [CJB](#) via the medium-speed [CAN](#) bus.

Once the [CJB](#) receives the authorization and confirms the response with an internal calculation, it passes coded data to the [ECM](#) on the high-speed [CAN](#) bus. Upon confirmation from the [ECM](#) the ignition is enabled.

Before [CJB](#) sends a mobilization signal to the [ECM](#) it will exchange encrypted data with the electric steering lock mechanism to authorize unlocking of the steering column. The instrument cluster only provides a ground for the steering lock motor.

The [CJB](#) will enable the fuel pump relay which, on diesel vehicles operates the fuel pump and on gasoline vehicles sends a battery voltage supply to the fuel pump driver module to operate the fuel pump in conjunction with the [ECM](#).

• **NOTE:** If the KVM fails to locate the Smart Key, a message 'SMART KEY NOT FOUND REFER TO HANDBOOK' will appear in the instrument cluster message center and the keyless start back-up process will have to be used to mobilize and start the vehicle.

Keyless Start Backup

If the vehicle has been unlocked using the emergency key blade or the Smart Key is not detected by the vehicle, it will be necessary to use the keyless start backup to disarm the alarm and start the engine. The following process must be followed in this event:

- Position the Smart Key against the underside of the fascia, on the outboard side of the steering column, with the buttons facing downwards. This is the location of the IAU (immobilizer antenna unit).
- Holding the Smart Key in position and the brake / clutch pedal depressed, press the start/stop button to start the engine.

Smart Key positioned next to immobilizer antenna unit

E129977

This process bypasses the data exchange between the KVM and the [CJB](#); this is an inductive process and will operate if the battery in the Smart Key is discharged. A transponder within the Smart Key is detected by the IAU. The IAU confirms the code output from the transponder and communicates this code confirmation with the [CJB](#) via a LIN (local interconnect network) bus connection. The [CJB](#) then initiates the vehicle start process in the normal manner.

Anti-Theft - Passive - Passive Anti-Theft System (PATS) Module

Removal and Installation

Removal

• NOTE: If the PATS module is to be replaced then T4 must be connected and the correct procedures adhered to, prior to the battery disconnection.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the RH A-pillar upper trim panel.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove the RH B-pillar upper trim panel.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove the RH C-pillar upper trim panel.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
5. Remove the RH sun visor.
 - Remove the screw covers.
 - Remove the 2 screws.

E49766

6. Remove the sun visor retaining clip.
 - Release the screw cover.
 - Remove the screw.

E49688

7. Remove the RH passenger assist handles.
 - Carefully release the 4 screw covers.
 - Remove the 4 screws.

E49689

8. Remove the rear headliner trim panel.

- Release the 7 clips.

9. Release the RH side of the headliner.

- Carefully release the 4 clips.

10. Remove the PATS module.

- Disconnect the electrical connector.
- Remove the 2 bolts.

Installation

1. Install the PATS module.

- Connect the electrical connector.
- Tighten the bolts to 10 Nm (7 lb.ft).

2. Secure the RH side of the headliner.

- Carefully secure the clips.

3. Install the rear headliner trim panel.

- Secure the clips.

4. Install the RH passenger assist handles.

- Install the screws.
- Install the screw covers.

5. Install the sun visor retaining clip.

- Install the screw.
 - Install the screw cover.
6. Install the RH sun visor.
- Install the screws.
 - Install the screw covers.
7. Install the RH C-pillar upper trim panel.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
8. Install the RH B-pillar upper trim panel.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
9. Install the LH A-pillar upper trim panel.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
10. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
11. Initiate a new PATS module using T4.

Remote Convenience - Universal Transmitter

Diagnosis and Testing

Principles of Operation

For a detailed description of the universal transmitter system and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: Universal Transmitter (419-02 Remote Convenience, Description and Operation).

Inspection and Verification

1. **1.** Verify the customer concern.
2. **2.** Visually inspect for obvious signs of mechanical damage.

Visual Inspection

Mechanical
<ul style="list-style-type: none"> ● Damaged universal transmitter ● Damaged receiver

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **4.** If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Causes	Action
Universal transmitter inoperative	<ul style="list-style-type: none"> ● Universal transmitter ● Receiver unit 	Refer to the electrical circuits and check universal transmitter and receiver unit circuits.

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Remote Function Actuator \(RFA\)](#) (100-00 General Information, Description and Operation).

Navigation System - Navigation System

Description and Operation

COMPONENT LOCATION

E124878

Item	Part Number	Description
1	-	VICS (vehicle information and communication system) beacon antenna - Japan only
2	-	TSD (touch screen display)
3	-	Microphone - voice recognition
4	-	Clockspring
5	-	Steering wheel switches
6	-	GPS (global positioning system) antenna
7	-	'TMC (traffic message channel) tuner' or 'VICS receiver - Japan only'
8	-	Power amplifier
9	-	IHU (integrated head unit)
10	-	Integrated control panel, incorporating navigation switch
11	-	Navigation update socket

OVERVIEW

The navigation system provides audible and visual route guidance information to enable the driver to reach a desired destination. The system allows the driver to choose the route to the destination using minor or major roads or highways with the option of three routes. Directions to hospitals, museums, monuments and hotels are also available. Map information stored on a hard-drive located within the TSD (touch screen display) is used to determine the best route for

the journey and provide the driver with details of directions and approaching junctions.

If the vehicle requires a map upgrade or a new region loading, an enabling code along with the map data must be purchased. Map upgrades to the hard-drive unit need to be carried out by a Land Rover dealer using Land Rover approved diagnostic equipment.

TRAFFIC MESSAGE CHANNEL

The TMC (traffic message channel) traffic data is received via the **FM (frequency modulation)** radio antenna and broadcast in many European countries.

TMC is a function of the FM, **RDS (radio data system)**, which broadcasts real-time traffic and weather information. Data messages are received and decoded by the TSD and passed onto the navigation system to inform the driver of impending traffic congestion and if possible provide an alternative route.

TMC conforms to a global standard that has been adopted by:

- Traffic data gatherers
- Information service providers
- Broadcasters
- Vehicle/receiver manufacturers

All TMC receivers use the same list of event codes, while the location database (on the hard-drive) contains both a country-specific set of location codes for the strategic European road network.

VEHICLE INFORMATION AND COMMUNICATION SYSTEM

VICS (vehicle information and communication system) is broadcast in the Japanese market.

VICS supplies the navigation system with information that enables the TSD to inform the vehicle driver of traffic conditions in the vehicle's vicinity and calculate an alternative route if necessary. Information is transmitted to the navigation system through three routes as headlined below:

Radio Frequency Transmission

Radio frequency transmission is generally transmitted from road side beacons mainly on highways. The information transmitted is:

- Traffic congestion
- Travel time to next intersection
- Traffic conditions in surrounding areas and highway junctions
- Traffic accidents
- Speed limits
- Lane regulations
- Tire chains regulations
- Parking availability at highway service areas and parking areas.

Infra-red Transmission

Infra-red transmission is received by the VICS beacon antenna mounted on the top of the instrument panel. Infra-red transmissions are transmitted from road-side beacons on major trunk roads. The information transmitted is:

- Traffic congestion and travel time
- Traffic accidents
- Breakdowns
- Road works restrictions
- Parking availability.

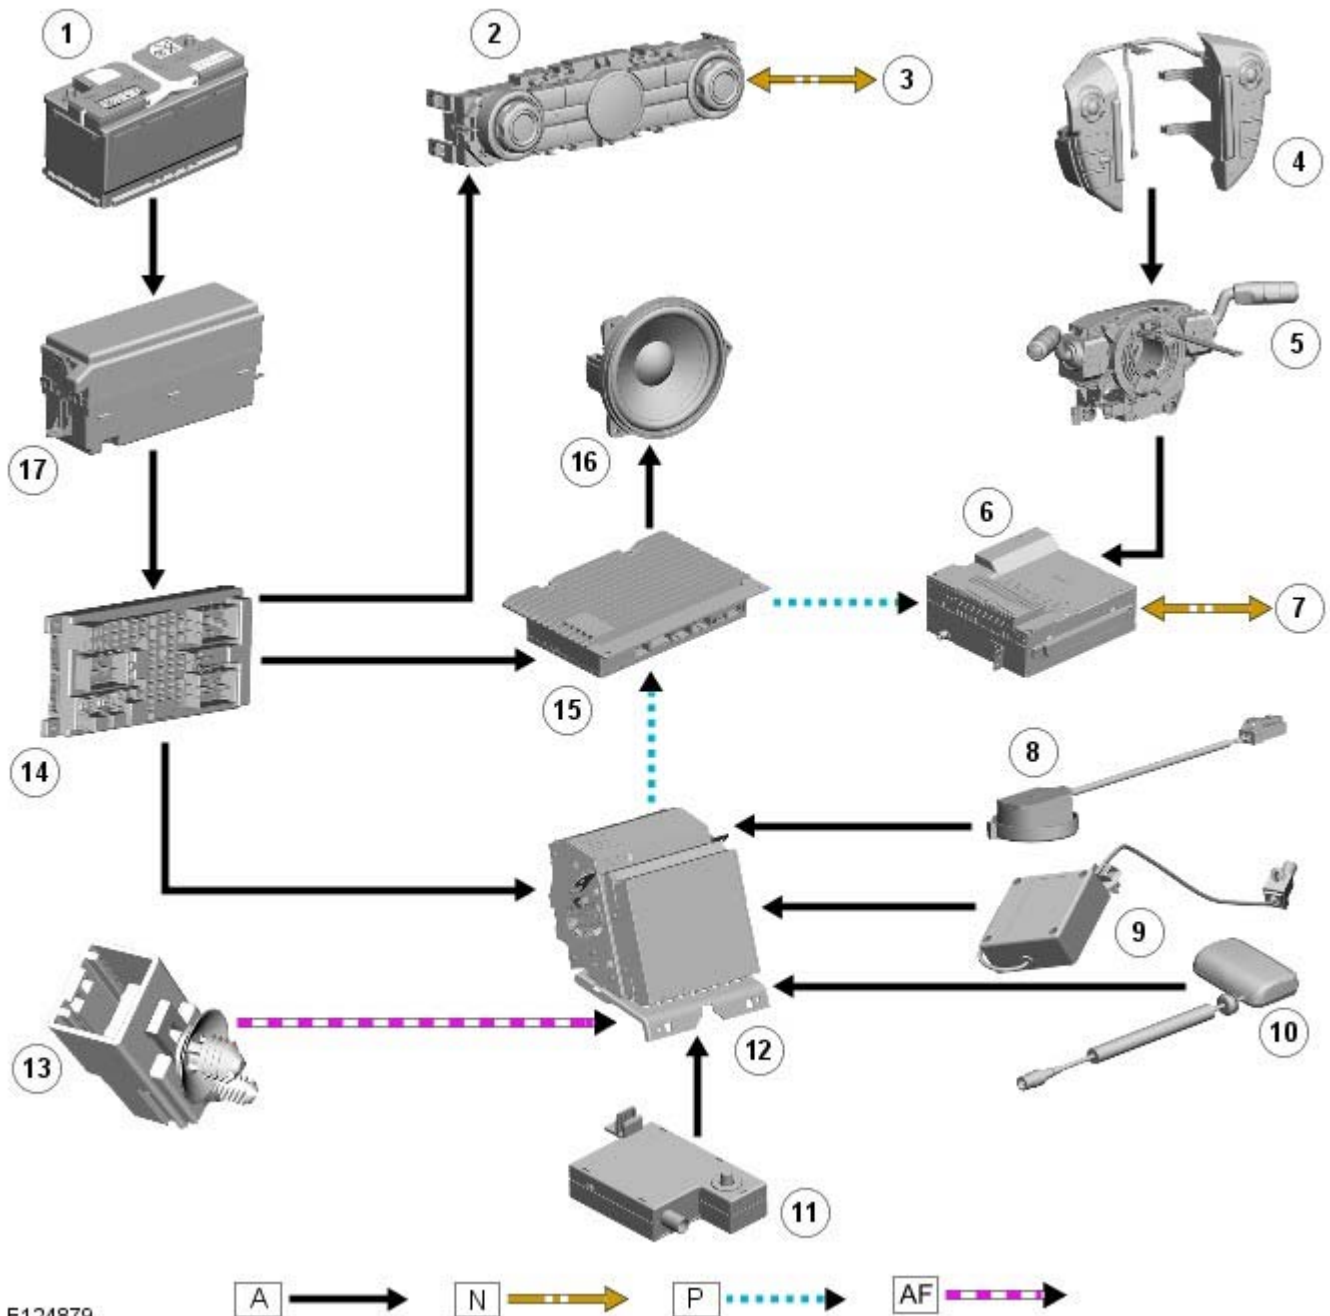

FM Transmissions

FM transmissions are received via the FM antenna and broadcast as part of the normal RDS FM transmission. The information transmitted is:

- Traffic congestion and travel time for wide areas
- Traffic accidents, road works, speed limits and lane restrictions for a wide area
- Parking availability information.

CONTROL DIAGRAM

- NOTE: **A** = Hardwired; **N** = Medium Speed CAN; **P** = MOST; **AF** = Firewire.

Item	Part Number	Description
1	-	Battery
2	-	Integrated control panel, incorporating navigation switch
3	-	Medium speed CAN bus connection to other vehicle systems
4	-	Steering wheel switches
5	-	Clockspring
6	-	IHU (integrated head unit)
7	-	Medium speed CAN bus connection to other vehicle systems
8	-	Microphone - voice recognition
9	-	GPS antenna
10	-	VICS beacon antenna - Japan only
11	-	'TMC (traffic message channel tuner' or 'VICS receiver - Japan only'
12	-	TSD (touch screen display)
13	-	Navigation update socket
14	-	CJB (central junction box)
15	-	Power amplifier
16	-	Speakers
17	-	EJB (engine junction box)

PRINCIPLES OF OPERATION

The system used to calculate the current position of the vehicle is called the [GPS](#). Satellites transmit radio signals to provide information about the satellite's position, for example the latitude, longitude, altitude, almanac data and an accurate time signal generated by an on-board atomic clock. Each satellite contains four atomic clocks.

The vehicle needs to receive data from at least four different satellites to give a three dimensional fix on its current

position.

As the vehicle moves, this information is continually being updated. The TSD determines which satellites are 'visible' to the system and their current position and relationship to each other. Using this information the TSD can account for positional deviations of the satellites and compensate to enhance the accuracy of the navigation system.

The GPS signal is also known as the PPS (precision positioning signal).

PPS predictable accuracy is:

- 22 meters horizontal accuracy
- 27.7 meters vertical accuracy
- 200 nanoseconds time accuracy.

The navigation system receives GPS information via the GPS antenna. The GPS signals are used by the TSD to calculate the vehicles position. Once the driver has input a desired destination the TSD can calculate a route, based on the driver's pre-determined preferences or the default settings in the TSD.

The navigation system is accessed by pressing the navigation switch on the integrated control panel.

Navigation is initiated by the driver entering a destination. This can be achieved by:

- Entering in an address using the touch screen display.
- Entering a post code.
- Choosing a previous destination.
- Choosing a point of interest from the hard drive database.
- Choosing the home location.
- Choosing a memory stored location.

The driver is then guided to the destination by a scrolling map display and voice guidance. The display can be varied by scale and display type.

In addition to the navigation system there are two market dependant systems that supply extra information to the navigation system and the driver. These are:

- TMC (traffic message channel – Europe only).
- VICS (vehicle information and communication system) - Japan only.

Limited Satellite Contact

It is possible to maintain the vehicle's positional information when there is limited or no satellite contact, for example when the vehicle is in a:

- tunnel or underpass
- covered car park
- street lined with tall buildings
- or dense forest.

When the vehicle is in one of these conditions the vehicle's position is maintained by both the gyroscope sensor contained in the TSD and the vehicle speed signal. The speed signal is supplied by the ABS module and transmitted via the high-speed CAN to the CJB it is then transmitted by a hard-wired signal to the TSD.

NAVIGATION SYSTEM COMPONENTS

Touch Screen Display (TSD)

E124877

Item	Part Number	Description
1	-	Touch screen display
2	-	Access Audio/Video Menu
3	-	Scroll up down (menu control)
4	-	Mode
5	-	Traffic/News information
6	-	Access Phone Menu
7	-	Search up/increase
8	-	Search down/increase
9	-	Access Navigation Menu
10	-	Tone hard key
11	-	Audio on/off
12	-	Volume
13	-	Access touch screen Home Menu

The TSD (touch screen display) and Integrated Control Panel are located in the center of the instrument panel and are the driver's control interface for the navigation system. The TSD is connected to the MOST ring and communicates with the other components in the audio/infotainment system.

The TSD is a seven inch touch sensitive, 1280 X 480 pixels LCD (liquid crystal display) VGA screen.

In addition to the navigation system the TSD and the Integrated Control Panel provides the driver with display and control of various other vehicle functions.

Microphone

E124819

The microphone is located in the front interior lamp console. The standard, directional type microphone is connected to the Touch Screen Display (TSD) for voice recognition of the navigation system and the telephone. The microphone has an integrated noise suppression system for hands-free telephone use.

TMC Antenna Amplifier

E124881

The TMC (traffic message channel) antenna amplifier is located above the rear left-hand-side window and is connected to the FM antenna which is integrated into the window. The TMC signals are received through the normal radio signals via the RDS (radio data system) and are routed separately from the radio signals via the TMC antenna amplifier to the Touch Screen Display unit.

Global Positioning System Antenna

E124882

The [GPS](#) antenna is located in the rear spoiler and connected to the Touch Screen Display unit.

VICS Beacon Antenna (Japan only)

E124822

The VICS beacon is located on top of the instrument panel on the left-hand-side. The beacon is connected to the TSD via a screened co-axial cable.

VICS Antenna Amplifier (Japan only)

E124881

The VICS antenna amplifier is located above the rear left-hand-side window. The amplifier is connected to the TSD unit.

Navigation System - Navigation System Display Module

Removal and Installation

Removal

2. *Torque: 2.5 Nm*

E123217

3.

E122691

4. 4. NOTE: LHD illustration shown, RHD is similar.

E123222

5.

E123218

6.

7.

8. Torque: 2.5 Nm

9. **NOTE:** Do not disassemble further if the component is removed for access only.

Installation

1. To install, reverse the removal procedure.
2. If a new component has been installed, configure using Land Rover approved diagnostic equipment.

Navigation System - Navigation System Traffic Amplifier

Removal and Installation

Removal

• NOTE: The navigation system traffic amplifier is located on the LH side of the liftgate. The diversity amplifier is located on the RH side of the liftgate. The procedure is similar for both components.

1. Remove the liftgate upper trim panel.

- Release the 4 clips.

2. Remove the navigation system traffic amplifier.

- Disconnect the 2 antenna cables.
- Disconnect the electrical connector.
- Remove the Torx bolt.
- Release the clip.

Installation

1. Install the navigation system traffic amplifier.

- Secure the clip.
- Tighten the Torx bolt to 10 Nm (7 lb.ft).
- Connect the electrical connector.
- Connect the antenna cables.

2. Install the liftgate upper trim panel.

- Secure with the clips.

Navigation System - Navigation System Antenna

Removal and Installation

Removal

1. Remove the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the high mounted stoplamp.
For additional information, refer to: [High Mounted Stoplamp](#) (417-01 Exterior Lighting, Removal and Installation).
3. Remove the liftgate trim panel.
 - Release the 4 clips.

4. Remove the navigation system antenna.
 - Remove the screw.
 - Release and disconnect the electrical connector.
 - Cut through the adhesive retaining pad.

Installation

1. Clean the adhesive contact area.
2. Install the antenna.
 - Connect and secure the electrical connector.
 - Tighten the screw.

3. Install the liftgate upper trim panel.

- Secure the clips.

4. Install the high mounted stoplamp.

For additional information, refer to: [High Mounted Stoplamp](#) (417-01 Exterior Lighting, Removal and Installation).

5. Connect the battery ground cable.

For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Cellular Phone -

Torque Specifications

Description	Nm	lb-ft
Cellular phone antenna Torx screw	10	7

Cellular Phone - Cellular Phone

Description and Operation

CELLULAR PHONE SYSTEM (up to 2009 MY)

Cellular Phone Component Location (up to 2009 MY)

E48168

Item	Part Number	Description
1	-	Microphone
2	-	Transceiver Module (TM)
3	-	Cellular Phone Antenna
4	-	Base plate adaptor
5	-	Adaptor cradle
6	-	Speaker
7	-	Clock spring
8	-	Steering wheel switches
9	-	Amplifier
10	-	IHU
11	-	Speakers

The cellular phone system comprises:

- Transceiver Module (TM)
- Base plate adaptor
- Telephone cradle

- Microphone
- Cellular Phone Antenna

The telephone system fitted to the vehicle allows the driver to dock their own handset to the vehicle hands free telephone system. This is achieved using an adaptor cradle which is telephone specific. This cradle is mated to a standard baseplate which in turn is connected to the TM. The TM is connected to the MOST ring for communication with the rest of the system. For additional information, refer to: Communications Network (418-00 Module Communications Network, Description and Operation).

Transceiver Module

E48172

The Transceiver Module (TM) is located in the rear RH quarter of the luggage compartment. The TM is the interface between the telephone and the Integrated Head Unit (IHU). The TM also contains the telephone voice recognition hardware and software.

Transceiver Module Connector Pin Out C2777

Pin No	Description	Input/Output
1 to 15	NC	-
16	Ignition	Input
17	Battery voltage	Input
18	Battery voltage	Input
19 to 32	NC	-
33	Ground	-
34	Ground	-
35	NC	-
36	NC	-
37	Cellular phone ear piece +	Output
38	Cellular phone ear piece -	-
39	Cellular phone Mic piece +	Input
40	Cellular phone Mic. piece -	-
41	Wake up signal (non Nokia phone in cradle)	Input
42	Wake up signal (Nokia phone in cradle)	Input
43	NC	-
44	Steering wheel push to talk button	Input
45	Transmit/receive to phone	Input/Output
46	Shield ground	-
47	Serial transmission + (Nokia F bus)	Output
48	Serial transmission - (Nokia F bus)	-
49	Serial receive + (Nokia F bus)	Input
50	Serial receive - (Nokia F bus)	-
51	Cradle ID signal	Input
52	Cradle voltage supply	Input
53	Phone charge ground	-
54	Battery charging voltage	Output

Microphone

E48173

A single microphone is used for hands-free telephone operation and for the voice recognition system. The microphone has an integrated noise suppression system for hands-free telephone use. The microphone is a standard directional type and is located in the front roof console.

Cellular Phone Antenna

E48085

The Cellular Phone Antenna is located in the roof mounted pod and is connected via a single coaxial cable to the TM. For additional information, refer to: [Antenna](#) (415-02 Antenna, Description and Operation).

Telephone Adaptor Cradle

E48170

The telephone system allows for the use of different types/manufacturers handsets. This is achieved using a handset specific cradle which is mated to a standard base plate. The design of the adaptor cradle will vary to accommodate different types of phones.

Telephone Adaptor Base Plate

E48171

The base plate is located in the centre arm rest. The base plate is connected to the TM via a dedicated serial link.

TELEPHONE SYSTEM OPERATION (up to 2009 MY)

Telephone System

The telephone system can be operated from the IHU or via voice commands. The telephone system has the following functions:

- Receive a call
- Make a call
- Phone book

- Text message receive
- Telephone phone book download

The telephone system is accessed via the IHU. Once the phone is docked in the cradle it is possible to read/ download the phones own phone book to find a contact or phone number. A phone number can also be dialled into the key pad on the IHU.

Calls can be received or made by pressing the push to talk button on the steering wheel mounted controls.

SMS messages can only be made via the IHU with the handset in the cradle.

VOICE RECOGNITION (up to 2009 MY)

The Voice recognition system controls the following systems where fitted:

- Telephone
- Radio (inc satellite radio)
- CD / MP3 Changer
- Touch Screen Display (TSD)
- Note Pad
- Navigation

Voice control will not control Television or climate control system.

On vehicles without navigation system fitted the voice recognition software is held in the Transceiver Module (TM) and the microphone is hardwired directly into the TM. ON vehicles with navigation the voice recognition software is held in the navigation computer and the microphone is wired directly into the navigation computer and the TM. Vehicles with only no navigation system will have a slightly reduced functionality compared with vehicles that have navigation fitted as well as the phone.

The TM only houses voice recognition software for the telephone system.

Voice control enables the driver to activate important functions of the car telephone and navigation systems without needing to operate any controls manually. This allows the driver to concentrate fully on driving the vehicle. Whenever the driver issues one of the defined voice commands with the system active, the voice control system converts the command into a control signal for the telephone or navigation system. The system recognises which system the command is directed at and routes the direction accordingly. The driver is guided through the dialogues by announcements or questions.

Telephone

The telephone system allows the following to be accessed and controlled by the voice recognition function.

Dial Number

This allows the user to dial a number (up to 20 digits) by digit entry with editing facility and with number as built up and displayed on the instrument pack message centre. The maximum number of recognised digits to be entered in one go is 16.

Phonebook

This allows the user to store inputted phone numbers against inputted nametag. Nametags are user repeatable association names given to identify the numeric destination of the phone call.

This facility will allow 50 nametags with corresponding telephone numbers to be stored within the voice recognition Phonebook. This phonebook should not be confused with the phonebook held within the Sim card or mobile phone. The facility shall allow editing of the nametags and phonebook and also provide audible feedback of the recorded nametag. Where nametags are part of the audible Feedback the corresponding phone number shall be displayed in text form on the instrument pack message centre.

It is also possible to use the add name feature to enter a telephone number onto the IHU and then by voice recognition append a nametag and store this within the voice recognition phonebook.

Radio

The radio system allows the following to be accessed and controlled by the voice recognition function.

Radio On

This allows the user to switch on the radio function. "Radio On" switches the ICE system to Radio with the last station played.

Radio Tune

This allows the user to tune the radio the radio into the desired frequency and band.

Radio Presets

This allows the user to allocate frequency against a given band preset. The user must be tuned into the desired frequency and band prior to preset allocation. If a preset has already a stored frequency and band against that preset then the new frequency and band shall be allotted.

The Auto store feature instructs the radio to select the six strongest signals and allocate them against the auto store presets.

There shall be nine preset memory locations within each of the following band settings, FM, FMA, AM, AMA, MW, MWA and LW (only nine presets available for LW band therefore no Auto store available).

Voice commands will be available to allow the user to tune the radio to a given preset within the band that is currently tuned.

Radio Directory

This function allows the user to nametag the current frequency and band including satellite radio (SDARS). Nametags are user repeatable association names given to identify the frequency and band information thus allowing the radio to tune into the desired signal. This facility shall allow 20 nametags to be stored within the voice recognition. It shall be possible for the system to replay the whole of the directory with the ability to play or delete the stations announced. It should also be possible to individually delete nametags.

Where nametags are part of the audible Feedback the corresponding Frequency and Band shall be displayed in text form on the instrument pack message centre.

CD Changer

The CD changer system allows the following to be accessed and controlled by the voice recognition function.

The voice commands are standard control features with exception of controls that can be accessed on the steering wheel. Commands shall be available for up to 256 tracks on a CD. Text numeric format shall be 3 numbers i.e. track 6 is displayed as "006". MP3 Format discs have commands for Folder up/down. For additional information, refer to: Audio System (415-01 Audio Unit, Description and Operation).

Display

This function allows the user to change the TSD display mode by voice command.

Voice Recognition Settings

Voice Feedback On / Off

Allows the user to choose between having audible feedback or not for functions, other than some necessary functions, which must have audible feedback to operate.

Replay

The replay command requests the voice recognition system to repeat it's last dialogue response within a list in both audible and associated text feedback.

Notepad

The notepad function allows the user to record a series of 10 notes for up to 5 min.

The user shall be able to replay or delete the notes in the order that they were recorded. It shall also be possible to delete the whole notepad.

TMC

The TMC system is part of the navigation system and provides real time traffic information to the navigation system. The voice commands are On or Off.

For additional information, refer to: [Navigation System](#) (419-07 Navigation System, Description and Operation).

TMC also offers Dynamic route guidance. This is also a voice operated on/off function.

BLUETOOTH® (up to 2009 MY)

The TM has Bluetooth® functionality. Bluetooth® allows the user to connect their own mobile phone (Bluetooth® enabled only) to the vehicle telephone system. Once connected the user can use the vehicle hands free functions system. The Bluetooth® system limits the functions available to those that are present in the Bluetooth® hands free profile. The available features include:

- Make/receive a call.
- Voice calls using the phones own voice tags (where set up).

Bluetooth® will not allow the following to be accessed via the IHU:

- SMS
- No signal strength indication in the IHU
- Phonebook download to the IHU
- Missed calls
- Last number redial
- Calls list

Prior to the Bluetooth® equipped phone being used on the vehicle hands free system the phone must be paired to the TM. The following describes the pairing process.

- Switch Bluetooth "ON" on the handset.
- The user initiates a search for other Bluetooth devices from the handset.
- The TM acknowledges the existence of the Bluetooth® phone.
- Land Rover appears in the handset available device list.
- The user selects Land Rover from the device list and the TM will attempt pairing.
- TM requests a PIN number from the phone.
- The user enters the phone PIN number (this will be supplied by the dealer or will be marked on the side of the TM, use the last four characters of the serial number).
- If the PIN number is correct the phone is paired with the TM and its details are stored in the TM EEPROM.
- If the PIN number is correct the phone is paired with the TM and the TM details are stored in the handset.

7	-	Transceiver Module (TM)
8	-	Cellular Phone Antenna
9	-	Clock spring
10	-	Steering wheel switches
11	-	Microphone

CELLULAR PHONE SYSTEM (2009 MY Onwards)

Cellular Phone Component Location (2009 MY Onwards)

BLUETOOTH® (2009 MY Onwards)

The Bluetooth® phone module allows the user to connect their own mobile phone handset (Bluetooth® enabled only) to the vehicle telephone system.

Once connected, the user can use the vehicle hands free functions although, the Bluetooth® system limits the functions to those available in the Bluetooth® hands free profile.

The available features include:

- Make/receive call
- Voice calls using the phones own voice tags (where set up)
- Signal strength indication on the Touch Screen Display (if supported by the telephone handset software)
- Phonebook download
- Missed calls
- Last number redial
- Calls list.

Bluetooth® Phone Module

E96494

The Bluetooth® phone module is connected to the MOST ring and is the interface between the telephone and the Integrated Header Unit, it processes all instructions and audio 'from and to' the phone.

TELEPHONE SYSTEM OPERATION (2009 MY Onwards)

Compatible Bluetooth® mobiles can communicate with the vehicle's inbuilt telephone system. Connection must be made with ignition on or engine running.

Initial pairing of the phone to the vehicle

To prepare the mobile phone for pairing to the system, refer to the telephone manufacturer's instructions, or follow the table in the vehicle handbook for generic commands.

When the handset has been successfully paired to the system, Bluetooth® will appear on the phone menu screen.

Bluetooth® selection

A maximum of 5 phones can be paired to the vehicle.

When the starter key is turned on, the vehicle searches for up to 5 previously paired phones, starting with the most recent pairing.

Before attempting a new pairing, wait for 30 seconds for this process to complete.

Making a call

Refer to vehicle's handbook.

Voice recognition

There is no Voice Recognition system on the Bluetooth® phone; refer to section **Voice Recognition (up to 2009 MY)**, for voice recognition information on other vehicle systems.

Steering Wheel Control Switches

E58417

Item	Part Number	Description
1	-	Adaptive speed control gap adjustment switches
2	-	Audio mode change switch
3	-	Audio volume control
4	-	Send key
5	-	End key
6	-	Audio system up/down
7	-	Horn
8	-	Speed control ON/OFF/ set speed
9	-	Push to talk voice recognition switch (Navigation System Only)
10	-	Speed control set speed adjust

The Steering wheel control switches allow the driver to:

- Receive a phone call.
- End a phone call.

The switches operate on a resistive ladder principle. A voltage is supplied to the switches and dependant upon which button is pressed a reduced voltage is returned to the head unit or the applicable vehicle system.

Cellular Phone - Cellular Phone Antenna Vehicles With: Metal Roof Panel

Removal and Installation

Removal

- NOTE: For certain markets, the SDARS antenna is also part of the cellular phone antenna.

1. Remove the rear headliner trim panel.

- Release the 7 clips.
- Disconnect the interior light electrical connector.

E49690

2. If installed remove the LH third row seat passenger assist handle.

- Carefully release the screw covers.
- Remove the 2 screws.

E49689

3. If installed, remove the RH third row seat passenger assist handle.

- Carefully release the screw covers.
- Remove the 2 screws.

4. Release the rear of the headliner.

- Release the 2 clips.

E55548

5. Remove the cellular phone antenna.
 - Disconnect the electrical connector.
 - Remove the 2 nuts.

Installation

1. Install the cellular phone antenna.
 - Tighten the nuts to 10 Nm (7 lb.ft).
 - Connect the electrical connector.
2. Attach the rear of the headliner.
 - Secure with the clips.
3. Install the RH third row seat passenger assist handle, if installed.
 - Tighten the screws.
 - Attach the covers.
4. Install the LH third row seat passenger assist handle, if installed.
 - Tighten the screws.
 - Attach the covers.
5. Install the rear headliner trim panel.
 - Secure in the clips.
 - Connect the electrical connector.

Cellular Phone - Cellular Phone Antenna Vehicles With: Glass Roof Panel

Removal and Installation

Special Tool(s)	
<div data-bbox="135 271 263 315" data-label="Text">419-002</div>  <div data-bbox="124 477 204 504" data-label="Text">E57688</div>	Torx bit, phone/SDARS antenna 419-002

Removal

- NOTE: For certain markets, the SDARS antenna is also part of the cellular phone antenna.

1. Remove the rear headliner trim panel.

E49690

- Release the 7 clips.
- Disconnect the interior light electrical connector.

2. Remove the cellular phone antenna.

- Disconnect the electrical connector.
- Using the special tool, remove the 2 Torx bolts.

E56388

Installation

1. Install the cellular phone antenna.

- Tighten the bolts to 6 Nm (4 lb.ft).
- Connect the electrical connector.

2. Install the rear headliner trim panel.

- Secure in the clips.
- Connect the electrical connector.

Cellular Phone - Transceiver Module

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.

1. Remove the RH lower rear quarter trim panel.

Refer to: [Rear Quarter Trim Panel](#) (501-05 Interior Trim and Ornementation, Removal and Installation).

- 2.

3. Torque: 10 Nm

Installation

1. To install, reverse the removal procedure.

Multifunction Electronic Modules - Driver Door Module (DDM)

Diagnosis and Testing

Principles of Operation

For a detailed description of the Driver/Passenger door systems and operation, refer to the relevant Description and Operation sections in the workshop manual.

Inspection and Verification

1. **1.** Verify the customer concern.
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Switches/mechanisms 	<ul style="list-style-type: none"> ● Fuses ● Electrical connectors ● Harnesses ● Modules

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **4.** If the cause is not visually evident, check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

DTC Index

For a list of DTCs that may be logged on this vehicle, refer to the DTC Index in section 100-00.

REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Door Module \(DDM/PDM\)](#) (100-00 General Information, Description and Operation).

Multifunction Electronic Modules - Driver Seat Module (DSM)

Diagnosis and Testing

Principles of Operation

For a detailed description of the Driver/Passenger seat systems and operation, refer to the relevant Description and Operation sections in the workshop manual.

Inspection and Verification

1. **1.** Verify the customer concern.
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Switches/mechanisms 	<ul style="list-style-type: none"> ● Fuses ● Electrical connectors ● Harnesses ● Modules

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **4.** If the cause is not visually evident, check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

DTC Index

For a list of DTCs that may be logged on this vehicle, refer to the DTC Index in section 100-00.

REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Front Seat Module \(DSM/PSM\)](#) (100-00 General Information, Description and Operation).

Multifunction Electronic Modules - Driver Seat Module (DSM)

Removal and Installation

Removal

1. Remove the front seat cushion front access cover.

- Release the 4 clips.

E93329

2.  CAUTION: Note of the routing of the wiring harnesses.

- NOTE: Raise the seat base for access.

Remove the driver seat module.

- Remove the 2 Torx screws.
- Release the harness clip.
- Disconnect the 5 electrical connectors.

E93220

Installation

1.  CAUTION: Make sure that the wiring harnesses are correctly routed.

Install the driver seat module.

- Connect the electrical connectors.

- Attach the wiring harness clip.
 - Install and tighten the Torx screws.
2. Install the access cover.
- Secure in the 4 clips.
3. If a new module has been installed, carry out initialization.
- Using each adjustment switch in turn, move the seat fully in all directions.

Winch - Winch - Component Location

Description and Operation

COMPONENT LOCATION

E136475

Winch - Winch - Overview

Description and Operation

OVERVIEW

The 9.5XP winch is manufactured by WARN in the U.S.A. The winch features a 6 Horse Power (HP) High Output Parallel Series Wound winch motor.

The winch has 3-stage planetary gearing and full-face contact drum seals, motor and end housing gaskets for extreme duty water resistance.

SPECIFICATIONS:

- WARN Part number: 70100 (12V)
- Rated Line Pull: 9,500 lbs. (4310 kgs) single-line
- Intended Use/Application: Vehicle Recovery
- Motor: 12V 6 hp, High Output Parallel Series Wound
- Remote Control: Remote switch, 12' (3.7m) lead
- Geartrain: 3-Stage Planetary Gear Ratio: 156:1
- Lubrication: 76 Moly low temperature
- Clutch (freespooling): Sliding Ring Gear
- Brake: Automatic Direct Drive Cone
- Wire Rope: 100', 5/16" diameter (30m, 8mm diam.)
- Fairlead: Hawse
- Recommended Battery: 650 CCA minimum for winching
- Battery Leads: 2 gauge, 85" (2.20m)
- Finish: High-gloss dark gray powder coat
- Drum Diameter/Length: 2.5"/9.0" (6.4cm/23cm)
- Weight: 87 lbs. (39.5 kgs.) (winch only, not including mounting cradle).

12V DC PERFORMANCE SPECIFICATIONS:

Line Pull Lbs.(Kgs.)	Line Speed FT./min(M/min.)	Motor Current	Pull by Layer: Layer/Lbs(Kgs.)
0	38 (11.6)	70 Amps	1/9500 (4313)
2000 (910)	16.8 (5.1)	175 Amps	2/8650 (4927)
4000 (1818)	12.8 (3.9)	262 Amps	3/7920 (3595)
6000 (2720)	10.1 (3.1)	335 Amps	4/7400 (3359)
8000 (3630)	8.8 (2.7)	425 Amps	5/6940 (3150)
9500 (4310)	7.6 (2.3)	480 Amps	-

The above performance figures are based on the first layer of the drum.

System Operation

OPERATION

⚠ WARNING: Observe all Warnings and Cautions detailed in the WARN Winch Operator's Guide and the WARN Basic Guide to Winching Techniques before and during winch operation.

The winch motor is powered by the vehicle battery. The motor provides rotational power to the gear mechanism, which in turn rotates the winch drum and winds the cable.

A remote control is used to operate the winch. The remote lead plugs into a remote control connector which is connected to the control box and allows the operator to control the winch winding direction while standing at a safe distance from the wire rope.

The clutch allows rope to be pulled off the drum without motor operation. Refer to the WARN Basic Guide to Winching Techniques.

Component Description

DESCRIPTION

Winch

E136478

ItemDescription

1	Motor
2	Winch drum and wire rope
3	Latching hook
4	Fairlead
5	Gear train housing
6	Clutch lever
7	Remote control socket

The winch is mounted on a bracket which is attached to the vehicle chassis frame. Two additional brackets are attached to the front bumper armature mounting plates. The brackets allow the attachment of the winch mounting bracket. The winch is secured to the bracket with four bolts, washers and nuts.

The winch control box is located on the rear of the front bumper armature. Two additional holes are drilled in the armature and the control box is attached with two bolts, washers and nuts.

The winch control box manages the power supplies to the winch motor and also receives the input from the remote control for winch operation. A remote control socket is located at the **LH (left-hand)** end of the winch mounting bracket and allows for the connection of the remote control.

The winch will operate with the ignition on and the engine not running, but this is not recommended due to excessive battery drain. Therefore it is recommended that the engine is running at all times when the winch is in operation.

Winch/Vehicle Electrical Connections

A blue wire from the winch remote control socket is routed via a joint below the **EJB (engine junction box)**, through the vehicle bulkhead grommet behind the **EJB**. The blue wire is then routed behind the glove compartment and along the floor console to connector C0253-12 on LR3 vehicles (up to VIN 513325) and C2754S-13 on LR4 vehicles (from VIN 513326), which is located below the cup holder, behind the transmission selector lever. The wire is spliced into the green/white wire into the connector. This connection on the blue wire provides an ignition on signal to the winch control box when the remote control is plugged in.

A red cable is attached from the battery positive (+) terminal to the positive terminal on the winch power interrupt solenoid. This connection is the main power supply to the winch power interrupt solenoid for the winch motor and control box. The winch power interrupt solenoid is located on the plenum in the driver's side of the engine compartment.

A white wire from the winch remote control socket is connected to the winch power interrupt solenoid and energizes the solenoid relay when the ignition on signal is received. A large red wire from the winch power interrupt solenoid is routed to the winch control box. Power is not supplied to the winch control box until the remote control is connected to the remote control socket and the ignition is on.

Winch Power Interrupt Solenoid

Winch - Winch

Diagnosis and Testing

Principle of Operation

For a detailed description of the winch system and operation, refer to the relevant Description and Operation section in the workshop manual. REFER to: (419-12 Winch)

[Winch](#) (Description and Operation),
[Winch](#) (Description and Operation),
[Winch](#) (Description and Operation).

Inspection and Verification

WARNING: Observe all Warnings and Cautions detailed in the WARN Winch Operator's Guide before and during winch operation.

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault, and may also cause additional faults in the vehicle being tested and/or the donor vehicle.

1. 1. Verify the customer concern.
2. 2. Visually inspect for obvious signs of damage and system integrity.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Incorrect installation ● Winch motor ● Gearbox ● Wire rope 	<ul style="list-style-type: none"> ● Fuses ● Battery (650 CCA minimum) ● Loose, corroded or damaged electrical connections ● Winch power interrupt solenoid ● Control box ● Remote control

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

Symptom Chart

Symptom	Possible causes	Action
No winch operation	<ul style="list-style-type: none"> ● Battery/power or ground supply fault ● Remote control internal failure ● Control box internal failure ● Winch motor internal failure 	<ul style="list-style-type: none"> ● Refer to the electrical circuit diagrams, check the winch power interrupt solenoid supply fused link ((Fuse 16 to vin 513325)(Fuse 59p from vin 513326)) central junction box ● For midtronics battery test GO to Pinpoint Test A. ● For remote control circuit checks GO to Pinpoint Test C. ● For winch circuit checks GO to Pinpoint Test B.
No winch operation (Clicking sound when remote control switch is activated)	<ul style="list-style-type: none"> ● Battery/power or ground supply fault ● Control box internal failure 	<ul style="list-style-type: none"> ● For midtronics battery test GO to Pinpoint Test A. ● For winch circuit checks GO to Pinpoint Test B.
Winch lacks power, pulls slowly, stalls	<ul style="list-style-type: none"> ● Battery/power or ground supply fault ● Winch motor internal failure ● Gearbox internal failure 	<ul style="list-style-type: none"> ● For midtronics battery test GO to Pinpoint Test A. ● For winch circuit checks GO to Pinpoint Test B.
When the remote control is activated, winch operates in only one direction	<ul style="list-style-type: none"> ● Battery/power or ground supply fault ● Remote control internal failure ● Control box internal failure 	<ul style="list-style-type: none"> ● For remote control circuit checks GO to Pinpoint Test C. ● For winch circuit checks GO to Pinpoint Test B.
Difficulty in spooling rope from drum by hand	<ul style="list-style-type: none"> ● Wire rope incorrectly wound on drum (Rubbing/binding) ● Distorted drum flange ● Worn drum bushes 	<ul style="list-style-type: none"> ● Confirm the rope is spooled correctly onto the drum ● Install a new winch as required. REFER to: Winch (419-12 Winch, Removal and Installation). Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component

Symptom	Possible causes	Action
	<ul style="list-style-type: none"> ● Damaged free spool clutch (inside gear train) ● Corroded clutch ring gear 	<ul style="list-style-type: none"> ● Install a new winch gearbox as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component
Winch does not hold load	<ul style="list-style-type: none"> ● Rope is spooled onto the drum in the wrong direction ● Winch drum brake is worn or broken 	<ul style="list-style-type: none"> ● Confirm the rope is spooled correctly onto the drum ● Confirm the clutch is fully engaged ● Install a new winch as required. REFER to: Winch (419-12 Winch, Removal and Installation). Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component
Remote control fault	<ul style="list-style-type: none"> ● Winch remote connector terminals damaged ● Remote switch internal failure 	<ul style="list-style-type: none"> ● For remote control circuit checks GO to Pinpoint Test C.
Clutch lever fault	<ul style="list-style-type: none"> ● Cable under load ● Clutch or gearbox mechanism internal failure 	<ul style="list-style-type: none"> ● Rotate clutch lever on winch. If clutch lever will not rotate, remove tension from the rope and hook by powering out for about 1 second ● Attempt to rotate the clutch lever with tension removed. If clutch lever still does not rotate, Install a new winch gearbox as required. REFER to: Winch Gear Assembly (419-12 Winch, Removal and Installation). Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component

PINPOINT TEST A : BATTERY TEST

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: MIDTRONICS BATTERY TEST	
1	Confirm that the vehicle battery charged, in good condition, and the correct specification (650 CCA minimum)
2	Using a Midtronics hand held tester or the Midtronics GR-1 diagnostic charger, carry out the "Midtronics battery test" as detailed in the battery care manual. Refer to (Service/Maintenance information/Battery care manual)
3	Record battery diagnostic result on the provided form
	Does the battery pass the "Midtronics battery test"? Yes Check for correct operation, refer to the symptom chart above if customer concern is still evident No Install a new battery as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component. Check for correct winch operation

PINPOINT TEST B : CIRCUIT CHECKS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
B1: WINCH POWER INTERRUPT SOLENOID - CONNECTIONS	
• NOTE: The winch power interrupt solenoid supplies power to the winch control box	
• NOTE: The ignition feed is supplied to the remote control connector (terminal 5) linked internally to (terminal 6) then supplied to (solenoid terminal 3) to energize the winch power interrupt solenoid	
1	Refer to the landrover electrical circuit diagrams, check the winch power interrupt solenoid supply fused link (Fuse 16 to vin 513325)(Fuse 59p from vin 513326) central junction box
2	Refer to the winch circuit diagrams REFER to: Winch (419-12 Winch, Description and Operation).
3	Confirm the circuit connections to the winch power interrupt solenoid (Terminal 1 - power to winch control box, Terminal 2 - solenoid ground, Terminal 3 - solenoid power ((C2053-12 to vin 513325)(C2754S-13 from vin 513326)), Terminal 4 - battery supply)
	Are all the electrical connections to the winch power interrupt solenoid clean and secure? Yes GO to B2. No Clean and secure the electrical connections. Check for correct winch operation
B2: WINCH POWER INTERRUPT SOLENOID - OPERATION	
1	With the ignition state on, and the remote control connected
2	Using a multimeter, check for battery voltage between terminal 1 (power to winch control box) and terminal 2 (winch power interrupt solenoid ground)

	<p>Is battery voltage present? (approx. 12 volts)</p> <p>Yes GO to B3.</p> <p>No Replace the winch power interrupt solenoid as required. REFER to: Winch Solenoid (419-12 Winch, Removal and Installation). Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component. Check for correct winch operation</p>
--	--

B3: POWER SUPPLY - CONTROL BOX

 **WARNING:** Ensure the winch clutch is in free spool mode (Refer to winch operation manual)

• **NOTE:** The winch power interrupt solenoid supplies power to the winch control box

	1 With the ignition state on, and the remote control connected
	2 Using a multimeter, check for battery voltage between the red power feed to the control box and vehicle ground

	<p>Is battery voltage present? (approx. 12 volts)</p> <p>Yes GO to B4.</p> <p>No Carry out circuit checks to investigate the loss of supply. Rectify as required. Check for correct winch operation</p>
--	---

B4: CONTROL BOX INPUT - REMOTE CONTROL

 **WARNING:** Ensure the winch clutch is in free spool mode (Refer to winch operation manual)

• **NOTE:** The winch control box controls the winch motor direction

• **NOTE:** Power out - The remote control supplies power to remote connector **terminal 2** and grounds **terminal 1**

• **NOTE:** Power in - The remote control supplies power to remote connector **terminal 4** and grounds **terminal 1**

	1 Refer to the winch circuit diagrams REFER to: Winch (419-12 Winch, Description and Operation).
	2 Using a multimeter, monitor terminal 2 (Black) , terminal 4 (Green) and terminal 1 (White)

	<p>Do the terminals 2 and 4 (Power) and terminal 1 (Ground) respond correctly when the remote control is used?</p> <p>Yes GO to B5.</p> <p>No Carry out circuit checks to investigate the loss of supply. Rectify as required. Check for correct winch operation</p>
--	--

B5: CONTROL BOX - OUTPUT

 **WARNING:** Ensure the winch clutch is in free spool mode (Refer to winch operation manual)

• **NOTE:** When activated the winch control box supplies power to the winch motor

• **NOTE:** Power out - The control box supplies power to the winch motor terminal **F1** and connects winch motor terminal **F2** to terminal **A**(Armature)

• **NOTE:** Power in - The control box supplies power to the winch motor terminal **F2** and connects winch motor terminal **F1** to terminal **A**(Armature)

	1 Refer to the winch circuit diagrams REFER to: Winch (419-12 Winch, Description and Operation).
	2 Using a multimeter, monitor terminals F1, F2

	<p>Do the terminals F1, and F2 respond correctly when the remote control is used?</p> <p>Yes GO to B6.</p> <p>No Check the connections to the control box. If all the connections are clean and secure, install a new control box as required. REFER to: Winch Control Unit (419-12 Winch, Removal and Installation). Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component. Check for correct winch operation</p>
--	--

B6: MOTOR CONNECTIONS

 **WARNING:** Ensure the winch clutch is in free spool mode (Refer to winch operation manual)

	1 Refer to the winch circuit diagrams REFER to: Winch (419-12 Winch, Description and Operation).
	2 Check the connections to the winch motor

	<p>Are all the connections clean and secure?</p> <p>Yes GO to B7.</p> <p>No Clean and secure the electrical connections. Check for correct winch operation</p>
--	--

B7: WINCH MOTOR TEST

 **WARNING:** Ensure the winch clutch is in free spool mode (Refer to winch operation manual)

	1 Disconnect the positive lead from the battery (leave the ground lead attached)
	2 Label and disconnect the three cables that run from the control pack to the three posts on the winch motor
	3 Stamped next to the three posts on the winch motor will be A, F1 and F2 . Connect a test cable (Jump leads work well) from A to F1 and supply power from the battery to F2 . The winch motor should operate
	4 Connect a test cable from A to F2 and supply power from the battery to F1 . The winch motor should operate in the opposite direction

	<p>Does the winch motor operate in both directions?</p> <p>Yes Check for correct operation, refer to the symptom chart above if customer concern is still evident</p> <p>No Check the connections to the winch motor. If all the connections are clean and secure, install a new winch motor as required. REFER to: Winch Motor (419-12 Winch, Removal and Installation). Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component. Check for correct winch operation</p>
--	--

PINPOINT TEST C : REMOTE CONTROL

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
C1: REMOTE CONTROL - CONTINUITY TEST	
<ul style="list-style-type: none"> • NOTE: Visually inspect the winch remote connector terminals for damage, repair or replace as required • NOTE: The winch remote should be tested for continuity using a multimeter 	
	<p>1 With the winch remote disconnected check for continuity, using the instructions below</p> <p>2 Move the switch to the power out position - Check for continuity between terminals (1) and (3), Check for continuity between terminals (2) and (6)</p> <p>3 Move the switch to the power in position - Check for continuity between terminals (1) and (3), Check for continuity between terminals (4) and (6)</p>
	<p>Did the winch remote pass the continuity test (Resistance less than 1 ohm)?</p> <p>Yes Check for correct operation, refer to the symptom chart above if customer concern is still evident</p> <p>No Install a new winch remote as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component. Check for correct winch operation</p>

Winch - Winch

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.
- NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

1. Disconnect the battery ground cable.

Refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

- 2.

- 3.

Front End Body Panels -

Torque Specifications

Description	Nm	lb-ft
Engine undershield bolts	62	46
Front fender bolts	10	7
Front fender nut	10	7

Front End Body Panels - Fender

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
3. Remove the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).
4. Remove the fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
5. Remove the fender moulding.
For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ormentation, Removal and Installation).
6. Remove the fender lower moulding.
 - Release the 4 clips.

E52564

E53026

7. Remove the fender air intake grille.
 - Release the 4 clips.
 - Remove the air ducting.

8. Remove the front fender.
NOTE: Do not disassemble further if the component is removed for access only.

Installation

1. Install the fender rear trim.
Remove the nut.
 - Remove the 3 clips.
2. Install the front fender.
 - Install the bolts and tighten to 10 Nm (7 lb.ft).
 - Install the nut and tighten to 10 Nm (7 lb.ft)
3. Install the fender air intake grille.
 - Install the air ducting.

E52568

4. Install the lower fender moulding.
 - Secure in the clips.
5. Install the fender moulding.
For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
6. Install the fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
7. Install the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).
8. Install the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
9. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Front End Body Panels - Fender Splash Shield

Removal and Installation

Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove the fender moulding.
For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).

3. Remove the fender splash shield.
 - Remove the 2 screws.
 - Remove the 6 retainers.
 - Disconnect the electrical connector.

E46261

4. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the tire pressure antenna.

- Remove the 2 retainers.

E46262

Installation

1. Install the tire pressure antenna.
 - Install the retainers.
2. Install the fender splash shield.

- Connect the electrical connector.
- Install the retainers.
- Install the screws.

3. Install the fender moulding.

For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).

Front End Body Panels - Engine Undershield

Removal and Installation

Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2.  **CAUTION:** Note the special washer.

Remove the engine undershield.

- Remove the 10 bolts.

Installation

1. To install, reverse the removal procedure.

- Tighten the bolts to 62 Nm (46 lb.ft).

Body Closures - Body Closures

Description and Operation

Body Protection

 **WARNING:** The weight of the armoured components fitted to the vehicle are far in excess of those fitted to the standard vehicle. As an example, the windshield weighs approximately 100 Kg (220 lb). Therefore, always be aware of the weight of components and have suitable lifting equipment available before attempting to remove any component from the vehicle.

Body Shell

Armoured cell

E101511

The vehicle passengers are protected by a steel armoured cell assembled inside the vehicle's bodywork. The cell provides armoured protection to the following areas of the vehicle:

- Bulkhead
- Roof
- Rear three-quarter panels
- 'A' posts
- 'B/C' posts
- 'D' posts
- Sills
- Floor pan

In addition to the floor pan armour, floor protection is also provided by a woven Kevlar blanket, available as an optional fit.

Armoured cell in position

E101513

Doors and Tailgate

The vehicle's doors are reinforced with steel armour, with the exception of the tailgate which remains standard. The armoured cell offers rear-end protection to the vehicle's occupants with the option of either:

- a solid armoured rear end with armoured window; or
- an armoured rear access with armoured window.

Armoured cell rear-access

E101512

Item	Part Number	Description
1	-	Upper access panel - gas struts
2	-	Upper access panel - dead locks
3	-	Upper access panel – internal release lever
4	-	Lower access panel – gas struts
5	-	Lower access panel – internal release handle
6	-	Upper access panel – external release lever
7	-	Lower access panel
8	-	Upper access panel - grab handle
9	-	Upper access panel
10	-	Armoured glass window *

* For additional information, refer to: Glass, Frames and Mechanisms (501-11, Description and Operation).

The armoured access option replicates the vehicle's tailgate by having upper and lower access panels. The access panels can be opened manually both internally and externally if the dead-locks are in the unlocked position. Gas struts fitted to the access panels aid their opening and reduce involuntary shutting.

Tailgate interior release button

E101515

A release button fitted to the interior of the vehicle's upper standard tailgate provides access to the tailgate from inside the vehicle. The release button is a momentary type switch, wired in parallel to the standard release switch on the exterior tailgate handle.

The door hinges, spindles and door stop mechanisms, on the driver and passenger doors are reinforced to support the additional weight of the armour. Gas struts have been fitted to aid door opening and reduce involuntary shutting.

 **CAUTION:** It is recommended that the driver and passenger doors are not opened until the vehicle has come to a complete stop. The combined effect of the vehicle's residual speed and the weight of the door could overcome the door stop mechanism.

Body Closures - Liftgate Alignment

General Procedures

1. With the liftgate closed, check the alignment of the liftgate to roof panel. The liftgate should be central in its aperture. Profile of the liftgate to roof panel should be 2 mm below flush.

2. Remove the rear headliner trim panel.
 - Release the 7 clips.
 - Disconnect the electrical connector.

3. Loosen, but do not remove both liftgate hinge to body bolts.

4. Position the liftgate central to the aperture.

☞ ☞ move the LH liftgate to body bolt.

6.  **CAUTION:** When setting the liftgate profile, make sure that the liftgate hinge NOT being adjusted has its retaining bolt fitted.

- **NOTE:** Turning the Allen key clockwise will raise the liftgate.

Using a 13 mm Allen key, adjust the LH liftgate hinge until a profile of 2 mm below flush to the roof panel is achieved.

- Install the bolt and tighten to 40 Nm (30 lb.ft).

7. Repeat the above procedure for the RH liftgate hinge.

8. Check for correct operation of the liftgate, and if necessary adjust the liftgate and tailgate strikers.

9. Install the rear headliner trim panel.

- Connect the electrical connector.
- Secure with the clips.

Body Closures - Fuel Filler Door Assembly

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the fuel filler interlock catch assembly.
For additional information, refer to: [Fuel Filler Interlock Catch](#) (501-03 Body Closures, Removal and Installation).

3. WARNINGS:

Place the vehicle in a well ventilated, quarantined area and arrange 'No Smoking/Petrol Fumes' signs about the vehicle.

Do not carry or operate cellular phones when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions may result in personal injury.

Remove the fuel filler door and inner assembly.

- Open the fuel filler door and remove the cap.
- Using a 2mm metal rod, pierce the inner assembly and release the 4 clips.
- Release from the filler neck.
- Replace the filler cap.

4. Remove the fuel filler door.

- Release the clip.

E53764

E55132

Installation

1. Install the filler door.
2. Install the fuel filler door assembly.
 - Clean the component mating faces.
 - Install the filler cap.
 - Close the fuel filler door.
3. Install the fuel filler interlock catch assembly.
For additional information, refer to: [Fuel Filler Interlock Catch](#) (501-03 Body Closures, Removal and Installation).
4. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Body Closures - Fuel Filler Interlock Catch

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornammentation, Removal and Installation).
3. Remove the fuel filler interlock catch assembly.

E54201

- Remove the clip.
- Release the cable.
- Disconnect the electrical connector.

4. Remove the solenoid.

- Remove the 2 Torx screws.
- Release the cable.

E54202

5. NOTE: Do not disassemble further if the component is removed for access only.

Release and remove the cable.

- Release the clip.

Installation

1. Install the cable.
 - Secure the clip.
2. Install the solenoid.
 - Attach the cable.
 - Install the Torx screws.
3. Install the fuel filler flap latch assembly.
 - Connect and secure the electrical connector.
 - Carefully secure the clips.
4. Install the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
5. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Body Closures - Liftgate

Removal and Installation

Removal

1. Open the liftgate and tailgate.
2. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

3. Remove the liftgate upper trim panel.

- Release the 4 clips.

4. Remove the liftgate side trim panel.

- Release the 5 clips.
- Repeat the above procedure for the other side.

5. Remove the rear headliner trim panel.

- Release the 7 clips.
- Disconnect the electrical connector.

6. Disconnect the washer jet hose.

- Release the grommet.

E55545

7. Release the liftgate wiring harness.

- Disconnect the 2 electrical connectors.
- Release the grommet.

E55546

8. With assistance, remove the liftgate assembly.

- Release the clips and disconnect the struts.
- Remove the 2 bolts.

Installation

1. With assistance, install the liftgate assembly.

- Tighten the bolts to 40 Nm (30 lb.ft).
- Connect the struts and secure with the clips.

2. Attach the liftgate wiring harness.

- Install the grommet.
- Connect the electrical connectors.

3. Connect the washer jet hose.

- Install the grommet.

4. Install the liftgate side trim panel.

- Secure with the clips.
- Repeat the above procedure for the other side.

5. Install the liftgate upper trim panel.
 - Secure with the clips.
6. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
7. Check and adjust the liftgate to roof panel profile.
For additional information, refer to: [Liftgate Alignment](#) (501-03 Body Closures, General Procedures).

* New bolt must be fitted

Interior Trim and Ornamentation - Engine Cover V6 4.0L Petrol

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

2. Remove the oil filler cap.

3. **NOTE:** Note the fitted position of the spacers

Remove the engine cover.

- Remove the 4 nuts.
- Collect the spacers.

4. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the acoustic pad.

- Remove the 7 clips.
- Remove the 4 mounts and compression limiters.

Installation

1. Install the acoustic pad.

- Position and secure the clips.
- Install the grommets.
- Install the compression limiters.

2. Install the engine cover.

- Install the spacers.
- Tighten the nuts to 10 Nm (7 lb.ft).

3. Connect the battery ground cable.

For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Interior Trim and Ornamentation - Engine Cover V8 5.0L Petrol

Removal and Installation

Removal

Installation

1. To install, reverse the removal procedure.

Interior Trim and Ornamentation - Engine Cover 2.7L V6 - TdV6

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the engine cover.

- Remove the oil filler cap.
- Release the 4 clips.

Installation

1. To install, reverse the removal procedure.

Interior Trim and Ornamentation - Engine CoverTDV6 3.0L Diesel

Removal and Installation

Removal

1. Remove the oil filler cap.

- 2.

Installation

1. To install, reverse the removal procedure.

Interior Trim and Ornamentation - Rear Quarter Trim Panel

Removal and Installation

Removal

1. Fold down the rear seat backrest.
2. Release the door aperture weatherstrip.

E49778

3. Release the safety belt anchor.

- Remove and discard the bolt.

E49594

4. Release the tailgate aperture seal.

5. Remove the support spigot from the tailgate.

- Release the clip.

6. Remove the rear quarter trim panel.

- Remove the Torx screw.
- Lift the storage box lid and using a firm grip, release the window clips by pulling the trim inboard.
- Release the remaining 6 plastic clips using a suitable tool.
- Disconnect the 2 electrical connectors.

7. NOTE: Do not disassemble further if the component is removed for access only.

Remove the stowage tray.

- Release the cover.

8. Remove the audio control switch.

- Release the 2 clips.

9. Remove the accessory socket.

Installation

1. Install the accessory socket.
2. Install the audio control switch.
 - Secure the clips.
3. Install the stowage tray.
 - Install the cover.
4. Install the rear quarter trim panel.
 - Install the clips.
 - Tighten the Torx screw to 8 Nm (6 lb.ft).
 - Connect the electrical connector.
5. Install the support spigot to the tailgate.
 - Install the clip.
6. Install the tailgate aperture seal.

7. Install the safety belt anchor.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).

8. Install the door aperture weatherstrip.

9. Return the seat backrest to the upright position.

Interior Trim and Ornamentation - A-Pillar Trim Panel

Removal and Installation

Removal

1. Release the door weatherstrip to access the A-pillar upper trim panel and instrument panel end panel.

E45650

2. Remove the instrument panel end panel.
 - Release the clip.

E45646

3. Remove the A-pillar upper trim panel.
 - Release the screw cover.
 - Remove and discard the Torx screw.
 - Release the clip.

E45647

4. NOTE: Do not disassemble further if the component is removed for access only.

Installation

1. Install the screw cover and clip from the A-pillar upper trim panel.
2. Install the A-pillar upper trim panel.
 - Secure with the clip.
 - Install a new Torx screw and tighten to 3 Nm (2 lb.ft).
 - Install the screw cover.
3. Install the instrument panel end panel.
 - Secure with the clip.

E45648

4. Attach the door weatherstrip.

Interior Trim and Ornamentation - Cowl Side Trim Panel

Removal and Installation

Removal

1. Remove the front scuff plate trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Driver side: Remove the footrest trim panel bolt.
 - Remove the cover.

E56799

3. Remove the cowl side trim panel.
 - Driver side: Release the hood release lever.
 - Release from the 2 clips.

E56800

Installation

1. Install the cowl side trim panel.
 - Align the hood release lever.
 - Secure with the clips.
2. Driver side: Tighten the footrest trim panel bolt to 5 Nm (4 lb.ft).
 - Install the cover.
3. Install the front scuff plate trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Interior Trim and Ornamentation - B-Pillar Upper Trim Panel

Removal and Installation

Removal

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the B-pillar lower trim panel.
For additional information, refer to: [B-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Release the safety belt lower anchor from the seat.

- Remove the bolt cover.
- Passenger side, disconnect the electrical connector.
- Remove the Torx bolt.

E45102

4. **NOTE:** Make sure the seat belt height adjuster is at its lowest point prior to removal of the B-pillar upper trim panel.

Remove the B-pillar upper trim panel.

- Release the front and rear door weatherstrips for access.
- Release the 2 lower clips, then the remaining upper clip.
- Release the safety belt.

E45728

Installation

1. Install the B-pillar upper trim panel.
 - Secure with the clips.
 - Attach the safety belt.
 - Attach the door weatherstrips.
2. Attach the safety belt lower anchor to the seat.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
 - Passenger side, connect the electrical connector.
 - Install the bolt cover.
3. Install the B-pillar lower trim panel.
For additional information, refer to: [B-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Interior Trim and Ornamentation - B-Pillar Lower Trim Panel

Removal and Installation

Removal

1. Remove the B-pillar lower trim panel.

- Release weatherstrip from both sides of the B-pillar lower trim panel.
- Release the 4 clips.

E43145

2. NOTE: Do not disassemble further if the component is removed for access only.

Remove 4 clips from the B-pillar lower trim panel.

E43146

Installation

1. To install, reverse the removal procedure.

Interior Trim and Ornamentation - D-Pillar Trim Panel

Removal and Installation

Removal

1. Remove the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Vehicles fitted with 7 seats: Release the seat belt.
 - Remove and discard the bolt.
3. Remove the D-pillar upper trim panel.
 - Release the 4 clips.
 - Disconnect the electrical connector.

4. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the speaker.

- Remove the 3 screws.

Installation

1. To install, reverse the removal procedure.
 - Tighten the new Torx bolt to 40 Nm (30 lb.ft).

Interior Trim and Ornamentation - C-Pillar Lower Trim Panel

Removal and Installation

Removal

1. Fold down the rear seat backrest.
2. Release the door aperture weatherstrip.

E49778

3. Release the safety belt anchor.

- Remove and discard the bolt.

E49594

4. Release the tailgate aperture seal.

5. Remove the support spigot from the tailgate.

- Release the clip.

6. Remove the C-pillar lower trim panel.

- Remove the Torx screw.
- Release the 8 clips.
- Disconnect the 2 electrical connectors.

E49781

7. NOTE: Do not disassemble further if the component is removed for access only.

Remove the stowage tray.

- Release the cover.

8. Remove the audio control switch.

- Release the 2 clips.

9. Remove the accessory socket.

E49782

Installation

1. Install the accessory socket.

2. Install the audio control switch.

- Secure the clips.

3. Install the stowage tray.

- Install the cover.

4. Install the C-pillar lower trim panel.

- Install the clips.
- Tighten the Torx screw to 8 Nm (6 lb.ft).
- Connect the electrical connector.

5. Install the support spigot to the tailgate.

- Install the clip.

6. Install the tailgate aperture seal.

7. Install the safety belt anchor.

- Tighten the Torx bolt to 45 Nm (33 lb.ft).

8. Install the door aperture weatherstrip.

9. Return the seat backrest to the upright position.

Interior Trim and Ornamentation - C-Pillar Upper Trim Panel

Removal and Installation

Removal

1. Fold down the rear seat backrest.
2. Release the door aperture weatherstrip.
3. Release the safety belt lower anchor.
 - Remove and discard the Torx bolt.
4. Release the upper trim access cover.
5. Remove the C-pillar upper trim panel.
 - Remove and discard the Torx screw.
 - Release the 4 clips.
 - Release the safety belt from the seat.

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the 4 clips from the C-pillar upper trim panel.

Installation

1. Install the clips to the C-pillar upper trim panel.
2. Install the C-pillar upper trim panel.
 - Attach the safety belt.
 - Secure with the clips.

- Install a new Torx screw and tighten to 3 Nm (2 lb.ft).
3. Install the upper trim access cover.
 4. Install the safety belt lower anchor.
 - Tighten the new Torx bolt to 40 Nm (30 lb.ft).
 5. Install the door aperture weatherstrip.
 6. Return the seat backrest to the upright position.

Interior Trim and Ornamentation - Front Door Trim Panel

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.
- NOTE: **Some variation in the illustrations may occur, but the essential information is always correct.**

1. **1. CAUTIONS:**

 Take extra care not to damage the component.

 Make sure that the clips are correctly located.

Disconnect the tweeter speaker electrical connector.

2.

3.

E126175

4. 4. CAUTIONS:

- ⚠ Take extra care not to damage the component. Apply masking tape to the end of the screwdriver.
- ⚠ When removing the chrome finisher from the trim panel, make sure the components are not damaged. If necessary protect the surrounding areas using masking tape.
- ⚠ Make sure that the clips are correctly located.

E126176

5. 5. CAUTIONS:

- ⚠ Take extra care not to damage the component. Apply masking tape to the end of the screwdriver.
- ⚠ When removing the chrome finisher from the trim panel, make sure the components are not damaged. If necessary protect the surrounding areas using masking tape.
- ⚠ Make sure that the clips are correctly located.

Interior Trim and Ornamentation - Tailgate Trim Panel

Removal and Installation

Removal

1. Remove the tailgate upper trim panel.

- Remove the 4 screw covers.
- Remove the 4 screws.
- Release the 2 clips.

E46285

2.  CAUTION: To protect the paintwork, the tailgate must be supported at all times.

Release the 2 support cables from the tailgate.

- Release the 2 clips.

E46286

3. Remove the 2 support cable spigots from the tailgate.

4. Lift the tailgate hinge cover for access.

5. Remove the tailgate trim panel.

- Release from the 12 clips.

E46287

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the 12 clips from the tailgate trim panel.

E46288

Installation

1. Install the tailgate trim panel.
 - Install the clips.
2. Lower the tailgate hinge cover.
3. Tighten the support strut spigot to 25 Nm (18 lb.ft).
4. Position the support cables to the tailgate and secure with the clips.
5. Install the tailgate upper trim panel.
 - Secure with the clips.
 - Install the screws.
 - Install the screw covers.

Interior Trim and Ornamentation - Scuff Plate Trim Panel

Removal and Installation

Removal

1. Remove the B-pillar lower trim panel.
For additional information, refer to: [B-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Release the front and rear door weatherstrips to access the scuff plate trim panel.

3. Remove the scuff plate trim panel.

- Remove the 9 clips.

4. NOTE: Do not disassemble further if the component is removed for access only.

Remove the 9 clips from the scuff plate trim panel.

Installation

1. Install the scuff plate trim panel.
 - Install the clips.
 - Secure with the clips.
2. Attach the door weatherstrips.
3. Install the B-pillar lower trim panel.
For additional information, refer to: [B-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Interior Trim and Ornamentation - Headliner

Removal and Installation

Removal

1. Remove both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove both B-pillar upper trim panels.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove both C-pillar upper trim panels.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove both D-pillar upper trim panels.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
5. Remove the front overhead console.

- Carefully release the 7 clips.
- Disconnect the 3 electrical connectors.

E50142

6. Remove the rear overhead console.

- Carefully release the 9 clips.
- Disconnect the 2 electrical connectors.

7. Disconnect the RH A-pillar electrical connector.

8. Remove the sun visor.

- Remove the cover.
- Remove the 2 screws.
- Release from the clip.
- Disconnect the electrical connector.
- Repeat the above procedure for the other side.

9. Remove the sun visor retaining clip.

- Release the screw cover.
- Remove the screw.
- Repeat the above procedure for the other side.

E49688

10. Remove the passenger assist handle.

- Release the 2 screw covers.
- Remove the 2 screws.
- Repeat the above procedure for the remaining 5 handles.

E49689

11. Position the front seats fully forward.

12. Position the rear seats fully forward.

13. Remove the rear headliner trim panel.

- Release the 7 clips.
- Disconnect the electrical connector.

E49690

14. Disconnect the headliner wiring harness rear electrical connector.

E50145

15. With assistance, carefully remove the headliner.

- Release the 14 clips.

16. NOTE: Do not disassemble further if the component is removed for access only.

Remove the rear interior lamp.

- Release the clip.
- Disconnect the electrical connector.
- Repeat the above procedure for the other side.

17. Remove the headliner wiring harness.

Installation

1. Install the headliner wiring harness.
 - Secure the wiring harness to the headliner.
2. Install the interior lamp.
 - Secure with the clip.
 - Connect the electrical connector.
 - Repeat the above procedure for the other side.
3. With assistance, carefully install the headliner.
 - Secure with the clips.
4. Connect the headliner wiring harness rear electrical connector.
5. Install the rear headliner trim panel.
 - Secure the clips.

6. Reposition the rear seats.
7. Reposition the front seats.
8. Install the passenger assist handles.
 - Install the screws.
 - Secure the screw covers.
9. Install the sun visors.
 - Install the clips.
 - Install the screws.
 - Install the screw covers.
 - Connect the electrical connectors.
10. Connect the RH A-pillar electrical connector.
11. Install the rear overhead console.
 - Connect the electrical connectors.
 - Carefully secure the clips.
12. Install the front overhead console.
 - Connect the electrical connectors.
 - Carefully secure the clips.
13. Install both D-pillar upper trim panels.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
14. Install both C-pillar upper trim panels.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
15. Install both B-pillar upper trim panels.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
16. Install both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Interior Trim and Ornamentation - Loadspace Trim Panel RH

Removal and Installation

Removal

1. Remove the loadspace floor panels.

- Lift and remove the front panel.
- Lift and remove the rear panel.

E53654

2. Remove the loadspace compartment anchors.

- Remove the bolt.
- Repeat the above procedure for the other anchor.

E53651

3. Remove the loadspace trim panel.

- Release the 3 clips.

E53652

4. NOTE: Do not disassemble further if the component is removed for access only.

Installation

1. Install the trim clips.

2. Install the loadspace trim panel.

- Secure the clips.
- Position the locating pegs.

3. Install the loadspace compartment anchors.

- Position the locating peg.
- Tighten the bolt to 25 Nm (18 lb.ft).
- Repeat the above procedure for the other anchor.

E53653

4. Install the loadspace floor panels.

Exterior Trim and Ornamentation - A-Pillar Moulding LH

Removal and Installation

Removal

- NOTE: This procedure is also applicable for the RH moulding.

1. Open the bonnet.
2. Remove the A-pillar moulding.
 - Release and discard the 5 clips.

Installation

1. NOTE: The lower clip is unique to the others and must only be installed to the lowest position on the moulding.

To install, reverse the removal procedure.

1. New clips must be used.

Exterior Trim and Ornamentation - Front Fender Moulding

Removal and Installation

Removal

1. Remove the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).

2.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

3. Remove the mud flap.

- Remove the 3 retaining screws.

E44470

4. Remove the 4 retainers.

E44471

5. Remove the fender moulding.

- Remove the 2 screws.
- Carefully release the 10 clips.

E44472

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the clips from the moulding.

E53307

Installation

1. To install, reverse the removal procedure.
2. Install the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).

Exterior Trim and Ornamentation - Rear Quarter Panel Moulding

Removal and Installation

Removal

1. Remove the mud flap.
 - Remove the 3 screws.

E45106

2. Remove the rear quarter panel moulding.
 - Remove the 3 clips from the underside of the moulding.
 - Release the 6 clips from the rear quarter panel.

E45107

3. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the clips from the moulding.

E45108

Installation

1. To install, reverse the removal procedure.

Exterior Trim and Ornamentation - Radiator Grille

Removal and Installation

Removal

1. Remove the radiator grille.

- Open the hood.
- Release the 6 clips.

Installation

1. To install, reverse the removal procedure.

Exterior Trim and Ornamentation - Rear Quarter Window Moulding

Removal and Installation

Removal

1. Open the liftgate.
2. Remove the rear quarter window moulding.
 - Remove the 4 clips.
 - Release the locating peg.

E53308

Installation

1. Install the rear quarter window moulding.
 - Position the locating peg.
 - Secure the clips.

Rear View Mirrors -

Torque Specifications

Description	Nm	lb-ft
Exterior mirror bolts	6	4

Rear View Mirrors - Rear View Mirrors

Description and Operation

COMPONENT LOCATION

- NOTE: RHD (right-hand drive) installation shown, LHD (left-hand drive) installation similar.

E132123

Item	Part Number	Description
1	-	DDM (driver door module)
2	-	Driver exterior mirror
3	-	Exterior mirror switches
4	-	Memory switches
5	-	Interior mirror (automatic dimming version shown)
6	-	Passenger exterior mirror
7	-	PDM (passenger door module)

GENERAL

Rear view mirrors consist of an interior mirror on the windshield and an exterior mirror on each front door cheater.

The interior mirror incorporates either manual dimming or automatic dimming. Depending on vehicle model and market, the automatic dimming interior mirror may also incorporate:

- A HomeLink® universal transmitter. NOTE: HomeLink is a registered trademark owned by Johnson Controls Inc.
- The automatic high beam function.

For additional information, refer to: [Exterior Lighting](#) (417-01 Exterior Lighting, Description and Operation).

The exterior mirrors on all models incorporate electrical heating and adjustment. Depending on vehicle model and market, the exterior mirrors may also incorporate:

- Memory recall.
- Reverse dipping.
- Mirror foldback.
- Approach lamps and proximity cameras. For additional information, refer to:
[Interior Lighting](#) (417-02 Interior Lighting, Description and Operation),
[Parking Aid](#) (413-13 Parking Aid, Description and Operation).

The door modules operate the exterior mirror functions under the control of the [CJB \(central junction box\)](#) and switches in the driver door switchpack.

INTERIOR MIRROR

Interior mirrors consist of mirror glass in a housing that is connected to a mounting stem by a ball joint. The mounting stem is attached to a pad bonded onto the windscreen.

Manual Dimming Mirror

E132124

Manual dimming is performed with a lever on the underside of the mirror body.

Automatic Dimming Mirror

E132125

Item	Part Number	Description
1	-	Mounting stem
2	-	Covers
3	-	Auto high beam control module and sensor (where fitted)
4	-	Front light sensor
5	-	Universal transmitter channel buttons
6	-	Universal transmitter status indicator
7	-	Rear light sensor
8	-	Electrical connector

Automatic dimming is performed by electrochromic mirror glass that automatically dims to reduce glare from the headlights of following vehicles in dark or low light conditions.

Light sensors on the front and rear of the interior mirror provide light level inputs for the automatic dimming function.

Automatic dimming interior mirrors are connected to the vehicle wiring by an electrical connector concealed by covers installed over the mounting stem. On vehicles with the automatic high beam function, the covers also contain the auto high beam control module.

Interior mirrors which incorporate a HomeLink® universal transmitter have operating buttons on the lower face. They also have a red **LED (light emitting diode)** status indicator, next to the buttons, which illuminates when the universal transmitter is transmitting.

The universal transmitter can operate up to three home or office remotely operated systems (e.g. garage door/gate openers, lighting and security systems), replacing the individual hand held transmitters required for each system. Universal transmitter operating frequencies vary across markets.

Power for the feature(s) in the automatic dimming interior mirror is provided by an ignition feed from the **EJB (engine**

junction box).

EXTERIOR MIRRORS

E132126

Item	Part Number	Description
1	-	Actuator
2	-	Heating element connectors
3	-	Cover
4	-	Body assembly
5	-	Fly leads
6	-	Screw (3 off)
7	-	Mirror glass
8	-	Combined approach lamp and proximity camera (where fitted)

The exterior mirrors are attached to the front door structure and connected to the door harness.

The door mirrors fold forwards or rearwards on impact. On vehicles without the mirror foldback option, the mirrors can be folded into a park position by pushing the mirror housing towards the side window.

Exterior mirror heating is provided by heater elements bonded to the back of the mirror glass. The power supply to the heater elements is controlled by the respective door modules, in response to signals from the [CJB](#).

The exterior mirrors each incorporate an actuator which contains two adjustment motors for the mirror glass. One for horizontal (left/right) adjustment and one for vertical (up/down) adjustment. Power to the motors is controlled by the respective door modules in response to signals from the driver door switchpack. On vehicles with memory recall, the exterior mirrors incorporate horizontal and vertical plane position sensors.

Exterior mirrors with the foldback feature incorporate a foldback motor in the hinge. Operation of the foldback motor is

controlled by the respective door modules in response to signals from the driver door switchpack.

EXTERIOR MIRROR SWITCHES

E132127

Left and right select switches and an adjustment switch for the exterior mirrors are incorporated into the driver door switchpack in the top of the door casing. The switchpack is connected to the door harness and powered by a permanent battery feed from the [CJB](#).

FRONT DOOR MODULES

E132128

Each front door module is attached to the inside of the related door casing and connected to the door harness.

The two front door modules interpret the signals from the [CJB](#), the driver door switchpack and the interior mirror into appropriate outputs for the related exterior mirrors. For operation of the various exterior mirror functions each door module is powered by a permanent battery feed from the [CJB](#). The live feed to the mirror foldback motors goes off 5 minutes after the ignition is switched off.

OPERATION

Automatic Dimming Interior Mirror

Power for the feature(s) in the automatic dimming interior mirror is provided in power mode 6 (ignition).

Automatic Dimming

The light sensor in the front of the mirror monitors ambient light at the front of the vehicle and the light sensor in the rear of the mirror monitors the light coming from behind the vehicle. When the light from behind the vehicle exceeds the ambient light level, the automatic dimming circuits darken the interior mirror.

Automatic dimming is inhibited when reverse gear is selected, to provide the driver with maximum vision. The reverse gear signal is provided by a battery voltage signal from the reverse relay in the central junction box (CJB).

Universal Transmitter

 **WARNING:** The universal transmitter must not be used with any garage door that lacks a safety stop and reverse feature, as required by federal safety standards (this includes any garage or door opener model manufactured before April 1 1982). A garage door opener which cannot detect an object in the path of a closing door, and then automatically stop and reverse the door, does not meet current federal safety standards. Using a garage door opener without these features increases the risk of serious injury or death.

The universal transmitter has three channels, with separate operating buttons for each channel. When one of the buttons is pressed the universal transmitter outputs the radio signal programmed for the related channel (if any) and illuminates the status indicator to confirm transmission.

Hand held transmitters are programmed into the universal transmitter as follows:

- Turn the ignition on.

-  **WARNING:** When programming the universal transmitter in the vicinity of the affected system, the system will operate. If the system controls garage doors or gates, ensure they are clear of people and objects to prevent personal injury or damage to equipment.

Press and hold the outer two buttons of the universal transmitter until the status indicator begins to flash, then release the buttons. This initializes the universal transmitter and erases previous settings from all three channels.

- Place the signal emitting end of the hand held transmitter against the underside of the interior mirror.
- Simultaneously press and hold the activation button on the hand held transmitter and the chosen button of the universal transmitter. When the status indicator flashes rapidly, indicating the channel has been programmed, release the buttons (the status indicator flashes slowly at first and can take up to a minute before it flashes rapidly).
- To program another channel on the universal transmitter, repeat steps C. and D.
- Turn the ignition off.

The radio signals used to operate some home/office systems incorporate a code protection feature. After a channel has been programmed from the hand held transmitter, these systems will need to be trained to accept the signal from the universal transmitter. To check if a system is code protected, press the appropriate universal transmitter button. If the status indicator flashes rapidly for 1 to 2 seconds, before illuminating permanently, the system has a code protection feature.

The system is trained to the universal transmitter, as follows:

- Locate the training button on the receiver system (refer to the system's literature for details).
- Press the training button for 1 to 2 seconds, then perform step C. within 30 seconds.
- On the vehicle, press and release the appropriate universal transmitter button, twice. The receiver system should now be trained to the universal transmitter.
- If the system does not operate, repeat the procedure, but in step C. press and release the universal transmitter button three times.

Additional information on the universal transmitter can be found on: www.homelink.com

Exterior Mirrors

Heating

The [CJB](#) receives the ambient air temperature value from the [ECM \(engine control module\)](#) on the high speed [CAN \(controller area network\)](#) bus. The [CJB](#) converts the ambient air temperature value to an on-time percentage and transmits it on the medium speed [CAN](#) bus to the two door modules, which then energize the exterior mirror heating elements accordingly. The on-time percentage is increased while the windshield wipers are on.

Exterior Mirror Heating Percentage On-times

On-times	Ambient Air Temperature, °C (°F)			
	<8 (<46)	8 to 15 (46 to 59)	>15 to 25 (>59 to 77)	>25 (>77)
Wipers Off	50%	33%	0%	0%
Wipers On	50%	33%	25%	0%

On vehicles with the parked heating function, exterior mirror heating may also operate when the parked heating function is active, depending on the ambient air temperature.

For additional information, refer to: [Auxiliary Heater](#) (412-02B Auxiliary Heating, Description and Operation).

Adjustment

Adjustment is enabled while the ignition is on and, provided the driver door is not opened, for up to five minutes after the ignition is switched off.

When the L or R select switch is pressed, the tell-tale [LED](#) in the switch illuminates and the adjustment switch can be used to move the mirror glass of the related exterior mirror. The driver door switchpack interprets adjustment switch movement and transmits it to the [DDM](#) on a [LIN \(local interconnect network\)](#) bus. Adjustment signals for the passenger door exterior mirror are transmitted from the [DDM](#) to the [PDM](#) on the medium speed [CAN](#) bus. On receipt of an adjustment signal, the appropriate door module connects a power supply and ground to the relevant adjustment motor to produce the required movement of the mirror glass. When the adjustment switch is tilted in the opposite direction, the door module reverses the polarity of the adjustment motor, to move the mirror glass in the opposite direction.

Memory recall

The vehicle can memorize up to three different positions for the exterior mirrors, the driver seat and the steering column. This enables three different drivers to achieve their optimum driving position at the touch of a button. The memory store and memory pre-set switches are located on the driver door casing.

The memory function is incorporated into the [CJB](#).

Memory Switches

E132129

The memory switches form a resistive ladder in hardwired connections with the driver seat switchpack. When a position is stored or recalled for channels 1 to 3, the driver seat switchpack transmits the information on a [LIN](#) bus to the seat memory module, which relays it to the [CJB](#) on the medium speed [CAN](#) bus. It is then relayed to the door modules. Each door module evaluates the recall or storage command and performs the necessary adjustments to the exterior mirrors. If a manual mirror adjustment is selected while a memory recall is operating, it will over-ride the memory recall movement.

For mirror memory to operate, the mirror adjustment potentiometers must deliver a voltage value in the range of 80 mV - 4.8 V. Should a voltage applied be outside of this range the mirror will not operate when memory is selected.

Reverse dipping

Reverse dipping can be enabled and disabled in the vehicle set-up section of the vehicle information and settings menu. If reverse dipping is enabled, both of the exterior mirrors automatically dip, to provide a better view of the kerb, when the ignition is on and reverse gear is engaged. The mirrors return to their original position immediately reverse gear is disengaged, or if the vehicle speed in reverse exceeds 12 km/h (7.5 mph).

The dipped positions of the exterior mirrors are stored in the [CJB](#), which signals the front door modules on the medium speed [CAN](#) to move the mirror glass into and out of the dipped positions. Reverse gear engagement and disengagement is signaled to the [CJB](#) on the high speed [CAN](#) bus by the [TCM \(transmission control module\)](#) (automatic transmission) or the transfer box control module (manual transmission).

The dipped mirror position can be adjusted using the mirror switches while reverse gear is selected and the ignition is on.

On vehicles with an automatic transmission, reverse gear must be selected for approximately 0.5 second before the exterior mirrors move to the dipped position. The time delay prevents nuisance movement of the exterior mirrors when the transmission selection moves between Park and Drive.

Mirror foldback

If mirror foldback is incorporated, pressing the L and R mirror select switches at the same time folds the exterior mirrors. Pressing both of the switches again unfolds the mirrors. Operation of mirror foldback is inhibited at speeds over 110 km/h (70 mph). If the mirrors are accidentally knocked out of synchronization (i.e. with one mirror folded and the other in the normal position), pressing both of the switches again re-synchronizes them.

On vehicles with mirror foldback, automatic operation can be enabled and disabled using Land Rover approved diagnostic equipment. When automatic operation is enabled, the exterior mirrors automatically fold and unfold when the vehicle is locked and unlocked using the smart key. However, if the mirrors are folded using the mirror switches, they will not automatically unfold when the vehicle is unlocked.

To prevent the foldback motors from overheating, the foldback function is disabled for 3 minutes if the mirror foldback function is selected ten times within 60 seconds. On the tenth selection within 60 seconds, the exterior mirrors will only unfold; if the selection is for the exterior mirrors to fold, the selection is ignored.

CONTROL DIAGRAM

• NOTE: A = Hardwired connection; D = High speed [CAN](#); N = Medium speed controller area network (CAN) bus; O = [LIN](#) bus.

Rear View Mirrors - Rear View Mirrors

Diagnosis and Testing

Principle of Operation

For a detailed description of the rear view mirror systems and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Rear View Mirrors](#) (501-09 Rear View Mirrors, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Door mirror switch condition and installation ● Door mirror condition and installation 	<ul style="list-style-type: none"> ● Battery condition and state of charge ● Fuses ● Harnesses and connectors ● Washer jet and mirror heater relay ● Memory control module(s) ● Door mirror switch(s) ● Door mirror motor(s) ● Ignition switch ● Battery Junction Box (BJB) ● Central Junction Box (CJB) ● Automatic Temperature Control (ATCM) module ● Local Interconnect Network (LIN) circuit

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Mirrors do not defrost/washer jets freeze	<ul style="list-style-type: none"> ● Fuse fault ● Washer jet and mirror heater relay fault ● Circuit fault: high resistance ● Circuit fault: short circuit to ground ● Automatic temperature control module fault 	Check the fuses. Check the operation of the washer jet and mirror heater relay. Check the washer jet and mirror heater circuits. Refer to the electrical guides. Refer to the warranty policy and procedures manual if a module is suspect.
Mirrors inoperative in one or more directions	<ul style="list-style-type: none"> ● Mechanical fault ● Switch fault ● Motor fault ● Circuit fault: high resistance ● Circuit fault: short circuit to ground 	Operate the mirror switch and listen for the motor(s). If the motor(s) can be heard, check the mechanical condition of the mirror and linkages. Rectify as necessary. Check for DTCs indicating a switch, motor or circuit fault.
Memorized mirror position is not resumed	<ul style="list-style-type: none"> ● Battery voltage below 10.5 volts ● Position not stored ● Switch operated during "one-touch" memory recall ● EEPROM fault 	Before condemning a memory component, check the function from the switch and refer to the symptoms above. Make sure the battery voltage is adequate. Make sure that the desired position is correctly stored. Make sure that the memory store/recall procedure is being followed. Refer to the relevant section of the workshop manual.
'Lazy entry' function inoperative	<ul style="list-style-type: none"> ● Remote transmitter fault (battery, transmitter programming, etc) ● Battery voltage below 10.5 volts ● Position not stored ● Switch operated during "one-touch" memory 	Check that the remote transmitter operates the central locking, etc. If it does, the fault is not with the transmitter. Make sure the battery voltage is adequate. Make sure that the desired position is correctly stored. Make sure that the memory store/recall procedure is being followed. Refer to the relevant section of the workshop manual.

Symptom	Possible Causes	Action

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Central Junction Box \(CJB\)](#) (100-00 General Information, Description and Operation) / [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Door Module \(DDM/PDM\)](#) (100-00 General Information, Description and Operation).

Rear View Mirrors - Interior Mirror

Removal and Installation

Removal

1. If installed, remove the interior mirror upper and lower covers.

- Release the 2 clips.

E49727

2. Vehicles with an auto-dimming interior mirror, remove the interior mirror.

- Disconnect the electrical connector.
- Rotate the mirror stem at its base to release from the windshield.

E49728

3. Vehicles without an auto-dimming interior mirror, remove the interior mirror.

- Pull the mirror away from the windshield to release the clip.

E49729

Installation

1. Vehicles without an auto-dimming interior mirror, install the interior mirror.

- Slide the mirror onto the boss from above to engage the clip.

E49730

2. Vehicles with an auto-dimming interior mirror, install the interior mirror.

- Rotate the mirror stem at its base to secure to the windshield.
- Connect the electrical connector.

E49731

3. Install the interior mirror covers.

- Secure with the clips.

Rear View Mirrors - Exterior Mirror Vehicles With: Parking Aid Camera

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.
- NOTE: RH illustration shown, LH is similar.
- NOTE: The ignition must be switched off.
- NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

1. Refer to: [Front Door Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

2.  CAUTION: Take extra care not to damage the wiring harnesses.

- NOTE: Support as necessary.

Torque: 6 Nm

- 3.

Installation

1. To install, reverse the removal procedure.

Rear View Mirrors - Exterior Mirror Vehicles Without: Parking Aid Camera

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.
- NOTE: RH illustration shown, LH is similar.
- NOTE: The ignition must be switched off.
- NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

1. 1. CAUTIONS:

 Take extra care not to damage the component.

 Make sure that the clips are correctly located.

2. 2. CAUTIONS:

 Take extra care not to damage the wiring harnesses.

 Make sure the electrical connector is securely in the service position, before disconnection. If the connector springs back after disconnection the internal door trim panel will have to be removed for access.

- NOTE: Support as necessary.

Torque: 6 Nm

3.

Installation

1. To install, reverse the removal procedure.

Rear View Mirrors - Exterior Mirror Glass

Seating - Seats

Description and Operation

Component Location

• NOTE: RH drive shown, LH drive similar

E137099

Item	Part Number	Description
1	-	Driver's seat cushion adjustment motor assembly
2	-	Driver's seat memory switch pack
3	-	Driver's seat non-memory switch pack
4	-	Driver's door ajar switch
5	-	Driver's seat squab motor
6	-	Driver's seat heating element
7	-	Second row RH (right-hand) seat heating element
8	-	Second row RH seat heating module
9	-	Second row LH (left-hand) seat heating element
10	-	Second row heated seat switches (vehicles without rear air conditioning)
11	-	Second row LH seat heating module
12	-	Front passenger seat heating element
13	-	Front passenger seat squab motor
14	-	Front passenger seat cushion adjustment motor assembly
15	-	Front passenger seat switch pack
16	-	CJB (central junction box)

17	-	Front heated seat switch pack (climate control system)
18	-	Memory control module
19	-	Front passenger seat power relay

OVERVIEW

Seat Configuration

E138147

Discovery is available in a 5 or 7 seat configuration. The driver's seat has the option of an 8-way power adjustment, with or without memory functionality, or a 6-way manual adjustment. The front passenger seat has the option of a 6 way power

adjustment or a 4-way, non-height, manual adjustment. On vehicles from 2008MY, the front passenger seat can be fitted with an 8-way power adjustment.

The type of second row seats depends upon whether the 7-seat option is fitted. If the vehicle supports 5 seats, the 2nd row is designed as a 60/40 split, flip and fold configuration, whereas a vehicle that supports the 7 seat option is designed as a 35/30/35 split with the 2 outer seats having the ability to 'jack-knife', allowing access to the 3rd row of seats.

All seats are available in a fabric, duragrain or leather finish depending on model specification.

MANUAL FRONT SEATS

E137621

Item	Part Number	Description
1	-	Fore and aft adjustment
2	-	Height adjustment
3	-	Backrest adjustment
4	-	Lumber support adjustment
5	-	Armrest height adjustment

Height adjustment (driver's seat only)

Pumping the handle controls seat height. Pumping the lever upwards raises the seat; downwards lowers the seat.

Recline adjustment

The angle of the backrest is adjusted by turning the rotary wheel either clockwise or anticlockwise.

Forward/backward adjustment

Lifting the tomel bar at the front of the seat and sliding the seat to the desired position achieves the forwards/backwards adjustment.

Lumber support adjustment

A hand wheel in the side of the seat provides for adjustment of lumbar support.

Folding armrest adjustment (if fitted)

Some vehicles are fitted with adjustable front seat armrests. These are used in the horizontal position or can be stowed vertically alongside the seat back rest. The horizontal position can be adjusted for height by turning the knob set into the end of the armrest.

POWER OPERATED FRONT SEATS (NON-MEMORY)

E137620

Item	Part Number	Description
1	-	Bolster adjustment: A - Bolster inflate; B - Bolster deflate
2	-	Lumbar support adjustment
3	-	Backrest adjustment
4	-	Height adjustment
5	-	Cushion tilt adjustment
6	-	Fore and aft adjustment

Forward/Backward adjustment

Push and hold the switch forwards or backwards to move the seat to the desired position.

Seat back adjustment

Twist the switch forwards or backwards until the desired seat back angle is achieved.

Seat cushion height adjustment

Push the switch up or down to raise or lower the cushion.

Front Seat Motors

• NOTE: On vehicles from 2008MY, the passenger seat can also be fitted with 8-way electrical adjustment.

The seat motors are a permanent magnet motor type coupled to a rack and pinion assembly. Should the motor seize or stick an internal thermal cut-out switch will trip to remove voltage from the motor. Two pins within each of the seat switch packs control the seat motors. Both pins are normally earthed. Operating the switch applies voltage to one of the pins while the other pin remains earthed. Operating the switch in the opposite direction reverses power and earth to the motor allowing the motor to run in the opposite direction.

DRIVER'S MEMORY SEAT

E137100

Item	Part Number	Description
1	-	Lock/unlock button
2	-	Memory preset buttons
3	-	Memory store button

Once the power operated driver's seat, steering column and exterior mirrors are adjusted, the vehicle can memorize these settings for future use.

1. Press the memory store (M) button to activate the memory function. The switch indicator will illuminate.
2. Press one of the preset buttons within 5 seconds to memorize the current settings. MEMORY (1, 2 or 3) SETTINGS SAVED will be displayed on the message center, accompanied by an audible chime to confirm the settings have been memorized.
3. To recall a stored position press the relevant preset button. MEMORY (1, 2 OR 3) RECALLED will be displayed in the message center.

• NOTE: A seat position will only be memorized during the 5 second active period. Any existing settings will be over-written when programming a memory position.

- NOTE: If the driver's seat or steering column are adjusted during entry or exit operation, automatic movement will stop.

Memory Recall

Memory recall has three memory positions stored for the seats, exterior mirrors and electric steering column (where fitted). The switches for this function are located on driver's seat outer side trim panel. Pressing the appropriate numbered memory switch allows the seat to start moving to the position appropriate to that memory.

When a memory recall is initiated, to limit the overall current consumption, only two-seat axis will move towards their intended position at any one time. To minimize current load as the motors start, the initiation of each axis is phased with a 10ms delay between each motor starting.

The following procedure will store a memory position:

- Ensure reverse gear is not engaged
- Manually adjust the seat to the desired position, using the seat switches
- Press and release the 'memory store' switch
- Press and release the desired numbered memory switch within 5 seconds

If any of the seat adjustment or memory switches are activated during a 'one touch' memory recall, the recall will be overridden and the seat will begin to move in the direction corresponding to the switch that has been pressed.

Both mirrors move simultaneously about the vertical axis first (left/right), and then, once all vertical axis movements are complete, about the horizontal axis (up/down). To minimize the number of mirror motor's required, a method of sharing is implemented, which dictates that all movement about one axis is complete before movement about the other axis commences.

Mirror movement coincides with the following table:

Action	Control Module Pin 14	Control Module Pin 7	Control Module Pin 13	Control Module Pin 8
Driver Mirror Up	Battery	-	-	-
Driver Mirror Down	Ground	-	-	-
Driver Mirror Left	-	Ground	-	-
Driver Mirror Right	-	Battery	-	-
Passenger Mirror Up	-	-	Battery	-
Passenger Mirror Down	-	-	Ground	-
Passenger Mirror Left	-	-	-	Ground
Passenger Mirror Right	-	-	-	Battery

Lazy Entry

Pressing the unlock button on the remote transmitter will initiate a memory recall. This feature is known as 'lazy entry'. If the seat movement, memory switch or the lock button on the remote transmitter is pressed, then the 'lazy entry' feature will stop immediately.

The memory settings are stored within **EEPROM (electrically erasable programmable read only memory)** of the memory control module each time the ignition switch is cycled from position II to position I. These are the positional values that a lazy entry request uses when the remote unlock button for that particular key is next pressed.

The lazy entry feature can be activated or deactivated via the customer personalization feature of the high line instrument cluster. This provides the driver with the option to enable or disable lazy entry as required.

For additional information, refer to: [Information and Message Center](#) (413-08 Information and Message Center, Description and Operation).

Immediate Adjustment

Pressing one of the manual adjustment switches will initiate the corresponding motor for that axis until the switch is released.

Only two seat motors can be driven at any one time. However, due to the sharing of relays, there are certain combinations of motors that cannot be driven together. The following table indicates which axis can and cannot be operated at the same time:

	Recline Up	Recline Down	Tilt Up	Tilt Down	Height Up	Height Down	Slide Forward	Slide Backward
Recline Up	-	No	Yes	Yes	Yes	Yes	Yes	Yes
Recline Down	No	-	Yes	Yes	Yes	Yes	Yes	Yes
Tilt Up	Yes	Yes	-	No	Yes	Yes	No*	No*
Tilt Down	Yes	Yes	No	-	Yes	Yes	No*	No*
Height Up	Yes	Yes	Yes	Yes	-	No	No*	No*
Height Down	Yes	Yes	Yes	Yes	No	-	No*	No*
Slide Forward	Yes	Yes	No*	No*	No*	No*	-	No
Slide Backward	Yes	Yes	No*	No*	No*	No*	No	-

Key

- - = Not applicable
- Yes = Can be activated together
- No = Cannot be activated together (Physically impossible)
- No* = Cannot be activated together (Relay sharing restriction)

If two axis are being driven and a third axis is requested to move, the third switch request is ignored until either of the two axis switches, already active, are released. The third axis movement may only be initiated providing the switch has been released and re-selected.

Seat adjustment can be initiated simultaneously with any mirror movement.

REVERSE GEAR MIRROR POSITION

To give the driver a clear view of the kerbs when reversing, the exterior door mirrors can be dipped when reverse gear is selected. The level of mirror dipping is set to a predetermined amount when the vehicle leaves the factory but has the ability to be customer programmed.

The following procedure will store a reverse gear mirror position:

- Perform a memory recall procedure
- Ensure reverse gear is engaged
- Manually adjust the mirrors to the desired position
- Press and release the 'memory store' switch
- Press and release the desired numbered memory switch
- Reverse gear mirror dip setting will be stored for that particular memory setting.

A single chime will be emitted from the instrument cluster to indicate that the store operation has been successful and 'Mirror Dip Stored' message will be displayed in the message center.

Once this sequence has been completed, the stored mirror position will be the position that the mirrors move to when reverse gear is next selected.

Storing a memory position with reverse gear selected only affects reverse gear mirror positions, the remainder of the memory positions remain unchanged.

To protect against an accidental setting, the mirror position will only be stored if a mirror adjustment has been made since reverse gear was selected. If there is no reverse gear mirror position stored, then a default setting, stored in the memory control module, is adopted.

There are three customer personalization memory settings per key. For each of these settings there are 3 possible reverse gear mirror position stores. This equates to a possible nine reverse gear mirror position settings. personalization memory setting relates to the 3 most recent ignition keys.

E137622

Item	Part Number	Description
A	-	Most recent ignition key
B	-	Second most recent ignition key
C	-	Third most recent ignition key
1	-	First reverse gear mirror position store
2	-	Second reverse gear mirror position store
3	-	Third reverse gear mirror position store

The reverse gear mirror position feature can be activated or deactivated via the customer personalization feature of the high line instrument cluster. This provides the driver with the option to enable or disable reverse gear mirror position as required.

For additional information, refer to: [Information and Message Center](#) (413-08 Information and Message Center, Description and Operation).

Information regarding the reverse gear mirror status, for both manual and automatic transmissions, is transmitted as a message on the LIN (local interconnect network) bus.

When the reverse gear mirror position feature is toggled 'OFF', all 3 memory settings associated with that personalization memory will return to the default reverse gear mirror settings.

- **NOTE:** Reverse gear status is only available with the ignition in position II.

When reverse gear is de-selected, the mirror position immediately prior to reverse selection will be resumed, unless a memory recall has been requested whilst reverse has been selected, in which case the mirrors will move to the requested memory position when reverse is de-selected.

On vehicles fitted with the ZF automatic transmission there is a delay of 0.5 second following the selection of reverse gear, prior to the reverse mirror position being recalled. This is to prevent any movement of the mirrors as the gear selector is moved through the reverse position on the way to, and from, the park position.

STEERING COLUMN ADJUST (where fitted)

The memory control module controls the electric adjustable steering column in a rake (up and down) and reach (in and out). The steering column can be adjusted for rake and reach by operating the rotary joystick control switch on the LH side of the steering column.

Item	Part Number	Description
1	-	Electric adjustment
2	-	Manual adjustment
3	-	Heated steering wheel

Entry/Exit Mode

Entry/Exit mode provides automatic movement of the steering column and driver's seat to allow easier entry to or exit from the vehicle.

Entry/Exit mode is selected by setting the steering column adjustment switch to the 'AUTO' position.

- NOTE: If the adjustment switch is moved away from 'AUTO' whilst the steering column is tilted away, the steering column will move back to its memorized position. Entry/Exit mode will then be cancelled.
- NOTE: If the adjustment switch is moved during entry/exit operation, steering column movement will stop.

Exit

When the ignition key is removed, the steering column will move to the uppermost rake and innermost reach positions and the driver's seat will move slightly rearwards and lower.

Entry

When the key is inserted in the ignition the steering column and seat will return to their previous positions. If, however, the memorised driver position has been changed (using the seat memory switches or another key transmitter), the steering wheel and seat will move to the new position.

Steering Column Control

Adjustment of the steering column is achieved by a single DC (direct current) motor. Each adjustment movement is transmitted through a solenoid actuated clutch; one clutch for reach movement and one for rake movement.

When engaged, a clutch can be released only if the system is unstressed. As the clutches are mounted on the same motor spindle, the sequence for position adjustment is as follows:

- Engage the selected clutch by powering the appropriate solenoid
- After a time period (approximately 0.1 of a second), the motor is powered in the desired direction
- When the motor reaches the stop position the solenoid and motor is released/unpowered. The clutch remains engaged under stress
- After a time period (approximately 0.1 of a second), the motor is powered in the opposite direction to enable the clutch to disengage when the stress is released.

Motor Rotation Direction	Clockwise	Counter Clockwise
Reach movement	IN	OUT
Rake movement	UP	DOWN

Simultaneous rake and reach movements are not possible since the motor must reverse direction as soon as the first axis has reached its required position.

Steering column rake and reach is controlled via potentiometer feedback.

AUDIBLE AND VISUAL CONFIRMATIONS

An audible confirmation is generated by the instrument cluster to provide confirmation to the driver that the requested operation has been successfully completed. The following operations support an audible confirmation:

Operation	Audible Confirmation	Conditions
Memory Store	Single Chime	Successful store operation completed
Memory Recall	Double Chime	Only issued if all axis of movement successfully reach the intended position
Reverse Gear Mirror Position Store	Single Chime	Successful store operation for reverse mirror position completed

In addition to audible confirmation there is also a visual confirmation via the instrument cluster message center. For additional information, refer to: [Information and Message Center](#) (413-08 Information and Message Center, Description and Operation).

MEMORY CONTROL MODULE

E 138149

Memory Control Module Location (LHD shown, RHD similar)

Item	Part Number	Description
1	-	Memory control module

The memory control module, located under the driver's seat, relies upon a number of inputs and controls a number of outputs. As with all electronic control modules, the unit needs information regarding the current operating conditions of the engine and other related systems before it can make calculations, which determine the appropriate outputs.

All memory values are stored in the non-volatile memory, [EEPROM](#). The current motor positions, which are monitored by the control modules integral Hall sensors, are stored in the [EEPROM](#). If a loss of power occurs, upon power reconnection

the current motor position are recalled from memory and adopted as the current positions. This will allow the relative memory positions to be retained without any need to re-calibrate. The memory control module checks the integrity of all data stored in the [EEPROM](#) each time it exits stand-by mode. In the event that the data is corrupt, the control module adopts the default values for all of the programming options. All memory positions are deemed as invalid and the software will perform as if there are no memory positions stored. Memory store operations will reset the relevant memory and allow full functionality.

Stall Detection

Seat, steering column (where fitted) and mirror motors are deemed to have stalled if there is no change in the inputs that are received from the corresponding feedback sensors for 200ms (seat), 1000ms (mirror & steering column) while that axis is being driven.

If a stall condition is detected then the drive to that axis is cancelled for the remainder of that memory operation (memory recall) or until the switch is re-selected (manual movement).

If the motor movement has stopped due to loss of sensor feedback, either stall or sensor failure, then that axis may be activated again, to move past the stall position, by re-selecting the appropriate switch. This allows control of the motor to be maintained if sensor feedback is lost.

Upon re-selection of movement, if sensor pulses are detected then the motor will continue to be driven until the switch is released or another stall condition is detected. If sensor feedback is not detected then the motor is only driven for 0.5 second and then stops until the switch is released and then pressed again, when a further 0.5 second of activation is permitted, and so on.

For all seat motor and steering column manual movements, whenever a motor is driven and a stall occurs, the memory control module records the position at which the stall occurred. If movement occurs beyond a stall position, then that position is erased from the control modules memory. This will always allow movement past a previously recorded stall position once movement has been registered beyond that position. This is the case for both manual and memory movement.

Initialization

When a replacement memory control module is fitted to a seat it should be initialized so that the control module can learn the seats and steering column maximum and minimum adjustment values. This is achieved by:

- adjusting all seat movement axis from one end of travel to the other; slide, recline, height and tilt
- adjusting all steering column movement from one end of travel to the other; rake and reach.

Battery Monitor

If the battery voltage drops below 10.5 Volts, then the memory control module ignores all requests for a memory recall, including lazy entry, or easy entry/exit until the battery voltage has reached 11.5 Volts. This will conserve as much power in the vehicle battery as possible to enable engine cranking.

Stand-by Mode

The memory control module supports a stand-by mode to keep power consumption to a minimum.

The control module will enter stand-by mode upon receipt of a [LIN](#) bus 'SLEEP' message from the [CJB](#). Alternatively, a time period of 3 seconds after the [LIN](#) bus network has remained quiet provided there are no motors being driven at that time and there are no valid switch requests.

If there is a failure with the [LIN](#) bus network then the seat will be operational in 'inch mode' only.

If the control module is being prevented from entering stand-by mode due to motor movement, memory recall or switch operation, then it will enter stand-by mode when the current function has terminated.

• **NOTE:** In the case of a memory recall, all memory recall operations should be carried out before entering stand-by mode, not just the current motor movement.

The control module will exit stand-by mode if there is any [LIN](#) bus activity. When the control module exits stand-by mode it must verify the 'System Enable Status' in order to recognize when it should respond to a switch request.

SEAT HEATING

E138150

Front Seats

Front Seat Heater Switches

E138151

Item	Part Number	Description
1	-	LH front seat heater switch
2	-	RH front seat heater switch

The heated front seat system is available on both manual and electric seats and is controlled by the Automatic Temperature Control Module (ATCM).

When the front seat heater switch is operated, power is supplied to the heater elements in the seat, causing the seat to heat up. The ATCM senses seat temperature via the sensor in the cushion and regulates voltage to the seat heater elements to maintain a constant temperature.

For additional information, refer to: Control Components (412-04, Description and Operation).

Rear Seat Heaters

Rear Seat Heater Switches

- NOTE: [Rear air conditioning variant shown](#)

E138152

The [RH](#) and [LH](#) rear seats support three integral heating elements, squab, back rest and bolster. The optional rear child booster seat also supports an integral seat-heating element.

- **NOTE:** The rear center seat is not available with seat heating.

The rear seat heaters are enabled when the ignition switch is position II, and operate at one of two temperature settings. With the first press of a rear seat heater switch the relative rear seat heat control module ([RH](#) or [LH](#)) adopts the higher temperature setting, supplies a power feed to the related rear seat heater elements and illuminates two amber [LED](#) (light emitting diode)'s in the switch. At the second press of the switch the control module adopts the lower temperature setting and extinguishes one of the [LED](#)'s. At the third press of the switch the control module de-energizes the heater elements and extinguishes the second [LED](#). The seat heaters remain on until selected off or the ignition is turned off.

The rear seat heat control modules receive an input from a temperature sensor in [RH](#) and [LH](#) rear seats, and regulate the power feed of the heater elements to control the seat temperature at the appropriate temperature setting between 35 and 45 °C (95 and 113 °F). The actual temperature settings vary with the type of seat covering, to allow for the different heat conduction properties of the different seat covering materials.

DIAGNOSTICS

The exchange of information between the diagnostic unit and the memory control module is via the [CJB](#), which are interconnected via the hi-speed [CAN](#) (controller area network) bus and [LIN](#) bus. There is a non-volatile memory ([EEPROM](#)) for saving detected errors. Its contents are not lost when the power supply is disconnected. Only a Land Rover approved diagnostic system can erase the error memory.

Seating - Seats

Diagnosis and Testing

Principle of Operation

For a detailed description of the seating systems and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: Seats (501-10 Seating, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Seat runners ● Seat frames ● Seat movement switch condition and installation ● Seat heater switch condition and installation ● Seat motor(s) condition and installation ● Steering column switch condition and installation ● Steering column condition and installation ● Door mirror switch condition and installation ● Door mirror condition and installation 	<ul style="list-style-type: none"> ● Battery condition and state of charge ● Fuses ● Harnesses and connectors ● Seat movement switch(s) ● Seat heater switch(s) ● Seat heater elements ● Seat motor(s) ● Seat module(s) ● Memory control module(s) ● Steering column switch ● Steering column motor ● Door mirror switch(s) ● Door mirror motor(s) ● Ignition switch ● Battery Junction Box (BJB) ● Central Junction Box (CJB) ● Local Interconnect Network (LIN) circuit

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Seat does not move when the switch is operated (forward, backward, tilt, etc)	<ul style="list-style-type: none"> ● Runner or mechanism jammed ● Switch fault ● Motor fault ● Thermal cut-out engaged ● Circuit fault ● Module fault 	Check for obstructions at the seat runners, mechanisms, etc, rectify as necessary. Steering column does not move when the switch is operated	<ul style="list-style-type: none"> ● Switch fault ● Motor fault ● Clutch/Solenoid fault 	Check for DTCs indicating a switch, motor or clutch/solenoid fault.
Mirrors do not move when the switch is operated	<ul style="list-style-type: none"> ● Mechanical fault ● Switch fault ● Motor fault ● Circuit fault: high resistance ● Circuit fault: short circuit to ground 	For mirror tests, refer to the relevant section of the workshop manual.
Memorized seat/steering column/mirror position is not resumed	<ul style="list-style-type: none"> ● Battery voltage below 10.5 volts ● Position not stored ● Switch operated during "one-touch" memory recall ● EEPROM fault 	Before condemning a memory component, check the function from the switch and refer to the symptoms above. Make sure the battery voltage is adequate. Make sure that the desired position is correctly stored. Make sure that the memory store/recall procedure is being followed. Refer to the relevant section of the workshop manual.

Symptom	Possible Causes	Action
"Lazy entry" function inoperative	<ul style="list-style-type: none"> ● Remote transmitter fault (battery, transmitter programming, etc) ● See list for "position is not resumed" 	Check that the remote transmitter operates the central locking, etc. If it does, the fault is not with the transmitter. Refer to "position is not resumed".
Entry/Exit mode inoperative	<ul style="list-style-type: none"> ● Switch not in AUTO mode ● Switch fault ● Motor fault ● Clutch/Solenoid fault 	Make sure the function is enabled and that the switch is correctly set. Check for DTCs indicating a switch, motor or clutch/solenoid fault.
Seat does not get warm	<ul style="list-style-type: none"> ● Switch fault ● Fuses ● Circuit fault ● Temperature sensor ● Battery voltage is greater than 16.5 volts 	Check the LEDs at the switches as a quick check of the switch function. If the LEDs illuminate when the switches are operated, there is power to the switches and the switches are operating at least one level. Check the seat heater circuits, refer to the electrical guides. Check the temperature sensor function. If the battery voltage is higher than 16.5 volts for more than 5 seconds, seat heating is suspended. Refer to the relevant section of the workshop manual.
Part(s) of the seat does not get warm	<ul style="list-style-type: none"> ● Element fault 	There are up to three elements in each seat, if the rest of the seat operates normally, check the element connections and continuity. Refer to the electrical guides.

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Front Seat Module \(DSM/PSM\)](#) (100-00 General Information, Description and Operation).

Seating - Heater Mats

Diagnosis and Testing

Principles of Operation

Heated seats incorporate heater elements in the cushion and the backrest of the seat. Each cushion heater element has a thermal sensor, which supplies a feedback temperature signal to the related seat heater module. The backrest heater elements do not have a thermal sensor, and are regulated at the same temperature as the cushion heater elements.

For a detailed description of the seat heater mat, refer to the relevant Description and Operation section in the workshop manual. REFER to: Seats (501-10, Description and Operation).

Inspection and Verification

1. **1.** Verify the customer concern.
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage.

Visual inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Seat heater switches condition and installation 	<ul style="list-style-type: none"> ● Fuses ● Harnesses and connectors ● Seat heater module ● Seat heater switches ● Seat heater mat

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **4.** If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

• NOTE: If the control module or a component is suspect and the vehicle remains under manufacturer warranty, refer to the warranty policy and procedures manual (section B1.2), or determine if any prior approval programme is in operation, prior to the installation of a new module/component.

• NOTE: Generic scan tools may not read the codes listed, or may read only five digit codes. Match the five digits from the scan tool to the first five digits of the seven digit code listed to identify the fault (the last two digits give additional information read by the manufacturer approved diagnostic system).

• NOTE: When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to three decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

• NOTE: Inspect connectors for signs of water ingress, and pins for damage and/or corrosion.

• NOTE: If DTCs are recorded and, after performing the pinpoint tests, a fault is not present, an intermittent concern may be the cause. Always check for loose connections and corroded terminals.

DTC Index

For a complete list of all diagnostic trouble codes that could be logged on this vehicle, please refer to section 100-00.

Seat Heater Mat Application Chart

• NOTE: To ensure an accurate resistance reading, calibrated test equipment **must be used**

Vehicle /Year	Cushion / Backrest	Heater Mat / NTC Resistor	Left Hand Drive		Right Hand Drive		Minimum Resistance Ohms At 20°C ±10°C	Maximum Resistance Ohms At 20°C ±10°C

PINPOINT TEST A : SEAT HEATER MAT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK FOR DTC'S	
	<ol style="list-style-type: none"> Where possible use the manufacturer approved diagnostic system to review any logged seat heater mat DTC's
	<p>Were any seat heater mat DTC's logged?</p> <p>Yes Carry out the help text action for any logged DTC's. Clear the DTC and retest. If DTC's return follow the tests listed below GO to A2.</p> <p>No GO to A2.</p>
A2: MANUAL CHECK	
• NOTE: On full power the seat should be hot to touch	
	<ol style="list-style-type: none"> If required operate the vehicle air conditioning on full for 10 minutes to reduce the in vehicle ambient temperature Operate the seat heater on full power
	<p>Does the seat heater operate correctly?</p> <p>Yes Clear any stored DTC's and retest. If seat heater operation is correct no further action required</p> <p>No GO to A3.</p>
A3: SHORT CIRCUIT TO GROUND	
	<ol style="list-style-type: none"> Refer to the electrical circuit diagrams and the seat heater mat application chart (see above) to identify the connector Disconnect the connector Refer to the electrical circuit diagrams and check the seat heater mat (heater circuit) and (thermal sensor circuit) for short circuit to ground
	<p>Are either of the circuits short circuit to ground?</p> <p>Yes Repair the circuit or replace the seat heater mat as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component. Clear any stored DTC's and retest</p> <p>No GO to A4.</p>
A4: CIRCUIT CONTINUITY TEST	
	<ol style="list-style-type: none"> Refer to the electrical circuit diagrams and check the seat heater mat (heater circuit) for circuit continuity
	<p>Does the seat heater mat heater circuit pass the continuity test?</p> <p>Yes GO to A5.</p> <p>No Repair the circuit or replace the seat heater mat as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component. Clear any stored DTC's and retest</p>
A5: POWER CONSUMPTION	
• NOTE: The seat heater power supply cycles on and off dependant on the seat and cabin temperature and may only switch on for 5 seconds in 30 seconds	
	<ol style="list-style-type: none"> Reconnect the connector Operate the vehicle air conditioning on full for 10 minutes to reduce the in vehicle ambient temperature Refer to the electrical circuit diagrams and check the seat heater mat (heater circuit) using a current clamp Operate the seat heater on full power Use the chart above to calculate typical value (V/R=I) (Volts divided by Resistance equals Current in Amps) Examples (12 volts / 0.5 ohms =24 amps) (12 volts / 1 ohms = 12 amps) (12 volts / 2 ohms = 6 amps)
	<p>Does the seat heater mat consume the correct level of current?</p> <p>Yes Clear any stored DTC's and retest. If operation correct, no further action required</p> <p>No GO to A6.</p>
A6: RESISTANCE CHECK	

<ul style="list-style-type: none"> NOTE: Ensure the multimeter used is calibrated and a resistance reading of 0 ohms is shown when the test leads are connected together, alternately subtract any resistance shown from the result NOTE: The seat heater mat circuits should be checked at the seat heater module connector NOTE: Refer to the electrical circuit diagrams and to confirm the total resistance of the circuit the cushion and backrest are connected in series 	
	<ol style="list-style-type: none"> 1 Refer to the electrical circuit diagrams and the seat heater mat application chart (see above) to identify the terminals 2 Disconnect the connector 3 Using a multimeter, carry out a resistance check of the seat heater mat heater circuit and the NTC resistor circuit. Record the results 4 Compare the results to the chart (see above)
	<p>Are the results within specification at the given ambient temperature? (tolerance +/- 0.5 Ohms)</p> <p>Yes Reconnect the connector. Clear any stored DTC's and retest. If customer concern or DTC's return refer to electrical circuit diagrams and investigate the power and ground supply circuits</p> <p>No Replace the seat heater mat as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component. Clear any stored DTC's and retest</p>

Seating - Front Seat Cushion

Removal and Installation

Removal

• NOTE: In this procedure the cushion is removed as an assembly. There is a separate procedure showing removal of the cushion cover.

1. Remove the front seat cushion assembly.

- Release and disconnect the 2 electrical connectors.
- Remove the 4 Torx bolts.

E55647

Installation

1. Install the front seat cushion assembly.

- Tighten the Torx bolts to 25 Nm (18 lb.ft).
- Connect and secure the electrical connectors.

Seating - Front Seat

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. **NOTE:** Torx bolts may be re-used.

Release the front seat.

- Remove the bolt covers.
- Remove and the 5 Torx bolts.

E45101

3. Release the safety belt lower anchor from the seat.

- Remove the bolt cover.
- Passenger side, disconnect the electrical connector.
- Remove and discard the Torx bolt.

E45102

4. With assistance, remove the front seat.

- Protect the rocker panel.
- Remove the bolt.
- Disconnect the 2 electrical connectors.
- Release the 2 wiring harness clips.

Installation

1. With assistance, install the front seat.

- Connect the electrical connectors.
- Secure the wiring harness clips.

2. Attach the safety belt lower anchor to the seat.

- Tighten the new Torx bolt to 40 Nm (30 lb.ft).
- Passenger side, connect the electrical connector.
- Install the bolt cover.

3. Secure the front seat.

- Tighten the Torx bolts to 40 Nm (30 lb.ft).
- Install the bolt covers.

4. Connect the battery ground cable.

Seating - Third Row Seat

Removal and Installation

Removal

- NOTE: Third row seats must be removed as a pair.

1. Remove the loadspace compartment anchors.

- Remove the 4 Torx bolts.

2. Remove the loadspace trim panels.

- Release from the 4 clips.

3. NOTE: Torx bolts may be re-used.

Remove the third row seats.

- Release the trim cover.
- Remove the 10 Torx bolts.

E56005

E56006

4. NOTE: Do not disassemble further if the component is removed for access only.

Separate the third row seats.

- Remove the seat frame finisher.
- Drill out the 6 rivets.
- Remove the 2 brackets.

Installation

1. Attach the third row seats.

- Install the brackets.
- Install the rivets.

2. Install the third row seats.

- Tighten the Torx bolts to 40 Nm (30 lb.ft).
- Secure the trim cover.

3. Install the loadspace trim panels.

- Secure in the clips.

4. Install the loadspace compartment anchors.

- Tighten the Torx bolts to 25 Nm (18 lb.ft).

Seating - Rear Seat Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

- NOTE: This procedure shows the removal and installation of both the LH and the RH seats.

1. NOTE: The Torx bolts can be re-used.

Release the RH rear seat.

- Fold the LH seat cushion forward.
- Remove the 4 Torx bolts.
- Fold down the rear seat backrest.

2. Remove the RH rear seat.

3. NOTE: The Torx bolts can be re-used.

Release the LH rear seat.

- Fold the LH seat cushion forward.
- Remove the 6 Torx bolts.
- Fold down the rear seat backrest.

4. With assistance, remove the LH rear seat assembly.

Installation

1. With assistance, install the LH rear seat assembly.

- Position the seat on the dowels.

2. Secure the LH rear seat.

- Return the seat backrest to the upright position.
- Tighten the Torx bolts to 40 Nm (30 lb.ft).
- Fold the seat cushion rearwards.

3. Install the RH rear seat.

- Position the seat on the dowels.

4. Secure the RH rear seat.

- Return the seat backrest to the upright position.
- Tighten the Torx bolts to 40 Nm (30 lb.ft).
- Fold the seat cushion rearwards.

Seating - Rear Seat Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. NOTE: The Torx bolts can be re-used.

Release the rear seat.

- Remove the front 2 Torx bolts.
- Fold the seat assembly forwards.
- Disconnect the electrical connector.
- Remove the rear 2 Torx bolts.

E55970

2. Remove the rear seat assembly.

Installation

1. Install the rear seat assembly.

2. Secure the rear seat.

- Connect the electrical connector.
- Tighten the rear Torx bolts to 45 Nm (33 lb.ft).
- Fold seat assembly rearwards.
- Tighten the front Torx bolts to 45 Nm (33 lb.ft).

Seating - Front Seat Cushion Cover

Removal and Installation

Removal

1. Remove the front seat cushion assembly.
For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).

2. Release the front seat cushion cover.

- Release the 13 clips.

E55966

3. Remove the front seat cushion cover.

- Remove the 12 hog rings.

E56020

Installation

1. Install the front seat cushion cover.

- Install the hog rings.
- Attach the cover and secure with the clips.

2. Install the front seat cushion assembly.

For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).

Seating - Front Seat Cushion Heater Mat

Removal and Installation

Removal

1. Remove the front seat cushion cover.
For additional information, refer to: [Front Seat Cushion Cover](#) (501-10 Seating, Removal and Installation).
2. Remove the front seat cushion heater mat.

E55962

Installation

1. Install the front seat cushion heater mat.
2. Install the front seat cushion cover.
For additional information, refer to: [Front Seat Cushion Cover](#) (501-10 Seating, Removal and Installation).

Seating - Third Row Seat Cushion Cover

Removal and Installation

Removal

1. Remove the occasional seat cushion assembly.

- Remove the 2 Torx bolts.

E56012

2. Remove the third row seat cushion latch covers.

- Remove the 4 screws.

E56007

3. NOTE: Note the fitted position.

Remove the third row seat cushion cover.

- Remove the 2 spacers.
- Release the 7 clips.

E56008

Installation

1. To install, reverse the removal procedure.

- Tighten the Torx bolt to 25 Nm (18 lb.ft).

Seating - Third Row Seat Cushion

Removal and Installation

Removal

• NOTE: In this procedure the cushion is removed as an assembly. There is a separate procedure for removing and installing the cushion cover.

E56012

1. Remove the third row seat cushion.

- Remove the 2 Allen bolts.
- Release the cushion from the seat frame.

Installation

1. NOTE: Ensure seat cushion return springs are correctly located.

Install the third row seat cushion.

- Attach the cushion to the seat frame.
- Tighten the Allen bolts to 25 Nm (18 lb.ft).

Seating - Rear Seat Cushion Cover Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

• NOTE: This procedure shows the removal and installation of both the LH and the RH covers.

1. Fold the seat cushion forward.
2. Release the rear LH seat cushion cover.
 - Release the clip.

E55996

3. Remove the rear LH seat cushion cover.
 - Remove the 21 hog rings.

E56015

4. Release the rear RH seat cushion cover.
 - Release the clip.

E56016

E55997

Installation

1. Install the rear seat cushion cover.
 - Install the hog rings.

- Attach the retaining clip.

2. Fold the seat cushion rearwards.

Seating - Rear Seat Cushion Cover Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. Remove the outer backrest hinge cover.

- Fold the seat assembly forwards.
- Remove the screw.

2. Remove the inner backrest hinge cover.

- Release the backrest cover side clip.
- Release the 2 clips.
- Remove the screw.

3. Remove the rear seat cushion side finisher.

- Remove the 2 screws.

4. Remove the seat rear release strap finisher.

- Remove the screw.

5. Remove the seat front release strap finisher.

- Remove the screw.

E55992

6. Remove the seat cushion finishers.

- Remove the 2 screws.

E55993

7. Remove the rear safety belt buckle.

- Remove the Torx bolt.
- Release the spring.

E55994

8. Release the rear seat cushion cover.

- Release the 15 clips.

E55995

E56017

9. Remove the rear seat cushion cover.

- Remove the 22 hog rings.

Installation

1. Install the rear seat cushion cover.

- Install the hog rings.
- Install the clips.

2. Install the rear safety belt buckle.

- Attach the spring.
- Tighten the Torx bolt to 45 Nm (33 lb.ft).

3. Install the seat cushion finishers.

- Tighten the screws.

4. Install the seat front release strap finisher.

- Remove the screw.
- Tighten the screw.

5. Install the seat rear release strap finisher.

- Tighten the screw.

6. Install the inner backrest hinge cover.

- Attach the clips.
- Tighten the screw.

7. Install the outer backrest hinge cover.

- Tighten the screw.
- Fold seat assembly rearwards.

8. Install the rear seat cushion side finisher.

- Tighten the screws.

Seating - Front Seat Track Motor

Removal and Installation

Removal

1. Raise the seat base for access.
2. Remove the drive cable.
 - Disconnect the seat motor electrical connector.

E131397

3. Remove the 2 clips.

E131398

4. Remove the front seat track motor.

E131399

Installation

1. Install the front seat track motor.
 - Install the drive cable.
 - Install the 2 clips.
2. Install the drive cable.
 - Connect the seat motor electrical connector.

Seating - Front Seat Height Adjustment Motor

Removal and Installation

Removal

- NOTE: Front seat height adjustment motor is supplied as part of the front seat frame assembly.

1. Remove the front safety belt buckle.
For additional information, refer to: Front Safety Belt Buckle (501-20, Removal and Installation).
2. Remove the front seat cushion assembly.
For additional information, refer to: Front Seat Cushion (501-10, Removal and Installation).
3. Remove the front seat backrest assembly.
 - Release and disconnect the 2 electrical connectors.
 - Remove the 4 Torx bolts.

E56071

4. Remove the front seat electrical connector bracket.
 - Remove the 4 screws.

E56072

5. Remove the front seat tilt motor.
 - Release the 3 wiring harness clips.
 - Remove the 4 Torx bolts.

E56073

6. Remove the front seat position sensor.

- Remove the 2 nuts.

7. Remove the front seat height adjustment motor.

- Disconnect the electrical connector.
- Remove the 8 nuts.

Installation

1. Install the front seat height adjustment motor.

- Tighten the nuts to 25 Nm (18 lb.ft).
- Connect the electrical connector.

2. Install the front seat position sensor.

- Tighten the nuts to 4 Nm (3 lb.ft).

3. Install the front seat tilt motor.

- Tighten the Torx bolts to 10 Nm (7 lb.ft).
- Attach the wiring harness.

4. Install the front seat electrical connector bracket.

- Tighten the screws.

5. Install the front seat backrest assembly.

- Tighten the Torx bolts to 25 Nm (18 lb.ft).
- Connect and secure the electrical connectors.

6. Install the front seat cushion assembly.

For additional information, refer to: Front Seat Cushion (501-10, Removal and Installation).

7. Install the front safety belt buckle.

For additional information, refer to: Front Safety Belt Buckle (501-20, Removal and Installation).

Seating - Front Seat Tilt Motor

Removal and Installation

Removal

1. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

2. Remove the front seat cushion side finisher.

- Remove the 2 Torx screws.
- Release from the 3 clips.

E56089

3. Release the front seat control switch.

- Remove the 2 screws.
- Remove the 2 clips.

E55961

4. Remove the front seat cushion assembly.
For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).

5. Remove the front seat tilt motor assembly.

- Remove the 4 Torx bolts.
- Disconnect the 7 electrical connectors.

E55963

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the seat module bracket.

- Remove the 2 Torx bolts.

E55964

Installation

1. Install the seat module bracket.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
2. Install the front seat tilt motor assembly.
 - Tighten the 4 Torx bolts to 10 Nm (7 lb.ft).
 - Connect the electrical connectors.
3. Install the front seat cushion assembly.
For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).
4. Install the front seat cushion side finisher.
 - Secure in the clips.
 - Tighten the screws.
5. Install the front seat control switch.
 - Secure in the clips.
 - Tighten the screws.
6. Install the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

Seating - Front Seat Recliner Motor

Removal and Installation

Removal

1. Remove the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).
2. Remove the front seat backrest pad.
3. Remove the front seat recliner motor.

- Disconnect the electrical connector.
- Remove the Torx bolt.
- Remove the front seat backrest shaft clip.
- Remove the front seat backrest shaft.

E55965

Installation

1. Install the front seat recliner motor.
 - Install the front seat backrest shaft.
 - Install the front seat backrest shaft clip.
 - Tighten the Torx bolt to 10 Nm (7 lb.ft).
 - Connect the electrical connector.
2. Install the front seat backrest pad.
3. Install the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).

Seating - Front Seat Control Switch

Removal and Installation

Removal

1. Remove the front seat cushion side finisher.

- Remove the 2 screws.
- Release from the 3 clips.

E55954

2. Remove the front seat control switch.

- Disconnect the electrical connector.
- Release the front seat control switch harness.
- Remove the 2 screws.
- Remove the 2 clips.

E55961

Installation

1. Install the front seat cushion side finisher.

- Secure in the clips.
- Tighten the screws.

2. Install the front seat control switch.

- Secure in the clips.
- Tighten the screws.
- Connect the electrical connector.
- Attach the wiring harness.

Seating - Front Seat Backrest Cover

Removal and Installation

Removal

• WARNINGS:

To avoid accidental deployment, the restraints control module backup power supply must be depleted. Wait at least one minute after disconnecting the battery ground cable(s) before commencing any repair or adjustment to the supplemental restraint system (SRS), or any component(s) adjacent to the SRS sensors. Failure to follow these instructions may result in personal injury.

Always wear safety glasses when working on an air bag equipped vehicle and when handling an air bag module. Failure to follow this instruction may result in personal injury.

To minimize the possibility of premature deployment, do not use radio key code savers when working on the supplemental restraint system. Failure to follow this instruction may result in personal injury.

To minimize the possibility of injury in the event of premature deployment, always carry a live air bag module with the bag and trim cover pointed away from the body. Failure to follow this instruction may result in personal injury.

To minimize the possibility of premature deployment, live air bag modules must only be placed on work benches which have been ground bonded and with the trim cover facing up. Failure to follow these instructions may result in personal injury.

Never probe the electrical connectors of air bag modules or any other supplemental restraint system component. Failure to follow this instruction may result in personal injury.

Painting over the driver air bag module trim cover or instrument panel could lead to deterioration of the trim cover and air bags. Do not for any reason attempt to paint discolored or damaged air bag module trim covers or instrument panel. Install a new component. Failure to follow this instruction may result in personal injury.

Make sure that sufficient time has elapsed after disconnecting the battery ground cable(s), before commencing work on the supplemental restraint system (SRS). Failure to follow these instructions may result in personal injury.

1. Make the SRS system safe.

For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. Remove the front safety belt buckle.

For additional information, refer to: [Front Safety Belt Buckle](#) (501-20A Safety Belt System, Removal and Installation).

3. Remove the front seat cushion side trim.

- Remove the 2 screws.
- Release from the 3 clips.

E55954

4. Remove the front seat backrest hinge cover.

- Remove the 2 screws.
- Release from the clip.

5. Remove the front seat backrest assembly.

- Release the retaining clips and disconnect the three electrical connectors.
- Remove the 4 Torx bolts.

E55956

6. Remove the front seat grab handles.

- Remove the bolt covers.
- Remove the 2 bolts.

7. NOTE: Head restraint release latch is underneath backrest cover.

Remove the front seat head restraint.

- Release the front seat head restraint latch.

8. Remove the seat armrest.

For additional information, refer to: Front Seat Armrest (501-10, Removal and Installation).

9. Remove the front seat lumbar adjustment knob.

- Pull sharply to release from lumbar mechanism.

10. Release the front seat backrest cover.

- Release the 5 clips.
- Release the tension straps.

11. Remove the front seat backrest cushion and cover from the front seat frame.

- Remove the 3 hog rings.

Installation

1. Install the front seat backrest cover.

- Install the hog rings.
- Install the clips.
- Attach the tension straps.

2. Install the front seat lumbar adjustment knob.

- Push firmly to secure to the lumbar mechanism.

3. Install the seat armrest.

For additional information, refer to: Front Seat Armrest (501-10, Removal and Installation).

4. Install the front seat head restraint.

5. Install the front seat grab handles.

- Tighten the bolts to 25 Nm (18 lb.ft).
- Install the bolt covers.

6. Install the front seat backrest assembly.
 - Tighten the Torx bolts to 25 Nm (18 lb.ft).
 - Connect and secure the electrical connectors.
7. Install the front seat backrest hinge cover.
 - Tighten the screws.
 - Fit the clip.
8. Install the front seat cushion side trim.
 - Position and secure in the clips.
 - Install the screws.
9. Install the front safety belt buckle.
For additional information, refer to: [Front Safety Belt Buckle](#)
(501-20A Safety Belt System, Removal and Installation).

Seating - Third Row Seat Backrest Cover

Removal and Installation

Removal

1. Fold the seat cushion assembly forwards.
2. Remove the seat backrest hinge inner covers.

- Release the clip.

3. Remove the seat backrest latch covers.

- Remove the 2 screws.

4. Remove the seat backrest cover.

- Fold the seat cushion forward.
- Release the 14 clips.

Installation

1. To install, reverse the removal procedure.

Seating - Front Seat Backrest Heater Mat

Removal and Installation

Removal

1. Remove the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).
2. NOTE: Front seat cushion heater mat shown in illustration.
Removal of backrest heater mat is the same.

Remove the front seat backrest heater mat.

E55962

Installation

1. Install the front seat backrest heater mat.
2. Install the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).

Seating - Rear Seat Backrest Cover Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

- NOTE: This procedure shows the removal of both the LH and RH covers.

1. LH seat only: Remove the safety belt retractor cover and guide.

- Remove the 2 screws.

2. Remove the rear seat release handle.

3. Remove the rear seat release handle finisher.

- Remove the screw.

4. Remove the rear seat head restraint.

- Depress the 2 retaining clips.

5. Remove the rear seat head restraint retaining clips.

6. Release the rear LH seat backrest cover.

- Release the 10 clips.

7. Remove the rear LH seat backrest cover.

- Remove the 41 hog rings.

E56013

8. Release the rear RH seat backrest cover.

- Release the 9 clips.

E56002

9. Remove the rear RH seat backrest cover.

- Remove the 24 hog rings.

E56014

Installation

1. Install the rear seat backrest cover.

- Install the hog rings.
- Attach the clips.

2. Install the rear seat head restraint retaining clips.

3. Install the rear seat head restraint.

4. Install the rear seat release handle finisher.

- Tighten the screw.

5. Install the rear seat release handle.

6. Install the safety belt guide and retractor cover.

- Attach the safety belt guide and retractor cover.
- Tighten the screws.

Seating - Rear Seat Backrest Cover Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. Remove the inner backrest hinge cover.

- Release the backrest cover side clip.
- Remove the screw.
- Release the 2 clips.

E55971

2. Remove the outer backrest hinge cover.

- Remove the screw.

E55972

3. Remove the rear seat cushion side finisher.

- Remove the 2 screws.

E55973

4. Remove the luggage strap tether.

- Remove the Allen bolt.

E55974

5. Remove the rear seat head restraint.

- Depress the 2 retaining clips.

6. Remove the rear seat head restraint retaining clips.

7. Remove the rear seat release handle.

8. Remove the rear seat release handle finisher.

- Remove the screw.

9. Disconnect the backrest heater mat electrical connector.

- Release the rear seat cushion side clip.

10. Remove the rear seat backrest assembly.

- Remove the 3 Torx bolts.

11. Release the rear seat backrest cover.

- Release the 5 clips.

12. Remove the rear seat backrest cover.

- Remove the 16 hog rings.

Installation

1. Install the rear seat backrest cover.

- Install the 16 hog rings.

- Attach the 4 clips.
2. Install the rear seat backrest assembly.
 - Tighten the Torx bolts to 45 Nm (33 lb.ft).
 3. Connect the backrest heater mat electrical connector.
 - Attach the rear seat cushion side clip.
 4. Install the rear seat release handle finisher.
 - Tighten the screw.
 5. Install the rear seat release handle.
 6. Install the rear seat head restraint retaining clips.
 7. Install the rear seat head restraint.
 8. Install the luggage strap tether.
 9. Install the rear seat cushion side finisher.
 - Tighten the screws.
 10. Install the outer backrest hinge cover.
 - Tighten the screws.
 - Tighten the screw.
 11. Install the inner backrest hinge cover.
 - Attach the clips.
 - Tighten the screw.
 - Attach the backrest cover side clip.

Seating - Seat Track Vehicles Without: Power Seats

Removal and Installation

Removal

1. Remove the front safety belt buckle.
For additional information, refer to: [Front Safety Belt Buckle](#) (501-20A Safety Belt System, Removal and Installation).

2. Remove the front seat cushion side trim.

- Remove the 2 Torx screws.
- Release from the 4 clips.

E56089

3. Remove the front seat base trim.

- Remove the screw.
- Release the 2 clips.

E55967

4. Remove the front seat base.

- Remove the 6 nuts.

E55968

5. Remove the front seat cushion assembly.
 - Release and disconnect the 2 electrical connectors.
 - Remove the 4 Torx bolts.

E59785

E59784

6. Remove the seat track assembly.
 - Remove the 4 Torx bolts.

Installation

1. Install the seat track assembly.
 - Tighten the Torx bolts to 25 Nm (18 lb.ft).
2. Install the front seat cushion assembly.
 - Tighten the Torx bolts to 25 Nm (18 lb.ft).
 - Connect and secure the electrical connectors.
3. Install the front seat base.
 - Tighten the nuts to 25 Nm (18 lb.ft).
4. Install the front seat base trim.
 - Secure in the clips.
 - Tighten the screw.
5. Install the front seat cushion side trim.

- Secure in the clips.
- Tighten the screws.

6. Install the front safety belt buckle.

For additional information, refer to: [Front Safety Belt Buckle](#)
(501-20A Safety Belt System, Removal and Installation).

Seating - Seat Track Vehicles With: Power Seats

Removal and Installation

Removal

- NOTE: The front seat track motor is supplied as part of the front seat lower frame assembly.

1. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

2. Remove the front seat cushion side trim.

- Remove the 2 Torx screws.
- Release from the 4 clips.

E56089

3. Release the seat control switch.

- Remove the 2 screws.
- Remove the 2 clips.

E55961

4. Remove the front seat base trim.

- Remove the screw.
- Release the 2 clips.

E55967

5. Remove the front seat base.

- Remove the 6 nuts.

E55968

6. Remove the front seat track motor.

- Disconnect the electrical connector.
- Release the electrical connector.
- Remove the 8 nuts.

E55969

7. Remove the front seat track motor assembly from the seat rails.

- Remove the 4 bolts.
- Release the flexi drive from the seat rails.

E126877

Installation

1. Make sure the seat rails are installed as a matched pair as supplied.

- Make sure the seat rails are correctly aligned.

2. Install the front seat track motor assembly to the seat rails.

- Install the 4 bolts.
- Tighten the nuts to 10 Nm (7 lb.ft).

3. Install the front seat track motor.

- Tighten the nuts to 22 Nm (16 lb.ft).
- Connect the electrical connector.
- Secure the electrical connector.

4. Install the front seat base.

- Tighten the nuts to 22 Nm (16 lb.ft).

5. Install the front seat base trim.

- Secure in the clips.
- Tighten the screw.

6. Install the front seat cushion side trim.

- Secure in the clips.
- Tighten the screws.

7. Install the seat control switch.

- Secure in the clips.
- Tighten the screws.

8. Install the front seat.

For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

Seating - Front Seat Manual Height Adjustment Lever

Removal and Installation

Removal

1. Remove the drivers side seat slides.
For additional information, refer to: [Seat Track - Vehicles With: Power Seats](#) (501-10 Seating, Removal and Installation).
2. Remove the front seat cushion base.
For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).
- 3.

4.

5. TORQUE: 25 Nm

6. CAUTIONS:

 Tie straps must be fitted, failure to follow this instruction may result in personal injury.

 Failure to follow this instruction may cause damage to the vehicle.

Secure the seat base using the 4 tie straps supplied, as shown.

- Using the seat height adjuster, lower the seat base to its lowest position.

E130243

7. Release the arm from the height adjuster.

- Remove the Torx bolt.

E130245

8. Drill out the 4 rivets.

E130244

Installation

1. To install, reverse the removal procedure.

Glass, Frames and Mechanisms -**Sealants**

11	-	PDM (passenger door module)
12	-	Front passenger window switch

GENERAL

Windshield

The laminated windshield is bonded and sealed to the body aperture using PU sealant. Heat bonded to the inner surface of the screen is the optical unit for the rain sensor and the interior mirror mounting boss.

Vertical fine-wire multi-strand elements are fitted between the glass laminations to de-ice and demist the screen. At the bottom of the screen six horizontal heating elements bonded to the interior glass surface prevent the wiper blades freezing to the screen during adverse weather conditions.

The screen is supplied with the heating element flat foil connectors fitted to a sealed terminal block. This terminal block is

wired to a connector for connecting to the vehicle harness.

Rear Window

The tempered glass tinted green rear window is bonded to the upper tail doorframe using PU sealant. Fitted to the inner surface of the rear window are the heating elements and antennas.

The heating element is connected by two Lucar terminals while the antenna is connected to the vehicle by a twin and single stud connector at the top of the screen.

Electric Windows

Electric windows are installed in all four doors. All of the electric windows incorporate one-shot up, one-shot down and anti-trap features.

In each door, the window is operated by a regulator, which is controlled by the related door module in response to inputs from window switches. The door modules also operate the windows in response to inputs from the [CJB \(central junction box\)](#) for global opening and closing.

WINDOW SWITCHES

Driver Window Switches

E132380

Passenger Window Switch

E132381

Individual window switches are installed in each of the three passenger doors. Window switches for all of the windows and a rear window isolation switch are installed in the driver door switchpack in the top surface of the door trim.

All window switches are of the non-latching rocker type. The switches have two switching positions in each direction, inch up/down and one-shot up/down. Operating the switch to the second detent position will activate the one-shot feature.

The driver door switchpack is powered by a permanent battery feed from the [CJB](#). When the switches in the driver door switchpack are used, the switchpack translates the switch movement into a [LIN \(local interconnect network\)](#) bus message. A [LIN](#) bus connects the driver door switchpack to the driver door module and the driver side [RDM](#). Each passenger window switch is hardwired into circuits with the related door module.

DOOR MODULES

E132128

Each door module is attached to the inside of the related door casing and connected to the door harness.

The door modules interpret the window operation requests into appropriate outputs for the motor in the related window regulators. Each door module is powered by a permanent battery feed from the [CJB](#).

A [LIN](#) bus connects the two door modules on the driver side of the vehicle to the driver door switchpack. The two door modules on the front passenger side of the vehicle are connected together by a second [LIN](#) bus. The [DDM](#) and the [PDM](#) are also connected to the medium speed [CAN \(controller area network\)](#) bus.

WINDOW REGULATORS

Front Window Regulators

E133133

Item	Part Number	Description
1	-	Window Glass
2	-	Window motor
3	-	Mounting frame
4	-	Glass carrier

The front window regulator and motor is supplied as an assembly and is handed. Each assembly comprises a front and rear runner, a continuous cable and a motor.

The runners are secured in the door frame with four screws. The door glass is located in two carriers, which are located in tracks in the runners. The glass is retained in friction pads in each carrier and secured with clamp screws.

Each carrier is attached to the cable which, in turn, is attached to a drum driven by the motor. When the motor is operated the drum pulls the cable in the required direction to raise or lower the glass.

Rear Window Regulators

E133134

Item	Part Number	Description
1	-	Window Glass
2	-	Window motor
3	-	Mounting frame
4	-	Glass carrier

The rear window regulator and motor is supplied as an assembly and is handed. Each assembly comprises a runner, a continuous cable and a motor.

The runner is secured in the door frame with four bolts. The door glass is located in a carrier located in a track in the runner. The glass is retained in friction pads in the carrier and secured with a clamp screw.

The carrier is attached to the cable which, in turn, is attached to a drum driven by the motor. When the motor is operated, the drum pulls the cable in the required direction to raise or lower the glass.

OPERATION

The electric windows will operate in power modes 6 (ignition on) and 7 (engine running), and for five minutes after the ignition is switched off provided none of the doors are opened.

When a window open or closed selection is made, the related door module supplies power to the window motor to drive it in the appropriate direction. In the inch mode, the motor stops when the switch is released or the window reaches the end of its travel. In the one-shot mode, the motor stops when if the switch is operated again (either up or down) or the window reaches the end of its travel.

When the passenger window switches are used, they produce an open or close request by completing a circuit with the related door module.

When the driver window switches are used, the driver door switchpack outputs a request message for the appropriate door module on the [LIN](#) bus. If the message is for a door module on the opposite side of the vehicle to the driver, the [DDM](#) relays the message to the [PDM](#) on the medium speed [CAN](#) bus. If necessary, the [PDM](#) then sends a [LIN](#) bus message to the [RDM](#) on its side of the vehicle.

If any of the passenger windows have opposing up and down requests from two separate switches, for example, a passenger window switch and the related window switch on the driver door switchpack, then the operation of that window will cease, until one or both of the switches are released.

While the isolator switch engaged, the switch tell-tale is illuminated and the rear door modules ignore requests from their related passenger window switches.

Global opening and closing requests are output from the [CJB](#) on the medium speed [CAN](#) bus. The [DDM](#) and the [PDM](#) then relay the request to their respective [RDM](#).

One-shot Window Operation Reset

If the battery is disconnected or discharged, or the power supply to a door module is interrupted, one-shot window operation is disabled until the window position is re-established by the affected door module(s). To reset one-shot window operation:

- Close the window fully.
- Release the switch, then pull up and hold the switch for one second.
- If necessary, repeat the procedure for the other windows.

Anti-trap Protection

The anti-trap feature is incorporated for all of the door windows in both the inching and one-shot modes. If the anti-trap function is activated while a window is closing, the window motor reverses for 0.5 second.

Each window motor has a Hall sensor to enable the related door module to monitor the motor speed. If the motor speed decreases below a set threshold, indicating an obstruction, the power feed to the motor is reversed so the window goes back down.

If it is still necessary to raise the window, the anti-trap protection can be overridden by attempting to close the window at intervals of less than 10 seconds. On the third attempt the window will move up with increased force to try and overcome the obstruction. If the obstruction cannot be overcome, one-shot operation is disabled.

WINDOW CONTROL DIAGRAM

Glass, Frames and Mechanisms - Glass, Frames and Mechanisms

Diagnosis and Testing

Principle of Operation

For a detailed description of the glass, frames and mechanisms and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Glass, Frames and Mechanisms](#) (501-11 Glass, Frames and Mechanisms, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. **1.** Verify the customer concern.
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Window control switches condition and installation ● Window motors/regulators ● Window channels/runners ● Window cables ● Door window glass retaining brackets 	<ul style="list-style-type: none"> ● Fuses ● Harnesses and connectors ● Window lift relay ● Window control switches ● Window motors

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **4.** If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Window(s) inoperative	<ul style="list-style-type: none"> ● Fuse(s) ● Switch fault ● Front switch isolator fault ● Motor/Regulator fault ● Channel/Runner fault ● Cable fault ● Harness fault 	<ul style="list-style-type: none"> ● Check the fuses. Check the suspect window operation from the individual door switch and from the driver door master switch (it is unlikely that both switches would fail at the same time, so if the window is inoperative from either switch, suspect a fault other than a switch). If the inoperative window is a rear unit, check the function of the isolator at the master switch. ● If the concern persists and a noise cannot be heard when operating the door window glass, GO to Pinpoint Test B.
Window(s) 'one-shot' function inoperative	<ul style="list-style-type: none"> ● Window motor initialization required ● Switch fault 	<ul style="list-style-type: none"> • NOTE: Do not install a new door window regulator motor for this concern. <p>If the battery has been disconnected, carry out the initialization procedure. REFER to: Door Window Motor Initialization (501-11 Glass, Frames and Mechanisms, General Procedures). Check the switch function after initialization.</p>
Rear window does not defrost	<ul style="list-style-type: none"> ● Fuse ● Switch fault ● Relay fault ● Element fault ● Circuit fault 	Check fuse. Check the operation of the heated rear window switch and relay. Check the element for continuity. Check the heated rear window circuit. Refer to the electrical guides.
Window(s) noisy during operation	<ul style="list-style-type: none"> ● Channel/Runner fault ● Cable fault ● Motor/Regulator fault 	<ul style="list-style-type: none"> • NOTE: Door window glass retaining bracket adjustment procedure <p>GO to Pinpoint Test A.</p>
Slow or partial window operation	<ul style="list-style-type: none"> ● Fuse ● Switch fault ● Relay fault ● Element fault ● Circuit fault 	GO to Pinpoint Test C.
Rear door window glass bounce back	<ul style="list-style-type: none"> ● Window motor initialization required (using the manufacturers approve diagnostic system) 	<ul style="list-style-type: none"> • NOTE: Do not install a new door window regulator motor for this concern. <p>Refer to IDS/SDD.</p>

Symptom	Possible Causes	Action
Front door window glass bounce back	<ul style="list-style-type: none"> Window motor initialization required Channel/Runner fault 	<ul style="list-style-type: none"> NOTE: Do not install a new door window regulator motor for this concern. GO to Pinpoint Test D .

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Door Module \(DDM/PDM\)](#) (100-00 General Information, Description and Operation).

Pinpoint Test

PINPOINT TEST A : WINDOW(S) NOISY DURING OPERATION	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK THE DOOR WINDOW GLASS IS SECURE	
	<ol style="list-style-type: none"> Remove the door window glass outer waist seal. Check if the door glass installed correctly and secured to the door window regulator.
	Is the door window glass correctly installed and secure? Yes GO to A2 . No Install a new door window glass as necessary. REFER to: Front Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation).
A2: CHECK THE OPERATION OF THE DOOR WINDOW REGULATOR MOTOR	
	<ol style="list-style-type: none"> Remove the door window glass as necessary. REFER to: Front Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation). Operate the door window regulator four times.
	Does the door window regulator operate correctly (without noise)? Yes Ensure that an anti-rattle pad (available from the parts department) is installed to the door window glass retaining bracket and installed correctly. REFER to: Front Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation). Test the system for normal operation. If the concern persists, GO to A3 . No Install a new door window regulator motor as necessary. REFER to: Front Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
A3: CHECK THAT THE DOOR WINDOW GLASS SEAL IS FREE FROM FOREIGN MATERIAL	
	<ol style="list-style-type: none"> Check for any foreign material or obstruction in the door window glass seal.
	Is the door window glass seal free from foreign material? Yes GO to A4 . No Remove any foreign material from door window glass seal and lubricate the seal. Test the system for normal operation.
A4: CHECK THAT THE DOOR WINDOW GLASS SEAL IS INSTALLED CORRECTLY	
	<ol style="list-style-type: none"> Check that the door window glass seal is installed correctly.
	Is the door window glass seal installed correctly? Yes GO to A5 . No Install the door window glass seal correctly. Test the system for normal operation.
A5: CHECK THAT THE DOOR WINDOW GLASS SEAL IS NOT WORN IN THE CHANNELS	
	<ol style="list-style-type: none"> Visually check that the door window glass seal is not worn in the door channels.
	Is the door window glass seal worn in the channels? Yes Install a new door window glass seal as necessary. Test the system for normal operation. No Install the door window glass and adjust the door window glass. Test the system for normal operation.
PINPOINT TEST B : WINDOW(S) INOPERATIVE (MOTOR NOISE CANNOT BE HEARD)	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
B1: CHECK FOR DOOR WINDOW REGULATOR MOTOR NOISE	
	<ol style="list-style-type: none"> Operate the door window regulator motor as necessary.
	Is there a noise from the door window regulator motor when operated? Yes GO to B2 . No

	<p>Install a new door window regulator motor as necessary. REFER to: Front Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).</p>
--	---

B2: CHECK THAT THE DOOR WINDOW GLASS SEAL IS FREE FROM FOREIGN MATERIAL

	<p>1 Check for any foreign material or obstruction in the door window glass seal.</p>
	<p>Is the door window glass seal free from foreign material? Yes GO to B3. No Remove any foreign material from door window glass seal and lubricate the seal. Test the system for normal operation.</p>

B3: CHECK THAT THE DOOR WINDOW GLASS SEAL IS INSTALLED CORRECTLY

	<p>1 Check that the door window glass seal is installed correctly.</p>
	<p>Is the door window glass seal installed correctly? Yes GO to B4. No Install the door window glass seal correctly. Test the system for normal operation.</p>

B4: CHECK THAT THE DOOR WINDOW GLASS SEAL IS NOT WORN IN THE CHANNELS

	<p>1 Visually check that the door window glass seal is not worn in the door channels.</p>
	<p>Is the door window glass seal worn in the channels? Yes Install a new door window glass seal as necessary. Test the system for normal operation. No Install the door window glass. Adjust the door window glass referring to the door window glass retaining bracket procedure at the end of this section (see below). Test the system for normal operation. If the concern persists, Test the system for normal operation.</p>

PINPOINT TEST C : SLOW OR PARTIAL WINDOW OPERATION

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
C1: CHECK THE OPERATION OF THE DOOR WINDOW REGULATOR MOTOR	
	<p>1 Remove the door window glass as necessary. REFER to: Front Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation).</p>
	<p>2 Operate the door window regulator as necessary.</p>
	<p>Does the door window regulator operate correctly? Yes GO to C2. No GO to C5.</p>

C2: CHECK THAT THE DOOR WINDOW GLASS SEAL IS FREE FROM FOREIGN MATERIAL

	<p>1 Check for any foreign material or obstruction in the door window glass seal.</p>
	<p>Is the door window glass seal free from foreign material? Yes GO to C3. No Remove any foreign material from door window glass seal and lubricate the seal. Test the system for normal operation.</p>

C3: CHECK THAT THE DOOR WINDOW GLASS SEAL IS INSTALLED CORRECTLY

	<p>1 Check that the door window glass seal is installed correctly.</p>
	<p>Is the door window glass seal installed correctly? Yes GO to C4. No Install the door window glass seal correctly. Test the system for normal operation.</p>

C4: CHECK THAT THE DOOR WINDOW GLASS SEAL IS NOT WORN IN THE CHANNELS

	<p>1 Visually check that the door window glass seal is not worn in the door channels.</p>
	<p>Is the door window glass seal worn in the channels? Yes Install a new door window glass seal as necessary. Test the system for normal operation. No Adjust the door window glass referring to the door window glass retaining bracket procedure at the end of this section (see below). Test the system for normal operation.</p>

C5: CHECK THE VOLTAGE TO THE DOOR WINDOW REGULATOR MOTOR

• NOTE: The door window regulator motor can be removed from the regulator. Install a new door window regulator motor not the complete assembly for this concern.

	<p>1 Using a multimeter, check the voltage to the door window regulator motor.</p>
	<p>Is the voltage greater than 10 volts? Yes Install a new door window regulator motor as necessary. No Repair the wiring harness. Test the system for normal operation. If the concern continues, install a new door window regulator motor as necessary.</p>

PINPOINT TEST D : FRONT DOOR WINDOW GLASS BOUNCE BACK

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
D1: CHECK WINDOW MOTOR INITIALIZATION	
	<p>1 Initialize the door window motor. REFER to: Door Window Motor Initialization (501-11 Glass, Frames and Mechanisms, General Procedures).</p>
	<p>Did the initialization work? Yes Test the system for normal operation. No GO to D2.</p>
D2: CHECK THAT THE DOOR WINDOW GLASS SEAL IS FREE FROM FOREIGN MATERIAL	
	<p>1 Check for any foreign material or obstruction in the door window glass seal.</p>
	<p>Is the door window glass seal free from foreign material? Yes GO to D3. No Remove any foreign material from door window glass seal and lubricate the seal. Test the system for normal operation.</p>
D3: CHECK THAT THE DOOR WINDOW GLASS SEAL IS INSTALLED CORRECTLY	
	<p>1 Check that the door window glass seal is installed correctly.</p>
	<p>Is the door window glass seal installed correctly? Yes GO to D4. No Install the door window glass seal correctly. Test the system for normal operation.</p>
D4: CHECK THAT THE DOOR WINDOW GLASS SEAL IS NOT WORN IN THE CHANNELS	
	<p>1 Visually check that the door window glass seal is not worn in the door channels.</p>
	<p>Is the door window glass seal worn in the channels? Yes Install a new door window glass seal as necessary. Test the system for normal operation. No GO to D5.</p>
D5: CHECK THE DOOR WINDOW GLASS IS SECURE	
	<p>1 Remove the door window glass outer waist seal.</p>
	<p>2 Check if the door glass installed correctly and secured to the door window regulator.</p>
	<p>Is the door window glass correctly installed and secure? Yes Test the system for normal operation. No Adjust the door window glass referring to the door window glass retaining bracket procedure in this procedure. Test the system for normal operation. If the concern persists, install a new door window regulator motor as necessary. REFER to: Front Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).</p>

Door window glass retaining bracket adjustment procedure

1. **1.** Remove the door window glass as necessary.
REFER to: [Front Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation) / [Rear Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
2. **2.** Check for any foreign material or obstruction in the door window glass seal and channels. Clean all areas prior to adjustment to allow correct alignment.
3. **3.** Release but do not remove the door window glass retaining bracket(s) bolt(s).
4. **4.** Push the door window glass retaining bracket(s) to the edge of the door window glass to achieve minimum parallel gap.
5. **5.** Tighten the door window glass retaining bracket(s) bolt(s).
 - Tighten the retaining bolt(s) to 6Nm.

E136430

6. **6.** Apply lubricate (RYL500010) to the lower part of the door window glass retaining brackets prior to installation of the door window glass.
7. **7.** Install the door window glass as necessary.
REFER to: [Front Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation) / [Rear Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
8. **8.** Check the system for normal operation.

Door glass channel setting procedure

1. **1.** Remove the door trim panel as necessary.
REFER to: [Front Door Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) / [Rear Door Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

E45509

2. • **NOTE:** Do not remove the door window glass channel.
2. Release the door window glass channel retaining bolt.
3. **3.** Lower the door window glass.

4. **4.** Tighten the door window glass channel retaining bolt.
5. **5.** Check the system for normal operation.

Glass, Frames and Mechanisms - Door Window Motor Initialization

General Procedures

1. NOTE: After the battery has been disconnected it is necessary to initialize each door window motor separately to operate the "one-touch" up function.

• **NOTE:** Make sure a minimum of 2 minutes from initial disconnect of battery has elapse prior to reconnecting the battery. The initialising of the window glass motor must be conducted with the engine running.

Operate the window control switch until the door window glass is in the fully closed position, continue to operate the window control switch for a further two seconds.

2. Release the window control switch.

3. Operate the window control switch in the closed position and continue to operate the window control switch for a further two seconds.

4. Operate the window control switch until the door window glass is in the fully open position ("one-touch" down).

5. NOTE: If the door window motor initialization has been completed correctly, when the window control switch is operated, the door window glass should move to the fully closed position ("one-touch" up) automatically.

• **NOTE:** If the door window glass does not fully close automatically ("one-touch" up), repeat the complete procedure.

Operate the window control switch once to the close position.

6. Repeat the door window motor initialization for each door window motor.

Glass, Frames and Mechanisms - Rear Door Window Glass

Removal and Installation

Removal

• NOTE: Once the rear door window fixed glass has been removed the rear door glass can be simply lifted and removed from the door.

• NOTE: The door glass should be lowered by approximately one third.

1. Remove the rear door window fixed glass.
For additional information, refer to: [Rear Door Fixed Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

2. Remove the rear door window glass.

3. NOTE: Do not disassemble further if the component is removed for access only.

• NOTE: Note the fitted position.

Remove the glass retaining clip.

- Remove the Torx bolt.
- Remove the spacer washer.
- Remove the flat washer.

E55206

Installation

1. Install the glass retaining clip.

- Install the spacer.
- Install the washer.
- Tighten the Torx screws to 8 Nm (6 lb.ft).

2. Install the rear door window glass.

3. Install the rear door window fixed glass.

For additional information, refer to: [Rear Door Fixed Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

Glass, Frames and Mechanisms - Liftgate Window Glass

Removal and Installation

Removal

• CAUTIONS:

Always protect paintwork and glass when removing exterior components.

Always protect the interior components when removing body glass.

Lay the glass on felt covered supports. Do not stand on edge as this can cause chips which subsequently develop into cracks.

• NOTE: The following equipment is required: | Cutting wire and handles | Kent knife | Glazing knife | Glass replacement kit | Sealant applicator gun | Suction cups | A felt covered table or stand to support glass

1. Remove the rear wiper arm.
For additional information, refer to: [Rear Wiper Pivot Arm](#) (501-16 Wipers and Washers, Removal and Installation).
2. Remove the rear wiper drive spindle seal.

E48470

3. Remove the liftgate lower trim panel.
For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ormentation, Removal and Installation).

E47638

4. Remove the liftgate upper trim panel.

- Release the 4 clips.

E48471

5. Remove the liftgate side trim panel.

- Release the 4 clips.
- Repeat the above procedure for the other side.

E48472

6. Disconnect both heated rear window electrical connectors.

E48473

7.  **WARNING:** Eye protection must be worn.

With assistance, remove the liftgate window glass.

- Carefully cut through the sealant using a glazing knife or cutting wire.
- Attach the suction cups.
- Noting fitted position, remove the 5 spacers.

E48474

Installation

1. Carefully remove the sealant from the body to leave a smooth surface.

2. Install the liftgate window glass.

- Install the spacers equally as shown.
- Use masking tape to establish reference marks as an alignment aid.

3. Remove the liftgate window glass.

- Clean the component mating faces.

4. Apply etch primer to any bare metal.

5. Apply primer over the etch primer.

6. Apply glass primer to the sealant face on the liftgate window glass and allow to cure.

7. Apply activator over the old sealant on the liftgate and allow to cure.

8. Fit a pre-cut nozzle to the sealer cartridge, remove the lid, shake out the crystals and fit the cartridge to the applicator gun.

- Modify the nozzle to achieve a bead section in the shape of a right angle triangle with a base of 8 mm and a vertical height of 12 mm.

9. Apply a continuous bead of sealant to the liftgate window glass as shown.

10. With assistance, install and align the liftgate window glass.

- Lightly press the window glass to seat the sealer.

11. Test the sealer for leaks, apply additional sealer if necessary. If water is used, allow sealer to dry before testing. Spray water around the glass and check for leaks. Mark any area that leaks. Dry the glass and sealer then apply additional sealer.

12. Connect the heated rear window electrical connectors.

13. Install the liftgate side trim panel.

- Secure with the clips.
- Repeat the above procedure for the other side.

14. Install the liftgate upper trim panel.

- Secure with the clips.

15. Install the liftgate lower trim panel.

For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and

Installation).

16. Install the rear wiper drive spindle seal.

17. Install the rear wiper arm.

For additional information, refer to: [Rear Wiper Pivot Arm](#)
(501-16 Wipers and Washers, Removal and Installation).

Glass, Frames and Mechanisms - Rear Door Fixed Window Glass

Removal and Installation

Removal

1. Remove the rear door window motor and regulator assembly.
For additional information, refer to: [Rear Door Window Regulator and Motor](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
2. Lower the rear door glass to the bottom of the door.
 - Remove the wedge.
3. Remove the rear door frame trim.
 - Release the 2 clips.
 - Carefully release the door trim.
4. Carefully remove the inner waist seal.

5. Release the lining from the glass rear channel.
6. Remove the rear door window fixed glass.
 - Remove the grommet.
 - Loosen the Torx screw, but do not remove it completely at this stage.
 - Pull the lower edge of the glass forward to release it from the door frame.

Installation

1. Install the rear door window fixed glass.
 - Make sure the locating peg on the fixed glass has engaged with the door frame.
 - Tighten the Torx screw to 10 Nm (7 lb.ft).
2. Install the channel lining.
3. Install the inner waist seal.
4. Install the door frame trim.

- Clean the component mating faces.
- Remove backing tape from adhesive strip.
- Secure the clips.

5. NOTE: Wedge the glass in this position.

Raise the rear door glass fully.

- Engage the door glass with the channel.

6. Install the rear door window motor and regulator assembly.
For additional information, refer to: [Rear Door Window Regulator and Motor](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

Glass, Frames and Mechanisms - Windshield Glass

Removal and Installation

Removal

• CAUTIONS:

Always protect paintwork and glass when removing exterior components.

Always protect the interior components when removing body glass.

Lay the glass on felt covered supports. Do not stand on edge as this can cause chips which subsequently develop into cracks.

• NOTE: The following equipment is required: | Cutting wire and handles | Kent knife | Glazing knife | Windshield replacement kit | Sealant applicator gun | Suction cups | A felt covered table or stand to support glass

1. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
2. Remove both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove the rain sensor.
For additional information, refer to: [Rain Sensor](#) (501-16 Wipers and Washers, Removal and Installation).
4. Remove the roof moulding.
 - Release the 6 clips.
 - Repeat the above procedure for the other side.

5. **WARNING:** Eye protection must be worn.

With assistance, remove the windshield glass.

- If installed, disconnect the 4 electrical connectors.
- Carefully cut through the sealant using a glazing knife or cutting wire.
- Attach the suction cups.
- Noting fitted position, remove the 4 spacers.

Installation

1. Carefully remove the sealant from the body to leave a smooth surface.

2. Install the windshield glass.

- Install the spacers equally as shown.
- Use masking tape to establish reference marks as an alignment aid.

3. Remove the windshield glass.

- Clean the component mating faces.

4. Apply etch primer to any bare metal.

5. Apply primer over the etch primer.

6. Apply glass primer to the sealant face on the windshield glass and allow to cure.

7. Apply activator over the old sealant on the windshield glass and allow to cure.

8. Fit a pre-cut nozzle to the sealer cartridge, remove the lid, shake out the crystals and fit the cartridge to the applicator gun.

- Modify the nozzle to achieve a bead section in the shape of a right angle triangle with a base of 8 mm and a vertical height of 12 mm.

9. Apply a continuous bead of sealant to the windshield glass as shown.

10. With assistance, install the window glass.

- Lightly press the window glass to seat the sealer.
- Connect the electrical connectors.

11. Test the sealer for leaks, apply additional sealer if necessary. If water is used, allow sealer to dry before testing. Spray water around the glass and check for leaks. Mark any area that leaks. Dry the glass and sealer then apply additional sealer.

12. Install the roof mouldings.

- Secure with the clips.

13. Install the rain sensor.

For additional information, refer to: [Rain Sensor](#) (501-16 Wipers and Washers, Removal and Installation).

14. Install both A-pillar upper trim panels.

For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

15. Install the plenum chamber panel.

For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).

Glass, Frames and Mechanisms - Glass Roof Panel

Removal and Installation

Removal

• CAUTIONS:

Always protect paintwork and glass when removing exterior components.

Always protect the interior components when removing body glass.

Lay the glass on felt covered supports. Do not stand on edge as this can cause chips which subsequently develop into cracks.

• NOTE: The following equipment is required: | Cutting wire and handles | Kent knife | Glazing knife | Glass replacement kit | Sealant applicator gun | Suction cups | A felt covered table or stand to support glass

1. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the roof moulding.
 - Release the 3 clips.
 - Repeat the above procedure for the other side.

E50911

3. Remove the antenna.
 - Disconnect the cable.
 - Remove the 2 screws.

E50912

4.  **WARNING:** Eye protection must be worn.

With assistance, remove the roof panel fixed glass.

- Carefully cut through the sealant using a glazing knife or cutting wire.
- Attach the suction cups.
- Noting fitted position, remove the 11 spacers.

E50913

Installation

1. Carefully remove the sealant from the body to leave a smooth surface.
2. Install the roof panel fixed glass.
 - Install the spacers equally as shown.
 - Use masking tape to establish reference marks as an alignment aid.

E50914

3. With assistance, remove the roof panel fixed glass.
 - Clean the component mating faces.
4. Apply etch primer to any bare metal.
5. Apply primer over the etch primer.
6. Apply glass primer to the sealant face on the roof panel fixed glass and allow to cure.
7. Apply activator over the old sealant on the roof panel and allow to cure.
8. Fit a pre-cut nozzle to the sealer cartridge, remove the lid, shake out the crystals and fit the cartridge to the applicator gun.
 - Modify the nozzle to achieve a bead section in the shape of a right angle triangle with a base of 8 mm and a vertical height of 12 mm.
9. Apply a continuous bead of sealant to the roof panel fixed glass as shown.

E50915

10. With assistance, install and align the roof panel fixed glass.

- Lightly press the roof panel fixed glass to seat the sealer.

11. Test the sealer for leaks, apply additional sealer if necessary. If water is used, allow sealer to dry before testing. Spray water around the glass and check for leaks. Mark any area that leaks. Dry the glass and sealer then apply additional sealer.

12. Install the antenna.

- Tighten the screws.
- Connect the cable.

13. Install the roof mouldings.

- Secure with the clips.

14. Install the headliner.

For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Glass, Frames and Mechanisms - Rear Quarter Window Glass

Removal and Installation

Removal

• CAUTIONS:

Always protect paintwork and glass when removing exterior components.

Always protect the interior components when removing body glass.

Lay the glass on felt covered supports. Do not stand on edge as this can cause chips which subsequently develop into cracks.

• NOTE: The following equipment is required:

- Cutting wire and handles
- Kent knife
- Glazing knife
- Glass replacement kit
- Sealant applicator gun
- Suction cups
- A felt covered table or stand to support glass

1. Remove the D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the rear quarter window glass panel.
 - Release the 3 clips.

E49794

3. Disconnect the rear quarter window glass antenna connector.

E49795

E49796

4.  **WARNING:** Eye protection must be worn.

 **CAUTION:** Care must be taken not to damage the air bag curtain module when cutting through the sealant.

With assistance, remove the rear quarter window glass.

- Carefully cut through the sealant using a glazing knife or cutting wire.
- Attach the suction cups.
- Noting fitted position, remove the 4 spacers.

Installation

1. Carefully remove the sealant from the body to leave a smooth surface.
2. Apply etch primer to any bare metal.
3. Apply primer over the etch primer.
4. Apply glass primer to the sealant face on the rear quarter window glass and allow to cure.
5. Apply activator over the old sealant on the rear quarter window glass and allow to cure.
6. Fit a pre-cut nozzle to the sealer cartridge, remove the lid, shake out the crystals and fit the cartridge to the applicator gun.
 - Modify the nozzle to achieve a bead section in the shape of a right angle triangle with a base of 8 mm and a vertical height of 12 mm.
7. Apply a continuous bead of sealant to the rear quarter window glass as shown.

E49797

8. With assistance, install and align the rear quarter window glass.
 - Install the spacers equally as shown.
 - Lightly press the window glass to seat the sealer.
9. Test the sealer for leaks, apply additional sealer if necessary. If water is used, allow sealer to dry before testing. Spray water around the glass and check for leaks. Mark any area that leaks. Dry the glass and sealer then apply additional sealer.
10. Connect the rear quarter window glass antenna connector.
 - Clean the component mating faces.
11. Install the rear quarter window glass panel.
 - Secure with the clips.
12. Install the D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Glass, Frames and Mechanisms - Rear Door Window Regulator and Motor

Removal and Installation

Special Tool(s)	
 <p>501-114</p> <p>E54200</p>	<p>Door glass release lever</p> <p>501-114</p>

Removal

- NOTE: The door glass should be lowered by approximately one third.

1. Remove the rear door trim panel.
For additional information, refer to: Rear Door Trim Panel (501-05, Removal and Installation).

2. Remove the speaker.

- Disconnect the electrical connector.
- Remove the 4 screws.

3. Carefully remove the outer waist seal.

- Remove the screw.

4. NOTE: Wedge the glass in this position.

Using the special tool, release the clip and lift the glass to the top of the door frame.

5. Remove the window motor and regulator assembly.

- Disconnect the electrical connector.
- Remove the 4 bolts.
- Remove the 2 nuts.
- Rotate the assembly 90 degrees clockwise, to remove the upper part of the assembly from the rear side of the aperture first.

Installation

1. Install the window motor and regulator assembly.
 - Tighten the bolts and nuts to 10 Nm (7 lb.ft).
 - Connect the electrical connector.

2. Secure the glass to the glass regulator.

- Remove the wedge.
- Lower the glass.

3. Install the outer waist seal.

4. Install the speaker

- Tighten the screws.
- Connect the electrical connector.

5. Install the rear door trim panel.

For additional information, refer to: Rear Door Trim Panel (501-05, Removal and Installation).

Glass, Frames and Mechanisms - Front Door Window Control Switch

Removal and Installation

Removal

1. Remove the window control switch.

- Carefully release the switch.
- Disconnect the 3 electrical connectors.

Installation

1. To install, reverse the removal procedure.

Glass, Frames and Mechanisms - Rear Door Window Control Switch

Removal and Installation

Removal

1. Remove the window control switch.
 - Carefully release the front of the switch.
 - Disconnect the electrical connector.

Installation

1. To install, reverse the removal procedure.

Glass, Frames and Mechanisms - Front Door Window Glass

Removal

1. *Special Tool(s):* [501-114](#)

2.

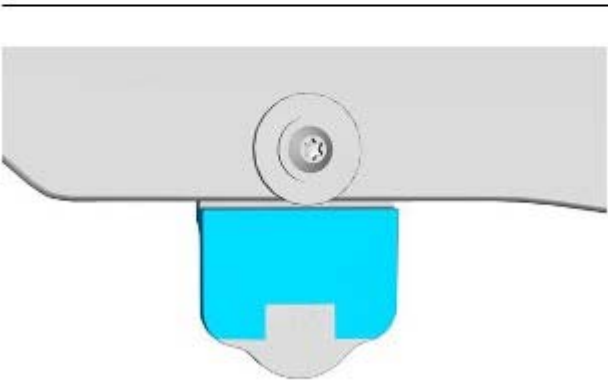

Installation

1.  **CAUTION:** Make sure that the door glass retaining brackets are pushed to the edge of the door window glass to achieve minimum parallel gap.
- **NOTE:** This operation must be done for both retaining brackets.

Torque: 6 Nm

E140674

2. **2. CAUTIONS:**

 Make sure that any grease or lubricant is removed from the retaining brackets prior to installation of the anti-rattle pads.

 Make sure that the anti-rattle pad is installed in the orientation illustrated.

• **NOTE:** This operation must be done for both retaining brackets.

3. To install, reverse the removal procedure.

Glass, Frames and Mechanisms - Front Door Window Regulator and Motor

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.

1. Refer to: [Front Door Trim Panel](#) (501-05 Interior Trim and Ornammentation, Removal and Installation).
2. Refer to: [Front Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

3.

4. *Torque:*

- Front door window regulator and motor retaining bolts 10 Nm
- Front door window regulator and motor retaining nuts 10 Nm
- Door window glass guide channel retaining bolt 10 Nm

Installation

1. To install, reverse the removal procedure.

Instrument Panel and Console - Instrument Panel

Description and Operation

E131962

Item	Part Number	Description
1	-	Instrument panel
2	-	Steering column cover
3	-	Cup holders
4	-	Centre console
5	-	Glove compartment

The instrument panel assembly houses the main instrument cluster, passenger air bag module, glovebox, navigation/message centre, headlamp leveling switch, in-vehicle temperature sensor, engine start/stop switch, audio control panel, steering column, climate control panel, ashtray and air distribution registers, all of which can be removed without removing the instrument panel assembly from the vehicle. The instrument panel wiring harness is located within the instrument panel assembly to facilitate easy installation in vehicle. The instrument panel assembly must be removed from the vehicle to gain access to the wiring harness.

Console

The floor console is located between the front seats and consists of the gear selector, passenger cup-holders, cigar lighter/power socket and a padded armrest. The armrest feature has a hinged lid which can be opened to expose, depending on option specification, a USB connectivity panel, and either a deep stowage unit or a cool box (which will keep items placed within at a temperature 20 degrees lower than the main vehicle cabin). Situated in the rear of the center console is a rear cup-holder unit for second row occupants, and further air distribution registers. Depending on trim level, the rear of the console will also have a rear entertainment console, with a further USB connection point.

For further information on the Audio & Climate control panels refer to the following:

- Control Components (412-04, Description and Operation)
- Audio Unit (415-01B, Description and Operation).

Removal and Installation

Removal

• NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the instrument panel driver side reinforcement.
For additional information, refer to: [Instrument Panel Driver Side Reinforcement](#) (501-12 Instrument Panel and Console, Removal and Installation).
4. Remove the passenger side register trim panel.
For additional information, refer to: [Passenger Side Register Trim Panel](#) (412-01 Air Distribution and Filtering, Removal and Installation).
5. Remove the stowage compartment tray.
 - Release the 4 clips.

6. Remove the instrument panel speaker.
For additional information, refer to: [Instrument Panel Speaker](#) (415-03 Speakers, Removal and Installation).
7. Remove both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
8. Remove the sunload sensor.
 - Release the clips.
 - Disconnect the electrical connector.

9. Remove the instrument panel passenger side reinforcement upper retaining screws.

10. Release the passenger air bag module bracket.

- Remove the 2 Torx screws.

11. Disconnect the 3 electrical connectors from the passenger air bag module.

12. NOTE: Avoid dropping the screw inside the instrument panel.

Remove 1 Torx screw and 1 bolt, from the instrument panel upper section speaker aperture.

13. Release the instrument panel wiring harness.

- Release the 2 clips.

E52203

14. With assistance, remove the instrument panel upper section.

- Remove the 5 Torx screws.

E124712

15. NOTE: Do not disassemble further if the component is removed for access only.

Remove the passenger air bag module.

- Remove the 4 nuts.

E47176

E47193

16. Remove the windshield defroster duct.

- Remove the 7 screws.

Installation

1. Install the windshield defroster duct.

- Tighten the screws.

2. Install the passenger air bag module.

- Tighten the nuts to 10 Nm (7 lb.ft).

3. With assistance, install the instrument panel upper section.

- Tighten the screws.
- Attach the wiring harness.

4. Tighten the instrument panel upper section speaker aperture bolt to 10 Nm (7 lb.ft).

5. Secure the passenger air bag module bracket.

- Tighten the Torx screws to 25 Nm (18 lb.ft).

6. Connect the passenger air bag module electrical connectors.

7. Install the instrument panel passenger side reinforcement upper retaining screws.

8. Install the sunload sensor.

- Connect the electrical connector.
- Secure with the clips.

9. Install the A-pillar trim panels.

For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

10. Install the speaker

For additional information, refer to: [Instrument Panel Speaker](#) (415-03 Speakers, Removal and Installation).

11. Install the stowage compartment tray.

- Secure the 4 clips.

12. Install the passenger side register trim panel.

For additional information, refer to: [Passenger Side Register Trim Panel](#) (412-01 Air Distribution and Filtering, Removal and Installation).

13. Install the instrument panel driver side reinforcement.

For additional information, refer to: [Instrument Panel Driver Side Reinforcement](#) (501-12 Instrument Panel and Console, Removal and Installation).

14. Connect the battery ground cable.

For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Instrument Panel and Console - Instrument Panel

Removal and Installation

Removal

- NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

1. Remove the engine cover.
For additional information, refer to: [Engine Cover - V6 4.0L Petrol](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) / [Engine Cover - V8 5.0L Petrol](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) / [Engine Cover - 2.7L V6 - TdV6](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) / [Engine Cover - TDV6 3.0L Diesel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

2. Evacuate the air conditioning (A/C) system.
For additional information, refer to: [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) (412-00 Climate Control System - General Information, General Procedures).

3.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

4. Drain the cooling system.
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03A Engine Cooling - TDV6 2.7L Diesel, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03B Engine Cooling - TDV6 3.0L Diesel, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - V6 4.0L Petrol, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03D Engine Cooling - V8 5.0L Petrol, General Procedures).

5. Remove the floor console.
For additional information, refer to: [Floor Console](#) (501-12 Instrument Panel and Console, Removal and Installation).

6. Remove both cowl side trim panels.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

7. Remove the driver side closing trim panel.

- Release the clip.
- Remove the 2 screws.
- Disconnect the electrical connector.

E47923

8. Remove the passenger side closing trim panel.

- Release the clip.
- Remove the 2 screws.
- Disconnect the electrical connector.

E47530

9. Release the door check strap from the A-pillar.

- Remove the 2 Torx bolts.

E51196

10. NOTE: The door is still attached by its harness at this stage.

With assistance, release and support the door assembly.

- Remove the 2 bolts.

11. Release the electrical connector from the A-Pillar.

- Release the grommet.
- Carefully release, then slide the latch to locate in the indents, arrowed.

12. Remove the door.

- Disconnect the electrical connector.

E83983

13. Remove the front seats.

For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

14. Release the transmission selector lever cable.

- Remove the clip.
- Release the cable.

E44788

15. Remove the transmission selector lever.

- Remove the 4 bolts.

E54438

16. Disconnect the steering column intermediate shaft from the steering column.

- Note the fitted position.
- Remove the special bolt and discard the nut.

E49465

17. Disconnect 2 drain tubes from the heater housing.

E51199

18. Position the heater housing center ducts aside for access.

E51200

19. Remove 2 Torx bolts from the instrument panel center bracket.

E51201

20. Remove the instrument panel center speaker grille.

- Release the 4 clips.

E124403

21. Remove the instrument panel upper section to body bolt.

E51203

22. Remove the plenum chamber panel.

For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).

23. Remove the instrument panel carrier to bulkhead Torx bolt.

E51204

24.  **CAUTION:** Before disconnecting or removing the components, make sure the area around the joint faces and connections are clean. Plug open connections to prevent contamination.

Disconnect 2 heater hoses from the bulkhead.

- Release the 2 clips.

25. Release 2 A/C lines from the body.

- Remove the nut.

26.  **CAUTION:** Immediately cap all refrigerant lines to prevent ingress of dirt and moisture.

Release 2 A/C lines from the bulkhead.

- Remove the bolt.
- Remove and discard the O-ring seals.

27. Remove the 2 adapter panels.

- Remove the 4 nuts.

28. Release the 3 ground cables from the driver side lower A-pillar.

- Remove the 2 nuts.

29. Disconnect the 5 electrical connectors from the driver side lower A-pillar.

30. Release the 3 ground cables from the passenger side lower A-pillar.

- Remove the 2 nuts.

31. Disconnect the 5 electrical connectors from the passenger side lower A-pillar.

32. Disconnect the heater motor electrical connector.

33. Disconnect 2 central junction box (CJB) electrical connectors.

34. Disconnect 2 electrical connectors from the instrument panel center reinforcement.

35. If installed, disconnect the instrument panel center reinforcement fibre optic cables.

- Disconnect the electrical connector.

36. Driver side: Remove the heater housing to bulkhead Torx bolt.

37. Passenger side: Remove the heater housing to bulkhead Torx bolt.

E51214

38. With assistance, remove the instrument panel.

- Remove the 4 Torx bolts.

E51215

Installation

1. With assistance, install the instrument panel.

- Tighten the Torx bolts to 25 Nm (18 lb.ft).

2. Passenger side: Install the heater housing to bulkhead Torx bolt and tighten to 6 Nm (4 lb.ft).

3. Driver side: Install the heater housing to bulkhead Torx bolt and tighten to 6 Nm (4 lb.ft).

4. Connect the instrument panel center reinforcement fibre optic cables.

5. Connect the instrument panel center reinforcement electrical connectors.

6. Connect the CJB electrical connectors.

7. Connect the heater motor electrical connector.

8. Connect the electrical connectors to the passenger side lower A-pillar.

9. Connect the ground cables to the passenger side lower A-pillar.

- Tighten the nuts to 10 Nm (7 lb.ft).

10. Connect the electrical connectors to the driver side lower A-pillar.

11. Connect the ground cables to the driver side lower A-pillar.

- Tighten the nuts to 10 Nm (7 lb.ft).

12. Install the adapter panels.

- Tighten the nuts to 10 Nm (7 lb.ft).

13. Secure the A/C lines to the bulkhead.

- Tighten the nuts to 10 Nm (7 lb.ft).

- Install new O-ring seals.

15. Connect the bulkhead heater hoses.

- Tighten the bolt to 10 Nm (7 lb.ft).

16. Install the instrument panel carrier to bulkhead Torx bolt and tighten to 25 Nm (18 lb.ft).
17. Install the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
18. Install the instrument panel upper section to body bolt and tighten to 10 Nm (7 lb.ft).
19. Install the speaker grille.
 - Secure with the clips.
20. Install the instrument panel center bracket Torx bolts and tighten to 25 Nm (18 lb.ft).
21. Attach the heater housing center ducts.
22. Connect the drain tubes to the heater housing.
23. Connect the steering column intermediate shaft.
 - Install the special bolt and tighten the new nut to 22 Nm (16 lb.ft).
24. Install the transmission selector lever.
 - Tighten the bolts to 10 Nm (7 lb.ft).
25. Attach the transmission selector lever cable.
 - Install the clip.
26. Install the front seats.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
27. With assistance, install the door assembly.
 - Connect the electrical connector.
 - Secure the electrical connector.
 - Secure the grommet.
 - Tighten the bolts to 10 Nm (7 lb.ft).
28. Attach the door check strap to the A pillar.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
29. Install the driver side closing trim panel.
 - Connect the electrical connector.
 - Secure the clip.
 - Tighten the screws.
30. Install the passenger side closing trim panel.
 - Connect the electrical connector.
 - Secure the clip.
 - Tighten the screws.
31. Install the cowl side trim panels.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
32. Install the floor console.
For additional information, refer to: [Floor Console](#) (501-12 Instrument Panel and Console, Removal and Installation).
33. Refill the cooling system.
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03A Engine Cooling - TDV6 2.7L Diesel, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03B Engine Cooling - TDV6 3.0L Diesel, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - V6 4.0L Petrol, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03D Engine Cooling - V8 5.0L Petrol, General Procedures).

34. Recharge the A/C system.

For additional information, refer to: [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) (412-00 Climate Control System - General Information, General Procedures).

35. Install the engine cover.

For additional information, refer to: [Engine Cover - V6 4.0L Petrol](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) /

[Engine Cover - V8 5.0L Petrol](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) /

Instrument Panel and Console - Instrument Panel Passenger Side Reinforcement

Removal and Installation

Removal

• NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

1. Remove the PAD switch.
For additional information, refer to: [Passenger Air Bag Deactivation \(PAD\) Switch](#) (501-20B Supplemental Restraint System, Removal and Installation).
2. Remove the instrument panel center reinforcement.
For additional information, refer to: [Instrument Panel Center Reinforcement](#) (501-12 Instrument Panel and Console, Removal and Installation).
3. Remove the glove compartment.
For additional information, refer to: [Glove Compartment](#) (501-12 Instrument Panel and Console, Removal and Installation).
4. Detach the door weatherstrip and remove the side trim panel.

E124315

1. Release the trim panel retaining clip.
2. Remove the trim panel.

5. Remove the passenger side footwell duct.

- Remove the clip.

E51923

6. Remove the stowage compartment tray.

- Release the 4 clips.

7. Remove the passenger side support bracket lower retaining screws.

8. Remove the instrument panel passenger side reinforcement.

- Remove the 11 Torx screws.
- Disconnect the electrical connector.

9. NOTE: Do not disassemble further if the component is removed for access only.

Remove the glove compartment lamp.

10. Remove the glove compartment damper.

- Remove the Torx screw.

E51929

11. NOTE: Note the position of the hinge pin and spring prior to removal.

Remove the stowage compartment lid.

- Remove the 2 hinge pins.
- Release the 2 hinge springs.
- Remove the Torx screw and remove the damper.

E51930

12. Remove the glove and stowage compartment strikers.

- Remove the 4 Torx screws.

Installation

1. Install the glove compartment damper.
 - Tighten the Torx screw.
2. Install the stowage compartment lid.
 - Install the damper and tighten the Torx screw.
 - Attach the hinge springs.
 - Install the hinge springs.
3. Install the glove and stowage compartment strikers.
 - Tighten the screws.
4. Install the glove compartment lamp.
5. Install the instrument panel passenger side reinforcement.
 - Connect the electrical connector.
 - Tighten the Torx screws.
6. Install the passenger side support bracket lower retaining screws.
7. Install the passenger side footwell duct.
 - Install the clip.
8. Install the stowage compartment tray.
 - Secure the clips.
9. Install the side trim panel and attach the door weatherstrip.
10. Install the glove compartment.

For additional information, refer to: [Glove Compartment](#) (501-12 Instrument Panel and Console, Removal and Installation).
11. Install the instrument panel center reinforcement.

For additional information, refer to: [Instrument Panel Center Reinforcement](#) (501-12 Instrument Panel and Console, Removal and Installation).
12. Install the PAD switch.

For additional information, refer to: [Passenger Air Bag Deactivation \(PAD\) Switch](#) (501-20B Supplemental Restraint System, Removal and Installation).

Handles, Locks, Latches and Entry Systems - Handles, Locks, Latches and Entry Systems

Description and Operation

Passive Entry - Antenna and Keyless Vehicle Module Location

E130381

Item	Part Number	Description
1	-	Door Antenna - right-hand-front
2	-	Door Antenna - right-hand-rear
3	-	Interior Antenna - roof lining
4	-	Keyless Vehicle Module
5	-	Interior Antenna - roof lining
6	-	Interior Antenna - luggage compartment
7	-	Bumper Antenna - rear bumper
8	-	Interior Antenna - luggage compartment
9	-	Door Antenna - left-hand-rear
10	-	Door Antenna - left-hand-front
11	-	Interior Antenna - front compartment (passive start only)
12	-	Interior Antenna - front compartment

OVERVIEW

The hinged panels are secured with latches and strikers. A remotely operated central locking system controls the locking

and unlocking of the door and luggage compartment latches.

A radio frequency Smart Key allows the vehicle to be locked and unlocked by pressing the appropriate handset buttons. Two levels of central locking system are available:

- Remote central locking, and an
- optional passive entry.

The passive entry and associated passive start system allows the driver to unlock and start the vehicle without using a vehicle key in a door-lock or ignition switch. The passive entry system is an optional fitment while the passive start system is a standard fitment on all vehicles. The passive start system is combined with the passive anti-theft immobilization system.

For additional information, refer to: [Anti-Theft - Passive](#) (419-01B Anti-Theft - Passive, Description and Operation).

Emergency access to the vehicle is provided by a concealed key barrel located in the front left-hand door handle. The key barrel is concealed by a plastic cover which can be removed by inserting the blade of the emergency key into a slot in the cover. The removable emergency key blade is located in the Smart Key.

Operation of the key barrel unlocks the vehicle but does not disarm the alarm system. Locking and unlocking conditions using the emergency key in the door key barrel are:

- If the alarm is not armed the vehicle can be centrally unlocked.
- If the alarm is armed the door only can be opened and the alarm will be triggered.
- The vehicle cannot be double locked or the alarm system armed using the emergency key.

The vehicle can be centrally locked and unlocked from inside using the interior handle release levers on the front doors only. The driver can select locking options, single point entry or drive away locking for example, from a menu available on the touch screen.

Central Locking – Radio Frequency Remote System

The radio frequency central locking system provides locking and unlocking from inside the vehicle and outside within a 20 meter range. The system is operated using buttons on the Smart Key, which transmits radio frequency signals to the radio frequency receiver.

Additional buttons on the Smart Key provide for the convenience operation of the headlamp delay, panic alarm and tailgate release.

Depending on vehicle market, functions offered by the Smart Key include:

- Double locking the doors from outside the vehicle if the lock button on the Smart Key is pressed twice within 3 seconds.
- Drive-away locking - switched on or off by the customer using the vehicle security settings menu available on the touch screen.
- Single or two stage unlocking - single-stage unlocking unlocks all doors with a single press; two-stage unlocking unlocks the driver's door only with a single press and all other doors with a second press.

Changing the unlocking mode between single stage and two-stage also affects the unlocking mode for passive entry (see below). The single or two-stage unlocking function can be switched on or off, as can remote global open or close for the electric windows using the vehicle security settings menu available on the touch screen.

The fuel filler flap is locked by the global locking function. It is not locked by drive-away locking, or if doors are locked from inside the vehicle using the handles.

Actuated from the front door levers only, the doors can be locked from inside the vehicle by pressing the interior door release levers inwards and unlocked by pulling the levers. The touch-screen incorporates a valet mode feature which inhibits access to the glove box while also limiting the use of the touch-screen.

On leaving the vehicle with passive entry the user must press an external button on the door handle once to centrally lock the vehicle or twice within 3 seconds to double lock. The user has a further 3 seconds to pull the door handle to check the vehicle is locked without the Smart Key proximity function unlocking the door again. Pulling the handle after the 3 seconds has lapsed will unlock the door as normal.

If any aperture is not fully closed when the locking process is initiated, either passively or by the Smart Key transmitter, the locking function will be inhibited and an audible error indication will be given. If the ignition is left on an audible warning will be given if the user exits the vehicle, if the user attempts to lock the vehicle (ignition on), another audible indication will be given, and the locking function will be inhibited.

If the door is closed without locking and no key left in the car the ignition will be switched off immediately. If the ignition is left on at any time without starting the vehicle it will switch off automatically after 60 minutes.

If the door is opened by the mechanical key, the full alarm system will sound until the user enters the vehicle and presses either:

- the start/stop button, or
- Smart Key unlock button.

• **NOTE:** If the KVM (keyless vehicle module) fails to locate the Smart Key, a message 'SMART KEY NOT FOUND REFER TO HANDBOOK' will appear in the instrument cluster message center and the keyless start back-up process will have to be used to mobilize and start the vehicle.

Keyless Start Backup

If the vehicle has been unlocked using the emergency key blade or the Smart Key is not detected by the vehicle, it will be necessary to use the keyless start backup to disarm the alarm and start the engine. The following process must be followed in this event:

- Position the Smart Key against the underside of the fascia, on the outboard side of the steering column, with the buttons facing downwards. This is the location of the IAU (immobilizer antenna unit).
- Holding the Smart Key in position and the brake / clutch pedal depressed, press the start/stop button to start the engine.

Smart Key positioned next to immobilizer antenna unit

E129977

This process bypasses the data exchange between the KVM and the [CJB \(central junction box\)](#); this is an inductive process and will operate if the battery in the Smart Key is discharged. A transponder within the Smart Key is detected by the IAU. The IAU confirms the code output from the transponder and communicates this code confirmation with the [CJB](#) via a LIN (local interconnect network) bus connection. The [CJB](#) then initiates the vehicle start process in the normal manner.

PASSIVE ENTRY SYSTEM

The passive entry system is controlled by the KVM and low frequency antennas in each door handle and one in the rear bumper; antennas are also strategically situated within the vehicle. When inside the vehicle, the antennas ensure the Smart Key is always within the active transmission zone of the antennas no matter where the Smart Key is placed inside the vehicle. For this reason the orientation and positioning of the antennas is critical to the correct functioning of the system.

The vehicle can be unlocked without the use of a key-blade or buttons on the Smart Key.

When an external door handle is grasped and the Smart Key is within one meter (3.3ft.) of the handle; the Smart Key receives a low-frequency signal transmitted from the handle.

The Smart Key responds with a radio frequency transmission of its authorization code. The radio frequency signal is received by the Radio-Frequency receiver and passed to the keyless vehicle module which checks and approves the code as valid.

The KVM then drives the fast latch directly to allow the door to be opened. The keyless vehicle module also transmits an unlock request to the [CJB](#). The [CJB](#) then passes an unlock request to the door modules.

Door-handle antenna operating area

E117707

Locking of the vehicle is performed by pressing one of the buttons located on each exterior door handle, with the Smart Key within a one meter range of the vehicle. When the door handle button is pressed, the KVM transmits a low-frequency signal via the handle antenna to the Smart Key. The Smart Key transmits a radio frequency signal which is verified by the KVM and allows the doors to be locked or double locked and the alarm system to be armed.

To double lock the vehicle, the button on the exterior door handle must be pressed twice within three seconds, with the Smart Key within one meter range of the vehicle. If a door, hood or the tailgate door is ajar when an attempt to lock the vehicle is made, an error tone is emitted and no locking action will occur. For additional information, refer to: [Anti-Theft - Active](#) (419-01A Anti-Theft - Active, Description and Operation).

When unlocking the vehicle using passive entry with single stage unlocking selected and a valid Smart key present, grasping the door handle will centrally unlock the vehicle. When the vehicle is configured for two stage unlocking and the drivers door handle is grasped with a valid Smart Key present only the drivers door will unlock, however if a passenger door handle is grasped with a valid Smart Key present the vehicle will centrally unlock.

- NOTE: Placing the key in a metallic container, a metal briefcase for example, may hinder its operation.
- NOTE: Passive locking will only activate if the key is outside the vehicle. If no key is present, two audible error warnings will sound.

To globally close the vehicle pressing and holding the button on the door handle locks the vehicle, arms the alarm and closes all open windows, not the sunroof. The windows will stop closing when the button is released.

Capacitive Door Handle

The new exterior door operates using the following principle. A capacitive plate is molded internally within the handle, the vehicle exterior body acts as a second capacitive plate; air between the two acts as an insulator. The control electronics within the door handle evaluate the capacitance of the circuit, when a hand interrupts the space between the electrical field is altered and thus the capacitance of the capacitor. This signal is used to trigger the KVM to initiate the unlock process. This signal is calibrated so as not to detect false activations, for example, rain water or soiling.

- NOTE: Extreme water levels can trigger an unlock signal, for example, when washing a locked vehicle with a hose or high powered jet nozzle, providing the key is in the detection zone.

CONTROL DIAGRAM

- NOTE: **A** = Hardwired; **F** = RF transmission; **N** = Medium Speed CAN; **W** = LF transmission; **AH** = Serial Communication Link

Item	Part Number	Description
1	-	Battery
2	-	EJB (engine junction box)
3	-	CJB
4	-	Tailgate release switch
5	-	Door handle, lock/unlock switch and antenna – right-hand-front
6	-	Door latch and fast latch - right-hand-front
7	-	Door handle, lock/unlock switch and antenna – left-hand-front
8	-	Door latch and fast latch - left-hand-front
9	-	Door handle, lock/unlock switch and antenna – right-hand-rear
10	-	Door latch and fast latch - right-hand-rear
11	-	Door handle, lock/unlock switch and antenna – left-hand-rear
12	-	Door latch and fast latch - left-hand-rear
13	-	Radio frequency receiver
14	-	Smart Key
15	-	Antenna
16	-	Antenna
17	-	Antenna
18	-	Antenna
19	-	Antenna
20	-	Antenna
21	-	Antenna
22	-	Keyless Vehicle Module

PRINCIPLES OF OPERATION

Passive Entry - Locking/Unlocking Process

The vehicle unlocking procedure is carried out in the following way.

With the key within one meter of the approached door and the handle grasped a signal is sent to the KVM which responds with the following simultaneous actions:

- The KVM energizes the low frequency antenna in the door handle which transmits a 125 KHz signal to the key.
- On receipt of the low frequency signal the Smart Key transmits a radio frequency signal '433.92 MHz Europe' '315 MHz NAS / ROW' containing its authorization code to the RF (radio frequency) receiver.
- The RF receiver relays the code, via a serial communication line, to the KVM which checks and approves the code as valid.
 - The KVM will only respond if the radio frequency signal produced is from a valid key for the vehicle.
- The KVM transmits the unlock request to the [CJB](#) via the medium-speed [CAN \(controller area network\)](#) bus.
- The [CJB](#) confirms and sends the request, via the medium speed [CAN](#) bus, to the front door modules.
- The front door modules respond with the following simultaneous actions:
 - Drive the motors to unlock the front doors.
 - Transmit the door unlock request via a [LIN \(local interconnect network\)](#) data signal to the rear door modules.
- The rear door modules drive the motors to unlock the rear doors.
- When the door handle reaches 80 percent of its travel the handle clutch switch is closed and grounded sending a hardwired switched signal to the KVM.
- The KVM drives the fast latch release motors in the door latch assemblies releasing the door latches as the approached door handle is pulled through its full travel, the door can be opened.

Handles, Locks, Latches and Entry Systems - Locks, Latches and Entry Systems

Diagnosis and Testing

Principle of Operation

For a detailed description of the locks, latches and entry systems and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Handles, Locks, Latches and Entry Systems](#) (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Incorrectly aligned door(s), hood or tailgate ● Fuel filler door lock actuator ● Hood release handle ● Hood release cables ● Hood latch(es) ● Exterior door handle(s) ● Interior door handle(s) ● Cable(s) ● Tailgate release switch ● Rear window release switch 	<ul style="list-style-type: none"> ● Fuses ● Wiring harness ● Wiring connector(s) ● Door lock actuator(s) ● Remote transmitter (key-fob or smart key) ● Central locking switches ● Controller Area Network (CAN) circuits ● Radio frequency (RF) receiver ● Central junction box (CJB) ● Loose or corroded connections

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

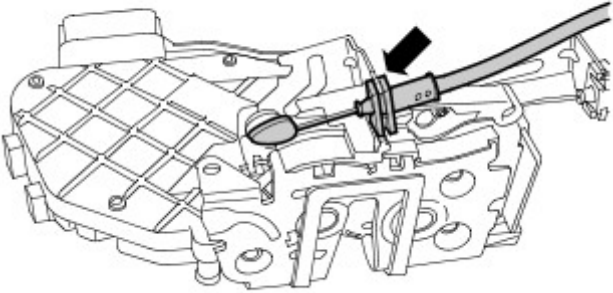

Symptom	Possible causes	Action
Door(s) will not open from outside	<ul style="list-style-type: none"> ● Exterior door handle condition/installation ● Exterior release cable disconnected from exterior door handle or door latch ● Door latch failure 	<ul style="list-style-type: none"> ● Check the exterior door handle condition and installation ● Check the condition and security of the exterior release cable ● Check the operation of the latch GO to Pinpoint Test A.
Door(s) will not open from inside	<ul style="list-style-type: none"> ● Child lock(s) engaged ● Interior door handle condition/installation ● Interior release cable disconnected from interior door handle or door latch ● Door latch failure 	<ul style="list-style-type: none"> ● Check that the child locks are disengaged ● Check the interior door handle condition and installation ● Check the condition and security of the interior release cable ● Check the operation of the latch. GO to Pinpoint Test A.
The message center indicates that the hood, the tailgate or a door is open when it appears to be closed Vehicle indicates a miss-lock when the hood, tailgate and doors appear to be closed	<ul style="list-style-type: none"> ● Incorrect striker alignment/adjustment ● Ajar switch circuit short circuit to ground ● Ajar switch failure 	<ul style="list-style-type: none"> ● Check/adjust the strikers as necessary ● Check for DTCs indicating an ajar switch fault. Refer to the DTC index
Fuel flap does not lock/unlock	<ul style="list-style-type: none"> ● Fuel flap cable detached from body ● Fuel flap actuator detached from mounting bracket ● Fuel flap actuator disconnected ● Fuel flap actuator failure 	<ul style="list-style-type: none"> ● Check the condition and installation of the fuel flap cable ● Check the security of the fuel flap actuator and bracket ● Check the security of the actuator electrical connector ● Check for DTCs indicating a fuel flap actuator fault. Refer to the DTC index

Symptom	Possible causes	Action
Door latching and locking function test	<ul style="list-style-type: none"> ● Door latch ● Cable fault ● Door handle ● Door lock switch ● Wiring harness ● Central junction box (CJB) 	<ul style="list-style-type: none"> • NOTE: Complete the diagnostic steps below to confirm any concern prior replacing the component ● Check for relevant stored DTCs ● Once any DTC related faults have been rectified continue with the diagnostic steps below ● The first component that should be checked when experiencing locking or latching issues are the door latch release cables, then the door latch. These can be tested as a discrete components to confirm if the specific component is working as designed or is demonstrating a fault ● Single door will not open from the outside (but opens from the inside)GO to Pinpoint Test A. ● Single Door Will Not Open From The Inside (but opens from the outside)GO to Pinpoint Test B. ● Door Latching and Locking Function TestGO to Pinpoint Test C. ● No lock / unlock function from key-fobGO to Pinpoint Test E.
Latch mounted door ajar switch test	<ul style="list-style-type: none"> ● Door latch ● Wiring harness ● Instrument cluster 	<ul style="list-style-type: none"> ● Latch Mounted Door Ajar Switch TestGO to Pinpoint Test D.
Vehicle electrical system test	<ul style="list-style-type: none"> ● Fuses ● Wiring harness ● Wiring connector(s) 	<ul style="list-style-type: none"> ● Vehicle Electrical System TestGO to Pinpoint Test E. ● Check for relevant stored DTCs ● Refer to the electrical circuit diagrams to locate the fault ● Carry out continuity test to confirm circuit integrity

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Central Junction Box \(CJB\)](#) (100-00 General Information, Description and Operation) / [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Door Module \(DDM/PDM\)](#) (100-00 General Information, Description and Operation).

Pinpoint Test

PINPOINT TEST A : SINGLE DOOR WILL NOT OPEN FROM THE OUTSIDE (BUT OPENS FROM THE INSIDE)	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK THE EXTERIOR DOOR RELEASE CABLE TO EXTERIOR DOOR HANDLE IS INSTALLED CORRECTLY	
	<ol style="list-style-type: none"> 1 Remove the door trim panel as necessary. REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation) / Rear Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation). 2 Confirm the exterior door release cable is correctly installed to the exterior door handle
	<p>Is the cable correctly installed?</p> <p>Yes GO to A2.</p> <p>No Connect the door release cable correctly. If the cable is damaged, install a new door release cable. Test the system for normal operation.</p>
A2: CHECK THE EXTERIOR DOOR HANDLE RELEASE CONNECTION TO THE DOOR LATCH	
 <p>E45779</p>	<ol style="list-style-type: none"> 1 Confirm the exterior door handle release connection to the door latch is installed correctly

	<p>Is the exterior door handle release cable installed correctly?</p> <p>Yes GO to Pinpoint Test C.</p> <p>No Connect the door release cable correctly. If the cable is damaged, install a new door release cable. Test the system for normal operation.</p>
--	---

PINPOINT TEST B : SINGLE DOOR WILL NOT OPEN FROM THE INSIDE (BUT OPENS FROM THE OUTSIDE)

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

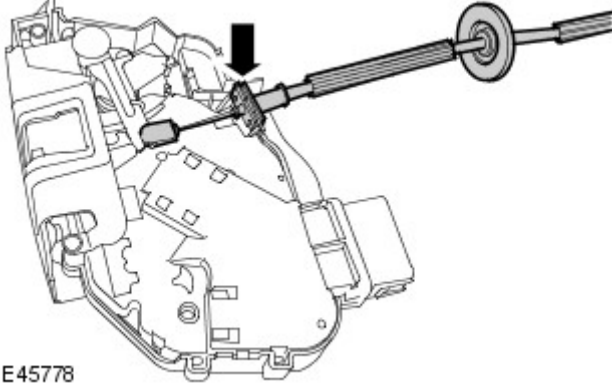

B1: CHECK THE INTERIOR DOOR RELEASE CABLE TO INTERIOR DOOR HANDLE IS INSTALLED CORRECTLY

	<p>• NOTE: Figure A - Child lock off position shown</p> <p>1 Make sure the child lock is disengaged (rear door only)</p>
--	---

	<p>2 Remove the door trim panel as necessary REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation) / Rear Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).</p> <p>3 Confirm the interior door release cable is correctly installed to the interior door handle</p>
--	--

	<p>Is the cable correctly installed?</p> <p>Yes GO to B2.</p> <p>No Connect the door release cable correctly. If the cable is damaged, install a new door release cable. Test the system for normal operation</p>
--	--

B2: CHECK THE INTERIOR DOOR HANDLE RELEASE CONNECTION TO THE DOOR LATCH

	<p>1 Confirm the interior door handle release connection to the door latch is installed correctly</p>
---	--

	<p>Is the interior door handle release cable installed correctly?</p> <p>Yes GO to Pinpoint Test C.</p> <p>No Connect the door release cable correctly. If the cable is damaged, install a new door release cable. Test the system for normal operation.</p>
--	---

PINPOINT TEST C : DOOR LATCHING AND LOCKING FUNCTION TEST

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>C1: DOOR LATCH TEST</p> <p>• NOTE: Test as a single component to ensure that the door latch is not replaced unnecessarily, when another component may be at fault</p>	<ol style="list-style-type: none"> 1 Remove door trim from door REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation) / Rear Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation). 2 Remove module plate / closing panel from door 3 Remove latch module from door REFER to: (501-14 Handles, Locks, Latches and Entry Systems) Front Door Latch (Removal and Installation), Rear Door Latch (Removal and Installation). 4 Inspect latch module for any visual damage 5 Disconnect interior release bowden cable at door latch 6 Disconnect exterior release bowden cable at door latch 7 With the latch in hand, connect the electrical connector(s) to connect door latch to door harness <p>• NOTE: THE LATCH IS NOW READY TO TEST</p> <ol style="list-style-type: none"> 8 Close all vehicle doors except the door being investigated
<div style="display: flex; flex-direction: column; align-items: center;"> <div style="display: flex; align-items: center; margin-bottom: 10px;"> <div style="border: 1px solid black; border-radius: 50%; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; margin-right: 10px;">1</div>  </div> <hr/> <div style="display: flex; align-items: center; margin-bottom: 10px;"> <div style="display: flex; align-items: center; margin-right: 10px;"> <div style="border: 1px solid black; border-radius: 50%; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; margin-right: 10px;">2</div> <div style="font-size: 48px; margin-right: 10px;">X</div> </div>  </div> <hr/> <div style="display: flex; align-items: center;"> <div style="border: 1px solid black; border-radius: 50%; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; margin-right: 10px;">3</div> <div style="font-size: 48px; margin-right: 10px;">✓</div>  </div> </div> <p>E139349</p>	<ol style="list-style-type: none"> 9 Rotate latch claw (using a small screw driver or similar) to the fully latched position (Figure 3) <p>• NOTE: Figure 1 - Unlatched position shown</p> <p>• NOTE: Figure 2 - First safety latched position shown</p> <p>• NOTE: Figure 3 - Fully latched position shown</p> <p>• NOTE: Test will not work if latch is only in first safety latch position</p>

• NOTE: Unlocked position shown

10 Confirm that the latch interior release lever is in the unlocked position as shown

• NOTE: Locked position shown

11 Press the **lock** button on the key-fob or smart key

Does the latch interior release lever move from the unlocked position to the locked position?
Yes
[GO to C2.](#)
No
If this is a repeat test and the vehicle electrical test section has been completed and confirmed that vehicle is working correctly, then replace the door latch. If replacing latch as part of a warranty claim, please quote reference code **LKINOP** in the technician comments section of the warranty claim

C2: TEST 1 DOOR LATCH

 <p>E139351</p>	<p>• NOTE: Locked position shown</p> <p>1 With the latch in the locked state (i.e. the latch interior release lever is in the locked position), press the key-fob or smart key unlock button</p>
	<p>Does the latch interior release lever move from the locked position to the unlocked position?</p> <p>Yes GO to C3.</p> <p>No GO to Pinpoint Test E. If pinpoint test E has been completed and confirmed that vehicle is correctly supplying signals to latch, then replace the door latch. If replacing latch as part of a warranty claim, please quote reference code UNLKINOP in the technician comments section of the warranty claim</p>
<p>C3: TEST 2 DOOR LATCH</p>	
 <p>E139352</p>	<p>• NOTE: Fully latched position shown</p> <p>1 With the latch in its unlocked state, push the latch exterior release lever against its return spring, whilst simultaneously applying a light pressure to release the latch claw using a small screw driver or similar</p>
	<p>Does the latch claw release?</p> <p>Yes GO to C4.</p> <p>No Repeat tests C2 and C3 to confirm the fault. GO to C2. If the repeat test has confirmed that the exterior release lever will not release the claw on an unlocked latch replace the door latch. If replacing latch as part of a warranty claim, please quote reference code EXTINOP in the technician comments section of the warranty claim</p>
<p>C4: TEST 3 DOOR LATCH</p>	

E139353

• NOTE: Fully latched position shown

- 1 Using a small screw driver or similar, rotate latch claw to the second fully latched position

E139354

• NOTE: Figure A - Child lock off position shown

- 2 If testing a rear door latch, ensure that the child lock is turned to the off position

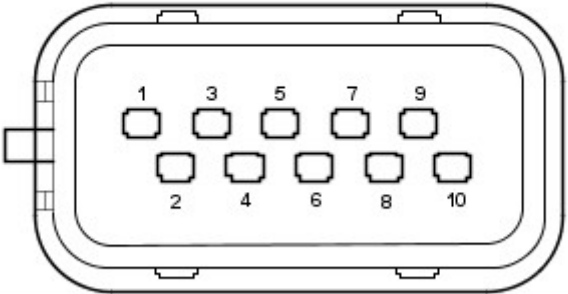

E139350

- 3 Confirm that the latch interior release lever is in the unlocked position as shown

 <p>E139355</p>	<p>4] Whilst the latch is still in its unlocked state, push the latch interior release lever against its return spring, whilst simultaneously applying a light pressure to release the latch claw using a small screw driver or similar</p>
	<p>Does the latch claw release</p> <p>Yes Latch has passed all tests to confirm its correct function. DO NOT REPLACE LATCH as part of any attempts to resolve any locking functionality issues. GO to Pinpoint Test E. To confirm vehicle electrical signal is received by the latch</p> <p>No Repeat this test GO to C4. If repeat test has confirmed that the interior release lever will not release the claw when the latch is in the unlocked state, then replace the latch. If replacing latch as part of a warranty claim, please quote reference code INTINOP in the technician comments section of the warranty claim</p>

PINPOINT TEST D : LATCH MOUNTED DOOR AJAR SWITCH TEST	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
D1: TEST 4 DOOR LATCH	
<p>• NOTE: If a customer is complaining of issues relating to a door ajar signal e.g. door latch won't lock, or alarm system triggering (indicated via DTC's), there may be several components that generate the fault, including</p>	
<ul style="list-style-type: none"> ● Door Latch ajar switch ● Alarm control module ● Central junction box ● Body wiring harness / connectors ● Door wiring harness / connectors 	
<p>• NOTE: To investigate the functioning of the door ajar switch contained within the door latch, to prove or eliminate the door latch mounted door ajar switch as the root cause, follow the process below. This will prevent the unnecessary replacement of a correctly functioning door latch</p>	
	<p>1] Remove door trim from door REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation) / Rear Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).</p> <p>2] Remove module plate / closing panel from door</p> <p>3] Remove latch module from door REFER to: (501-14 Handles, Locks, Latches and Entry Systems) Front Door Latch (Removal and Installation), Rear Door Latch (Removal and Installation).</p> <p>4] Inspect latch module for any visual damage</p>

<p>①</p> 	<ul style="list-style-type: none"> • NOTE: Figure 1 - Unlatched position shown • NOTE: Figure 2 - First safety latched position shown • NOTE: Figure 3 - Fully latched position shown • NOTE: Test will not work if latch is only in first safety latch position
<p>②</p> 	
<p>③</p>  <p>E139349</p>	<p>⑤ Using a small screw driver or similar, rotate latch claw to the second fully latched position (figure 3)</p>
 <p>E139356</p>	<p>⑥ Carry out continuity test between terminals 1 and 4 (left side) or 8 and 4 (right side) with claw closed</p>
	<p>Does the continuity test pass?</p> <p>Yes The latch ajar switch is working correctly. Do not replace latch. Investigate for fault elsewhere in vehicle system</p> <p>No Release latch claw and repeat test from step 5 to confirm result. If this is a repeat test and you are sure that the ajar switch does not provide continuity when fully latched. Replace the latch. If replacing latch as part of a warranty claim, please quote reference code AJARINOP in the technician comments section of the warranty claim</p>

PINPOINT TEST E : VEHICLE ELECTRICAL SYSTEM TEST

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
E1: TEST 5 LOCK COMMAND	

 <p>E139357</p>	<p>1 Disconnect electrical connector from latch</p>
	<p>2 Close all vehicle doors apart from door being investigated, please note which door, left side or right side is under investigation</p> <p>3 Monitor the circuit for momentary power when locking the vehicle via the key-fob or smart key between terminals 1 and 10 left side or 8 and 10 right side</p>
	<p>Is there momentary power (for approx 8 seconds) between terminals 1 and 10 left side or 8 and 10 right side when locking the vehicle via the key-fob or smart key</p> <p>Yes The vehicle electrical system is locking correctly, providing the signal to the latch. GO to E2.</p> <p>No Refer to the electrical circuit diagrams and investigate why vehicle electrical system is not providing signals to the latch. Using the manufacturer approved diagnostic system check for logged DTCs to localize the fault</p>
<p>E2: TEST 6 UNLOCK COMMAND</p>	
	<p>1 Monitor the circuit for momentary power when unlocking the vehicle via the key-fob or smart key between terminals 1 and 9 left side or 8 and 9 right side</p>
	<p>Is there momentary power (for approx 8 seconds) between terminals 1 and 9 left side and 8 and 9 right side when unlocking the vehicle via the key-fob or smart key</p> <p>Yes The vehicle electrical system is unlocking correctly, providing the signal to the latch. Plug electrical connector back in to latch. Rebuild vehicle and check for correct operation</p> <p>No Refer to the electrical circuit diagrams and investigate why vehicle electrical system is not providing signals to the latch. Using the manufacturer approved diagnostic system check for logged DTCs to localize the fault</p>

Handles, Locks, Latches and Entry Systems - Tailgate Striker Adjustment

General Procedures

1. Check for an equal gap and alignment to the adjacent panels. If incorrect, follow the adjust procedure below.

E46273

2. Remove the tailgate striker trim panel.
3. Loosen the 2 tailgate striker bolts.

E46274

4. Close the tailgate and check for an equal gap and alignment to the adjacent panels.
5. Open the tailgate and tighten the tailgate striker bolts to 25 Nm (18 lb.ft).
6. Install the tailgate striker trim panel.

Handles, Locks, Latches and Entry Systems - Liftgate Striker Adjustment

General Procedures

1. Check for an equal gap and alignment to the adjacent panels. If incorrect, follow the adjust procedure below.

E45607

2. Remove the liftgate striker trim panel.

E45600

3. Loosen the 2 liftgate striker bolts.
4. Close the liftgate and check for an equal gap and alignment to the adjacent panels.
5. Open the liftgate and tighten the liftgate striker bolts to 25 Nm (18 lb.ft).
6. Install the liftgate striker trim panel.

Handles, Locks, Latches and Entry Systems - Ignition Lock Cylinder

Removal and Installation

Removal

• NOTE: This procedure is for removal and installation of the ignition lock cylinder. The ignition lock and door lock cylinders are replaced in sets.

1. Fully extend the steering column for access.
2. Remove the steering column upper shroud.

- Release the 4 clips.

3. Remove the steering column lower shroud.

- Remove the 3 Torx screws.
- Release the steering column adjustment lever.

4. Remove the passive coil.

- Disconnect the electrical connector.
- Release the 2 clips.

5. Remove the ignition lock cylinder.

- Turn the ignition key to position 1.
- Insert a pin, not exceeding 2 mm diameter, through the access hole in the ignition lock cylinder housing to depress the plunger, and release the ignition lock cylinder.

Installation

1. Install the ignition lock cylinder.

- Turn the ignition key to position 1.
- Locate into guides and depress the plunger.

2. Install the passive coil.

- Secure the clips.
- Connect the electrical connector.

3. Install the steering column shrouds.

- Tighten the Torx screws.
- Secure the clips.
- Secure the adjustment lever.

Handles, Locks, Latches and Entry Systems - Hood Latch Release Handle

Removal and Installation

Removal

1. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Disconnect the hood release cable from the connecting box.
 - Open the connecting box cover.

3. Remove the hood release lever housing.
 - Remove the bolt.
 - Disconnect the hood release cable.

Installation

1. Install the hood release lever housing.
 - Connect the hood release cable.
 - Tighten the bolt to 5 Nm (3.7 lb.ft).
2. Attach the hood release cable to the connecting box.
 - Close the connecting box cover.
3. Install the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Handles, Locks, Latches and Entry Systems - Front Door Latch

Removal and Installation

Removal

1. Remove the window motor and regulator assembly.
For additional information, refer to: Front Door Window Regulator and Motor (501-11, Removal and Installation).

2.  **CAUTION:** Release the exterior door handle and screw cover clips from inside the door.

Remove the front door exterior handle.

For additional information, refer to: [Exterior Front Door Handle](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

3. Release the remote control cable.
 - Release the grommet.

4. Release the door exterior handle mechanism.
 - Remove the adhesive tape from the access hole.
 - Remove the Torx screw.
 - Remove the locking pin.

5. Remove the front door latch assembly.
 - Disconnect the electrical connector.
 - Remove the 3 Torx screws.

E45777

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the door latch remote control cable.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

E45778

7. Release the exterior door handle mechanism cable from the door latch.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

E45779

8. LH side: Release the door lock cylinder cable from the door latch.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

E45780

Installation

1. LH side: Connect the door lock cylinder cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

2. Connect the door exterior handle mechanism cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

3. Install the remote control cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

4. Set the exterior handle mechanism.

- Rotate the lever.
- Engage the retaining tang.

5. Install the front door latch assembly.

- Tighten the Torx screws to 10 Nm (7 lb.ft).
- Connect the electrical connector.

6. Install the door exterior handle mechanism.

- Position the mechanism to the door.
- Fit the locking pin.
- Fit and tighten the Torx screw.

7. LH side: Position the control cables into the retainers.

8. Position the remote control cable to the door.

- Install the grommet.

9. Install the front door exterior handle.

For additional information, refer to: [Exterior Front Door Handle](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

10. Install the window motor and regulator assembly.

For additional information, refer to: Front Door Window Regulator and Motor (501-11, Removal and Installation).

Handles, Locks, Latches and Entry Systems - Rear Door Latch

Removal and Installation

Removal

1. Remove the rear door window motor and regulator assembly.
For additional information, refer to: [Rear Door Window Regulator and Motor](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

2.  **CAUTION:** Release the exterior door handle and screw cover clips from inside the door.

Remove the rear door exterior handle.

For additional information, refer to: [Exterior Rear Door Handle](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

3. Release the remote control cable.

- Release the grommet.

4. Release the door exterior handle mechanism.

- Remove the 2 Torx screws.
- Remove the locking pin.

5. Remove the rear door latch assembly.

- Disconnect the electrical connector.
- Remove the 3 Torx screws.

6. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the door latch remote control cable.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

7. Release the exterior door handle mechanism cable from the door latch.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

E45779

Installation

1. Connect the door exterior handle mechanism cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

2. Install the remote control cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

3. Set the exterior handle mechanism.

- Rotate the lever.
- Engage the retaining tang.

E45781

4. Install the rear door latch assembly.

- Tighten the Torx screws to 10 Nm (7 lb.ft).
- Connect the electrical connector.

5. Install the door exterior handle mechanism.

- Position the mechanism to the door.
- Fit the locking pin.
- Install and tighten the Torx screws.

6. Position the remote control cable to the door.

- Install the grommet.

7. Install the rear door exterior handle.

For additional information, refer to: [Exterior Rear Door Handle](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

8. Install the rear door window motor and regulator assembly.
For additional information, refer to: [Rear Door Window Regulator and Motor](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

Handles, Locks, Latches and Entry Systems - Liftgate Latch

Removal and Installation

Removal

1. Remove the tailgate trim panel.
For additional information, refer to: [Tailgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

2. Remove the tailgate water shedder.

3. Release the liftgate latch.

- Remove the 3 Torx screws.

E45598

4. Remove the liftgate latch.

- Disconnect the electrical connector.
- Release the liftgate latch to actuator cable.

E45599

Installation

1. Install the liftgate latch.

- Attach the liftgate latch to actuator cable.
- Connect the electrical connector.
- Tighten the Torx screws to 10 Nm (7 lb.ft).

2. Install the tailgate water shedder.

3. Install the tailgate trim panel.

For additional information, refer to: [Tailgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

4. Adjust the liftgate striker.

For additional information, refer to: [Liftgate Striker Adjustment](#) (501-14 Handles, Locks, Latches and Entry Systems, General Procedures).

Handles, Locks, Latches and Entry Systems - Door Lock Cylinder

Removal and Installation

Removal

1. Remove the front door lock cylinder cover.

- Use the ignition key.

2. NOTE: The Torx screw remains in the door lock housing.

Remove the front door lock cylinder.

- Open the door.
- Remove the access plug.
- Loosen the Torx screw to release the lock.

Installation

1. To install, reverse the removal procedure.

Handles, Locks, Latches and Entry Systems - Tailgate Latch

Removal and Installation

Removal

1. Remove the tailgate speaker assembly.
For additional information, refer to: [Tailgate Speaker](#) (415-03 Speakers, Removal and Installation).

2. Remove the tailgate latch assembly.

- Remove the 3 Torx bolts.
- Disconnect the electrical connector.
- Remove the latch.
- Remove the latch plate.
- Remove the latch actuator assembly.

3. NOTE: Do not disassemble further if the component is removed for access only.

Remove the latch actuator.

- Remove the 2 screws.

Installation

1. Install the latch actuator.

- Tighten the screws.

2. Install the tailgate latch assembly.

- Install the latch actuator assembly.
- Install the latch plate.
- Install the latch.
- Tighten the Torx screws to 25 Nm (18 lb.ft).
- Connect the electrical connector.

3. Install the tailgate speaker assembly.

For additional information, refer to: [Tailgate Speaker](#) (415-03 Speakers, Removal and Installation).

4. Adjust both the tailgate strikers.

For additional information, refer to: [Tailgate Striker Adjustment](#) (501-14 Handles, Locks, Latches and Entry Systems, General Procedures).

Handles, Locks, Latches and Entry Systems - Exterior Front Door Handle

Removal and Installation

Removal

- NOTE: This procedure details removal and installation of both the LH and RH exterior front door handles.
- NOTE: If the exterior handle is to be removed in conjunction with additional door internal items, then it is recommended that the exterior handle and screw cover be released from the inside of the door, after removal of the door trim pad, regulator and motor.

1. NOTE: Vehicles with passive entry system.

Remove the window regulator assembly.
For additional information, refer to: [Front Door Window Regulator and Motor \(501-11, Removal and Installation\)](#).

2. Disconnect the electrical connector.

3. NOTE: All vehicles.

LH side: Remove the private lock.
For additional information, refer to: [Door Lock Cylinder \(501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation\)](#).

4. NOTE: Removal of the screw cover may break the retaining clips.

- NOTE: If the screw cover is to be removed in conjunction with additional door internal items, then it is recommended that the screw cover be released from the inside of the door, after removal of the door trim pad, regulator and motor.

RH side: Remove the screw cover.

- Release the 2 clips.

E66202

5. To remove the exterior front door handle, after removal of the door trim pad and regulator.

- Using a nylon mallet, carefully release the clip.
- Remove the 2 gaskets.

6. NOTE: Vehicles without passive entry system.

To remove the exterior front door handle, without removal of the door trim pad.

- Slide the handle firmly rearward, then pivot the handle away from the door to remove it.
- Remove the 2 gaskets.

E55256

Installation

1. NOTE: Use a length of cord to hold the lock lever against spring pressure while engaging the outside handle.

To install, reverse the removal procedure.

E55272

Handles, Locks, Latches and Entry Systems - Exterior Rear Door Handle

Removal and Installation

Removal

• NOTE: If the exterior handle is to be removed in conjunction with additional door internal items, then it is recommended that the exterior handle and screw cover be released from the inside of the door, after removal of the door trim pad, regulator and motor.

1. NOTE: Removal of the screw cover may break the retaining clips.

• NOTE: If the screw cover is to be removed in conjunction with additional door internal items, then it is recommended that the screw cover be released from the inside of the door, after removal of the door trim pad, regulator and motor.

Remove the screw cover.

- Release the 2 clips.

2. To remove the exterior rear door handle, without removal of the door trim pad.

- Slide the handle firmly rearward, then pivot the handle away from the door to remove it.
- Remove the 2 gaskets.

3. To remove the exterior rear door handle, after removal of the door trim pad and regulator.

- Using a nylon mallet, carefully release the clip.
- Remove the 2 gaskets.

Installation

1. NOTE: Use a length of cord to hold the lock lever against spring pressure while engaging the outside handle.

To install, reverse the removal procedure.

E55272

Handles, Locks, Latches and Entry Systems - Liftgate Latch Actuator

Removal and Installation

Removal

1. Remove the tailgate trim panel.
For additional information, refer to: [Tailgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

2. Release the liftgate actuator.

- Loosen the 2 bolts.
- Disconnect the electrical connector.

3. Remove the actuator cover.

- Remove the 2 Torx screws.

4. Remove the liftgate actuator.

- Release the liftgate latch to actuator cable.

Installation

1.  CAUTION: It is possible to incorrectly install the cable, ensure the ferrule and clip are fully engaged.

Attach the actuator to the liftgate latch cable.

2. Install the cover.

- Tighten the Torx screws.

3. Install the liftgate actuator.

- Tighten the bolts to 10 Nm (7 lb.ft).
- Connect and secure the electrical connector.

4. Install the tailgate trim panel.

For additional information, refer to: [Tailgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Wipers and Washers -

Wipers and Washers - Wipers and Washers

Description and Operation

Wiper and Washer System Component Location

E 132362

Item	Part Number	Description
1	-	Front washer jets

2	-	Wiper control switch
3	-	Rain/Light sensor
4	-	Rear wiper linkage and motor assembly
5	-	CJB (central junction box)
6	-	Wiper relay 1 (located in BJB (battery junction box))
7	-	Wiper relay 2 (located in BJB)
8	-	Front wiper linkage and motor assembly, including wiper arms and blades
9	-	Washer reservoir and pumps
10	-	Headlamp washer jets

GENERAL

The wiper and washer system is controlled by the [CJB](#) on receipt of requests made by the driver or the rain/light sensor unit (if fitted). All wiper functions for the front and rear wipers are controlled from a multi-function wash/wipe switch assembly located on the right hand side of the steering column.

The wiper and washer system comprises:

- Front and rear wiper motors
- A front wiper linkage
- Two front and one rear wiper arms and blades
- Two front washer jets and one rear washer jet
- A washer reservoir and pump
- A wash/wipe control column switch.

The following optional items can be added to enhance the wiper system:

- A rain/light sensor for automatic wiper control
- Heated front washer jets
- Headlamp washers
- Low fluid level sensor (fitted to vehicles with headlamp washers).

The wiper system can be optionally equipped with a rain/light sensor. The sensor, located below the interior rear view mirror, detects rain drops on the windscreen and automatically operates the wipers in the intermittent mode. The column stalk switch must be in the intermittent position for rain/light sensor controlled wiper operation.

The front wiper system has five stages of operation and six intermittent delay periods.

The five wiper stages are as follows:

- Flick wipe
- Off
- Intermittent
- Normal (slow) speed continuous
- Fast speed continuous

Speed Control Intermittent Mode

The intermittent, slow and fast speeds are affected by road speed, providing the speed control intermittent wipe mode has been configured. The intermittent wiper delay periods change with the road speed and wiper sensitivity positions with the delay decreasing as the road speed increases.

Speed Dependant Wipe Mode

When the speed dependant wipe mode has been configured, the normal continuous operation changes to intermittent operation when the vehicle is stationary. The fast speed operation changes to normal operation when the vehicle is stationary.

The wiper and washers operate with the ignition switch in positions I or II. Wiper functions are suspended during engine cranking to reduce battery power consumption under high load conditions.

Diagnostic information for the wiper system is available and can be retrieved using T4.

CENTRAL JUNCTION BOX

The [CJB](#) is an integrated unit located behind the fascia on the passenger side of the bulkhead. The [CJB](#) contains fuses, relays and a number of microprocessors, which control the power supply and functionality of the wash/wipe system and other vehicle systems.

Inputs and Outputs

The [CJB](#) receives and sends the following wiper and washer system inputs and outputs:

Inputs

- Intermittent front wipe switch
- Rear wipe park switch
- Rain/light sensor, if fitted
- Normal (slow) speed continuous switch
- Fast speed continuous switch
- Flick wipe switch
- Front screen wash switch
- Rear screen wash switch
- Ignition switch
- Lighting switch

- Low level reservoir status, via CAN
- Vehicle speed, via CAN
- Front wiper motor park switch
- Reverse switch, via CAN
- Tail gate open switch
- Ambient temperature, via CAN

Outputs

- Front wiper motor (normal)
- Front wiper motor (fast)
- Washer motors
- Heated washer jets (if fitted)
- Rear wiper motor relay
- Headlamp power wash motor

FRONT WIPER ASSEMBLY

The front wiper assembly comprises:

- Wiper motor and linkage assembly
- Wiper arms and blades
- Washer reservoir and pumps.

Wiper Linkage

E43319

Item	Part Number	Description
1	-	RH pivot housing assembly
2	-	Link rod
3	-	Bracket
4	-	Bush
5	-	Motor assembly
6	-	Bush
7	-	Washer
8	-	Bolt
9	-	Link rod

The wiper linkage and motor assembly are available as separate components. The wiper linkage and motor differs between LH and RH drive models.

The assembly is located below the plenum grill in the engine compartment and is secured with bushes, sleeves and bolts. The rubber bushes isolate the assembly from the body mountings.

The linkage assembly comprises a main tube, with a pivot housing at each end and the motor is attached directly to the tube. A motor crank is positively attached to the motor output shaft. Two link rods then attach to the motor crank which transfers power directly to each pivot crank.

The motor crank converts rotary motion from the motor output shaft into linear movement of the link rods. The cranks, connected between the each link rod and pivot housing, convert the linear motion to reciprocating motion at the pivot housing. This reciprocating motion is passed to the wiper arms and blades causing the blades to wipe an arc across the windscreen.

Wiper Motor

The motor assembly comprises a dc motor, which drives a gear wheel via a worm drive attached to the motor spindle. The gear wheel has a central spigot, which provides the attachment point for the motor crank.

The motor is connected electrically by a five-pin connector. The connector supplies two battery voltage feeds to the motor (when switched). The motor has three sets of brushes with one brush connected to ground. One feed is direct to the motor brush opposite the ground brush and operates the motor at normal (slow) speed. The second feed is connected to a motor brush, which is offset from the ground brush and operates the motor at fast speed. With the power supplied through this brush, the current flows through fewer coil windings. This results in a lower resistance to the current flow to the ground brush and gives a higher motor rotational speed.

Output control of the wiper motor is through a double contact relay. The relay is located in the [BJB](#).

The motor has an internal track switch, which signals the [CJB](#) when the wipers have reached the park position. The park signal is closed circuit when the wipers are in the park position. When the wipers are switched off and the [CJB](#) receives the park position signal from the motor, the [CJB](#) shorts the motor via a relay bridge circuit. This short circuit has the effect of applying a brake to the motor, giving precise positioning of the wiper blades in the park position.

Wiper Arms

E43321

Item	Part Number	Description
1	-	Spindle caps
2	-	RH Wiper arm
3	-	Wiper blades
4	-	LH wiper arm
5	-	Self locking nuts

The wiper arms are positively located on tapered splines on the wiper linkage spindles.

The wiper arm has a pivot point, midway between the spindle attachment and the blade. A tension spring is connected to the wiper arm on each side of the pivot point and applies pressure to maintain the wiper blade in contact with the windscreen.

The wiper blades are attached to the wiper arms with clips that allow the blade to pivot. The wiper blades comprise of a sprung steel curved backbone which applies the pressure evenly to the windscreen, to which is applied the wiping lip to the bottom surface and an aerofoil section to the top which presses the blades onto the windscreen at high vehicle speeds.

REAR WIPER ASSEMBLY

The rear wiper assembly comprises:

- Wiper motor
- Rear washer pump
- Rear washer jet
- Wiper arm and blade.

Wiper Motor

E132363

Item	Part Number	Description
1	-	Motor assembly
2	-	Harness connector
3	-	Grommet
4	-	Pivot housing connection
5	-	Wiper arm
6	-	Spindle cap
7	-	Self locking nut

The rear wiper and washers operation is controlled by the [CJB](#), via the rear wiper relay, which is located in the LH rear 'D' post.

The rear wiper motor is located in the upper tail gate, behind a trim panel. The assembly is secured to the body of the upper tail gate with three M6 nuts. Bushes isolate the motor assembly from the body, which help reduce the transmission of motor operating noise to the tail gate.

The motor is located on a worm drive gearbox mechanism, which converts the rotary motion of the motor output spindle into the required arc for the rear wiper blade.

The feed hose, for the separate rear washer jet, is located at the rear of the motor spindle. The hose is going directly to the washer jet, housed in the spoiler. A Non-Return Valve (NRV) is located in the hose, near the motor, and prevents fluid returning to the reservoir.

The motor spindle is a conventional design with a taper spline location for the wiper arm and a threaded shank to secure the arm to the spindle.

Wiper Arm

The wiper arm is similar in design to the front wiper arms. The arm attachment hole has tapered splines, which mate with the splines on the wiper spindle. The arm is secured to the wiper motor spindle with a nut. The wiper arm has a pivot point, close to the spindle attachment. A tension spring is connected to the wiper arm on each side of the pivot point and applies pressure to maintain the wiper blade in contact with the windscreen.

The wiper blade is attached to the wiper arm with a clip that allows the blade to pivot. The blade comprises a number of levers and yokes to, which the rubber wiper blade is attached. The levers and yokes ensure that the pressure applied by the arm tension spring is distributed evenly along the full length of the blade and also allow the blade to adjust to the curvature and contour of the windscreen.

A plastic cap located on the arm pivot point, covers the spindle attachment nut.

WASHER RESERVOIR AND PUMPS

E132364

Item	Part Number	Description
1	-	Filler tube and cap
2	-	Front and rear washer pump
3	-	Headlamp washer pump (if fitted)
4	-	Fluid level sensor
5	-	Reservoir

The windscreen washer system comprises:

Vehicles without headlamp washers:

- A reservoir
- A washer pump
- Two washer jets
- Hoses

Vehicles with headlamp washers:

- A reservoir
- Two washer pumps
- A level sensor
- Four washer jets - two windshield and two headlamp washers
- Hoses

The plastic, moulded reservoir is located in the LH wheel arch, behind the liner and has a capacity of 11.08 pints (6.3 litres). It is secured to the body and front panel with bolts. A boss on the reservoir locates in a slot in the front panel and provides additional support.

The reservoir has two recessed holes on its rear face, which provide location for the combined front/rear pump and headlamp washer pumps. The pumps are push fitted into grommets, which seal the pumps in their locations. A hole in the top of the reservoir allows for the fitment of a flexible filler tube. The front and rear wash hoses are integrated into the harness and so follow it's routing. The headlamp washer hose comes front the bumper around the bottle to attach to the headlamp washer pump.

A hole with a grommet in the side of the reservoir provides the location for the fluid level sensor.

The low level sensor has a float, with integral magnet. The sensor has a contact, which is normally closed when the reservoir is full. When the fluid level reduces to approximately 1 litre, the magnetic float pivots down, which causes the switch contact to open. This open circuit is sensed by the instrument cluster, which displays the low fluid level message and transmits the switch status on the CAN bus.

The sensor cannot determine the precise amount of fluid in the reservoir, but can detect when the fluid level has fallen below a certain point. When the fluid level is low, the magnetic float closes the sensor contacts, completing a circuit through the sensor. This completed circuit is sensed by the instrument cluster, to which the sensor is directly connected.

The fluid level sensor is monitored continuously by the instrument cluster. The instrument cluster checks the fluid level

sensor when the ignition is switched on to give the driver an early warning of the low fluid level. The instrument cluster then monitors the sensor value over a 25 second period when the ignition is on to prevent invalid messages due to fluid 'sloshing' in the reservoir.

When a low fluid level signal is transmitted to the high line instrument cluster, a 'WASHER FLUID LOW' message is displayed in the instrument cluster's message centre. On the low line instrument cluster a low fluid level indicator is illuminated. The first display of this message, or illumination of the indicator, is accompanied by a 'chime' sound to alert the driver to the low fluid level.

HEADLAMP WASHERS

E132365

Item	Part Number	Description
1	-	Headlamp washer jets
2	-	Reservoir
3	-	Washer fluid tube

The headlamp washer assembly is located below each headlamp.

The headlamp washer operation is controlled by the [CJB](#) via a headlamp washer relay. The relay is located in the [BJB](#).

Head Lamp Wash Only (No Wipe Function)

The headlamp washers are only active when the headlamps and ignition are switched on. If the washer reservoir fluid level becomes low, the instrument cluster sends a message, via the CAN bus, to the [CJB](#), which suspends headlamp wash operation to preserve washer fluid in the reservoir.

With the ignition and lights on, headlamp wash is activated on the first operation of the wiper column control switch in the wash/wipe position. The [CJB](#) then suspends headlamp wash activation for the next 10 minutes and four operations of the wash/wipe switch.

The [CJB](#) monitors the operation of the wash/wipe switch and maintains a counter to restrict headlamp washer operation to every fourth operation of the wash/wipe switch in conjunction with a 10 minute timer. The timer prevents a second operation of the headlamp washers within a 10 minute period. Should the washer switch be activated for more than four programmed wipe requests during the 10 minute period, the headlamp washer will remain disabled. Only the next consecutive programmed wipe request, after the 10 timer has expired, will the headlamp washers be enabled. The counter and timer are reset when the ignition is switched off.

When headlamp wash is active, the [CJB](#) energises the washer pump twice per cycle. The headlamp washer pump is powered for a 0.5 second period.

RAIN/LIGHT SENSOR

E43325

Item	Part Number	Description
1	-	Adhesive pad
2	-	Optical element
3	-	Sub-assembly light guide
4	-	Heater
5	-	Housing
6	-	Locking device
7	-	Printed Circuit Board (PCB)
8	-	Screws
9	-	Cover
10	-	Contact pins

Rain Sensor Functionality

E43326

Item	Part Number	Description
A	-	Clean and dry windscreen
B	-	Wet and dirty windscreen
1	-	Windscreen - Outside surface
2	-	Optical unit
3	-	Transmitter diodes (100% light transmitted)
4	-	Rain/Light sensor unit
5	-	Receiver diodes (100% received)
6	-	Water droplets/film
7	-	Receiver diodes (less than 100% light received)
8	-	Lost light

WIPER CONTROL COLUMN SWITCH

E132366

Item	Part Number	Description
1	-	Wash/wipe control column switch
2	-	Intermittent variable delay rotary control
3	-	Intermittent/continuous rear wipe
4	-	Rear wash position
5	-	Fast speed wipe position
6	-	Normal speed wipe position
7	-	Intermittent/rain sensor wipe position
8	-	Flick wipe position
9	-	Front windscreen washer control

The wiper control column switch is located on the right hand side of the steering column and controls all front and rear wiper functions.

The switch comprises 8 switch positions and the intermittent rotary control. The switch positions each complete a combination of earth paths to connections on the [CJB](#). The [CJB](#) interprets the selected combination of switches and operates the respective function accordingly.

Flick Wipe

Moving the switch down selects the front wiper flick wipe function. The front wipers will operate at fast speed for as long as the flick wipe switch position is operated. Once the switch is released the front wiper motor will revert to a normal (slow) speed operation until a park position has been detected.

Intermittent

Moving the switch up one position from 'OFF', selects intermittent front wiper operation. The rotary potentiometer on the stalk selects one of six delay periods. The delay period is also influenced by vehicle speed (should speed control intermittent wipe mode be configured), using a signal value derived from the ABS control module. The selected delay period decreases with an increase in road speed. When a rain/light sensor is incorporated into the system, the intermittent position also initiates wiper operation controlled by the rain/light sensor. The sensitivity of the rain/light sensor is also adjusted by rotating the rotary switch to one of the six positions.

The rotary switch selects differing output values for each position. The switch is wired to three data input terminals of the [CJB](#).

Normal (Slow) Speed

The normal (slow) speed continuous wiper operation is selected by moving the switch vertically to the second detente position from 'OFF'. The wipers will operate continuously when the vehicle is moving. When the vehicle is stationary, or less than 5 mph (8 km/h), the [CJB](#) operates the wipers in the intermittent mode (if speed dependant wipe mode is configured), using a 3 second intermittent delay period.

Fast Speed

The fast speed continuous wiper operation is selected by moving the switch vertically to the third detente position. The wipers will operate continuously at fast speed when the vehicle is moving. When the vehicle is stationary, or less than 5 mph (8 km/h), the [CJB](#) operates the wipers in normal (slow) speed mode (if speed dependant wipe mode is configured).

Wash/Wipe

When the non-latching wiper stalk button is pushed the front screen washer is operated. If the wipers are off and the button is pressed for less than 0.5 seconds, only the washer will operate. If the button is pressed for more than 0.5 seconds, the wipers will come on and perform two wipes. When headlamp washers are fitted, the headlamp washers will operate if the front windscreen washer is operated and the headlamps are on – refer to headlamp wash section for detail of operation. The [CJB](#) monitors the wash/wipe switch operation and after the switch is released, if a programmed wipe is enabled, the [CJB](#) allows two further wipe cycles to be completed.

Rear Wash/wipe

Moving the switch rearwards, towards the driver, selects the intermittent rear wash/wipe function. The intermittent delay period will vary according to the sensitivity settings and vehicle speed.

When the switch is moved rearwards to the second position and held, the washer pump will operate. If the switch is operated for more than 10 seconds, the pump will be disabled. When the switch is released, the rear wiper will complete a further two full wipe cycles and then operate on an intermittent function until selected off.

HEATED WINDSCREEN WASHER JETS

Two windscreen washer jets are located on the bonnet outer surface. The washer fluid feed hose from the front screen pump is connected to a 'Y' piece connector located between the two jets. Two short lengths of hose connect the jets to the 'Y' piece. Each jet contains a NRV to prevent washer fluid draining back to the reservoir and also to limit the amount of washer fluid, which can be forced by gravity from the jet during cornering.

Each washer jet has two ball nozzles, which can rotate in their housing's to obtain the optimum fluid application onto the windscreen. Each washer jet contains a heater element, which prevents the fluid freezing in the nozzles in very cold conditions and a Positive Temperature Coefficient (PTC) sensor, which regulates the temperature. The jet heater elements are controlled by the Automatic Temperature Control Module (ATCM) and a heated washer jet relay in the [BJB](#). For additional information, refer to: Control Components (descop 412-04).

REVERSE GEAR INPUT

The intermittent delay period (below) depends on speed dependant wipe mode being enabled or disabled.

The rear wiper also operates if reverse gear is selected and the front wipers are on. If the front wipers are operating continuously when reverse is selected, the rear wiper will also operate continuously as long as reverse gear is engaged. If the front wipers are operating intermittently when reverse is engaged, the rear wiper will complete one wipe cycle then wipe intermittently.

On vehicles fitted with rain/light sensor, when reverse gear is selected while the front wipers are in intermittent mode but the rain/light sensor indicates that the front wipers are off, the rear wiper will not operate. If the rain/light sensor subsequently calls for a single wipe, the rear wiper will operate a single wipe cycle. If the rain/light sensor calls for a slow or fast wipe, the rear wiper will operate continuously.

The [CJB](#) will operate the rear wiper (providing the front wipers are on) upon receipt of a reverse gear signal from the Electronic Automatic Transmission (EAT) module on the CAN bus, via the instrument cluster. On vehicles with manual transmission, the gear position signal is transmitted directly from the transfer box control module and picked by the [CJB](#) as an CAN bus message, via the instrument cluster.

'TAIL GATE OPEN' DISABLE

If the rear wiper is switched on or is already running and the tail gate is opened, the rear wiper should not start to run, or should immediately become disabled during a wipe cycle. If the tail gate is subsequently closed, the wiper will resume its normal operation after a delay of three seconds. Should the vehicle speed input be more than 4 mph (6km/h), then the tail gate switch will be deemed as closed.

The CJB receives the 'tail gate open' signal directly from the upper tail gate central locking motor.

FRONT AND REAR WIPER MOTOR BLOCKING PROTECTION

The wiper park signal is also used by the CJB for blocking protection of the front wiper motor. This feature protects the motor in the event of the wiper operation being obstructed.

If the CJB does not receive a wiper park signal status change for a period of 6 seconds, when the wiper motor is active, the CJB removes the power supply to the motor. The motor will remain disabled until either an alternative motor mode has been selected, or the ignition has been moved to position 0 and back to position I. Should a stall condition be achieved 3 times during a single ignition position I status, then the wiper relay will remain disabled, regardless of wiper switch positions, for 180 seconds. The CJB will not automatically switch the motor on, to prevent the risk of injury. The wiper switch must be moved off and then on to reactivate the wiper motor. The blocking protection is active in all wiper switch positions and can only be reset by turning the ignition off.

The rear wiper algorithm contains the same logic as mentioned above.

Wipers and Washers - Wipers and Washers

Diagnosis and Testing

Principle of Operation

For a detailed description of the wipers and washers systems and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Wipers and Washers](#) (501-16 Wipers and Washers, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. **1.** Verify the customer concern.
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Windshield and rear window for damage or contamination e.g. road film or general residue deposits ● Wiper blades, arms and linkage for wear, security, damage and freedom of movement ● Windshield/Rear window/Headlamp washer fluid level ● Washer pipes and jets for leaks, restrictions and damage 	<ul style="list-style-type: none"> ● Battery condition and state of charge ● Fusible links ● Fuses ● Relays ● Electrical connections ● Front and rear wiper motors ● Wiper switch ● Washer pumps ● Rain/light sensor ● Heated front washer jets ● Ignition switch ● Light switch ● Ambient air temperature sensor ● Central Junction Box (CJB) ● Battery Junction Box (BJB) ● Anti-Lock Braking System (ABS) module ● Automatic Temperature Control Module (ATCM) ● Instrument Cluster (IPC) module ● Controller Area Network (CAN) circuits

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step
4. **4.** If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Wiper blade(s) drag/judder across the windshield/rear window	<ul style="list-style-type: none"> ● Contamination of the windshield/rear window ● Incorrectly installed wiper arm(s) ● Wiper arm(s) incorrectly aligned to the screen ● Wiper arm(s) spring tension inadequate 	Clean the windshield/rear window. Check for the correct installation and tension of the wiper arm(s). Refer to the relevant section of the workshop manual. Rectify as necessary.
Very slow operation of the wiper(s) across the windshield/rear window	<ul style="list-style-type: none"> ● Low battery voltage ● Front wiper linkage seized or fouling ● Wiper circuit fault ● Wiper switch fault, high resistance 	Check the battery condition and state of charge. Check the wiper linkage for fouling. Disconnect the motor from the linkage. Refer to the relevant section of the workshop manual. Check the linkage operation. Check for DTCs indicating a wiper circuit fault. Rectify as necessary.
Wiper(s) inoperative		
Noisy operation of wiper(s)	<ul style="list-style-type: none"> ● Wiper motor/linkage fault 	Lift the wiper arm(s) from the windshield/rear window and recheck the noise level during the wiper sweep operation.

Symptom	Possible Causes	Action
Noisy operation of washers	<ul style="list-style-type: none"> ● Washer motor(s) faulty ● Washer system blocked or partially blocked 	Listen for washer motor operation. Check and top up washer fluid level. Check and rectify blocked washer circuit. Check the wiper/washer circuit for DTCs indicating a fault. Rectify as necessary.
Washers do not operate	<ul style="list-style-type: none"> ● Fluid level low ● Washer circuit blocked ● Washer circuit faulty 	

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Central Junction Box \(CJB\)](#) (100-00 General Information, Description and Operation).

Wipers and Washers - Windshield Washer Reservoir

Removal and Installation

Removal

1. Remove the front bumper cover.
For additional information, refer to: Front Bumper Cover (501-19, Removal and Installation).

2. Remove the windshield washer reservoir filler neck.

- Release the windshield washer reservoir filler neck from the coolant expansion tank.
- Remove and if necessary, discard the seal.

3. **NOTE:** Some fluid spillage is inevitable during this operation.

Disconnect the 2 hoses from the windshield washer reservoir pumps.

- Drain the washer reservoir fluid.
- Disconnect the 3 electrical connectors.

E94895

4. Remove the windshield washer reservoir.

- Remove the 4 bolts.

5. NOTE: Do not disassemble further if the component is removed for access only.

Remove the windshield washer pump.

- Remove and if necessary, discard the seal.

6. Remove the headlamp washer pump.

- Remove and if necessary, discard the seal.

Installation

1. Install the windshield washer pump.

- If necessary, install a new seal.

2. Install the headlamp washer pump.

- If necessary, install a new seal.

3. Install the windshield washer reservoir.

- Tighten the M6 bolts to 6 Nm (4 lb.ft).
- Tighten the M8 bolt to 25 Nm (18 lb.ft).

4. Connect the 2 hoses to the windshield washer reservoir pumps.

- Connect the electrical connectors.

5. Install the windshield washer reservoir filler neck.

- If necessary, install a new seal.
- Lubricate the seal.
- Secure in the clip.

6. Install the front bumper cover.

For additional information, refer to: Front Bumper Cover (501-19, Removal and Installation).

Wipers and Washers - Windshield Washer Pump

Removal and Installation

Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove the LH fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
3. Release the windshield washer pump hoses.
 - Drain the washer reservoir fluid.
4. Disconnect the windshield washer pump electrical connector.
5. Remove the windshield washer pump.
 - Discard the O-ring seal.

Installation

1. Install the windshield washer pump.
 - Install a new O-ring seal.
2. Connect the windshield washer pump electrical connector.
3. Connect the windshield washer pump hoses.
4. Install the fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
5. Lower the vehicle.
6. Top-up the windshield washer reservoir.

Wipers and Washers - Rain Sensor

Removal and Installation

Removal

1. Remove the interior mirror.
For additional information, refer to: [Interior Mirror](#) (501-09 Rear View Mirrors, Removal and Installation).
2. Remove the rain sensor.

E49707

- Release the 2 clips.
- Disconnect the electrical connector.

Installation

1. To install, reverse the removal procedure.

Wipers and Washers - Front Wiper Pivot Arm

Removal and Installation

Removal

1. Noting the fitted position, remove the front wiper pivot arm.

- Remove the nut cover.
- Remove the nut.

2. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the wiper blade.

- Release the clip.

E47632

Installation

1. To install, reverse the removal procedure.

- Tighten the nut to 18 Nm (13 lb.ft).

Wipers and Washers - Windshield Wiper Motor

Removal and Installation

Removal

1. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
2. Remove the windshield wiper motor and linkage.

- Remove the 2 bolts.
- Remove the 2 clips.
- Disconnect the electrical connector.

3. NOTE: Do not disassemble further if the component is removed for access only.

Noting the fitted position, remove the wiper linkage.

- Remove the 2 bolts.
- Remove the nut.

Installation

1. Install the wiper linkage.
 - Tighten the bolts to 10 Nm (7 lb.ft).
 - Tighten the nut to 25 Nm (18 lb.ft).
2.  CAUTION: Make sure the windshield wiper motor is located on its stud prior to installing the bolts.

Install the windshield wiper motor and linkage.

- Tighten the bolts to 6 Nm (4 lb.ft).
 - Connect the electrical connector.
 - Install the clips.
3. Install the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).

Wipers and Washers - Headlamp Washer Jet

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the front fog lamp.
For additional information, refer to: [Front Fog Lamp](#) (417-01 Exterior Lighting, Removal and Installation).
3. Release the washer jet assembly.
 - Release the clip.

E47039

4. Remove the washer jet.
 - Release the hose clip and disconnect the hose.

E47040

Installation

1. To install, reverse the removal procedure.

Wipers and Washers - Headlamp Washer Pump

Removal and Installation

Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove the LH fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
3. Release the headlamp washer pump hose.
 - Drain the washer reservoir fluid.
4. Disconnect the headlamp washer pump electrical connector.
5. Remove the headlamp washer pump.
 - Discard the O-ring seal.

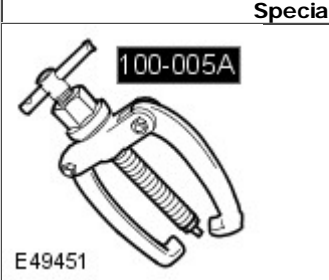

Installation

1. Install the headlamp washer pump.
 - Install a new O-ring seal.
2. Connect the headlamp washer pump electrical connector.
3. Connect the headlamp washer pump hose.
4. Install the fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
5. Lower the vehicle.
6. Top-up the windshield washer reservoir.

Wipers and Washers - Rear Wiper Pivot Arm

Removal and Installation

Special Tool(s)	
	General purpose puller 100-005A (LRT-99-500A)

Removal

1. Noting the fitted position and using the special tool, remove the rear wiper pivot arm.

- Remove the nut cover.
- Remove the nut.

2. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the wiper blade.

- Release the clip.

Installation

1. To install, reverse the removal procedure.

- Tighten the nut to 15 Nm (11 lb.ft).

Wipers and Washers - Rear Window Wiper Motor

Removal and Installation

Removal

1. Remove the liftgate trim panel.
For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the rear window wiper arm.
For additional information, refer to: [Rear Wiper Pivot Arm](#) (501-16 Wipers and Washers, Removal and Installation).
3. Remove the rear window wiper motor.
 - Disconnect the electrical connector.
 - Release the clip.
 - Remove the 3 nuts.

4. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the 3 rubber insulators.

- Remove the metal inserts.

Installation

1. To install, reverse the removal procedure.
 - Tighten the nuts to 10 Nm (7 lb.ft).

Roof Opening Panel -

Roof Opening Panel - Roof Opening Panel

Description and Operation

Roof Opening Panel Components

E48077

Item	Part Number	Description
1	-	Glass panel assembly
2	-	Glass panel seal
3	-	Frame assembly
4	-	Sunblind

5	-	Motor
6	-	Control module
7	-	RH rear drain tube
8	-	LH rear drain tube
9	-	LH front drain tube
10	-	Deflector
11	-	Access panel
12	-	RH front drain tube

GENERAL

E48078

Item	Part Number	Description
1	-	Access panel
2	-	Switch

The sunroof is electrically operated through a two-way rocker switch located on the roof mounted centre console. An electric motor, attached to the sunroof frame, drives the glass sunroof panel to the tilt or open positions. The glass panel is operated by two cables, which are driven by the motor.

The sunroof frame is bolted to eleven mounting points on the roof panel. The frame is a large injection moulding and supports all of the sunroof components. Two aluminium guides held in the frame, on each side. The sunroof motor attaches to the rear of this frame. The motor is supported on the frame with three screws.

The sunroof glass panel is attached to the guide at the extreme front and rear. The tilt and slide positions are achieved by driving the attachment points on the panel over two fixed curves, one in the guide and one fixed to the panel.

Sunroof Motor

E48079

The sunroof motor has a worm drive, which drives a gear in a cast housing attached to the end of the motor. The gear has

a small pinion gear attached to the outer part of its spindle. The pinion engages with the helixed cables to form a rack and pinion drive. Rotation of the motor turns the pinion, which in turn drives the cables in the required direction.

Sunroof Motor Pin Out Information

Pin	Description	Input/Output
1	Hall sensor Ground	-
2	Hall sensor Supply	Input
3	Hall sensor Speed	Output
4	Hall sensor Direction	Output
5	Motor A	Input
6	Motor B	Input

The two cables are attached either side of the pinion. One end of each cable is attached to the guide. The opposite end is trapped in its position on the pinion by a metal insert in the frame. The cables run in channels in the frame to the guides. As the sunroof panel is closed, the cables are pushed through channels in the rear of the frame. The displaced cable is guided into a further two channels in the frame, which protect the cable and prevent the cable snagging creating noise. The cables are made from rigid spring steel and therefore can pull as well as push the sunroof along the guides.

A sun blind is also located in the guides integrated into the frame. The sunblind is operated manually, independently of the glass panels position. To move to the closed position the sunblind handle is pushed forward until it latches into the frame. To move the sunblind to the open position the sunblind handle is pushed up, to unlatch and either released or retracted to the open position. The sunblind can only be in either the fully open or fully closed positions.

Drain hoses are connected to the front and rear corners of the frame. The drain hoses are located inside of the cabin on the 'A' and 'C' post pillars to allow water, which has collected in the frame to escape. A one-way valve is fitted to the end of each drain hose to prevent the ingress of dirt and moisture.

SUNROOF CONTROL MODULE

The sunroof control module is mounted on the rear of the frame, and is connected to the motor at one end as described above, and to the vehicle electrical system at the other. It takes the inputs from the vehicle, such as LIN (Local Interconnect Network) bus signals and switch signals, and controls motor movement appropriately. It also contains the algorithm for the anti-trap system.

Sunroof Control Module Pin Out Information

Pin	Description	Input/Output
1	Switch Ground	-
2	Switch Open	Input
3	Switch Close	Input
4	Not used	-
5	Not used	-
6	Emergency (see note below)	Input
7	ECU Ground	-
8	Battery	Input
9	Not used	-
10	Not used	-
11	Not used	-
12	LIN	Input

• NOTE: Pin 6 is for use in an emergency only in the event of the vehicle LIN bus not being functional. It is not connected on the vehicle harness or in the connector.

• NOTE: Putting pin 6 to ground will enable the sunroof control module but without one touch operation or anti trap. The sunroof will not require re-calibrating unless the battery has been disconnected.

• NOTE: The sunroof control module will remain awake and enabled until pin 6 is disconnected again. Under no circumstances is this pin to be left grounded for long periods.

• NOTE: There is no emergency key access in the headlining for manual sunroof operation should the motor fail for any reason.

OPERATION

The sunroof can be operated with the ignition in power modes 4 accessory or 6 on. The sunroof can also be operated for up to 40 seconds after the ignition power mode 0 'off' provided the driver's or passenger's door is not opened. During the 40 second period the one touch function is inoperative.

The motor contains a micro-switch and a Hall effect sensor. Two gears, driven by the motor at one end of the pinion drive spindle, trip the micro-switch every thirteen revolutions of the spindle. When the micro-switch is tripped, the sunroof control module senses an open circuit signal. The sunroof control module, to calculate the exact position of the sunroof, uses the signal from the micro-switch combined with signals received from the Hall effect sensor. The Hall effect sensor is also responsible for the operation of the anti-trap function.

If the anti-trap feature is activated while the sunroof is closing, the roof panel is reversed for 200mm or as far as possible. The Hall sensor, located in the sunroof motor, monitors the speed of the motor and if the speed decreases below a set threshold, indicating an obstruction, the power feed to the motor is reversed so the sunroof goes back. In an emergency the anti-trap function can be overridden by holding the sunroof switch in the closed position.

Tilt

With the sunroof panel closed, pushing the upper part of the rocker switch operates the sunroof motor to 'tilt' the rear of the sunroof upwards. The motor operates for as long as the switch is operated until the glass is tilted to its full extent. If the switch is released before the full tilt position is reached, the sunroof panel stops at the chosen position. A single press (between 0.5 and 1 second) of the switch operates the motor so that the panel automatically retracts to the fully tilted position.

When the tilt function is requested, the cables pull the guide rearward, forcing the panel attachment up a curve, which raises the sunroof panel to the tilt position.

With the sunroof panel in the tilted position, pushing the lower part of the rocker switch operates the sunroof motor to lower the sunroof panel. The motor operates to lower the panel for as long as the switch is operated until the panel is fully lowered. If the switch is released before the fully lowered position is reached, the sunroof panel stops at the chosen position.

Open (slide)

With the sunroof panel tilted, pushing the upper part of the rocker switch operates the sunroof motor to raise the sunroof panel and retract it backwards. A single press (between 0.5 and 1 second) of the switch operates the motor so that the panel automatically retracts to the fully open position. When the panel retracts, a wind deflector automatically raises at the front of the sunroof aperture, which serves to reduce wind noise.

When the open function is requested, the cables pull in a rearward direction, driving the glass panel attachments to slide the panel over the exterior roof skin.

With the sunroof panel half or fully open, pushing the lower part of the switch operates the motor to close the sunroof panel. A single press (between 0.5 and 1 second) of the switch operates the motor so that the panel automatically closes to the fully tilted position.

If only partial opening or closing is desired, pressing the switch momentarily (less than 0.5 seconds) in either direction will stop the sunroof panel movement. When movement is desired in either direction, pressing the switch will operate the motor to move the panel.

The sunroof has an 'anti-trap' function which prevents the sunroof panel from closing if an obstruction is sensed. When an obstruction is sensed, the motor will automatically retract the panel by 200mm or as far as possible. When the obstruction is removed, the panel can be closed by the normal method.

Battery Disconnection

If the battery has been disconnected, the one touch and anti-trap function will become inoperative. Pressing the lower part of the sunroof switch for 20 seconds will start the sunroof's calibration routine. The sunroof will complete a full cycle in order to re-learn the parameters required for one-touch open and close and the anti-trap function. The sunroof will still have manual movement available until the sunroof is re-calibrated.

SUNROOF CONTROL DIAGRAM

Roof Opening Panel - Roof Opening Panel

Diagnosis and Testing

Principle of Operation

For a detailed description of the roof opening panel system and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Roof Opening Panel](#) (501-17 Roof Opening Panel, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Glass panel assembly ● Glass panel seal ● Frame assembly ● Sunblind ● Deflector ● Access panel ● Roof opening panel cables ● Drain tube(s) 	<ul style="list-style-type: none"> ● Fuses ● Battery Junction Box (BJB) ● Central Junction Box (CJB) ● Wiring harness ● Loose or corroded connector(s) ● Roof opening panel motor and control module ● Roof opening panel switch

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Roof opening panel inoperative	<ul style="list-style-type: none"> ● Fuse(s) blown ● Circuit fault ● Switch fault ● Motor fault 	Check the fuse(s). Check the roof opening panel circuits. Check the switch and motor function. Refer to the electrical guides.
Roof opening panel sticking	<ul style="list-style-type: none"> ● Debris in the channels/guides ● Cable(s) sticking/damaged ● Roof opening panel not correctly aligned ● Switch fault ● Motor fault 	Check for general debris. Inspect, clean and lubricate the cable(s) and guides. Check the roof opening panel alignment. Refer to the relevant section of the workshop manual. Check the switch and motor function. Refer to the electrical guides.
Roof opening panel juddering	<ul style="list-style-type: none"> ● Debris in the channels/guides ● Cable(s) sticking/damaged ● Roof opening panel not correctly aligned ● Motor fault 	Check for general debris. Inspect, clean and lubricate the cable(s) and guides. Check the roof opening panel alignment. Refer to the relevant section of the workshop manual. Check the motor function.
Water ingress from roof opening panel	<ul style="list-style-type: none"> ● Debris in the channels/guides ● Drain tube(s) blocked ● Damage to the glass panel seal ● Roof opening panel not correctly aligned 	Check for general debris and blocked drain tube(s). Inspect, clean and lubricate the cable(s) and guides. Check the glass panel seal. Check the roof opening panel alignment. Refer to the relevant section of the workshop manual.
Wind noise	<ul style="list-style-type: none"> ● Damage to the glass panel seal ● Cable(s) sticking/damaged ● Roof opening panel not correctly aligned 	Check the glass panel seal. Inspect, clean and lubricate the cable(s) and guides. Check the roof opening panel alignment. Refer to the relevant section of the workshop manual.

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00.
REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Central Junction Box \(CJB\)](#) (100-00 General Information, Description and Operation).

Roof Opening Panel - Roof Opening Panel Alignment

General Procedures

1. With the roof opening panel closed, check the alignment of the glass to the roof panel. The glass should be central in its aperture. Profile of sunroof to body:

1. Front edge, set flush or up to 1.0 mm (0.040") low.
1. Rear edge, set flush or up to 1.0 mm (0.040") high.

2. Open the roof opening panel blind.

3. Loosen the 6 roof opening panel Torx bolts.

4. Align the roof opening panel.

- Tighten the Torx screws to 6 Nm (4 lb.ft).

5. Close the roof opening panel blind.

Roof Opening Panel - Roof Opening Panel

Removal and Installation

Removal

1. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Release the 4 drain hoses from the roof opening panel.
3. Disconnect the roof opening panel motor electrical connector.

4. With assistance, remove the roof opening panel assembly.
 - Remove the 11 bolts.

E49601

5.  **CAUTION:** Do not depress the RH plunger to remove the blind.

• **NOTE:** Do not disassemble further if the component is removed for access only.

• **NOTE:** Note the fitted position.

Remove the roof opening panel blind.

- Twist to release the handle.
- Depress the LH plunger.

E49602

6. Remove the roof opening panel motor.

- Remove the 3 Torx screws.
- Remove the spacer.

Installation

1. Install the roof opening panel motor.

- Install the spacer.
- Tighten the Torx screws to 4 Nm (3 lb.ft).

2. **NOTE:** Align to the position noted on removal.

Install the roof opening panel blind.

- Secure in the guides.
- Locate the tensioner peg.
- Depress the LH plunger.

3. With assistance, install the roof opening panel assembly.

- Clean the component mating faces.
- Tighten the bolts to 10 Nm (7 lb.ft).

4. Connect the roof opening panel motor electrical connector.

5. Connect the drain hoses.

- Make sure the drain hoses are clear prior to connection.

6. Install the headliner.

For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

7. Using T4, configure a new roof opening panel.

- 8.** If the battery has been disconnected, the one touch and anti-trap function will become inoperative. Close the roof opening panel and continue to hold the switch for a further 20 seconds to allow the sunroof to complete a full cycle. This will complete the roof opening panels calibration routine and reset these functions.

Roof Opening Panel - Roof Opening Panel Glass

Removal and Installation

Removal

1. Open the roof opening panel blind.
2. Open the roof opening panel to the tilt position.
3. Remove the roof opening panel glass.

- Remove the 3 Torx screws.
- Repeat the above procedure for the other side.

E49244

Installation

1. Install the roof opening panel glass.
 - Install the Torx bolts, but do not tighten fully at this stage.
2. Align the roof opening panel glass.
For additional information, refer to: [Roof Opening Panel Alignment](#) (501-17 Roof Opening Panel, General Procedures).

Roof Opening Panel - Roof Opening Panel Motor

Removal and Installation

Removal

1. Remove both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove both B-pillar upper trim panels.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove the front overhead console.

- Carefully release the 7 clips.
- Disconnect the electrical connector.

E50142

4. Remove the sun visor.

- Remove the cover.
- Remove the 2 screws.
- Release from the clip.
- Disconnect the electrical connector.
- Repeat the above procedure for the other side.

E49687

5. Remove the sun visor retaining clip.

- Release the screw cover.
- Remove the screw.
- Repeat the above procedure for the other side.

E49688

6. Remove the passenger assist handle.

- Release the 2 screw covers.
- Remove the 2 screws.
- Repeat the above procedure for the other side.

E49689

7. Lower the headliner for access.

- Release the 4 clips.

E56036

8. Remove the roof opening panel motor.

- Disconnect the electrical connector.
- Remove the 3 Torx screws.
- Remove the spacer.

E55446

Installation

1. Install the roof opening panel motor.

- Install the spacer.

- Tighten the Torx screws to 4 Nm (3 lb.ft).
 - Connect the electrical connector.
2. Position the headliner.
- Secure with the clips.
3. Install the passenger assist handles.
- Install the screws.
 - Secure the screw covers.
4. Install the sun visors.
- Install the clips.
 - Install the screws.
 - Install the screw covers.
 - Connect the electrical connectors.
5. Install the front overhead console.
- Connect the electrical connector.
 - Carefully secure the clips.
6. Install both B-pillar upper trim panels.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
7. Install both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
8. Using T4, configure a new roof opening panel motor.
9. If the battery has been disconnected, the one touch and anti-trap function will become inoperative. Close the roof opening panel and continue to hold the switch for a further 20 seconds to allow the sunroof to complete a full cycle. This will complete the roof opening panel calibration routine and reset these functions.

Roof Opening Panel - Roof Opening Panel Module

Removal and Installation

Removal

1. Remove the rear overhead console.

- Carefully release the 9 clips.
- Disconnect the 2 electrical connectors.

E50143

2. Remove the roof opening panel module.

- Slide the module to the LH side to release it from the bracket.
- Disconnect the 2 electrical connectors.

E55397

Installation

1. Install the roof opening panel module.

- Connect the electrical connectors.
- Secure the module to the bracket.

2. Install the rear overhead console.

- Connect the electrical connectors.
- Carefully secure the clips.

3. Using T4, configure a new roof opening panel module.

4. If the battery has been disconnected, the one touch and anti-trap function will become inoperative. Close the roof

opening panel and continue to hold the switch for a further 20 seconds to allow the sunroof to complete a full cycle. This will complete the roof opening panels calibration routine and reset these functions.

Installation

1. To install, reverse the removal procedure.

Bumpers - Rear Bumper Cover

Removal and Installation

Removal

All vehicles

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove both rear lamp assemblies.
For additional information, refer to: [Rear Lamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).
3. Remove both rear quarter panel mouldings.
For additional information, refer to: [Rear Quarter Panel Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
4. Remove 4 screws, 2 clips and 2 bolts from the rear bumper cover.

5. With assistance, remove 4 clips from the inner edge of the bumper cover.

- Tilt the tailgate for access.
- Open the tailgate hinge cover.

6. Remove the rear bumper cover.

- Release from the 12 clips.
- If installed, disconnect the parking aid sensor wiring harness electrical connector.

7. NOTE: Do not disassemble further if the component is removed for access only.

Remove the towing eye cover.

- Remove the 2 screws.

8. Remove the rear bumper trim panel.

- Release the 11 clips.

9. Remove the bumper insert.

- Remove the 3 screws.

Vehicles with parking aid

10. Remove the parking aid sensor wiring harness.

- Disconnect the 4 electrical connectors.

Vehicles with parking aid

11. Remove the parking aid sensor.

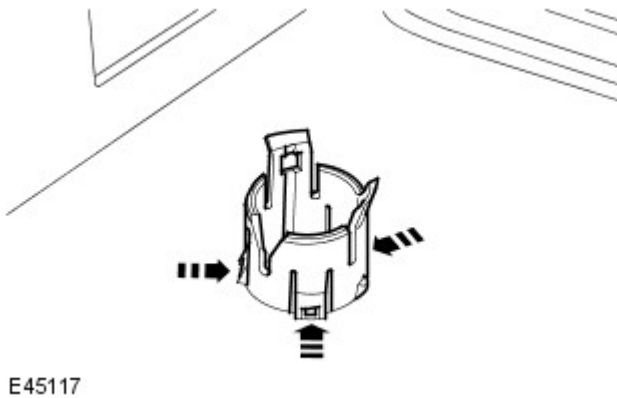

- Release the 2 clips.
- Repeat the above procedure for the remaining 3 sensors.

Vehicles with parking aid

12. Remove the parking aid sensor trim panel.

- Release the 3 clips.
- Repeat the above procedure for the remaining 3 sensor trim panels.

Installation

Vehicles with parking aid

1. Install the parking aid sensor trim panels.

Vehicles with parking aid

2. Install the parking aid sensors.

Vehicles with parking aid

3. Install the parking aid sensor wiring harness.

- Connect the electrical connectors.

4. Install the bumper insert.

- If installed, secure the parking aid sensor wiring harness.

- Tighten the screws.
5. Install the rear bumper trim panel.
 6. Install the towing eye cover.
 - Tighten the screws.
 7. Install the rear bumper cover.
 - If installed, connect the parking aid sensor wiring harness electrical connector.
 - Secure with the clips.
 - Tighten the screws.
 - Tighten the bolts to 10 Nm (7 lb.ft).
 8. Install both rear quarter panel mouldings.
For additional information, refer to: [Rear Quarter Panel Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
 9. Install both of the rear lamp assemblies.
For additional information, refer to: [Rear Lamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).

+ Rear seat Torx bolts	40	30

+ New Torx bolt must be fitted

Safety Belt System - Safety Belt System

Description and Operation

COMPONENT LOCATIONS (FIVE SEAT VEHICLES)

E44815

COMPONENT LOCATIONS (SEVEN SEAT VEHICLES)

E44835

GENERAL

A three point safety belt is installed at each seat position. Except in North American Specification (NAS) markets, all of the safety belts have Emergency Locking Retractors (ELR). In NAS markets, only the driver seat is fitted with an ELR; all of the passenger safety belts have Automatic Locking Retractors (ALR).

Both types of retractor incorporate a liftshaft locking system with webbing sensor and car sensor activating mechanisms. The webbing sensor activates the locking system if the webbing is subjected to a sharp pull. The car sensor activates the locking system if the vehicle is subjected to sudden deceleration or a severe tilt angle.

The ALR has a mode of operation where the retractor will take up slack in the webbing, but not allow any slack to be paid out. This mode of operation can be used to secure a child seat.

- **To engage the ALR child seat mode of operation:** Pull the webbing out of the retractor to its full extent.
- **To cancel the ALR child seat mode of operation:** Allow the retractor to fully rewind the webbing.

A safety belt warning indicator is installed in the instrument cluster to remind the front seat occupants to fasten their safety belts. On NAS vehicles, when the ignition switch is turned to position II, the warning indicator illuminates if the safety belt of an occupied front seat is not fastened. The warning indicator remains illuminated until the safety belt of each occupied front seat is fastened, or the ignition is switched off. In all markets except NAS, a belt minder function provides a more intrusive reminder to fasten the front safety belts.

FRONT SAFETY BELTS

The retractor of each front safety belt is attached to the related B pillar. The webbing runs from the retractor through an upper mounting, attached to a shoulder height adjuster on the B pillar, to an anchor point on the front seat.

On NAS vehicles, a tension sensor is integrated into the anchor point of the passenger front safety belt. The tension

sensor is part of the occupant classification system.

For additional information, refer to: [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) (501-20B Supplemental Restraint System, Description and Operation).

The retractor for each front safety belt incorporates a load limiter that allows the retractor reel to partially unwind when the load on the webbing exceeds a predetermined limit.

The buckle for each front safety belt is attached to a pretensioner secured to the inboard side of the related front seat frame. Each buckle incorporates a safety belt buckle sensor that provides a status input to the restraints control module, which uses the input to determine the air bag and pretensioner activation strategies. The restraints control module also relays the status of the safety belts to the instrument cluster on the high speed CAN bus.

Belt Minder Function (Where Fitted)

The belt minder function provides warnings to the driver if the appropriate front safety belts are not fastened when driving. The belt minder function is controlled by the instrument cluster using medium speed CAN bus messages, from the restraints control module, to monitor the status of the front safety belts.

When the ignition switch is turned to position II, the instrument cluster illuminates the safety belt warning indicator until one of the front safety belts is fastened or the belt minder function is triggered. The belt minder function is triggered when the ignition switch is in position II and the following conditions coexist:

- The belt minder function is enabled.
- Vehicle speed is 8 km/h (5 mph) or more.
- The vehicle is not in reverse.
- The driver safety belt or, if the front passenger seat is occupied, the front passenger safety belt, is unfastened.

When the belt minder is triggered, the instrument cluster generates the following warnings for 10 seconds.

- Flashes the safety belt warning indicator at 2 Hz.
- Sounds a repeating chime in sequence with the flashing safety belt warning indicator.

After 10 seconds, the repeating chime is discontinued and the safety belt warning indicator changes from flashing to continuously illuminated. While the trigger conditions still coexist, the warnings are repeated every 30 seconds until one of the following occurs:

- 5 minutes has elapsed from when the warnings were first triggered.
- The safety belt of each occupied front seat is fastened.
- The ignition switch is turned to position 0.
- The vehicle speed decreases to 5 km/h (3 mph).

The belt minder function can be enabled and disabled using the driver safety belt switch. The instrument cluster changes the state of the belt minder function if, within 60 seconds of first turning the ignition switch to position II, the driver safety belt is fastened and unfastened nine times. Successful completion of the change is indicated by a single chime and the safety belt warning indicator flashing five times, at 2 Hz. The belt minder function can also be enabled and disabled using T4.

Safety Belt Warning Indicator

SECOND ROW SAFETY BELTS

The retractor of each outboard second row safety belt is attached to the body immediately behind the D pillar. The webbing runs from the retractor, through an upper mounting on the D pillar, to an anchor point at the front of the related wheel arch.

The retractor for the center second row safety belt is installed in the top of the seat back. The webbing runs from the retractor, over the top of the seat, to an anchor point at the base of the seat frame.

The buckles for the second row safety belts are attached to the related seat frame.

THIRD ROW SAFETY BELTS (WHERE FITTED)

The retractor of each third row safety belt is attached to the E pillar. The webbing runs from the retractor, through a mounting on the E pillar to an anchor point on the floor.

The buckles for the third row safety belts are attached to the related seat frame.

Safety Belt System - Safety Belt System

Diagnosis and Testing

Principle of Operation

For a detailed description of the safety belt system and operation, refer to the relevant description and operation section of the workshop manual REFER to: [Safety Belt System](#) (501-20A Safety Belt System, Description and Operation).

Safety Information

• WARNINGS:

To avoid accidental deployment the back-up power supply must be depleted before beginning any work on the SRS system or its components. Failure to follow this instruction may result in personal injury

Do not use a multimeter to probe an SRS module. It is possible for the power from the multimeter battery to trigger the activation of the module. Failure to follow this instruction may result in personal injury

• NOTE: Do not to use a cellular phone or to have a cellular phone in close proximity when working on the SRS system or components

Power supply depletion

Before beginning any work on the SRS system or related components:

1. **1.** Remove the ignition key
2. **2.** Disconnect the battery leads, ground first
3. **3.** Wait 2 minutes for the power circuit to discharge

There are comprehensive instructions on the correct procedures for SRS system repairs, refer to the relevant section of the workshop manual

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle

• NOTE: Check and rectify basic faults before beginning diagnostic routines including pinpoint tests

1. **1.** Verify the customer concern by operating the safety belt
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Check for the installation of non-standard accessories which may affect or obstruct the function of the safety belt system ● Frayed or damaged webbing ● Missing or damaged button stop ● Pretensioner(s) Buckles/Stalks 	<ul style="list-style-type: none"> ● Fuses ● Wiring harness fault ● Correct engagement of electrical connectors ● Loose or corroded connections ● Warning lamp bulb(s) ● Impact sensor(s) ● Buckle sensor(s) ● Pretensioner(s) ● Belt tension sensor(s) ● Restraints control module

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step
4. **4.** If the cause is not visually evident, carry out the test methods described below, alternatively check for diagnostic trouble codes and refer to the relevant diagnostic trouble code index

For a complete list of all diagnostic trouble codes that could be logged on this vehicle, please refer to section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Restraints Control Module \(RCM\)](#) (100-00 General Information, Description and Operation).

Symptom Chart for Safety Belt Rows 1, 2 and 3

Symptom	Possible Causes	Action
Safety belt jammed - Webbing tight	<ul style="list-style-type: none"> ● Backlock effect-in action (webbing retracted quickly and came to sudden stop) ● Safety belt retractor not installed correctly ● Rear centre belt only. Mini-button (webbing travel limit stop) missing and seat squab has been moved 	<ul style="list-style-type: none"> ● GO to Pinpoint Test A. ● GO to Pinpoint Test E. ● GO to Pinpoint Test H. ● See the automatic locking retractor description below

Symptom	Possible Causes	Action
	<ul style="list-style-type: none"> causing tight fit Automatic locking retractor activated (clicking – during retraction only) 	
Seat squab will not fold/jammed	<ul style="list-style-type: none"> • NOTE: Rear centre belt only • Mini-button (webbing travel limit stop) missing and seat squab has been moved causing excessive tension 	<ul style="list-style-type: none"> • GO to Pinpoint Test H.

Safety Belt - Not extracting	<ul style="list-style-type: none"> • Backlock effect-in action (webbing retracted quickly and came to sudden stop) • Safety belt retractor not installed correctly • Safety belt retractor webbing guide loose • Twist in safety belt webbing • D-loop not rotating correctly • Interference in webbing routing • Foreign object/debris • Automatic locking retractor activated (clicking – during retraction only) 	<ul style="list-style-type: none"> • GO to Pinpoint Test A. • GO to Pinpoint Test F. • GO to Pinpoint Test C. • GO to Pinpoint Test D. • GO to Pinpoint Test G. • GO to Pinpoint Test E. • GO to Pinpoint Test E. • See the automatic locking retractor description below
Safety belt - Noisy during operation	<ul style="list-style-type: none"> • Automatic locking retractor activated (clicking–during retraction only) • Interference in webbing routing (rubbing) 	<ul style="list-style-type: none"> • GO to Pinpoint Test B. • GO to Pinpoint Test E.
Safety belt buckle - Not latching / jammed	<ul style="list-style-type: none"> • Foreign object/debris 	 CAUTION: Do not insert any objects or tools into the buckle head <ul style="list-style-type: none"> • GO to Pinpoint Test I.

Inertia Reel Safety Belts

The vehicle is equipped with (two row one), (three row two), and (two row three (seven seat versions only)) inertia reel safety belts

These safety belts are "**dual sensitive**" which means that they have:

- **Car sense system - A vehicle motion sensor, which locks the safety belt webbing under braking, cornering, on steep hills and in adverse camber conditions, when parked on a steep incline or driveway or two wheels on a high curb**
- **Webb sense system - A webbing motion sensor, which locks when the safety belt webbing is extracted suddenly**

The safety belts in the following positions are equipped with an automatic locking retractor function:

Carline	Market	Seat position	Automatic Locking Retractor Installed	From Model Year
Defender (L316)	All	All	No	2007
Discovery / Range Rover Sport (L319/L320)	All	Driver	No	2008
Discovery / Range Rover Sport (L319/L320)	US	Passenger	Yes	2005
Discovery / Range Rover Sport (L319/L320)	All	Driver	No	2005
Discovery / Range Rover Sport (L319/L320)	ROW	Passenger	No	2005
Discovery (L319)	All	Row 2	Yes	2005
Discovery (L319)	All	Row 3	Yes	2005
Range Rover Sport (L320)	All	Row 2	Yes	2006
Freelander (L359)	All	Driver	No	2007
Freelander (L359)	ROW	Passenger	No	2007
Freelander (L359)	US	Passenger	Yes	2007
Freelander (L359)	ROW	Row 2	No	2007
Freelander (L359)	US	Row 2	Yes	2007

Carline	Market	Seat position	Automatic Locking Retractor Installed	From Model Year
Range Rover Evoque (L358)	All	Driver	No	2011

Range Rover (L322)	All	Driver	No	2003
Range Rover (L322)	ROW	Passenger	No	2003
Range Rover (L322)	US	Passenger	Yes	2003
Range Rover (L322)	ROW	Row 2	No	2003
Range Rover (L322)	US	Row 2	Yes	2003

The **automatic locking retractor function** is a feature to secure a child seat or heavy load to the seat

Activation	Deactivation
<ul style="list-style-type: none"> NOTE: When automatic locking retractor is activated, no further webbing can be drawn from the safety belt retractor, prior to disengagement of the automatic locking. This can be mistaken as a jammed safety belt retractor 	Automatic locking retractor is deactivated by allowing the webbing to retract until the clicking stops (close to park position)
Activated by total extraction of the webbing	
When activated the automatic locking retractor is identified by a clicking noise during webbing retraction	When deactivated the automatic locking retractor safety belt changes state, from a static safety belt to an automatic safety belt

Safety Belt Locking Test

With the vehicle stationary and on level ground take firm hold of the safety belt webbing (on the tongue side of the upper safety belt anchor) and withdraw sharply, **the retractor should lock**. Preventing further webbing release (**repeat this test 3 times**). Any safety belt retractor which fails to lock **must not be used** and a **new safety belt must be installed**.

DTC Index

For a list of diagnostic trouble codes that could be logged on this vehicle, please refer to Section 100-00 or for removal and installation/description and operation see Section 501-20

Diagnostic Guide Inertia Reel Safety Belts

PINPOINT TEST A : BACKLOCK	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: BACKLOCK	
	<ol style="list-style-type: none"> 1 Visually inspect the condition of the suspect safety belt 2 Draw a maximum of 20mm of the webbing from the safety belt retractor with moderate force. Then release the webbing 3 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes No further action required No For first row safety belt GO to Pinpoint Test C . For second and third row safety belts GO to Pinpoint Test B .

PINPOINT TEST B : WEBBING-TRAPPED IN SEAT	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
B1: WEBBING-TRAPPED IN SEAT	
	<ol style="list-style-type: none"> 1 Visually inspect the condition of the suspect safety belt 2 Lift the seat base or release the seat backrest as required 3 Free the trapped webbing, allow the webbing to retract Note: If the automatic locking retractor is activated, allow the webbing to retract until the clicking stops 4 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes No further action required No GO to Pinpoint Test C .

PINPOINT TEST C : SAFETY BELT RETRACTOR-WEBBING GUIDE LOOSE	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
C1: SAFETY BELT RETRACTOR-WEBBING GUIDE LOOSE	
	<ol style="list-style-type: none"> 1 Refer to 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point) and safety belt retractor 2 Check the webbing is not trapped or twisted and is centrally located on the safety belt retractor spindle 3 Attempt to withdraw the webbing from the safety belt retractor NOTE: If the safety belt webbing is jammed, the automatic locking retractor could be engaged 4 To release the automatic locking retractor, manually wind the webbing onto the spindle until the automatic locking retractor deactivates (clicking stops) 5 Fully extract webbing

	6 Confirm webbing guide location is correct , Confirm the fixing lugs are correctly located in the retractor frame
	7 Allow webbing to retract
	8 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No GO to Pinpoint Test D.

PINPOINT TEST D : TWIST IN WEBBING	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
D1: TWIST IN WEBBING	
	1 Refer to section 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point)
	2 Twist the webbing back the correct way in the loop
	3 Pass the twist through the pillar loop or escutcheon as required
	4 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No GO to Pinpoint Test E.

PINPOINT TEST E : INTERFERENCE-WEBBING ROUTING	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
E1: INTERFERENCE-WEBBING ROUTING	
	1 Refer to the 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point)
	2 Remove obstructions and foreign objects ensure the webbing does not catch or rub
	3 Confirm the safety belt does not contact the wiring harness
	4 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No GO to Pinpoint Test E.

PINPOINT TEST F : SAFETY BELT RETRACTOR-INCORRECT INSTALLATION	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
F1: SAFETY BELT RETRACTOR-INCORRECT INSTALLATION	
	1 Refer to the 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point) and the safety belt retractor
	2 Refer to the 501-20 removal and installation section of the workshop manual, correctly reinstall the safety belt retractor ensure that the locating "T bar" and "anti rotation pins" are correctly located
	3 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No Replace as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component

PINPOINT TEST G : D-LOOP NOT ROTATING CORRECTLY	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
G1: D-LOOP NOT ROTATING CORRECTLY	
	1 Refer to the 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point) and the safety belt retractor
	2 Ensure there are no obstructions and the webbing does not catch or rub, the D loop (anchor point) rotates correctly and if installed the confirm the height adjuster operates correctly
	3 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No

Replace as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component

PINPOINT TEST H : MINI BUTTON-MISSING/DAMAGED

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
H1: MINI BUTTON-MISSING/DAMAGED	
• NOTE: This test applies to the rear centre safety belt retractor installed in the seat back	
	<ol style="list-style-type: none"> <li data-bbox="304 311 1479 383">1 Refer to the 501-20 removal and installation section of the workshop manual, remove the seat cushion and the plastic escutcheon at the top of the seat back (where the webbing exits to expose the lower anchor fixing point of the center safety belt) <li data-bbox="304 383 1479 412">2 Remove the lower anchorage of the safety belt <li data-bbox="304 412 1479 439">3 With the seat back correctly latched, allow up to 20mm webbing to retract, then extract the webbing
	<p>Is the mini-button (webbing travel limit stop) correctly installed to the webbing and in good condition?</p> <p>Yes Feed the mini-button back through the plastic escutcheon if required. Correctly reinstall the escutcheon to the seat back, extract the webbing then allow to retract, ensure the mini-button comes to rest outside the escutcheon stop</p> <p>No Replace as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component</p>

PINPOINT TEST I : SAFETY BELT BUCKLE-NOT LATCHING/JAMMED

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
I1: SAFETY BELT BUCKLE-NOT LATCHING/JAMMED	
 CAUTION: Do not insert any objects or tools into the buckle head	
	<ol style="list-style-type: none"> <li data-bbox="304 824 1479 853">1 Visually inspect the buckle head for evidence of damage. If damaged replace as required <li data-bbox="304 853 1479 902">2 Depress the buckle release (red button) and (Using a torch) carry out visual inspection for any evidence of debris/material or foreign objects in the buckle head <li data-bbox="304 902 1479 952">3 If required remove the pretensioner from the vehicle. Remove the seat. Remove the pretensioner from the seat frame <li data-bbox="304 952 1479 1001">4 Do not insert any objects or tools buckle head With the buckle removed invert and attempt to shake out any debris <li data-bbox="304 1001 1479 1032">5 Attempt to latch the tongue in the buckle
	<p>Does the seat belt buckle operate correctly</p> <p>Yes Reinstall any components, no further action required</p> <p>No Replace the pretensioner, Refer to section 501 20</p>

Safety Belt System - Front Safety Belt Retractor

Removal and Installation

Removal

1. Position the front seat fully forwards.
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the B-pillar upper trim panel.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Release the safety belt upper anchor from the B-pillar.
 - Remove and discard the Torx bolt.

5. Release the front seat switch pack trim panel for access.

- Remove the 2 screws.

6. Remove the front safety belt retractor.

- Remove and discard the Torx bolt.

Installation

1. Install the front safety belt retractor.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).

2. Install the front seat switch pack trim panel.

- Tighten the screws.

3. Attach the safety belt upper anchor.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).

4. Install the B-pillar upper trim panel.

For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Safety Belt System - Second Row Center Safety Belt Retractor Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

1. Release the safety belt retractor cover and guide

- Remove the 2 screws.
- Remove the safety belt guide.
- Remove the retractor cover.

2. Remove the safety belt lower anchor.

- Raise the seat cushion.
- Remove and discard the nut.

3. Remove the safety belt retractor assembly.

- Remove and discard the Torx bolt.

Installation

1. Install the safety belt retractor assembly.

- Tighten the new Torx bolt to 40 Nm (30 lb.ft).

2. Install the safety belt guide and retractor cover.

- Attach the safety belt guide and retractor cover.
- Tighten the screws.

3. Install the safety belt lower anchor.

- Tighten the new nut to 40 Nm (30 lb.ft).
- Lower the seat cushion.

Safety Belt System - Second Row Center Safety Belt Retractor Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. Remove the center seat.
For additional information, refer to: [Rear Seat - Vehicles With: 40/20/40 Split Seat](#) (501-10 Seating, Removal and Installation).

2. Release the safety belt retractor cover and guide

- Remove the 2 screws.
- Remove the safety belt guide.
- Remove the retractor cover.

3. Remove the safety belt lower anchor.

- Fold the LH outer seat assembly forwards.
- Remove and discard the Torx bolt.

4. Remove the safety belt retractor assembly.

- Remove and discard the Torx bolt.

Installation

1. Install the safety belt retractor assembly.
 - Tighten the new Torx bolt to 40 Nm (30 lb.ft).
2. Install the safety belt guide and retractor cover.

- Attach the safety belt guide and retractor cover.
 - Tighten the screws.
- 3.** Install the safety belt lower anchor.
- Tighten the new nut to 40 Nm (30 lb.ft).
 - Lower the seat cushion.
- 4.** Install the center seat.
For additional information, refer to: [Rear Seat - Vehicles With: 40/20/40 Split Seat](#) (501-10 Seating, Removal and Installation).

Safety Belt System - Second Row Safety Belt Retractor

Removal and Installation

Removal

1. Remove the C-pillar upper trim panel.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Release the safety belt upper anchor.
 - Remove and discard the Torx bolt.

E49593

4. Remove the second row safety belt retractor.
 - Remove and discard the Torx bolt.

E49594

Installation

1. Install the second row safety belt retractor.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
2. Install the safety belt upper anchor.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
3. Install the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Install the C-pillar upper trim panel.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Safety Belt System - Third Row Safety Belt Retractor

Removal and Installation

Removal

1. Remove the D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Release the safety belt upper anchor.
 - Remove and discard the Torx bolt.

3. Remove the third row safety belt retractor.
 - Remove and discard the Torx bolt.

Installation

1. Install the third row safety belt retractor.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
2. Install the safety belt upper anchor.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
3. Install the D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Safety Belt System - Front Safety Belt Buckle

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
4. Remove the seat backrest hinge cover.
 - Remove the 2 screws.

E56486

5. Remove the front safety belt buckle.

- Remove the Torx bolt.
- Disconnect the 2 electrical connectors.
- Release the wiring harness.

Installation

1. Install the front safety belt buckle.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).
- Connect the electrical connectors.
- Attach the wiring harness.

2. Install the seat backrest hinge cover.

- Tighten the screws.

3. Install the front seat.

For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

4. Connect the battery ground cable.

Safety Belt System - Rear Safety Belt Buckle Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. Remove the inner backrest hinge cover.

- Release the backrest cover side clip.
- Remove the screw.
- Release the 2 clips.

E55971

2. Remove the rear seat cushion side finisher.

- Remove the 2 screws.
- Release the tension strap.

E55973

3. Remove the safety belt buckle.

- Fold the seat assembly forwards.
- Remove the Torx bolt.
- Release the tension spring.

E55994

Installation

1. Install the safety belt buckle.

- Attach the tension spring.
- Tighten the Torx bolt to 25 Nm (18 lb.ft).
- Fold seat assembly rearwards.

2. Install the rear seat cushion side finisher.

- Attach the tension strap.
- Tighten the screws.

3. Install the inner backrest hinge cover.

- Attach the clips.
- Tighten the screw.
- Attach the backrest cover side clip.

Safety Belt System - Rear Safety Belt Buckle LH Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

1. Remove the safety belt buckle.

- Raise the seat cushion.
- Release the retaining strap.
- Remove the Torx bolt.
- Release the tension spring.

Installation

1. Install the safety belt buckle.

- Attach the tension spring.
- Tighten the Torx bolt to 25 Nm (18 lb.ft).
- Attach the retaining strap.
- Lower the seat cushion.

Safety Belt System - Rear Safety Belt Buckle RH Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

1. Release the RH rear seat.

- Fold the seat cushion forward.
- Remove and discard the 4 Torx bolts.
- Fold down the rear seat backrest.

2. Remove the RH rear seat.

3. Remove the rear seat cushion side finisher.

- Remove the screw.

4. Remove the safety belt buckle.

- Raise the seat cushion.
- Release the retaining strap.
- Remove and discard the bolt.

Installation

1. Install the safety belt buckle.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).
- Attach the retaining strap.
- Lower the seat cushion.

2. Install the rear seat cushion side finisher.

- Tighten the screw.

3. Install the RH rear seat.

- Position the seat on the dowels.

4. Secure the RH rear seat.

- Return the seat backrest to the upright position.
- Tighten the new bolts to 40 Nm (30 lb.ft).
- Fold the seat cushion rearwards.

Safety Belt System - Rear Center Safety Belt Buckle Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

1. Release the RH rear seat.

- Fold the seat cushion forward.
- Remove and discard the 4 Torx bolts.
- Fold down the rear seat backrest.

2. Remove the RH rear seat.

3. Remove the rear seat cushion side finisher.

- Raise the seat cushion.
- Remove the screw.

4. Remove the safety belt buckle.

- Release the retaining strap.
- Remove and discard the bolt.

Installation

1. Install the safety belt buckle.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).
- Attach the retaining strap.
- Lower the seat cushion.

2. Install the rear seat cushion side finisher.

- Tighten the screw.

3. Install the RH rear seat.

- Position the seat on the dowels.

4. Secure the RH rear seat.

- Return the seat backrest to the upright position.
- Tighten the new bolts to 40 Nm (30 lb.ft).
- Fold the seat cushion rearwards.

Supplemental Restraint System -

Torque Specifications

10	-	Seat cushion pressure pad (NAS only)
11	-	Safety belt tension sensor (NAS only)
12	-	Side air bag
13	-	Front impact sensors

GENERAL

The SRS provides additional protection for occupants in certain vehicle accident conditions. The SRS consists of:

- A driver air bag
- A passenger air bag
- A side air bag on each front seat
- Side air curtains for first and second row seats
- Side air curtains for third row seats (where fitted)
- A pretensioner for each front safety belt
- A buckle sensor for each front safety belt

- Front and side impact sensors
- A passenger air bag deactivation indicator
- A passenger air bag deactivation switch (all except NAS and Australia)
- An occupant monitoring system for the front passenger seat
- A position sensor for the driver seat
- A SRS warning indicator
- A clockspring
- A RCM.

⚠ WARNING: All pyrotechnic devices are dangerous. Before performing any procedures on any pyrotechnic device, read all information contained within the Standard Workshop Practices section of this manual. For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

The SRS features selective activation of the air bags and pretensioners, and two stage driver and passenger air bags. The RCM monitors internal and external sensors and activates the required safety belt pretensioners and air bags if the sensors detect an impact or roll-over above preset limits.

DRIVER AIR BAG

E133079

Item	Part Number	Description
1	-	Release tool slot and guide channel
2	-	Inflator stage 1 connector
3	-	Inflator stage 2 connector
4	-	Latch spring
5	-	Locating pin and spring
6	-	Latch hook

The driver air bag forms the center pad of the steering wheel. The latches consist of wire springs on each side of the driver air bag which engage with hooks in the steering wheel. The driver air bag is released from the steering wheel by pulling on the wire springs with a special tool inserted through a slot on each side of the steering wheel hub. Springs on the locating pins then push the driver air bag away from the steering wheel.

A Lucar connector attaches a ground to the driver air bag.

The driver air bag has a two stage inflator, with separate electrical connectors for each stage. The inflator contains a non-azide propellant as the gas generator.

Lines moulded into the inner surface of the driver air bag cover provide weak points that split open in a controlled manner when the driver air bag deploys. The inflated volume of the air bag is 57 liters (2.01 ft³).

PASSENGER AIR BAG

Item	Part Number	Description
1	-	Reinforcement lid
2	-	Chute
3	-	Passenger air bag
4	-	In-vehicle crossbeam
5	-	Mounting bracket
6	-	Lucar connector
7	-	Inflator connector
8	-	Deployment doors

The passenger air bag is located in the instrument panel, behind the upper glove compartment. The bottom of the passenger air bag is attached to a mounting bracket on the in-vehicle crossbeam. The top of the passenger air bag is attached to a chute, which, in turn, is attached to a reinforcement lid in the top of the instrument panel. When the air bag deploys, the chute guides the air bag to the underside of the reinforcement lid. The reinforcement lid incorporates two deployment doors that are forced open, splitting the instrument panel covering, when the air bag deploys.

A Lucar connector attaches a ground to the passenger air bag.

The passenger air bag has a two stage inflator, with separate electrical connectors for each stage. The inflator contains a non-azide propellant as the gas generator. The inflator uses a high pressure mix of air and hydrogen gas as the inflation medium. The inflated volume of the air bag is 130 liters (4.59 ft³).

SIDE AIR BAGS

- NOTE: Left side air bag shown, right side air bag is mirror image

E45253

Item	Part Number	Description
1	-	Seat backrest frame
2	-	Side air bag
3	-	Cable
4	-	Inflator

A side air bag is attached to the outside of each front seat backrest frame, under the backrest cover.

The side air bags are handed, and each consist of a moulded plastic case which contains the folded air bag and the inflator. A cable connects the igniter of the inflator to a connector in the main seat harness connector block located under the front edge of the seat cushion.

When the air bag deploys it forces the front edge of the moulded plastic case apart and splits open the backrest cover.

The side air bags use compressed argon as the inflation medium. The inflated volume of each side air bag is 12 liters (0.42 ft³).

SIDE AIR CURTAINS

The side air curtains are designed to protect the head and upper body in side impact and roll-over situations. The first and second row side air curtains are a standard fit on all vehicles. The third row side air curtains are fitted on seven seat vehicles only. The side air curtains use compressed argon as the inflation medium.

First and Second Row Side Air Curtain

- NOTE: Right side air curtain shown, left side air curtain is mirror image.

E45254

Item	Part Number	Description
1	-	Air curtain anchorage points
2	-	Non inflatable section of air curtain
3	-	Air curtain clip (manufacturing aid)
4	-	Front gas guide attachment
5	-	Inflatable section of air curtain
6	-	B pillar ramp
7	-	Securing screws
8	-	Active tether device
9	-	Rear tether anchor
10	-	Rear tether
11	-	Cant rail clip
12	-	Gas guide pipe
13	-	Inflator electrical connector
14	-	Inflator
15	-	Inflator mounting bracket

The first and second row side air curtains are installed on the cant rails above the front and rear doors, behind the headliner.

Each side air curtain has an inflator, which is attached to the header rail by a mounting bracket and two screws. The inflator is connected to the air curtain by a gas guide pipe.

The gas guide pipe and air curtain are secured along the cant rail by a fixing at the front of the gas guide pipe, two fixings at the B pillar ramp, two clips and two screws, and two fixings at the end of the gas guide pipe and C pillar ramp.

At the rear of the air curtain, an active tether device is clipped in two positions down the C pillar. At the bottom of the active tether device is a fixing anchorage.

The front of the air curtain is secured to the A pillar by two fixings.

When the side air curtain deploys, it breaks out of the B pillar ramp and the clips on the cant rail and extends downwards from behind the headliner. The deploying air curtain is tensioned between the anchorage points on the A pillar and the active tether device on the C pillar. This retains the air curtain in position against the upper part of the doors and the B pillar.

Third Row Side Air Curtain

- NOTE: Right side air curtain shown, left side air curtain is mirror image.

E45255

Item	Part Number	Description
1	-	Securing screw
2	-	Air curtain
3	-	Securing screw
4	-	Rear tether
5	-	Gas guide pipe
6	-	Inflator mounting bracket
7	-	Inflator
8	-	Rear tether anchor
9	-	Tether housing
10	-	Rear tether
11	-	Front tether anchor

The third row side air curtains are installed on the cant rails above the rear quarter windows, behind the headliner.

Each side air curtain has an inflator, which is attached to the D pillar by a mounting bracket and two screws. The inflator is connected to the air curtain by a gas guide pipe. The gas guide pipe and air curtain are secured to the cant rail by two screws. Tethers are attached to the front and rear of the air curtain. The front tether is anchored to the C pillar. The rear tether is anchored to the D pillar and held in position by a tether housing.

When a third row side air curtain deploys, it extends downwards from behind the headliner. The expanding air curtain tightens the tethers, which retain the air curtain in position against the rear quarter window.

PRETENSIONERS

E45256

Item	Part Number	Description
1	-	Safety belt buckle
2	-	Boot
3	-	Anchor bolt
4	-	Piston and tube
5	-	Electrical connectors for inflator and buckle switch

The pretensioners are used to tighten the front safety belts during a collision to ensure the occupants are securely held in their seats. A pretensioner is integrated into each front safety belt buckle.

Each pretensioner has a tube containing an inflator and a piston. The inflator is connected to the RCM. The piston is attached to a steel cable, the opposite end of which is attached to the safety belt buckle.

On receipt of a fire signal from the RCM, the inflator generates nitrogen gas that rapidly expands to drive the piston along the tube, pulling the cable and drawing the safety belt buckle downwards.

SAFETY BELT SENSORS

The buckle of each front safety belt incorporates a Hall effect sensor that provides a safety belt status signal to the RCM. The RCM broadcasts the status of the two front safety belts on the high speed controller area network (CAN) bus for use by the instrument cluster.

IMPACT SENSORS

E45257

Impact sensors are installed in the front and both sides of the vehicle. The use of multiple impact sensors provides shorter air bag trigger times, through faster detection of lateral and longitudinal acceleration, and improves detection accuracy.

There are two front impact sensors attached to brackets on the body front support frame, just above each front longitudinal.

There are six side impact sensors located in the passenger compartment, as follows:

- One attached to each front door.
- One attached to the base of each B pillar.
- One installed in each rear quarter, above the rear wheelarch.

Each impact sensor incorporates an accelerometer and a microcontroller powered by a feed from the RCM. The power feed also provides the interface connection through which the impact sensor communicates with the RCM using serial data messages. Acceleration is evaluated by the microcontroller and transmitted to the RCM, which then makes the decision on whether or not to activate the air bags and pretensioners.

When the ignition is switched on the RCM supplies power to the impact sensors, which perform a self test. After satisfactory self tests the impact sensors continually output 'sensor active' messages to the RCM. If a fault is detected the relevant impact sensor sends a fault message, instead of the sensor active message, to the RCM. The RCM then stores a related fault code and illuminates the SRS warning indicator.

PASSENGER AIR BAG DEACTIVATION INDICATOR

E133080

The **PAD (passenger air bag deactivation)** indicator is installed on the climate control module in the center of the instrument panel. When appropriate, the indicator illuminates to advise front seat occupants that the passenger air bag is disabled. Operation of the indicator is controlled by the RCM based on seat occupancy status derived from the occupant classification system (NAS vehicles) or the passenger air bag deactivation switch (all except NAS and Australian specification vehicles).

The RCM illuminates the indicator:

- When the passenger air bag is deactivated with the **PAD** switch (where fitted).
- When required by passenger seat occupant monitoring (NAS vehicles only).

PASSENGER AIR BAG DEACTIVATION SWITCH

E45259

The [PAD](#) switch provides a method of manually disabling the passenger air bag on all vehicles except Australian specification and those fitted with the occupant classification system. The switch is installed in the front passenger end of the instrument panel and can be operated by the emergency key blade in the smart key.

When the [PAD](#) switch is operated, it changes a ground connection between two pins in the connectors of the RCM. When the [PAD](#) switch is selected to OFF, the RCM disables the passenger air bag and, if the front passenger seat is occupied, illuminates the [PAD](#) indicator.

OCCUPANT SENSING

There are two types of occupant sensing:

- In all markets except North America, vehicles have an occupant detection system to activate the seat belt minder
- On NAS vehicles, an occupant classification system provides signals to the RCM to allow the correct arming of the passenger air bag and corresponding indicator.

Occupant Detection System

E46657

Item	Part Number	Description
1	-	Seat cushion
2	-	Pressure switch

The occupant detection system can only determine if the front passenger seat is occupied or unoccupied. The occupant detection system consists of a pressure switch installed between the foam padding and the cover of the front passenger seat cushion.

The pressure switch incorporates a number of load cells connected in series and embedded in a plastic film. Weight on the pressure sensor increases the resistance of the circuit.

The instrument cluster supplies a reference voltage to the pressure switch and measures the current draw to determine the occupancy status. From the occupancy status, and the status of the front passenger safety belt (received from the RCM on the high speed CAN bus), the instrument cluster determines the belt minder status.

Occupant Classification System

E133081

Item	Part Number	Description
1	-	Seat cushion
2	-	Pressure pad
3	-	Pressure tube
4	-	Pressure sensor
5	-	Safety belt tension sensor
6	-	Occupant classification module

The occupant classification system comprises an occupant classification module attached to the underside of the seat, a silicon filled bladder and pressure sensor fitted between the cushion foam and the seat pan and a seat belt tension sensor. When an occupant sits on the seat a pressure is created in the bladder and the occupant weight is determined from the pressure generated. The weight is compared against four classification thresholds. These are:

- Empty
- Occupied inhibit status (6 year old child, 3 year old child, rear facing/forward facing 12 month infant seats and booster seats)
- Occupied allow status (weight greater than 5th percentile female) and the air bag enabled/disabled as appropriate
- Indeterminate state.

Classification	PAD Indicator	SRS Warning Indicator
Seat unoccupied	OFF	OFF
Occupied inhibit	ON	OFF
Occupied allow	OFF	OFF
Indeterminate state	OFF	ON

The occupant classification module contains accelerometers and algorithms to compensate for the effects of longitudinal, lateral and vertical forces acting on the vehicle whilst being driven. The belt tension sensor is used to offset loads forced into the seat by 'cinched' child seats (where a child seat load on the seat is increased by a highly tensioned seat belt) and also dynamic belt loading (off-road/aggressive driving styles).

The belt minder system on vehicles with the occupant classification system uses the RCM to detect seat occupancy status based on calculations within the RCM, with the instrument cluster then determining whether a seat belt reminder should be activated based on the status of the seat belt buckle switches and the vehicle speed.

SEAT POSITION SENSOR

E133082

Item	Part Number	Description
1	-	Seat frame
2	-	Mounting plate
3	-	Seat position sensor
4	-	Electrical connector
5	-	Target plate
6	-	Seat base

The seat position sensor allows the RCM to detect when the driver seat is forward of a given point on the seat track. The seat position sensor consists of a Hall effect sensor attached to the driver seat frame and a target plate on the seat base. While the ignition is on, the RCM supplies the sensor with a power supply of 12 V nominal, and monitors the return voltage. When the seat frame moves forwards, the sensor moves over the target plate, which changes the reluctance of the sensor. The change of voltage is detected by the RCM and used as a switching point. The switching point is when the center of the sensor is 3 ± 4 mm from the leading edge of the target plate.

When the driver seat is forward of the switching point, the RCM increases the time delay between firing the two stages of the inflator in the driver air bag. When the driver seat is rearward of the switching point, the RCM uses the normal time delay between firing the two stages.

SRS WARNING INDICATOR

E133083

The SRS warning indicator consists of a red light emitting diode (LED) behind a SRS graphic in the speedometer of the instrument cluster.

Operation of the SRS warning indicator is controlled by a high speed CAN bus message from the RCM to the instrument cluster. The RCM illuminates the SRS warning indicator if a fault is detected, and for approximately 6 seconds during the bulb check at the beginning of each ignition cycle.

CLOCKSPRING

E45264

Item	Part Number	Description
1	-	Electrical connector for steering wheel switch packs and horn
2	-	Inner rotor
3	-	Outer housing securing lug
4	-	Driver air bag link leads
5	-	Viewing window
6	-	Drive peg
7	-	Stopper
8	-	Electrical connector for steering column harness
9	-	Outer cover

The clockspring is installed on the steering column to provide the electrical interface between the fixed wiring harness of the steering column and the components that rotate with the steering wheel, i.e. the driver air bag, the horn and the steering wheel switch packs.

The clockspring consists of a plastic cassette which incorporates an outer cover fixed to the steering column and an inner rotor which turns with the steering wheel. Four securing lugs attach the cover to the multifunction switch on the steering column. The rotor is keyed to the steering wheel by a drive peg. A lug on the underside of the rotor operates the self-cancelling feature of the turn signal indicator switch. A ribbon lead, threaded on rollers in the rotor, links two connectors on the cover to two connectors on the rotor. Link leads for the driver air bag are installed in one of the connectors on the rotor.

To prevent damage to the ribbon lead, both the steering and the clockspring must be centralized when removing and installing the clockspring or the steering wheel. The clockspring is centralized when the drive peg is at six o'clock and 50 - 100% of a yellow wheel is visible in the viewing window.

Replacement clocksprings are fitted with a stopper, which locks the cover to the rotor, in the central position. The stopper must be broken off when the replacement clockspring is installed.

RCM

E45265

The RCM is installed on the top of the transmission tunnel, in line with the B pillars, and controls operation of the [SRS \(supplemental restraint system\)](#). The main functions of the RCM include:

- Crash detection and recording.
- Air bag and pretensioner firing.
- Self test and system monitoring, with status indication via the SRS warning lamp, and non volatile storage of fault information.

A safing sensor in the RCM provides confirmation of an impact to verify if air bag and pretensioner activation is necessary. A roll-over sensor monitors the lateral attitude of the vehicle. Various firing strategies are employed by the RCM to ensure that during an accident only the appropriate air bags and pretensioners are fired. The firing strategy used also depends on the inputs from the safety belt switches and the occupant monitoring system.

An energy reserve in the RCM ensures there is always a minimum of 150 milliseconds of stored energy available if the power supply is disrupted during a crash. The stored energy is sufficient to produce firing signals for the driver air bag, the passenger air bag and the safety belt pretensioners.

When the ignition is switched on the RCM performs a self test and then performs cyclical monitoring of the system. If a fault is detected the RCM stores a related fault code and illuminates the SRS warning indicator. The faults can be retrieved by Land Rover approved diagnostic equipment. If a fault that could cause a false fire signal is detected, the RCM disables the related firing circuit, and keeps it disabled during a crash event.

SRS OPERATION

General

In a collision, the sudden deceleration or acceleration is measured by the safing sensor in the RCM and by the impact sensors. The RCM evaluates the readings to determine the impact point on the vehicle and whether the deceleration/acceleration readings exceed the limits for firing any of the air bags or pretensioners. During a collision, the RCM only fires the air bags and pretensioners if the safing sensor confirms that the data from the remote sensor(s) indicates an impact limit has been exceeded. The RCM also monitors the vehicle for a roll-over accident using the internal roll-over sensor and high speed [CAN \(controller area network\)](#) bus messages from the anti-lock brake system (ABS) module and the steering angle sensor.

The RCM incorporates the following impact thresholds to cater for different accident scenarios:

- Front impact, pretensioners.
- Front impact, driver and passenger air bags stage 1, belt unfastened.
- Front impact, driver and passenger air bags stage 2, belt unfastened.
- Front impact, driver and passenger air bags stage 1, belt fastened.
- Front impact, driver and passenger air bags stage 2, belt fastened.
- Rear impact.
- LH (left-hand) side impact.
- RH (right-hand) side impact.
- Roll-over.

The front impact thresholds increase in severity from pretensioners, through to driver and passenger air bag stage 2, belt fastened.

Firing Strategies

The seat belt pretensioners are fired when either the pretensioner impact limit or the roll-over limit is exceeded. The RCM only fires the pretensioners if the related safety belt is fastened. For the front passenger pretensioner to fire, the seat must also be occupied by a large person, i.e. someone over a given weight (NAS only).

The driver and passenger air bags are only fired in a frontal impact that exceeds the stage 1 threshold. Both stages of the inflator in the driver and passenger air bags are fired. At impacts between the stage 1 and 2 thresholds, the delay between the firing of the two stages varies with the severity of the impact; the more severe the impact the shorter the delay. At stage 2 impact thresholds and above, the two stages of the inflator are fired almost simultaneously. The passenger air bag is disabled unless the front passenger seat is occupied by a large person (NAS only), or the passenger air bag deactivation switch is on (all except NAS). The time delay between firing the two stages of the inflator in the driver air bag is increased if the driver seat is forward of the seat position sensor switching point.

If there is a fault with a safety belt buckle sensor, the RCM assumes the related safety belt is fastened for the pretensioner firing strategy and unfastened for the driver and passenger air bag firing strategies. If there is a fault with the occupant detection system, or if there is a fault with the passenger air bag deactivation switch, the RCM increase the time delay between firing the two stages of the inflator in the passenger air bag.

If a side impact limit is exceeded, the RCM fires the side air bag and the side air curtain(s) on that side of the vehicle. If the side impact limit on the front passenger side of the vehicle is exceeded, the RCM also evaluates the input from the occupant classification system, and fires the side air bag only if the front passenger seat is occupied by a large person (NAS only).

The side air curtain(s) on both sides of the vehicle are fired if the roll-over limit is exceeded.

If multiple impacts occur during a crash event, after responding to the primary impact the RCM will output the appropriate fire signals in response to any further impacts if unfired units are available.

Crash Signal

When the RCM outputs any of the fire signals, it also outputs a hard wired crash signal to the [ECM \(engine control module\)](#) and the [CJB \(central junction box\)](#), and changes the high speed CAN bus output message from 'no crash' to 'crash condition'.

On receipt of the crash signals:

- The engine control module (ECM) disables the fuel pump.
- Where fitted, the operation of the FFBH is disabled.
- The central junction box (CJB) enters the crash mode and:
 - Activates all of the unlock signals of the vehicle locking system, even if the vehicle is already unlocked. After 3 seconds, the CJB activates the unlock signals again.
 - Ignores all locking and superlocking inputs until the crash mode is cancelled, when it returns the locking system to normal operation.
 - Activates all of the courtesy lamps, except for the approach lamps. The activated courtesy lamps remain on until they are manually switched off at the lamp unit, or the CJB crash mode is cancelled, after which they return to normal operation.
 - Activates the hazard warning lamps. The hazard warning lamps remain on until cancelled by turning the ignition off the crash mode is cancelled.

The crash mode is cancelled by cycling the ignition.

Supplemental Restraint System - Air Bag Supplemental Restraint System (SRS)

Diagnosis and Testing

Principle of Operation

For a detailed description of the air bag supplemental restraint system and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) (501-20B Supplemental Restraint System, Description and Operation).

Safety Information

• WARNINGS:

To avoid accidental deployment the back-up power supply must be depleted before beginning any work on the SRS system or its components. Failure to follow this instruction may result in personal injury.

Do not use a multimeter to probe an SRS module. It is possible for the power from the meter battery to trigger the activation of the module. Failure to follow this instruction may result in personal injury.

• NOTE: It is advisable not to use a cellular phone or to have a cellular phone in close proximity when working on the SRS system or components.

• NOTE: Given the legal implications of a restraints system failure, harness repairs to Air Bag module circuits are not acceptable. Where the text refers to "REPAIR the circuit", this will normally mean the replacement of a harness.

Power supply depletion

Before beginning any work on the SRS system or related components:

1. 1. Remove the ignition key.
2. 2. Disconnect the battery leads, ground first.
3. 3. Wait 2 minutes for the power circuit to discharge.

There are comprehensive instructions on the correct procedures for SRS system repairs in the workshop manual. Refer to the relevant section of the workshop manual.

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
 - Confirm the function of the warning lamp (if the warning lamp is inoperative, system faults will be signalled by an audible chime)
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Check for the installation of non-standard accessories which may affect or obstruct the function of the SRS system ● Check the condition of trim, etc at the SRS system components ● Sensor(s) ● Pretensioner(s) ● Air bag module(s) ● Occupant detection/classification sensors ● Seat position sensor 	<ul style="list-style-type: none"> ● Fuses ● Wiring harness ● Make sure all electrical connector(s) are engaged correctly on the air bag circuits ● Make sure the Restraints Control Module (RCM) is correctly installed ● Warning lamp bulb(s) ● Impact sensor(s) ● Buckle sensor(s) ● Pretensioner(s) ● Air bag module(s) ● Air bag deactivation switch ● Air bag deactivation warning lamp ● Occupant detection/classification sensors ● Seat position sensor ● Clockspring

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, check for Diagnostic Trouble Codes (DTCs) and refer to the relevant DTC Index.

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Restraints Control Module \(RCM\)](#) (100-00 General Information, Description and Operation) / [Diagnostic Trouble Code \(DTC\) Index - DTC: Occupant Classification System \(OCS\)](#) (100-00 General Information, Description and Operation).

Supplemental Restraint System - Driver Air Bag Module

Removal and Installation

Special Tool(s)	
 <p>501-106</p> <p>E48291</p>	<p>Airbag module remover</p> <p>501-106</p>

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the driver air bag module.
 - Using the special tool, release the clip.
 - Repeat the above procedure for the other side.
 - Disconnect the ground cable.
 - Release the clips and disconnect the 2 electrical connectors.

Installation

1.  **WARNING:** The SRS electrical connectors are unique. DO NOT force, or attempt to connect electrical connectors to the wrong sockets.

 **CAUTION:** Make sure the cables/harnesses are not twisted before connecting them to the airbag module. Once connected, do not rotate the air bag module as this will cause the wires to twist, which can lead to harness damage and SRS faults.

Attach the driver air bag module.

- Connect the ground cable.
- Connect the electrical connectors.

2.  **WARNING:** Driver air bag module installation can be confirmed by hearing 2 audible clicks, 1 for each spring. The module edges should also be flush with the steering wheel.

Install the driver air bag module.

- Install top edge of module, then hinge upwards and make sure wires are connected to clips.
- Make sure the wires are not trapped behind the module.
- Hold wires in place while hinging module closed.
- Align the locating pins and springs.

E84910

Supplemental Restraint System - Passenger Air Bag Module

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the instrument panel upper section.
For additional information, refer to: [Instrument Panel Upper Section](#) (501-12 Instrument Panel and Console, Removal and Installation).
4. Remove the passenger air bag module.
 - Remove the 4 nuts.

5. NOTE: Do not disassemble further if the component is removed for access only.

Remove the passenger air bag module bracket.

- Remove the 2 nuts.

Installation

1. Install the passenger air bag module bracket.
 - Tighten the nuts to 10 Nm (7 lb.ft).

2. Install the passenger air bag module.

- Tighten the nuts to 10 Nm (7 lb.ft).

3. Install the instrument panel upper section.

For additional information, refer to: [Instrument Panel Upper Section](#) (501-12 Instrument Panel and Console, Removal and Installation).

Supplemental Restraint System - Rear Side Air Curtain Module

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove the side air curtain module.

- Disconnect the electrical connector.
- Remove the 5 Torx screws.
- Release the retaining strap.

E 49973

Installation

1. Install the side air curtain module.
 - Tighten the Torx screws to 10 Nm (7 lb.ft).
 - Connect the electrical connector.
 - Secure the retaining strap.
2. Install the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

3. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Supplemental Restraint System - Front Impact Severity Sensor

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).
3. Remove the front impact sensor.

- Disconnect the electrical connector.
- Remove the 2 Torx bolts.

Installation

1. Install the front impact sensor.
 - Tighten the Torx bolts to 8 Nm (6 lb.ft).
 - Connect the electrical connector.
2. Install the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).

Supplemental Restraint System - Passenger Air Bag Deactivation (PAD) Switch

Removal and Installation

Removal

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the passenger side register trim panel.
For additional information, refer to: [Passenger Side Register Trim Panel](#) (412-01 Air Distribution and Filtering, Removal and Installation).
3. Remove the PAD switch.
 - Disconnect the electrical connector.
 - Release the 2 clips.

E53834

Installation

1. Install the PAD switch.
 - Connect the electrical connector.
 - Secure with the clips.
2. Install the passenger side register trim panel.
For additional information, refer to: [Passenger Side Register Trim Panel](#) (412-01 Air Distribution and Filtering, Removal and Installation).

Supplemental Restraint System - Clockspring

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• CAUTIONS:

Make sure the wheels are in the straight-ahead position. Failure to follow this instruction may result in damage to the components.

Correct clockspring alignment can be found by viewing a yellow marker through the window situated on the clockspring face. If the marker is not visible, carefully turn the clockspring. If the turning force increases before the marker is visible, reverse the direction to avoid component damage.

• NOTE: test piece

• NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Fully extend the steering column for access.
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the steering wheel.
For additional information, refer to: Steering Wheel (211-04, Removal and Installation).
4. Remove the steering column upper shroud.
 - Release the 6 clips.

5. Remove the steering column lower shroud.
 - Remove the 3 Torx screws.
 - Release the steering column adjustment lever.

6.  CAUTION: Do not dismantle the clockspring, it has no servicable parts and must be replaced as a complete assembly.

Remove the clockspring.

- Disconnect the 2 electrical connectors.
- Remove the 4 screws.

Installation

1.  CAUTION: Correct clockspring alignment can be found by viewing a yellow marker through the window situated on the clockspring face. If the marker is not visible, carefully turn the clockspring. If the turning force increases before the marker is visible, reverse the direction to avoid component damage.

To install, reverse the removal procedure.

Supplemental Restraint System - B-Pillar Side Impact Sensor

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.

For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. Remove the scuff plate trim panel.

For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

3. Remove the side impact sensor.

- Remove the 2 Torx bolts.
- Disconnect the electrical connector.

Installation

1. Install the side impact sensor.

- Connect the electrical connector.
- Tighten the Torx bolts to 8 Nm (6 lb.ft).

2. Install the scuff plate trim panel.

For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Supplemental Restraint System - C-Pillar Side Impact Sensor

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.

For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. Remove the C-pillar lower trim panel.

For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

3. Remove the side impact sensor.

- Remove the 2 Torx bolts.
- Disconnect the electrical connector.

Installation

1. Install the side impact sensor.

- Tighten the Torx bolts to 8 Nm (6 lb.ft).
- Connect the electrical connector.

2. Install the C-pillar lower trim panel.

For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Supplemental Restraint System - Front Door Side Impact Sensor

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.

For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. Remove the front door trim panel.

For additional information, refer to: Front Door Trim Panel (501-05, Removal and Installation).

3. Remove the front door side impact sensor.

- Disconnect the electrical connector.
- Remove the 2 Torx bolts.

Installation

1. Install the front door side impact sensor.

- Tighten the Torx bolts to 8 Nm (6 lb.ft).
- Connect the electrical connector.

2. Install the front door trim panel.

For additional information, refer to: Front Door Trim Panel (501-05, Removal and Installation).

Supplemental Restraint System - Side Air Bag Module

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).
3. Remove the front seat backrest pad.
 - Remove the front seat head restraint retaining clips.

4. NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

Remove the side air bag module.

- Release the side air bag module harness.
- Remove the 2 nuts.

Installation

1. Install the side air bag module.
 - Tighten the nuts to 10 Nm (7 lb.ft).
 - Attach the wiring harness.
2. Install the front seat backrest pad.
 - Install the front seat head restraint retaining clips.
3. Install the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).

Supplemental Restraint System - Side Air Curtain Module

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Release the roof opening panel drain tube from the securing clips.
4. Release the tire deflation wiring harness from securing clips.
5. Remove the side air curtain module.

- Remove the 8 screws.
- Remove the 5 Torx screws.
- Disconnect the electrical connector.

Installation

1. Install the side air curtain module.
 - Tighten the Torx screws to 10 Nm (7 lb.ft).
 - Tighten the screws.
 - Connect the electrical connector.
2. Secure the tire deflation wiring harness into the clips.
3. Secure the roof opening panel drain tube into the clips.
4. Install the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Supplemental Restraint System - Restraints Control Module (RCM)

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the restraints control module (RCM) is to be replaced then T4 must be connected and the correct procedures adhered to, prior to battery disconnection.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

3. Remove the floor console.
For additional information, refer to: Floor Console (501-12, Removal and Installation).

CAUTION: Make sure the wiring harness is protected when cutting the carpet.

Remove the restraints control module (RCM).

- Cut the carpet for access.
- Disconnect the 2 electrical connectors.
- Remove the 3 Torx screws.

E52439

Installation

1. Install the RCM.
 - Tighten the Torx screws to 10 Nm (7 lb.ft).
 - Connect the electrical connectors.
 - Position the carpet.
2. Install the floor console.
For additional information, refer to: Floor Console (501-12, Removal and Installation).
3. Initiate a new RCM using T4.

Supplemental Restraint System - Occupant Classification Sensor

Removal and Installation

Removal

- NOTE: The occupant classification sensor is part of the passenger seat cushion. The sensor is only fitted to NAS models.

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the front seat cushion cover.
For additional information, refer to: [Front Seat Cushion Cover](#) (501-10 Seating, Removal and Installation).

Installation

1. Install the front seat cushion cover.
For additional information, refer to: [Front Seat Cushion Cover](#) (501-10 Seating, Removal and Installation).
2. Connect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
3. Using T4, configure a new occupant classification sensor.

Body Repairs - General Information - Body Repairs

Description and Operation

General Information

Introduction

The body plays a significant role in the increasing trend of ever more rapidly changing model variants. The different customer groups are strongly influenced by the design and shape of the body. At the same time the stability of the body plays the most important part in ensuring passenger and driver safety. Lightweight construction, alternative materials, composite materials, plastics and appropriate joining processes are all design features that characterise modern Land Rover vehicle bodies.

In terms of manufacturing technology, modern safety cell bodies can be produced almost without any problems. Land Rover guarantee high quality standards by ensuring that mechanical strength properties are tried and tested in numerous computer simulations, crash tests, by testing materials and by employing sophisticated manufacturing technologies. In the event of repairs it is vital that the production quality standards are upheld. This requires a well-equipped workshop, and places particular emphasis on the qualifications of the workshop technicians. Up-to-date knowledge of current manufacturing technologies and continuous training on new repair methods and techniques are vital for high-quality body repairs. The model-specific repair manuals and the general repair techniques provide valuable support when undertaking body repairs.

Always follow the repair instructions published in this manual. Failure to observe this instruction can result in serious impairment of vehicle safety. All specified safety requirements must be met after the work has been carried out.

Vehicle design

Vehicle design

E55853

Item	Part Number	Description
1	-	Body
2	-	Integral body Frame

High Strength Steels

Land Rover vehicles are constructed from a number of different steels, partly to obtain an optimised body (collision, safety, rigidity, fuel economy, etc).

Steels are divided into several groups according to their tensile and yield strength, that is to say the force necessary to bring about plastic deformation of the material.

Yield Summary

Yield is the strength at which the metal changes from elastic to plastic in behaviour, the point of no return.

Tensile Summary

Tensile strength is the breaking strength of a material when subjected to a tensile (stretching) force, the point of no return.

Abbreviation	Steel type	Yield Point
SS	Soft Steel	Maximum Yield point of 220 MPa
DP	Dual Phase Steel	Steel With a Yield Point up to 400 MPa
HS	High Strength Steel	Steel With a Yield Point 220 - 450 MPa
EHS	Extra High Strength Steel	Steel With a Yield Point 450 - 800 MPa
UHS	Ultra High Strength Steel	Steel With a Yield Point up to 1400 MPa

Ultra High Strength

The addition of ultra high strength steel in the A Pillar, B-Pillar and cantrail gives the body greater strength in a front or side impact.

No attempt should be made to straighten ultra high strength steel, due to its brittleness.

Ultra High Strength steel in body structure

E55726

Aluminium

Aluminium 6000 series is used in the hood, tailgate and liftgate. It is made from magnesium/copper aluminium alloy and is heat treated during manufacturing/paint bake process resulting in a panel with increased strength and dent resistance.

When repairing aluminium you must use tools that have only been used on aluminium and never on steel panels, this is to prevent cross-contamination

Aluminium in body structure

E55727

Magnesium

Magnesium AM60B is used to make the hood latch panel. It has good ductility and energy absorbing properties. It is also used on the instrument panel mounting beam.

No attempt should be made to weld or straighten the hood latch panel and it should be replaced in the event of an accident. If the corrosive coating is damaged it must be repaired using 'Land Rover Low Temperature Anti-Corrosion Coating', service part no VEP 501 840 PMA

Magnesium in body structure

E56195

Accident damage and diagnosis

General notes

- Exact diagnosis of the extent of damage enables proper repair planning.
- All body repairs must be carried out in accordance with the guidelines in this Body Repair Manual.
- The stability and strength properties of the body must be taken into account during body repairs. The body has exactly defined deformation patterns that must not be affected by any repair work.
- For instance, the crumple zones absorb the bulk of the impact energy. If any unprofessional repair techniques or methods are used in these areas then this can pose a fundamental threat to vehicle safety.

Hidden damage

- As well as looking at external indicators like flaked off paint, it is vital to check for hidden body damage or deformation that is not visible from the outside. Large attached parts like bumpers and inner fenders often need to be removed to allow accurate assessment of damage to underlying body parts.

Gap dimensions

For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Gap dimensions offer another alternative for diagnosis by visual inspection. If any changes or misaligned edges are apparent, then this usually indicates that the dimensions of the affected part are incorrect.

Changes in gap dimension

DEE0003919

Item	Part Number	Description
1	-	Gap too wide
2	-	Gap too small

Planning a repair

The following decisions have to be made before the repairs are started:

- Does the vehicle need to be put on a straightening jig, or can it be straightened by other means?
- Does the body need to be measured?
- Do aggregates like engine or axles need to be removed?
- • NOTE: It is preferable to repair body parts rather than to renew them, as this keeps the complete body-shell intact.
- Which body parts need to be renewed?
- Which body parts can be repaired?

Obtaining spare parts

The availability of spare parts often determines how easily the body repairs can be carried out. The following procedure is recommended:

- Obtain all the data for the vehicle, including type, vehicle identification number, trim code, engine identification letters, initial registration etc.
- Establish all of the metal parts that need to be renewed.
- Establish all of the attached parts that need to be renewed, including small parts like rivets, clips etc.

Straightening repairs

Straightening repairs are often required to restore the body to its original shape after an accident. This can be done with:

- Alignment jigs
- Universal straightening and measuring jigs

The following points must be followed to ensure that the repairs are carried out professionally and that all the dimensions are correct after the repairs have been carried out.

- Structure:
 - The repair sequence depends on the individual repair plan (taking any necessary disassembly work into account).
 - Clean the attachment areas.
 - Anchor the vehicle free of stress on the relevant system.
 - Support the aggregates to take strain off the body.
 - Decide on at least three measuring/mounting points that are undamaged and as far apart as possible (for basic adjustment).
 - Check the dimensions of the measuring/mounting points.
- Straightening:
 -
 - **NOTE: Check dimensions and gaps continuously during straightening.**

A body is always straightened in the opposite direction to that of the impact. Always carry out straightening repairs with the complete body shell assembled (do not cut out any parts beforehand). Carry out the straightening work in several stages. This prevents the risk of over stretching or of welded joints tearing out. During the individual straightening steps, relieve tension by striking with an aluminium hammer while the part is subjected to a tensile load (in the area of pre-determined folding points, dents, welded joints etc.).

CAUTION: Ultra High Strength steel in the A-Pillar, B-Pillar and cantrail cannot be straightened.

Panel Beating

Fundamentals of panel beating

- Before carrying out any sectional replacements or complete replacements of body panels, always check carefully whether the damaged panel(s) can be rectified by panel beating.
- Panel beating is usually the easiest and most economical method of repairing a damaged panel.

Examples of applications of different panel beating techniques:

- Aluminium hammer and mallet
 - Advantage: Low risk of overstretching the panel.
 - Used for repairs of small dents on panels that are accessible from both sides.
 - These two panel beating tools are usually used for "finishing repairs".

Fine straightening with an aluminium hammer and a universal dolly

DEE0003935

- Sliding hammer
 - If the damaged panel is only accessible from the outside, use a sliding hammer to pull it back into shape. The discs or studs needed to mount the sliding hammer are welded onto the bare surface. Dents in the panel can be flattened out using controlled application of the sliding hammer.

Cutting out body parts

Depending on how the parts are joined/connected, different tools are suitable for cutting/separating body parts.

- NOTE: All other parts like interior equipment, window glass etc. must be protected against flying sparks.
- NOTE: Ensure that the milling depth is set correctly to prevent the remaining flange from being weakened.

Spot-weld mill

Spot-weld mill

DEE0003924

- Rod sander
 -
 - NOTE: Wear protective clothing. Protect any vulnerable body or glass areas against flying sparks. Remove explosive materials from the vicinity.

Any spot welds that are inaccessible for the spot-weld mill (diameter > 8 mm) should be ground out using a rod sander. The same applies to MIG spot welds or seams.

Rod sander

DEE0003925

- -
- NOTE: Underlying metal parts, wiring harnesses, hoses etc. must not be damaged - remove them beforehand if necessary.

Body saws are particularly versatile and are therefore very suitable for making severance cuts on body parts.

Short stroke saw

DEE0003926

- Reciprocating saw
 - In addition to the short stroke saw, the reciprocating saw can be used. With this, it is possible to make narrow and straight cuts to an exact depth.

Reciprocating saw

DEE0003927

Carrying out the repairs

- Complete replacement
 - In a complete replacement the entire damaged old part is removed at its original joins/connections, and a complete new part is then installed. The following illustration shows a replacement new back panel.

Replacement of a new back panel

E56124

- Sectional replacement
 - In many cases it makes technical and economical sense to carry out a sectional replacement. The two main considerations are firstly, maintaining the original overall body shell structure and secondly, keeping the repair costs to a minimum.
- The main method for sectional replacement:
 - Butt joints
 - New part and old part are joined with a continuous MIG weld seam.
 - Butt joints are most commonly used for sectional replacements on members and pillars, or on short severance cuts.

Butt joint

DEE0003929

• NOTE: The severance cut should always be kept as short as possible on sectional replacement. Only cut at the severance lines shown in the repair chapters.

Do not make any cuts near reinforcements or pre-determined folding lines.

- Prepare parts remaining on the vehicle / new parts.
 - Reshape the adjoining surface of any dented body parts that are to remain on the vehicle using a hammer and a counterhold (ensure that the old part matches the shape of the new part). Grind off left over spot welds or seams with a suitable tool.
 - Cut the new parts to shape.
 - If necessary punch or drill holes for mig plug welding.

-
- NOTE: Do not use a welding torch to remove paint residue (the heat could cause the metal to deform).

Prepare all joining flanges to a bright metal finish on both sides. Do not use an angle grinder for this purpose (this could weaken the metal and damage the zinc layer). Suitable tools: rotating wire brush, belt sander or plastic disc.

- Apply welding primer liberally to all weld flanges.
- The primer must be well stirred or shaken before use.

- NOTE: When using aerosols, take care not to contaminate adjacent parts with spray mist.

fitting the new part.

- It must be ensured that the new part fits exactly to the specified dimensions, to help this it is recommended to use such equipment as:
 - Alignment jig
 - Universal measuring system
 - Jig system
 - Ruler or tape measure
- Any attached body parts that require accurate alignment and fitting must be incorporated in this step; for instance bumpers, seals, headlamps, rear lamps and lock assembly components. If this is not done carefully it may result in water leaks, wind noises and substantial follow-on work.
- Ensure that edges line up with adjacent parts and check that gaps are consistent (compare left and right-hand sides). Make sure that the shape of the vehicle is retained.

Secure the new part

- NOTE: The need for subsequent follow-on work can be significantly reduced if aligning and tack-welding are carried out with due care.

Depending on accessibility the following methods for securing are available:

- Grip pliers (set of)
- Screw clamp (set of)
- Self-tapping screws
- Tack welds
- Using a suitable tool ensure that the edges of sectional replacements of profiled parts line up. The edge is then tack welded to ensure that it lines up.

Aligning and tack weld

DEE 0003933

Item	Part Number	Description
1	-	Tack welds
2	-	Using a suitable tool to align

- Longer joints are usually tack welded to prevent the panel from warping. It is important to carry out the tack welds in the correct sequence (see diagram).
- Weld in the new part following the instructions in the repair manual.

Correct tack welding sequence

DEE0003934

Safety measures

- The electronic control modules (ECM) fitted to vehicles make it advisable to follow suitable precautions prior to carrying out welding repair operations. Harsh conditions of heat and vibration may be generated during these operations which could cause damage to the modules. In particular, it is essential to follow the appropriate precautions when disconnecting or removing the airbag RCM. For additional information, refer to: [Specifications](#) (501-20B Supplemental Restraint System, Specifications).
- Do not allow electronic modules or lines to come into contact with the ground connection or the welding electrode.
- Connect the ground connection of the electrical welder directly to the part that is to be welded. Ensure that there are no electrically insulating parts between the ground connection and the welding point.

Resistance spot welding

Where resistance spot welds have been used in production, they must be reproduced with new spot welds in replacement where possible. All such reproduction spot welds should be spaced 25 to 30mm apart.

Setting up the equipment and co-ordinating the welding parameters

- Equipment:
 - Follow the equipment manufacturer's instructions for the equipment settings.
 - Select the correct electrode arms (as short as possible).
 - Align the electrode arms and tips exactly.
 - Electrode tips should be convex (rough shaping with a file, fine shaping with a sanding block).
- Body:
 - Ensure that the flanges to be joined lie perfectly flat to one another.
 - Prepare a bare metal joint surface (inside and outside).
- Notes on technique/method:
 - Carry out a test weld on a sample piece of the material coated in welding paste.
 - If any metal parts are located between the electrode arms then there will be a loss of induction and therefore power (adjust current setting).
 - The power needs to be adjusted for high and ultra high-strength steel.
 - Repeated welding on old welding points often leads to poor quality welds.
 - Keep the electrode tips as near as possible to an angle of 90° to the contact surface.
 - The electrodes work best if their shape is convex. Clean the contact surface of the electrodes regularly.

Resistance spot welding panels where the total thickness is 3 mm or more

For all repairs to modern Land Rover vehicles, spot-welding equipment should be suitable for reliable welding of zinc-plated, high-strength and high-tensile steels in three or more layers, up to 5 mm total thickness. If these requirements are not fulfilled, plug welding must be used for safety reasons. The electrical specifications (current, resistance, heat) of the spot-welding equipment have different validity, depending upon the type of equipment. Therefore, it is essential that the equipment manufacturer's instructions are observed with regard to the actual welding performance.

MIG / MAG welding

Setting up the equipment and co-ordinating the welding parameters

- Any joints that are MIG/MAG welded in production must also be MIG/MAG welded during repairs. Also during repairs, some resistance spot welds need to be replaced by plug welds.
 - If access is difficult, or if a suitably powerful spot welder (see above) for total panel thicknesses of 3 mm or more is not available, resistance spot welding must be partially replaced by plug welding during repairs. In this case, the increased time needed and the correspondingly more demanding corrosion protection requirements, must be taken into account.
 - Welding repairs can only be carried out properly if the equipment is set up correctly and all the welding parameters are co-ordinated.
 - Equipment:
 - Set up the equipment as directed by the manufacturer.
 - The hoses must be untwisted.
 - The core must be free of abraded rod particles.
 - The gas and current nozzles must be free of slag and scale residue.
 - Pay attention to the quality of the welding wire and the throughput of gas.
 - Body:
 - Ensure that the joint surface is correct.
 - Prepare a bare metal joint surface.
 - Maintain the correct gaps (formation of roots).
 - Notes on technique/method:
 -
 - NOTE: The increased application of heat during MIG welding destroys the welding primer/zinc layer over a much larger area than during resistance spot welding, as a result of which much more care needs to be taken when applying anti-corrosion protection afterwards.
 - NOTE: A test weld should always be carried out to ensure that the welded joint is not just a surface connection.
- Attach the ground cable right next to the welding point (ensure that good contact is made).
- During plug welding start welding on the lower panel to ensure adequate penetration.

Plug welding

DEE0003936

Item	Part Number	Description
1	-	Welding direction: circular pattern working from the inside outwards
2	-	Welding starting point: centre of hole on lower panel

Bonded glazing

- - The windscreen, side and rear windows are bonded directly onto the window frames on the body and liftgate.
- The windows are bonded primarily for reasons of adhesive strength. Bonded glazing provides additional torsional stiffness to the body.

Adhesive bonding of bonded windows

DEE0003938

Item	Part Number	Description
1	-	Rubber strip
2	-	Window frame
3	-	Adhesive
4	-	Window glass

Removing and installing bonded windows

Safety measures

- The following safety measures must always be followed to prevent personal injury:
 - Wear protective gloves.
 - Wear protective goggles.

Preparations

- Before cutting out a bonded window, undo and remove any attached parts in the cutting area that are at risk, e.g. trim panels and decorative strips, as well as all electrical connections.
- Mask any painted areas that are adjacent to the window.
- Cut off any surplus adhesive, as this makes it easier to cut out the window.
- Secure vertical windows against dropping out.

Cutting out the window

- Cut into the adhesive bead at easily accessible points using the cutting tool.
- Carefully guide the cutting tool around the window, cutting through the adhesive bead.
- Avoid touching the window frame and the body flange.
- Use cup suction tools to lift the cut-out window out of the window aperture.

General preparations for bonding

- Follow the manufacturer's instructions.
- Cut back the remaining adhesive bead on the metal flange to a residual height of about 1mm. Do not touch or clean the cut surface afterwards.
- Carefully rectify any paint damage (apply primer and top coat).
- Renew the window stops as necessary.

Bonding the window glass

- Apply an even bead of adhesive to the window or to the body flange.
- Insert the window glass into the window aperture and centre it (2 technicians required).
- Check the gaps.
- • NOTE: Open the windows and doors while the window is left to dry and do not move the vehicle (slamming doors creates excess pressure which could cause the window to become loose).

Use adhesive tape to prevent the window from falling out or slipping.

Finishing operations

- Reconnect all electrical connections and check that the components operate correctly.
- Install the attached parts and check that the fit is accurate and secure.
 - Carry out a visual inspection to ensure that the gaps and joints are even.
- Thoroughly clean the window glass.

Protective equipment and safety at work

- Various safety measures and legal requirements must be met when carrying out repairs. All regulations relating to health and safety at work must be followed.

Welding safety precautions

- The following safety precautions must be observed to prevent the risk of personal injury:
 - Safety hood (face protection)
 - Welding shield
 - Safety gloves
 - Safety shoes
 - Extraction unit for welding smoke
- Welding should always be carried out in well ventilated areas. A fire extinguisher must also always be within reach.

General body repair safety measures

Extraction unit

DEE0003940

- Sealing compound, underbody protection etc. must **not** be burned off with a naked flame. This would produce toxic gases. If for instance PVC is burned, then gases containing hydrochloric acid are produced. For this reason a suitable extraction unit should always be used when performing grinding, welding or soldering work.
- Always ensure good ventilation when working with materials that contain solvents, wear breathing equipment and use an extraction unit.
- Ear defenders should always be worn when cutting, grinding or straightening metal, as the noise levels can reach or even exceed 85 - 90 dB(A).
- When removing components from a vehicle mounted on a lifting ramp, watch out for a shift in its centre-of-gravity. When first placing the vehicle on the ramp, take into account that it may need to be secured against tipping over.
- Chains and chain clamps must be secured with safety ropes during straightening work.

Safety rope

DEE0003941

Paint Preparation

Paint repairs

Before carrying out paintwork repairs, clean the vehicle thoroughly using either a steam cleaner or high pressure washer.

Wash locally repaired areas using a mild water-mixable detergent and wipe them clean with solvent, immediately before paint application.

Ensure damaged paintwork which has led to exposed metal is abraded until the metal is clean, extending beyond the area of the original damage. Treat the bare metal with an etch phosphate to remove all traces of rust and to provide a key for new paint coats. Re-treat the affected area using either a separate acid-etch primer and two pack surfacer or an integrated etch primer/filler, and follow with a two pack paint system. Treat those surfaces not receiving paint using an approved cavity wax, following paint operations

- CAUTIONS:

When preparing bumpers for painting, ensure the PDC sensors are not damaged. Only remove the clear coat if possible. When painting the PDC sensors, do not apply excessive layers of paint as this can hinder the performance of the sensors.

When heat curing paint repairs, the temperature must not exceed 65°C (149°F). Temperature above this figure will cause the reflective elements within the headlamps and tail lamps to distort and may damage other components.

Body Repairs - Corrosion Protection - Corrosion Protection

Description and Operation

General

The corrosion protection provided in production must be carefully maintained and/or reproduced during and after body repair work. It is only then that the long-term warranty against penetrative rust damage can be assured.

Only Land Rover original bodywork components and Land Rover approved repair materials (sealer, paint etc.), are to be used for bodywork repairs.

Land Rover original parts

All Land Rover bodywork components have a cathodic base coating. Individual bodywork components are zinc plated on one or both sides (in different areas depending on vehicle model).

Together with elastic paint coating, this guarantees an optimum, highly resistant protection against corrosion caused by the impact of small objects such as gravel.

• **NOTE:** If possible, the individual protective layers (zinc, cathodic base coat) on Land Rover bodywork components must not be damaged or destroyed by sanding or other mechanical operations.

If hairline cracks at "bodywork connection areas" appear after reshaping work (e.g. at door hinges), it must be ensured that the corrosion protection provided in production is recreated. The complete paint covering must be re-created if necessary. The same applies to reshaping work on heavily profiled bodywork components (e.g. floor pan). Renew or touch-up the paint coating, sealing beads and underbody protection as necessary.

After repair, any interior surfaces which are no longer visible or accessible must be primed before cavity wax is applied. To be certain of an even coating on inner surfaces, careful application of spray (twice, with drying time in-between) must be carried out throughout the whole cavity.

If bodywork panels are strongly heated during repair work, this will invariably result in damage to or even destruction of the applied corrosion protection material. The effectiveness of the cavity protection material is reduced if heating occurs. Reworking of the affected areas is therefore vital.

Welded areas should be made good before corrosion protection is applied.

The corrosion protection measures to be taken when bodywork components are renewed are described on the following pages.

Corrosion protection of new components

All new components must be inspected for transport or storage damage such as scratches or dents. The following operations may be necessary, depending on the extent of damage:

Undamaged new component

- Do not grind the cathodic dip primer.
- Thoroughly clean with silicone remover and rob dry.

Slightly damaged new component

- Sand out scratches
- Finely sand the surrounding surface.
- Thoroughly clean with silicone remover and rub dry.
- Apply corrosion protection primer to bare areas.

Damaged new components (bumps and dents)

- Beat out the dented area sand down to bare metal.
- Apply polyester filler (only onto bare metal)
- Apply filler.
- Lightly sand the whole components.
- Thoroughly clean with silicone remover and rob dry.
- Apply corrosion protection primer to bare areas.

The clinched flanges on the hood, doors, tailgate and liftgate must be sealed with clinched flange sealer.

Weld Components

Use a rotating tress wire brush to remove the dip coat on the inside and outside of the area to be welded, taking care not to damage the zinc coating.

- NOTE: The area to be ground should be kept as small as possible, the corrosion protection applied in production (cathodic primer) should be retained as much as is possible.
- NOTE: The welding primer must be stirred well or shaken before application.

Clean the repair area thoroughly (silicone remover).

Apply welding primer evenly to all weld flanges (old and new components).

- NOTE: The welding primer must be allowed to dry before welding is carried out.

Apply welding primer

E56116

All weld beads must be ground down after all welding is completed, taking care not to weaken the material.

Any unevenness at the joint must be made good.

If necessary, spot weld missing T-pins for trim strip clamps into position. The vehicle must be completely cleaned of sanding dust and metal swarf because of the danger of corrosion.

Clean and prime all internal areas and those to be sealed.

- NOTE: The primer must be dry before sealing mastic or underbody protection is applied. Do not use thinners when applying sealing mastic (the mastic would not dry).

Partial renewal

The procedure to follow when partially renewing components is the same as described in the section "Welded components".

The main difference when components are partially, rather than completely renewed, concerns the preparation of butt or lap joints.

- When bodywork components are cut through, attention must be paid to the adequate removal of the paint and zinc coatings on inner areas. This specially applies to areas which are difficult to access internally.
- It is important for the weld quality that the inner area is bare metal. Zinc and paint residues in the weld area burn and cause serious hole formation during welding.
- If the zinc layer and the paint coating are not removed, the zinc and paint will burn during welding. The soot produced prevents satisfactory cavity protection.

Procedure

- The paint layer must be removed for a width of 30mm from the line of the weld using a rotating tress wire brush.
 - This operation must be carried out on both the new and the old parts of the bodywork.
 - Depending on the bodywork component, a 10mm width of the underlying zinc layer must also be removed along the weld line.
- NOTE: A flat scraper or a wire brush can be used instead of the rotating brush if the cavity is small. Do not use an angle grinder, which would weaken the structure.

Application of cavity wax protection on a door rocker panel after partial repair

Underbody sealer

Under floor areas and rocker outer panels are treated with a plastisol PVC underbody sealer. This material is not suitable for re-treatment. When repairing areas of underbody sealer, strip the factory-applied underbody sealer back to a suitable break point. Ensure that a clean metal surface is exposed and that the edge of the existing adheres soundly to the panel.

Apply new underbody sealer between primer and surface paint operations. Apply seam sealer as necessary before application of underbody sealer. Ensure that blanking plugs and grommets in the floor pan (except those used for wax injection) are fitted before underbody sealer application. Refit any heat-fusible plugs which have been disturbed in repair with the aid of a hot air blower, or replace with rubber grommets

CAUTION: Ensure that suspension units, wheels, tires, power unit, drive shafts, exhaust and brakes (including all mounting points) are shielded prior to application of fresh underbody sealer.

Area of underbody sealer application

E56193

Precautions during body repairs and handling

Take care when handling the vehicle in the workshop. Underbody sealers, seam sealers, underbody wax and body panels may be damaged if the vehicle is carelessly lifted.

Proprietary anti-corrosion treatments

The application of proprietary anti corrosion treatments in addition to the factory-applied treatment could invalidate the corrosion warranty and should be discouraged. This does not apply to approved, compatible, preservative waxes which may be applied on top of existing coatings.

Fitting approved accessories

When fitting accessories ensure that the vehicle corrosion protection is not affected, either by breaking the protective coating or by introducing a moisture trap.

Do not screw self-tapping screws directly into body panels. Fit suitable plastic inserts to the panel beforehand. Always

ensure that the edges of holes drilled into panels, chassis members and other body parts are protected with a suitable zinc rich or acid etch primer, and follow with a protective wax coating brushed onto the surrounding area.

Do not attach painted metal surfaces of any accessory directly to the vehicle's bodywork unless suitably protected. Where metal surfaces are bolted together always interpose a suitable interface material such as weldable zinc rich primer, extruded strip, or zinc tape.

Steam Cleaning

Due to the high pressure/temperature generated by steam cleaning equipment, there is a risk that certain adhesives and corrosion prevention material may become softened or liquified.

Take care not to allow the steam jet to dwell on one area, and keep the nozzle at least 300mm from the panel surface.

CAUTION: Do not remove wax or lacquer from underbody areas during repairs.

Inspection during maintenance servicing

It is a requirement of the corrosion warranty that the vehicle is checked for corrosion by an authorised Land Rover Authorised Repairers at least once a year, to ensure that the factory-applied protection remains effective.

Rectify any bodywork damage or evidence of corrosion found during inspection as soon as is practicable, both to minimise the extent of the damage and to ensure the long term effectiveness of the factory-applied corrosion prevention treatment.

Underbody protection repairs

Whenever body repairs have been carried out, ensure that full sealing and corrosion protection treatments are reinstated. This applies both to the damaged areas and also to areas where protection has been indirectly impaired, as a result either of accident damage or repair operations.

Remove corrosion protection from the damaged areas before straightening or panel beating. This applies in particular to panels coated with wax, PVC underbody sealer, sound deadening pads etc.

CAUTION: Do not use oxy-acetylene to remove corrosion prevention material. Large volumes of fumes and gases are liberated by these materials when they burn.

The most common method of removal is by means of a hot air blower with an integral scraper. High temperatures can be generated with this equipment which may cause fumes. Take care during its use.

Structural Adhesive

Metal to metal adhesive is applied to critical joint areas during factory assembly. The material used is a high temperature, heat cured, nitrile phenolic which serves to bond two metal surfaces and also to seal the joint against ingress of dust, moisture and fumes. This material is not suitable for service use and, during repair, should be substituted by an approved structural adhesive.

CAUTION: When separating a joint with metal to metal adhesive, it is important to avoid distortion. Heat gradually until the bond weakens sufficiently to permit panel separation.

- **NOTE:** When spot welding through metal to metal adhesive, take particular care to adjust the equipment setting to ensure a suitable weld.

Areas of structural adhesive

E56119

Item	Application	Function
1	B-pillar upper hinge RH/LH	Structural
2	B-pillar upper hinge RH/LH	Structural
3	Rear rocker panel RH/LH	Structural
4	B-pillar lower hinge RH/LH	Structural
5	Front rocker panel RH/LH	Structural
6	Front rocker panel RH/LH	Structural
7	A-pillar lower hinge RH/LH	Structural
8	A-pillar upper hinge RH/LH	Structural
9	C-pillar striker reinforcement	Structural
10	B pillar rear door aperture	Structural
11	B-pillar latch face	Structural
12	A-pillar to front door aperture	Structural
13	A-pillar to W/shield aperture	Structural

Joints symmetrically opposite to those shown are also treated. Apply 3mm diameter beads to all joints shown. Leave rocker drain points free of adhesive.

Expanding Foam Acoustic Seals

Expanding foam acoustic seals are used in various closed-sections of the body to improve vehicle refinement. The seals are installed during the vehicle body manufacture and expand during the paint process up to ten times original size, thus locking them into position. They are located such that they prevent noise accentuation along a section and reflect air borne noise away from the cabin.

The seals have split functionality depending on location. The seals located at the base of the body pillars have a primary function of preventing water ingress when wading. Their secondary function is to prevent noise and dust ingress.

The seal around the fuel filler has a primary function of preventing both fuel and water ingress. With a secondary function of preventing noise and dust ingress.

The remaining seals primary function is to prevent noise accentuation along a section and reflect air borne noise away from the cabin.

Another advantage of the seals is that they marginally increase the overall stiffness of the body and its structural performance in case of a crash.

The seals are manufactured from an expandible polymer, 'Sika Baffle 250.'

Replacing Foam Acoustic Seals

As paint oven temperatures used in a repair workshop are significantly lower than those that are used during manufacture of the vehicle, a different process is required to replace the seals.

After a repair that involves replacement of a section containing expanding foam acoustic seals, the new expanding foam acoustic seal is installed to the new section and injected with an approved acoustic foam. The acoustic foam should be injected after paint refinishing, where possible. When injecting the foam, ensure the foam fills a complete cross section of

the cavity and around the expanding foam acoustic seal.

Position of acoustic seals, front reinforcement

E56122

Item	Description	Function	Service part No
1	A-pillar upper inner	Acoustic	EUH000520
2	B-pillar lower inner	Water Ingress/Acoustic	EUH000560
3	Rocker panel middle	Acoustic	EUH000670
4	A-pillar lower inner	Water Ingress/Acoustic	EUH000550
5	B-pillar lower outer	Water Ingress/Acoustic	EUH000570
6	Rocker panel outer	Acoustic	EUH000680
7	A-pillar lower inner	Water Ingress/Acoustic	EUH000540
8	A-pillar upper outer	Acoustic	EUH000530

Position of acoustic seals, rear quarter panel

E56121

Item	Description	Function	Service part No
1	Cantrail rear	Acoustic	EUH000650
2	C-pillar outer	Acoustic	EUH000610
3	Rear wheel arch outer	Water Ingress/Acoustic	EUH000590
4	Fuel filler aperture	Water/Fuel Ingress	ARY 780030
5	D-pillar outer	Acoustic	EUH000630

Seam Sealer

A heat cured, PVC based sealant is applied to specific joint seams during factory assembly. This material is not suitable for service use and during repair, should be substituted by an approved seam sealer.

Apply seam sealers after the application of primer and before the application of top coat. The sealer must form a continuous bead, with the profile of the bead dependent on the type of seam. If the seam sealer is applied with a brush take particular care to maintain the required coverage of the seam.

Ensure that all accessible repair seams are sealed following a repair. Damaged to a vehicle often flexes areas of the body remote from the impact. As a result the seam sealer in these areas may be disturbed by subsequent straightening and repair operations. Check all seams in the vicinity of the area undergoing repair for evidence of cracked seam sealer, then clean out as required and apply fresh seam sealer using the following procedure:

- Clean the affected seam and re-treat any exposed metal areas with a suitable etch phosphate primer.
- Treat affected area with an etch-acid primer.
- Apply appropriate seam sealer as necessary.
- apply appropriate colour coat (and under body sealer as applicable).

Where seams are inaccessible following the reassembly or fitting of components, ensure that a paste-type seam sealer is applied to such seams. Certain seams also become inaccessible after the completion of panel repairs. In such instances apply seam sealer and paint before final assembly.

Provided access is adequate, apply seam sealer to both sides of a repair joint. Where access is limited to one side only (eg box section), treat the affected box member with cavity wax.

Seam sealer on the rear end

E56146

Underbody seam sealer

E56148

Cavity Wax

After repairs, always re-treat these areas with an approved cavity wax. In addition, treat all interior surfaces which have been disturbed during repairs whether they have been treated in production or not. This includes all Box members, cavities and door interiors.

Before wax injection, ensure that the cavity to be treated is free from any contamination or foreign matter. Where

necessary, clear out any debris.

Ensure that cavity wax is applied after the final paint process and before refitting any trim components.

During application ensure that the wax covers all flanges and seam areas and that it is adequately applied to all repaired areas of both new and existing panels.

It should be noted that new panel assemblies and complete body shells are supplied without wax injection treatment. Ensure that such treatment is carried out after repairs.

Effective cavity wax protection is vital. Always observe the following points:

- Complete all paint refinish operations before wax application.
- Check the spray pattern of injection equipment.
- Mask all areas not to be waxed
- Remove body fixings, such as seat belt retractors, if contamination is at all likely.
- Move door glasses to fully closed position before treating door interiors.
- Treat body areas normally covered by trim before refitting items.
- Check that body and door drain holes are clear after the protective wax has dried.
- Keep all equipment clean, especially wax injection nozzles

Body Repairs - Water Leaks - Water Leaks

Description and Operation

General

- If water leaks occur after bodywork repairs, the cause can be established using the checks described below. A systematic and logical procedure is required to locate water leaks. Before beginning extensive checks, a thorough visual inspection must be carried out.
- Visual Inspection
 - The following characteristics may indicate existing leaks:
 - Check the clearance and accurate fit of ancillary components such as the hood, tailgate, liftgate, doors, and so on.
 - Check for correct fit and possible damage to sealing elements such as blanking plugs, rubber door seals, and so on.
 - Check water drain holes for unhindered flow.
- Various tests can be used to provide further information on possible leaks:
 - Water test
 - Washer test
 - Road test
 - Chalk (powder) test

Practical execution of tests and checks

Water test

- **NOTE:** Never aim a jet of water directly at a rubber seal.
- Carry out the water test with a second person present (passenger compartment).
- Use variable washer nozzles (concentrated water jet to fine spray mist).
- Start in the lower section and spray the whole area, working upwards in stages.

Washer test

- Further tests can be carried out in the washer system.
- Some leaks originate here, or only occur here.
- The relevant passenger compartment should be checked using a torch during the wash procedure.

Road test

- If no leaks are located during the tests above, road tests should be carried out on wet roads.
- Road tests under various conditions:
 - At various speeds.
 - On various road surfaces (asphalt to cobbles).
 - With loaded or unloaded vehicle.
 - Driving through puddles (splash water).

Chalk test (powder test)

- In this test, the clamping load and the bearing surface of the seal are checked.
- Performing the test:
 - Dust the door seal with powder or coat with chalk.
 - Coat the bearing surface of the seal with a thin film of grease.
 - Slowly close the door and open it again.
 - Check the width and continuity of the imprint on the door seal.

Other test equipment

- Other equipment such as stethoscopes, UV lamps, special mirrors or ultrasound measuring instruments can be used to locate leaks.

Rectifying the leak using recommended tools, auxiliary equipment and materials

- Tools and auxiliary equipment:
 - Dry, absorbent cloths
 - Variable washer nozzle
 - Torch, fluorescent tube
 - Mirror
 - Compressed air
 - Seal lip installer
 - Wet/dry vacuum cleaner
 - Sealing compound compressor
 - Remover for interior trim
 - Cutter blade or pocket knife
 - Wedge (wood or plastic)
 - Hot air blower
 - Special mirror for concealed leaks
 - Air flow checker
- - Sealing compound (tape and plastic compound)
 - Multi-purpose sticker
 - Clinched flange sealer
 - Window sealing compound
 - Water shield (PVC)
 - Double-sided adhesive tape for water shield

- Methylated spirit (available from trade outlets)
- PU adhesive
- Silicone remover
- Tar remover

Water leaks according to mileage or running time

Increasing mileage has an effect on the problem of leaks in a vehicle. Possible influencing factors are:

- Servicing and maintenance of seals:
 - No maintenance, lack of maintenance or incorrect maintenance
 - Using an incorrect agent
- Damaged seals:
 - As a result of aging, wear or incorrect handling/assembly.
- Heavy soiling of the vehicle:
 - Heavy soiling of a vehicle can seriously impair the function of water drainage channels in particular, and also of rubber seals.
- Age-related factors:
 - Environmental factors
 - UV radiation
 - Extreme climatic conditions
- Corrosion can have a serious impact on bodywork, in particular as a result of:
 - Lightly or heavily rusted seal carriers
 - Rusted body seal welds
 - Perforation corrosion

Water leaks after body repairs

If a vehicle develops a leak after body repairs, the following points must be taken into consideration in particular:

- The correct seating of ancillary components and their seals must be checked.
- The correct alignment of doors/tailgate and liftgate must be checked. The associated seals must not be damaged and must be installed correctly.
- Check that welded seams are correctly sealed.
- The correct seating of rubber grommets must be checked.
- Directly-glazed windows must have correct and complete bonding.

Water drainage system

If a vehicle develops water leaks, then areas into which water is routed or drained should be checked first.

Water drainage system

E56126

Item	Part Number	Description
1	-	Water drainage, front
2	-	Water drainage, side and rear
3	-	Roof drainage
4	-	Engine compartment drainage

Water leaks, diagnosis and corrective action: Front passenger compartment

Windscreen

- Diagnosis:
 - Ingress of water into A-pillar area or instrument cluster area and rocker panel area.
- Cause:
 - Breaks in adhesive beads
- Corrective action:
 - The breaks in adhesive beads can be located from inside by using compressed air. The leak can be identified from outside by the escaping air.
 - The second test method is by means of a water test. The outer trims must be raised carefully using a plastic wedge. The leak should be located from inside by a second assistant.

Side windows

In the case of side windows, the same problems can arise as for a windscreen. The same corrective actions must therefore be used.

Door seal

- Diagnosis:
 - Water ingress in the lower part of the interior door trim or in the rocker panel area.

- Cause:
 - The water shield fitted behind the interior door trim exists to drain off water that has entered the door via the drainage holes, either downwards or outwards. If the water shield seal is damaged or has been fitted incorrectly, then water can get into the passenger compartment.
 - In addition to this, the drainage holes can become clogged with leaves, dirt or excess cavity protection agents. Water gathers in the door and ingresses into the passenger compartment.
 - Check water shield for damage or correct fitting.
 - If the water shield needs to be re-bonded, then approved seam sealer should be used.
 - Before the water shield is installed, the drainage holes must be checked for unhindered flow.

Door seals

- Diagnosis:
 - Ingress of water into the rocker panel area
- Cause:
 - Insufficient clamping load between seal and door.
- Corrective action:
 - Check clamping load:
 - The easiest way to check the clamping load of a seal to the respective bearing surface is by means of a paper strip test. This consists of trapping strips of paper at various points between the door and the seal, and fully closing the door. If it is possible to pull out the paper with no great resistance, then the clamping load is too low.
 - Adjust the clamping load:
 -
 - NOTE: When adjusting the clamping load, the profile alignment of the relevant components must always be taken into consideration.

The clamping load is normally adjusted using the striker. When doing so, the edge alignment from the door to the side panel, or from the front door to the rear door must be taken into account.

- Another setting method is to realign the panel flange for the seal mounting. The clamping load is increased by moving the flange towards the door.

-

• NOTE: Do not realign the flange too far in the direction of the door, as this can reduce the bearing surface of the seal to the door.

Check the bearing surface:

- Apply chalk evenly to the surface of the seal. Evenly coat the bearing surface of the door with vaseline.
- Close the door fully, the lock must engage. Open the door. The imprint of the chalk (bearing surface) can be identified in the film of grease.
- The bearing surface should be at least 5mm across at all points.

- Other causes:
 - The door seal must completely seal the door where it meets the bodywork.
 - Water can ingress directly or indirectly into the interior of the vehicle if the seal is damaged at any point.
- Corrective action:
 - A damaged or worn door seal must always be renewed in full.
 - When renewing the seal, the following must be taken into account:
 - Always fit the seal first in the area of the narrow radii (corner points).
 - Next, secure the seal to the flange evenly by tapping lightly with a rubber hammer. The installed seal must not be kinked at any point.

• NOTE: The prescribed length of a seal must not be shortened.

- Other cause:
 - The door seal is attached to the welded flange all the way round. If this welded flange is uneven or damaged at any point (usually in areas with narrow radii) then this point could be subject to leaks.
 - A stretched seal carrier can also cause a leak.
 - In both cases, water gets into the vehicle interior under the seal carrier.
- Corrective action:
 - Align the deformed welded flange using a hammer and anvil block, prevent and if necessary repair any paint damage.
- Other cause:
 - The door seal is attached to the welded flange all the way round. If this welded flange is uneven or damaged at any point (usually in areas with narrow radii) then this point could be subject to leaks.
 - A stretched seal carrier can also cause a leak.
 - In both cases, water gets into the vehicle interior under the seal carrier.

Sliding roof/tilting roof

- Diagnosis:
 - Ingress of water at sliding roof aperture
- Cause:
 - The sliding roof/tilting roof is installed in a water trap. The water drains off via the water trap, water drain holes and drain hoses. The drain hoses lead downwards on both sides via the A-pillar and C-pillar.
 - The drain holes or drain hoses can become clogged with leaves, dirt, underbody protection and so on.
- Corrective action:
 -
 - NOTE: In the case of a sliding or tilting roof, the external rubber seal and the lock actuator or latch mechanism must be checked first of all.

Check the water trap for leaks.

- Check the drain hoses for leaks and for correct connection to the water trap.
- Check the drainage system for unhindered flow, and blow out with compressed air if necessary.
- Check the external seal and the correct adjustment of the sliding roof.

Tailgate and Liftgate

- Diagnosis:
 - Ingress of water into rear headlining area and luggage area.
- Cause:
 - The leak problems of the tailgate and liftgate correspond to those of the doors.
 - In addition to this, the area to be sealed is much bigger. The routing holes for cables and hoses must also be sealed.
 - The rubber grommets for the routing holes must be checked for damage and correct seating (fully unhooked).
 - The mounting points of the tailgate and liftgate hinges may leak.
- Corrective action:
 - Check the rubber grommets and renew if necessary.
 - Check the hinge mounting points, and re-seal with sealing compound if necessary.

Forced air extraction

- Diagnosis:
 - Ingress of water into side luggage compartment area
- Cause:
 - The forced air extraction for the vehicle interior is located in the D-pillar behind the rear lights.
 - The rubber flap of the forced air extraction must be able to move freely.
- Corrective action:
 - Remove the forced air extraction.
 - Check the seal area between the bodywork and housing, as well as the rubber flap.
 - Renew seal if necessary.

Rear window and moon roof

- Diagnosis:
 - Ingress of water into the luggage compartment area
- Cause:
 - Rear window and moon roof leaking.
 - Check for leak in the same way as for leaking windscreen.

Panel connections with seal welds

- Diagnosis:
 - Ingress of water into the luggage compartment area
- Cause:
 - Several panel connections must be fitted in production in the wheelhouse and luggage compartment areas. These connections are sealed with sealing compound.
 - Uneven application of sealing compound can lead to a break in a seal weld.
- Corrective action:
 - Expose the seal weld.
 - Locate the leak in the seal weld.
 - Re-seal using sealing compound.

Body Repairs - Vehicle Specific Information and Tolerance Checks - Body and Frame

Description and Operation

Body Repairs - Tolerance Checks

Measurements shown are in millimetres and inches. The measurements shown in brackets are in inches.

Point-to-Point Dimensional Information

Point-to-point measurements are actual distances between two points. These points can be holes or intersections points. Where holes are taken, the point of measurement is always from the hole centres.

Front End Sheet Metal Repairs - Hood Latch Panel

Removal and Installation

Removal

• **NOTE:** If the hood latch panel coating is damaged or scratched, it must be repaired using the approved coating. For additional information, refer to: [Specifications](#) (501-27 Front End Sheet Metal Repairs, Specifications).

1. Disconnect the battery ground cable.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the front bumper.
For additional information, refer to: [Front Bumper](#) (501-19, Removal and Installation).
3. Release the power steering fluid reservoir and position aside.
 - Release the clip.

4. Release the washer reservoir filler neck from the coolant tank clip.
5. Remove the 2 coolant expansion tank mounting bolts.
6. Release the coolant expansion tank.
 - Lift coolant expansion tank vertically.

7. Remove the radiator securing pegs.

8. Disconnect the hood release cable from the connecting box.

9. NOTE: Note the fitted position.

Release the wiring harness.

- Disconnect the 3 electrical connectors.
- Release the 9 clips.
- Release the grommet.
- Carefully tie the harness aside.

E55091

10. Remove the panel upper fixings.

- Remove the 4 Torx bolts.

E55092

11. Remove the panel lower fixings.

- Remove the 6 Torx bolts.

E55093

12. NOTE: Note the fitted position.

With assistance, remove the hood latch panel.

13. Noting the fitted position, remove the 6 spacers.

- Remove the 2 clips.

E55094

14. NOTE: Do not disassemble further if the component is removed for access only.

Remove the 2 horn assemblies.

- Remove the 2 air deflectors.
- Remove the 2 Torx bolts.

E55095

15. Remove the hood switch.

- Remove the 2 Torx bolts.
- Release the 2 clips.

16. Remove the RH hood latch.

- Release and remove the cable.

E55096

17. Remove the LH hood latch.

- Remove the 2 Torx bolts.

Installation

1. Install the horn assemblies.
 - Install the air deflectors.
 - Install the bolts and tighten to 10 Nm (7 lb.ft).
2. Install the LH hood latch.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
3. Install the RH hood latch.
 - Attach the hood release cable.
 - Install the hood switch.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
4. Install the spacers.
 - Install the clips.
5. **NOTE: Align to the position noted on removal.**
 With assistance, install the hood latch panel.
6. Install the panel fixings.
 - Install and tighten the bolts to 25 Nm (18 lb.ft).
7. **NOTE: Align to the position noted on removal.**
 Install the wiring harness.
 - Connect and secure the electrical connector.
 - Carefully secure the clips.
8. Connect the hood release cable.
9. Install the radiator securing pegs.
10. Install the coolant expansion tank.
 - Position the coolant expansion tank, locate the spigot and lug.
 - Install the bolts and tighten to 10 Nm (7 lb.ft).
11. Install the windshield washer reservoir filler neck.
 - Locate in clip.
12. Install the power steering fluid reservoir.

- Position and secure to mounting bracket.

13. Install the front bumper.

For additional information, refer to: Front Bumper (501-19, Removal and Installation).

14. Open and close the hood to check the hood latch operation.

15. Adjust both of the hood latches.

- Loosen the 4 hood latch Torx bolts.
- Lower the hood and check for alignment.
- Open the hood and tighten the Torx bolts to 10 Nm (7 lb.ft).
- Check for the correct operation of the hood safety catch.
- If necessary, repeat the above adjustment procedure.

16. Connect the battery ground cable.

For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).

Front End Sheet Metal Repairs - Front Crossmember

Removal and Installation

Removal

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
3. Remove the radiator.
For additional information, refer to: [Radiator](#) (303-03A Engine Cooling - TDV6 2.7L Diesel, Removal and Installation).
4. Remove both front impact sensors.
For additional information, refer to: [Front Impact Severity Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
5. Release wiring harness from crossmember
6. Remove the fender moulding.
For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
- 7.

Item	Part Number	Description
1	-	8 spot welds.
2	-	8 spot welds.

E55794

8. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Front Side Member

Removal and Installation

Removal

- NOTE: This procedure requires the body to be removed from the integrated body frame.
 - NOTE: In this procedure the front side member is replaced in conjunction with hood latch panel, front wheelhouse and the front crossmember.
1. Load vehicle onto ramp.
 2. Disconnect both the battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
 3. L/H side: Remove the battery.
 4. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
 5. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 6. Remove the front crossmember.
For additional information, refer to: [Front Crossmember](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 7. Remove the front wheelhouse.
For additional information, refer to: [Front Wheelhouse](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 8. Remove the hood.
 9. Remove both hood support struts.
 10. Remove the hood wiring harness.
 11. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
 12. Remove both wiper arms and blades.
 13. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Reservoir - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
 14. Remove the instrument panel.
For additional information, refer to: Instrument Panel - 2.7L Diesel (501-12 Instrument Panel and Console, Removal and Installation).
 15. Remove the insulation from outer and inner bulkhead.
 16. R/H side: Release the ABS modulator.
 17. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02A Acceleration Control - TDV6 2.7L Diesel, Removal and Installation).
 18. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
 19. Release the wiring harness from bulkhead.
 20. Release the wiring harness from fender apron panel reinforcement.
 21. Release the wiring harness from the side member.
 22. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: Fuel Fired Booster Heater (412-02B Auxiliary Heating, Removal and Installation).
 23. Remove the scuff plate trim panel trim.
For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
 24. Remove the footrest
 25. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

26. Release the front carpet.

27.

E55830

Item	Part Number	Description
1	-	18 spot welds.
2	-	16 spot welds.

28.

E56906

Item	Part Number	Description
1	-	6 plug welds and a butt weld.

29. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Front Side Member Section

Removal and Installation

Removal

- NOTE: This procedure requires the body to be removed from the integrated body frame.
 - NOTE: In this procedure the front side member section is replaced in conjunction with hood latch panel, front wheelhouse and the front crossmember.
1. Load vehicle onto ramp.
 2. Disconnect both the battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
 3. L/H side: Remove the battery.
 4. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
 5. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 6. Remove the front wheelhouse.
For additional information, refer to: [Front Wheelhouse](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 7. Remove the front crossmember.
For additional information, refer to: [Front Crossmember](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 8. Remove the hood.
 9. Remove both hood support struts.
 10. Remove the hood wiring harness.
 11. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
 12. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Cooler - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
 13. Remove the instrument panel.
For additional information, refer to: Instrument Panel - 2.7L Diesel (501-12 Instrument Panel and Console, Removal and Installation).
 14. Remove the insulation from outer and inner bulkhead.
 15. R/H side: Release the ABS modulator.
 16. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02A Acceleration Control - TDV6 2.7L Diesel, Removal and Installation).
 17. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
 18. Release the wiring Harness from bulkhead.
 19. Release the wiring harness from fender apron panel reinforcement.
 20. Release the wiring harness from the side member.
 21. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: Fuel Fired Booster Heater (412-02B Auxiliary Heating, Removal and Installation).
 22. Remove the scuff plate trim panel trim
For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
 23. Remove the footrest
 24. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
 25. Release the front carpet.

26.

E55831

Item	Part Number	Description
1	-	Butt weld
2	-	7 spot welds.
3	-	8 spot welds.

27. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Fender Apron Panel Reinforcement

Removal and Installation

Removal

• NOTE: In this procedure the fender apron panel reinforcement is replaced in conjunction with fender apron panel closing.

1. Disconnect both the battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
3. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
4. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
5. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Reservoir - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
6. L/H side: Remove the battery.
7. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: [Fuel Fired Booster Heater](#) (412-02B Auxiliary Heating, Removal and Installation).
8. L/H side: Remove fuel fired booster heater pipes.
9. R/H side: Remove the air cleaner.
For additional information, refer to: [Air Cleaner](#) (303-12A Intake Air Distribution and Filtering - TDV6 2.7L Diesel, Removal and Installation).
10. R/H side: Release the ABS modulator.
11. Remove the wiring harness.
12. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
13. Remove the hood.
14. Remove both hood support struts.
15. Remove the hood wiring harness.
- 16.

E56916

Item	Part Number	Description
1	-	Acoustic seal.
2	-	34 plug welds.
3	-	13 spot welds.
4	-	3 spot welds.
5	-	14 spot welds.

17. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Fender Apron Panel Reinforcement Front Section

Removal and Installation

Removal

• NOTE: In this procedure the fender apron panel reinforcement front section is replaced in conjunction with fender apron panel closing.

1. Disconnect both the battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
3. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
4. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
5. L/H side: Remove the radiator coolant expansion tank.
For additional information, refer to: [Coolant Expansion Tank](#) (303-03C Engine Cooling - V6 4.0L Petrol, Removal and Installation).
6. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Reservoir - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
7. L/H side: Remove the battery.
8. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: [Fuel Fired Booster Heater](#) (412-02B Auxiliary Heating, Removal and Installation).
9. L/H side: Remove fuel fired booster heater pipes.
10. R/H side: Release the ABS modulator.
11. Remove the wiring harness.
12. Remove the hood.
13. Remove both hood support struts.
14. Remove the hood wiring harness.
- 15.

E56613

Item	Part Number	Description
1	-	Butt weld.
2	-	20 spot welds.
3	-	3 spot welds.
4	-	11 spot welds.

16. For additional information:

Installation

1. Install the reinforcement front section.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
 - Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
 - Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Front End Sheet Metal Repairs - Fender Apron Panel Reinforcement Rear Section

Removal and Installation

Removal

1. Disconnect both the battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
3. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
4. L/H side: Remove the battery.
5. R/H side: Remove the air cleaner.
For additional information, refer to: [Air Cleaner](#) (303-12A Intake Air Distribution and Filtering - TDV6 2.7L Diesel, Removal and Installation).
6. R/H side: Release the ABS modulator.
7. Remove the wiring harness.
8. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
9. Remove the hood.
10. Remove both hood support struts.
11. Remove the hood wiring harness.
- 12.

E56917

Item	Part Number	Description
1	-	3 spot welds.
2	-	34 plug welds.
3	-	7 spot welds.
4	-	Acoustic seal.
5	-	Butt weld.

13. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Roof Sheet Metal Repairs - Roof

Description and Operation

Roof service panels

E55791

Item	Description	Service part No
1	Roof panel	AKA780012
2	Header assembly	AKC780050
3	Roof panel (with roof opening panel)	AKB780040
4	Roof reinforcement	AKR780080
5	Roof reinforcement	AKB780031
6	Rear assembly	AKC780090
7	Rail assembly	R/H AK1780021 L/H AK1780031

paragraph

Time schedules, front end

The following information shows the total time taken to replace single panels and complete assemblies. This time includes removal of Mechanical, Electrical and Trim (MET) items, plus paint times based on Metallic Clear Over Base Paint.

The times shown were generated by Thatcham (the motor insurance repair and research centre) and are to be used as a guide only.

Single panel times

Panel Description	Petrol	Diesel
Roof panel	25.8	25.8
Roof glass support panel	1.1	1.1

Roof Sheet Metal Repairs - Roof Panel

Removal and Installation

Removal

- NOTE: The roof opening panel is supplied with the reinforcement roof aperture.
- NOTE: This procedure shows removal of the roof opening panel. For vehicles with a fixed roof, the procedure is similar.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove both side air curtain modules.
For additional information, refer to: [Side Air Curtain Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
3. Remove the windshield glass.
For additional information, refer to: [Windshield Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
4. Remove both rear quarter window glass.
For additional information, refer to: [Rear Quarter Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
5. If applicable, remove roof opening panel.
For additional information, refer to: [Roof Opening Panel](#) (501-17 Roof Opening Panel, Removal and Installation).
6. If applicable, remove glass roof panel.
For additional information, refer to: [Glass Roof Panel](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
7. Remove both front seats.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
8. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
9. Release the wiring harness from both A-pillars.
10. Release the wiring harness from the roof.
11. Remove the liftgate.
12. Remove both front door and rear door aperture weatherstrip.
13. Remove the tailgate weatherstrip.
14. Remove both front safety belt retractors.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
15. Remove both second row safety belt retractors.
For additional information, refer to: [Second Row Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
16. If applicable, remove both third row safety belt retractors.
For additional information, refer to: [Third Row Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
17. Release the carpet
18. Remove the load space trims.
19. Remove the load space carpets.
- 20.

E57137

Item	Part Number	Description
1	-	33 spot welds.
2	-	31 spot welds. (R/H is symmetrically opposite to L/H).
3	-	43 spot welds.

E57170

21.

Item	Part Number	Description
1	-	12 plug welds and 27 spot welds.
2	-	7 plug welds and 40 spot welds (R/H is symmetrically opposite to L/H).
3	-	23 spot welds.
4	-	32 spot welds.
5	-	4 plug welds. (R/H is symmetrically opposite to L/H).

22. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - Rocker Panel

Removal and Installation

Removal

1. Load vehicle onto ramp.
2. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
3. Remove the rear wheel and tire.
4. Remove the rear fender splash shield.
5. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
6. Release the front door check strap from the A-pillar and release the rear door check strap from the B-pillar.
 - Remove the 2 Torx bolts.

E51196

7. Remove the front and rear door assemblies.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

8. Remove the front and rear door weatherstrips.

9. Remove the front seat.

For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

10. Remove the rear seat.

For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).

11. Remove the cowl side trim panel.

For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

12. Release the wiring harness from A-pillar.

13. Remove the front safety belt retractor.

For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).

14. Remove the B-pillar side impact sensor.

For additional information, refer to: [B-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).

15. Remove the second row safety belt retractor.

For additional information, refer to: [Second Row Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).

16. Remove the C-pillar side impact sensor.

For additional information, refer to: [C-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).

17. Release the rocker panel and B-pillar wiring harness.

18. Release the carpet away from the area of repair.

19. Release the wiring harness from rocker panel and B-pillar.

20. Remove the rocker panel finisher.

21.

Item	Part Number	Description
1	-	Butt weld.
2	-	20 spot-welds.
3	-	Butt weld.
4	-	9 spot welds.
5	-	8 spot welds.
6	-	Butt weld.
7	-	35 spot welds.

22.

Item	Part Number	Description
1	-	3 plug welds.
2	-	3 plug welds.
3	-	38 plug welds.
4	-	3 plug welds.
5	-	4 plug welds.

23. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#)
(501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#)
(501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#)
(501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - A-Pillar Outer Panel

Removal and Installation

Removal

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the windshield glass.
For additional information, refer to: [Windshield Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
3. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
4. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
5. R/H side: Remove the ABS module.
For additional information, refer to: [Anti-Lock Brake System \(ABS\) Module](#) (206-09A Anti-Lock Control - Traction Control, Removal and Installation).
6. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02A Acceleration Control - TDV6 2.7L Diesel, Removal and Installation).
7. R/H side: Remove the brake booster.
For additional information, refer to: [Brake Booster](#) (206-07, Removal and Installation).
8. Remove the front door assembly.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

9. Remove the insulation from the outer and inner bulkhead.
10. Remove the front and rear door weatherstrip.
11. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
12. Release the A-Pillar wiring harness.
13. Remove the footrest.

14. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
15. Remove the front safety belt retractor.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
16. Remove the rocker panel outer trim.
17. Release the front carpet.
- 18.

Item	Part Number	Description
A	-	Cut line 55mm (2.165 inches) from A-Pillar trim hole.
1	-	Butt welds.
2	-	30 spot welds.
3	-	8 spot welds.
4	-	15 spot welds.

E55944

19.

Item	Part Number	Description
1	-	6 plug welds.
2	-	4 plug welds.
3	-	12 plug welds.
4	-	10 plug welds.
5	-	13 plug welds.

E57675

20.

Item	Part Number	Description
1	-	Areas of adhesive.
2	-	Acoustic seal.

E57676

21. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - Side Panel

Removal and Installation

Removal

1. Load vehicle onto ramp.
2. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
3. Remove the windshield glass.
For additional information, refer to: [Windshield Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
4. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
5. Remove the front and rear door assemblies.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

E51197

6. Remove front and rear door strikers.
7. Remove the insulation from the outer and inner bulkhead.
8. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
9. Release the A-Pillar wiring harness.
10. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
11. R/H side: Remove the brake booster.
For additional information, refer to: [Brake Booster](#) (206-07 Power Brake Actuation, Removal and Installation).
12. R/H side: Remove the ABS module.
For additional information, refer to: [Anti-Lock Brake System \(ABS\) Module](#) (206-09A Anti-Lock Control - Traction Control, Removal and Installation).
13. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02A Acceleration Control - TDV6 2.7L Diesel, Removal and Installation).

14. Remove the footrest.
15. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
16. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
17. Remove the front and rear door weatherstrip.
18. Remove the front safety belt retractor.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
19. Remove the Second row safety belt retractor.
For additional information, refer to: [Second Row Center Safety Belt Retractor - Vehicles With: 60/40 Split Seat](#) (501-20A Safety Belt System, Removal and Installation).
20. Remove the third row safety belt retractor.
For additional information, refer to: [Third Row Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
21. Remove the B-Pillar side impact sensor.
For additional information, refer to: [B-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
22. Remove the side air curtain module.
For additional information, refer to: [Side Air Curtain Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
23. Remove the C-Pillar side impact sensor.
For additional information, refer to: [C-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
24. Remove the wiring harness from the B-Pillar.
25. Release the wiring harness from the rocker panel.
26. Release wiring harness from roof panel.
27. Remove the rocker panel outer trim.
28. Release the front and back carpet.
29. Remove rear wheel and tire.
30. Remove rear bumper cover.
For additional information, refer to: [Rear Bumper Cover](#) (501-19 Bumpers, Removal and Installation).
31. Remove forced air extraction grille.
32. R/H side: Remove fuel tank.
For additional information, refer to: [Fuel Tank](#) (310-01A Fuel Tank and Lines - TDV6 2.7L Diesel, Removal and Installation).
33. R/H side: Remove the fuel tank filler pipe.
For additional information, refer to: [Fuel Tank Filler Pipe](#) (310-01A Fuel Tank and Lines - TDV6 2.7L Diesel, Removal and Installation).
34. R/H side: Remove the fuel filler interlock catch.
For additional information, refer to: [Fuel Filler Interlock Catch](#) (501-03 Body Closures, Removal and Installation).
35. Remove the rear quarter window glass.
For additional information, refer to: [Rear Quarter Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
36. Remove the exhaust heatshields.
37. Remove the tailgate latch.
For additional information, refer to: [Liftgate Latch](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
38. Remove tailgate weatherstrip.
39. With assistance remove the tailgate.
40. Remove the load space trims.
41. Remove the load space carpets.
42. Release wiring harness.

43.

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - B-Pillar Outer Panel

Removal and Installation

Removal

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the rear door assembly.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

3. Remove front door striker.
4. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
5. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
6. Remove the B-pillar side impact sensor.
For additional information, refer to: [B-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
7. Remove the side air curtain module.
For additional information, refer to: [Side Air Bag Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
8. Remove the wiring harness from the B-pillar.
9. Release the wiring harness from the rocker panel.
10. Remove the front safety belt retractor.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
11. Remove the rocker panel outer trim.
12. Release the carpet.

E55946

13.

Item	Part Number	Description
1	-	Cut line and butt weld.
2,4	-	81 spot welds.
3	-	Butt welds.

E57346

14.

Item	Part Number	Description
1	-	Adhesive.
2	-	6 plug welds.
3	-	19 plug welds.
4	-	Acoustic seal.

For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - A-Pillar Reinforcement

Removal and Installation

Removal

- NOTE: In this procedure the A-Pillar reinforcement is replaced in conjunction with the A-Pillar outer panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the A-Pillar outer panel.
For additional information, refer to: [A-Pillar Outer Panel](#) (501-29 Side Panel Sheet Metal Repairs, Removal and Installation).
3. Remove the instrument panel.
For additional information, refer to: Instrument Panel - 2.7L Diesel (501-12, Removal and Installation).
- 4.

Item	Part Number	Description
A	-	Cut line 80mm (3.149 inches) from edge of A Pillar reinforcement.
1	-	Butt weld.
2	-	30 spot welds.
3	-	17 spot welds.

E55945

5.

Item	Part Number	Description
1	-	Butt weld
2	-	7 Plug welds.
3	-	16 plug welds.
4	-	Acoustic seal.

E57677

6. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - B-Pillar Reinforcement

Removal and Installation

Removal

- NOTE: In this procedure the B-Pillar reinforcement is replaced in conjunction with the B-pillar outer panel.
- NOTE: The B-Pillar closing panel is fitted with the B-Pillar reinforcement.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the B-pillar outer panel.
For additional information, refer to: [B-Pillar Outer Panel](#) (501-29 Side Panel Sheet Metal Repairs, Removal and Installation).

3.

Item	Part Number	Description
A	-	Cut line 140.0mm (5.51 inches)
1	-	Butt weld.
2,3	-	81 spot welds. (including the B-Pillar closing panel.)

E55947

E57347

4.

Item	Part Number	Description
1	-	Butt weld.
2	-	Acoustic seal.
3	-	12 plug welds.

E55948

5. The B-Pillar closing panel is supplied with the cantrail. Remove the B-Pillar closing panel from the cantrail and fit the B-pillar closing panel to the B-Pillar reinforcement, as shown in graphic E55948 and E55947.

Item	Part Number	Description
1	-	9 plug welds.
2	-	4 spot welds.

6. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - Side Panel Front Section

Removal and Installation

Removal

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the windshield glass.
For additional information, refer to: [Windshield Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
3. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
4. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
5. R/H side: Remove the brake booster.
For additional information, refer to: Brake Booster (206-07, Removal and Installation).
6. R/H side: Remove the ABS module.
For additional information, refer to: [Anti-Lock Brake System \(ABS\) Module](#) (206-09A Anti-Lock Control - Traction Control, Removal and Installation).
7. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02A Acceleration Control - TDV6 2.7L Diesel, Removal and Installation).
8. Remove the front and rear door assemblies.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

9. Remove front door striker.
10. Remove the insulation from the outer and inner bulkhead.
11. Remove the front and rear door weatherstrip.
12. Remove the footrest.
13. Release the A-Pillar wiring harness.
14. Remove the front safety belt retractor.
For additional information, refer to: [Front Safety Belt Retractor](#)

(501-20A Safety Belt System, Removal and Installation).

15. Remove the B-Pillar side impact sensor.
For additional information, refer to: [B-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
16. Remove the side air curtain module.
For additional information, refer to: [Side Air Bag Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
17. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
18. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
19. Remove the wiring harness from the B-Pillar.
20. Release the wiring harness from the rocker panel.
21. Release wiring harness from roof panel.
22. Remove the rocker panel outer trim.
23. Release the front and back carpet.
- 24.

Item	Part Number	Description
A	-	Cut line is 55 mm (2.165 inches) from A-Pillar trim hole.
1	-	98 spot welds.
2	-	Butt weld.
3	-	80 spot welds.
4	-	Butt weld.
5	-	8 spot welds.
6	-	15 spot welds.
7	-	Butt weld.

E56608

25.

Item	Part Number	Description
1	-	6 plug welds.
2	-	31 plug welds.
3	-	4 plug welds.
4	-	10 plug welds.
5	-	13 plug welds.
6	-	6 plug welds.

E57174

26.

Item	Part Number	Description
1	-	Areas of adhesive.
2	-	Acoustic seal.
3	-	Acoustic seal.

E57175

27. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear End Sheet Metal

Description and Operation

Rear end service panels

E55754

Item	Description	Service part No
1	Quarter panel outer	R/H ALA780100 L/H ALA780110
2	Rear side member	R/H AGA780021 L/H AGA780031
3	Rear side member	R/H AFD780080 L/H AFD780090
4	Rear floor panel	AFD780010
5	Rear crossmember	AQA780050
6	Rear panel reinforcement	AQR780080
7	Rear panel outer	AQA780030

Rear end service panels

E55755

Item	Description	Service part No
1	Rear wheelhouse outer	R/H ALK780100 L/H ALK780110
2	Rear lamp mounting panel	R/H AME780320 L/H AME780330
3	Water drain panel	R/H AME780300 L/H AME780310
4	D-pillar closing panel	R/H AFF780060 L/H AFF780070
5	D-pillar inner lower panel assembly	R/H AGY780060 L/H AGY780070
6	Inner quarter panel	R/H ALR780220 L/H ALR780230
7	Inner quarter panel/side panel rear section	R/H ALJ780120 L/H ALJ780130

Time schedules, front end

The following information shows the total time taken to replace single panels and complete assemblies. This time includes removal of Mechanical, Electrical and Trim (MET) items, plus paint times based on Metallic Clear Over Base Paint.

The times shown were generated by Thatcham (the motor insurance repair and research centre) and are to be used as a guide only.

Single panel times

Panel Description	Petrol	Diesel
Liftgate	9.0	9.0

Panel Description	Petrol	Diesel
Tailgate	6.7	6.7
Quarter panel L/H	23.4	23.4
Quarter panel R/H	23.7	23.7

Combination panel replacement times

The following panel combination times show the total time to remove/refit body panels, MET items and any paint process.

Combination panel times

Panel Description	Petrol	Diesel
Rear bumper		
D-Pillar closing panel L/H and R/H		
Rear lamp panel		
Rear crossmember		
Rear panel		
Quarter panel		
Tailgate		
Total Time	L/H 35.6 R/H 35.9	L/H 35.6 R/H 35.9

Combination panel times

Panel Description	Petrol	Diesel
Rear bumper		
D-Pillar closing panel L/H and R/H		
Rear lamp panel L/H and R/H		
Rear panel		
Rear crossmember		
Tailgate		
Quarter panel L/H and R/H		
Total Time	62.1	62.1

Combination panel times

Panel Description	Petrol	Diesel
Body off integraed frame		
Rear floor panel section		
Rear bumper		
Rear side member section		
D-Pillar closing panel		
D-Pillar inner lower panel assembly		
Rear lamp panel		
Rear panel		
Rear crossmember		
Tailgate		
Quarter panel		
Total Time	L/H 64.1 R/H 64.3	L/H 64.3 R/H 64.5

Combination panel times

Panel Description	Petrol	Diesel

Rear End Sheet Metal Repairs - Quarter Panel

Removal and Installation

Removal

1. Load vehicle onto ramp.
2. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
3. Remove the rear wheel and tire.
4. Remove the rear bumper cover.
For additional information, refer to: [Rear Bumper Cover](#) (501-19 Bumpers, Removal and Installation).
5. Remove the forced air extraction grille.
6. R/H side: Remove fuel tank.
For additional information, refer to: [Fuel Tank](#) (310-01A Fuel Tank and Lines - TDV6 2.7L Diesel, Removal and Installation).
7. R/H side: Remove the fuel tank filler pipe.
For additional information, refer to: [Fuel Tank Filler Pipe](#) (310-01C Fuel Tank and Lines - 2.7L Diesel, Removal and Installation).
8. R/H side: Remove the fuel filler interlock catch.
For additional information, refer to: [Fuel Filler Interlock Catch](#) (501-03 Body Closures, Removal and Installation).
9. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
10. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
11. Remove the C-pillar side impact sensor.
For additional information, refer to: [C-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
12. Remove the side air curtain module.
For additional information, refer to: [Side Air Curtain Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
13. Remove the rear quarter window glass.
For additional information, refer to: [Rear Quarter Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
14. Remove the rocker panel finisher.
15. Remove the exhaust heatshield.
16. Remove the tailgate latch.
For additional information, refer to: [Tailgate Latch](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
17. Remove the tailgate weatherstrip.
18. With assistance remove the tailgate.
19. Remove the load space trims.
20. Remove the load space carpets.
21. Release the wiring harness.

22.

Item	Part Number	Description
1	-	Butt weld.
2	-	Butt weld.
3	-	50 spot welds.
4	-	5 spot welds.
5	-	40 spot welds.
6	-	9 spot welds.
7	-	Butt weld.
8	-	40 spot welds.

E56609

23.

Item	Part Number	Description
1	-	Acoustic seal.
2	-	16 plug welds.
3	-	Acoustic seal R/H.
4	-	7 plug welds.
5	-	3 plug welds.
6	-	Acoustic seal.
7	-	Acoustic seal.

E57109

24. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Inner Quarter Panel

Removal and Installation

Removal

• NOTE: In this procedure, the inner quarter panel is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

3.

Item	Part Number	Description
1	-	Butt weld.
2	-	24 spot welds.
3	-	11 spot welds.
4	-	Butt weld.
5	-	40 spot welds.

E55760

4.

Item	Part Number	Description
1	-	5 plug welds.
2	-	8 plug welds.
3	-	Acoustic seals

E57103

5. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear Wheelhouse Outer

Removal and Installation

Removal

• NOTE: In this procedure, the rear wheelhouse outer is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Disconnect the parking brake cables.
For additional information, refer to: Parking Brake Cable (206-05 Parking Brake and Actuation, Removal and Installation).
3. Remove the brake line.
4. Remove the rear suspension.
For additional information, refer to: Rear Suspension (204-02 Rear Suspension, Description and Operation).
5. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

6.

Item	Part Number	Description
1	-	60 spot welds.
2	-	10 spot welds.

E55930

7.

Item	Part Number	Description
1	-	160mm (6.29) adhesive.
2	-	2 plug welds and 5 spot welds.

E57119

8. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear Lamp Mounting Panel

Removal and Installation

Removal

- NOTE: In this procedure, the rear lamp mounting panel is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

3.

Item	Part Number	Description
1	-	18 plug welds.
2	-	Adhesive.
3	-	3 plug welds.
4	-	2 plug welds.

E57102

4.

Item	Part Number	Description
1	-	16 spot welds.
2	-	11 spot welds.

E55761

5. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Back Panel

Removal and Installation

Removal

- NOTE: When replacing the back panel it is necessary to remove a section of the rear lamp panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the rear bumper cover.
For additional information, refer to: [Rear Bumper Cover](#) (501-19 Bumpers, Removal and Installation).
3. Remove both D-pillar trim panels.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove the tailgate hinge trim cover.
5. Remove the tailgate weather seal.
6. Remove the load space trims.
7. Remove the load space carpets.
8. With assistance remove the tailgate.
9. Remove the L/H exhaust heatshield tailpipe.
10. Remove the R/H exhaust heatshield tailpipe.
11. Remove the spare wheel and tire.
12. Release the back panel wiring harness.

13.

E55756

Item	Part Number	Description
1	-	20 plug welds.
2	-	42 spot welds.
3	-	4 plug welds.
4	-	21 plug welds.
5	-	4 plug welds.

14.

E56870

Item	Part Number	Description
1	-	2 plug welds. (R/H is symmetrically opposite to L/H)
2	-	30 spot welds.
3	-	7 spot welds. (R/H is symmetrically opposite to L/H)

15. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.

For additional information, refer to: [Body and Frame](#)
(501-26 Body Repairs - Vehicle Specific Information and
Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear Floor Panel Section

Removal and Installation

Removal

• NOTE: In this procedure, the rear floor panel section is replaced in conjunction with the back panel and rear crossmember.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the back panel.
For additional information, refer to: [Back Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).
3. Remove the rear crossmember.
For additional information, refer to: [Rear Crossmember](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).
- 4.

Item	Part Number	Description
1	-	Mig-weld.
2	-	Mig-weld.
3	-	Mig-welds and 18 plug-welds.

E55762

5. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear Crossmember

Removal and Installation

Removal

- NOTE: In this procedure, the rear crossmember is replaced in conjunction with the back panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the back panel.
For additional information, refer to: [Back Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

3.

Item	Part Number	Description
1	-	Mig weld.
2	-	3 spot welds.
3	-	12 plug welds.
4	-	3 spot welds.
5	-	Mig weld.

E55758

4. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Quarter/Side Panel Rear Section LH

Removal and Installation

Removal

- NOTE: The quarter / side panel rear section R/H is symmetrically opposite to the L/H.
- NOTE: In this procedure, quarter / side panel rear section is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).
- 3.

Item	Part Number	Description
1	-	15 spot welds.
2	-	Butt weld.
3	-	Butt weld.
4	-	Acoustic seal.
5	-	3 plug welds.
6	-	8 plug welds.
7	-	Mig weld.
8	-	5 plug welds.
9	-	Butt weld.

E55933

4. For additional information:
 - Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
 - Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
 - Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear Side Member Section

Removal and Installation

Removal

• **NOTE:** In this procedure, the rear side member section is replaced in conjunction with the back panel and rear crossmember.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the back panel.
For additional information, refer to: [Back Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).
3. Remove the rear crossmember.
For additional information, refer to: [Rear Crossmember](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).
- 4.

Item	Part Number	Description
1	-	2 plug welds. (also see graphic E55932)
2	-	2 plug welds.
3	-	Butt weld.

- 5.

Item	Part Number	Description
1	-	Butt weld.
2	-	2 plug welds.
3	-	4 plug welds.

6. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - D-Pillar Inner Lower Panel

Removal and Installation

Removal

- NOTE: In this procedure the D-Pillar inner lower panel is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

3.

E56610

Item	Part Number	Description
1	-	8 plug welds.
2	-	3 plug welds.
3	-	4 plug welds.
4	-	Mig weld.
5	-	7 plug welds.
6	-	6 plug welds.
7	-	4 plug welds.
8	-	Butt weld.
9	-	Adhesive
10	-	4 plug welds.
11	-	6 plug welds.

- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - D-Pillar Closing Panel

Removal and Installation

Removal

- NOTE: In this procedure the D-Pillar closing panel is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: [Specifications](#) (414-00 Battery and Charging System - General Information, Specifications).
2. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

3.

Item	Part Number	Description
1	-	Mig weld.
2	-	2 plug welds.
3	-	1 plug weld.
4	-	4 plug welds.

E56611

4. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Body Panels -

Torque Specifications

Description	Nm	lb-ft
Engine undershield bolts	62	46
Front fender bolts	10	7
Front fender nut	10	7

Front End Body Panels - Fender

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
3. Remove the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).
4. Remove the fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
5. Remove the fender moulding.
For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
6. Remove the fender lower moulding.
 - Release the 4 clips.

E52564

7. Remove the fender air intake grille.
 - Release the 4 clips.
 - Remove the air ducting.

E53026

8. Remove the front fender.
 - Remove the 6 Torx bolts.
 - Remove the nut.

E53027

9. NOTE: Do not disassemble further if the component is removed for access only.

Remove the fender rear trim.

- Remove the 3 clips.

Installation

1. Install the fender rear trim.
 - Secure in the 3 clips.
2. Install the front fender.
 - Install the bolts and tighten to 10 Nm (7 lb.ft).
 - Install the nut and tighten to 10 Nm (7 lb.ft)
3. Install the fender air intake grille.
 - Install the air ducting.
4. Install the lower fender moulding.
 - Secure in the clips.
5. Install the fender moulding.
For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
6. Install the fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
7. Install the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).
8. Install the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
9. Connect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).

Front End Body Panels - Fender Splash Shield

Removal and Installation

Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove the fender moulding.
For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).

3. Remove the fender splash shield.
 - Remove the 2 screws.
 - Remove the 6 retainers.
 - Disconnect the electrical connector.

E46261

4. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the tire pressure antenna.

- Remove the 2 retainers.

E46262

Installation

1. Install the tire pressure antenna.
 - Install the retainers.
2. Install the fender splash shield.

- Connect the electrical connector.
- Install the retainers.
- Install the screws.

3. Install the fender moulding.

For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).

Front End Body Panels - Engine Undershield

Removal and Installation

Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2.  **CAUTION:** Note the special washer.

Remove the engine undershield.

- Remove the 10 bolts.

Installation

1. To install, reverse the removal procedure.

- Tighten the bolts to 62 Nm (46 lb.ft).

Body Closures - Body Closures

Description and Operation

Body Protection

 **WARNING:** The weight of the armoured components fitted to the vehicle are far in excess of those fitted to the standard vehicle. As an example, the windshield weighs approximately 100 Kg (220 lb). Therefore, always be aware of the weight of components and have suitable lifting equipment available before attempting to remove any component from the vehicle.

Body Shell

Armoured cell

E101511

The vehicle passengers are protected by a steel armoured cell assembled inside the vehicle's bodywork. The cell provides armoured protection to the following areas of the vehicle:

- Bulkhead
- Roof
- Rear three-quarter panels
- 'A' posts
- 'B/C' posts
- 'D' posts
- Sills
- Floor pan

In addition to the floor pan armour, floor protection is also provided by a woven Kevlar blanket, available as an optional fit.

Armoured cell in position

E101513

Doors and Tailgate

The vehicle's doors are reinforced with steel armour, with the exception of the tailgate which remains standard. The armoured cell offers rear-end protection to the vehicle's occupants with the option of either:

- a solid armoured rear end with armoured window; or
- an armoured rear access with armoured window.

Armoured cell rear-access

E101512

Item	Part Number	Description
1	-	Upper access panel - gas struts
2	-	Upper access panel - dead locks
3	-	Upper access panel – internal release lever
4	-	Lower access panel – gas struts
5	-	Lower access panel – internal release handle
6	-	Upper access panel – external release lever
7	-	Lower access panel
8	-	Upper access panel - grab handle
9	-	Upper access panel
10	-	Armoured glass window *

* For additional information, refer to: Glass, Frames and Mechanisms (501-11, Description and Operation).

The armoured access option replicates the vehicle's tailgate by having upper and lower access panels. The access panels can be opened manually both internally and externally if the dead-locks are in the unlocked position. Gas struts fitted to the access panels aid their opening and reduce involuntary shutting.

Tailgate interior release button

E101515

A release button fitted to the interior of the vehicle's upper standard tailgate provides access to the tailgate from inside the vehicle. The release button is a momentary type switch, wired in parallel to the standard release switch on the exterior tailgate handle.

The door hinges, spindles and door stop mechanisms, on the driver and passenger doors are reinforced to support the additional weight of the armour. Gas struts have been fitted to aid door opening and reduce involuntary shutting.

 **CAUTION:** It is recommended that the driver and passenger doors are not opened until the vehicle has come to a complete stop. The combined effect of the vehicle's residual speed and the weight of the door could overcome the door stop mechanism.

Body Closures - Liftgate Alignment

General Procedures

1. With the liftgate closed, check the alignment of the liftgate to roof panel. The liftgate should be central in its aperture. Profile of the liftgate to roof panel should be 2 mm below flush.

2. Remove the rear headliner trim panel.
 - Release the 7 clips.
 - Disconnect the electrical connector.

3. Loosen, but do not remove both liftgate hinge to body bolts.

4. Position the liftgate central to the aperture.

☞ ☞ move the LH liftgate to body bolt.

6.  **CAUTION:** When setting the liftgate profile, make sure that the liftgate hinge NOT being adjusted has its retaining bolt fitted.

- **NOTE:** Turning the Allen key clockwise will raise the liftgate.

Using a 13 mm Allen key, adjust the LH liftgate hinge until a profile of 2 mm below flush to the roof panel is achieved.

- Install the bolt and tighten to 40 Nm (30 lb.ft).

7. Repeat the above procedure for the RH liftgate hinge.

8. Check for correct operation of the liftgate, and if necessary adjust the liftgate and tailgate strikers.

9. Install the rear headliner trim panel.

- Connect the electrical connector.
- Secure with the clips.

Body Closures - Fuel Filler Door Assembly

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the fuel filler interlock catch assembly.
For additional information, refer to: [Fuel Filler Interlock Catch](#) (501-03 Body Closures, Removal and Installation).

3. WARNINGS:

 Place the vehicle in a well ventilated, quarantined area and arrange 'No Smoking/Petrol Fumes' signs about the vehicle.

 Do not carry or operate cellular phones when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions may result in personal injury.

Remove the fuel filler door and inner assembly.

- Open the fuel filler door and remove the cap.
- Using a 2mm metal rod, pierce the inner assembly and release the 4 clips.
- Release from the filler neck.
- Replace the filler cap.

4. Remove the fuel filler door.

- Release the clip.

Installation

1. Install the filler door.
2. Install the fuel filler door assembly.
 - Clean the component mating faces.
 - Install the filler cap.
 - Close the fuel filler door.
3. Install the fuel filler interlock catch assembly.
For additional information, refer to: [Fuel Filler Interlock Catch](#) (501-03 Body Closures, Removal and Installation).
4. Connect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).

Body Closures - Fuel Filler Interlock Catch

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove the fuel filler interlock catch assembly.

E54201

- Remove the clip.
- Release the cable.
- Disconnect the electrical connector.

4. Remove the solenoid.

- Remove the 2 Torx screws.
- Release the cable.

E54202

5. NOTE: Do not disassemble further if the component is removed for access only.

Release and remove the cable.

- Release the clip.

Installation

1. Install the cable.
 - Secure the clip.
2. Install the solenoid.
 - Attach the cable.
 - Install the Torx screws.
3. Install the fuel filler flap latch assembly.
 - Connect and secure the electrical connector.
 - Carefully secure the clips.
4. Install the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
5. Connect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).

Body Closures - Liftgate

Removal and Installation

Removal

1. Open the liftgate and tailgate.
2. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
3. Remove the liftgate upper trim panel.

- Release the 4 clips.

4. Remove the liftgate side trim panel.

- Release the 5 clips.
- Repeat the above procedure for the other side.

5. Remove the rear headliner trim panel.

- Release the 7 clips.
- Disconnect the electrical connector.

6. Disconnect the washer jet hose.

- Release the grommet.

E55545

7. Release the liftgate wiring harness.

- Disconnect the 2 electrical connectors.
- Release the grommet.

E55546

8. With assistance, remove the liftgate assembly.

- Release the clips and disconnect the struts.
- Remove the 2 bolts.

Installation

1. With assistance, install the liftgate assembly.

- Tighten the bolts to 40 Nm (30 lb.ft).
- Connect the struts and secure with the clips.

2. Attach the liftgate wiring harness.

- Install the grommet.
- Connect the electrical connectors.

3. Connect the washer jet hose.

- Install the grommet.

4. Install the liftgate side trim panel.

- Secure with the clips.
- Repeat the above procedure for the other side.

5. Install the liftgate upper trim panel.
 - Secure with the clips.
6. Connect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
7. Check and adjust the liftgate to roof panel profile.
For additional information, refer to: [Liftgate Alignment](#) (501-03 Body Closures, General Procedures).

Interior Trim and Ornamentation -

Torque Specifications

Description	Nm	lb-ft
Safety belt lower anchorage to seat Torx bolt	40	30
Tailgate support strut spigot	25	18
C-pillar lower trim panel Torx screw	8	6
C-pillar upper trim panel Torx screw	3	2
A-pillar trim panel Torx screw	3	2
* Safety belt anchorage Torx bolt	40	30
Foot rest nuts	10	7

* **New bolt must be fitted**

Interior Trim and Ornamentation - Engine Cover V6 4.0L Petrol

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the oil filler cap.
3. **NOTE:** Note the fitted position of the spacers

Remove the engine cover.

- Remove the 4 nuts.
- Collect the spacers.

4. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the acoustic pad.

- Remove the 7 clips.
- Remove the 4 mounts and compression limiters.

Installation

1. Install the acoustic pad.
 - Position and secure the clips.
 - Install the grommets.
 - Install the compression limiters.
2. Install the engine cover.
 - Install the spacers.
 - Tighten the nuts to 10 Nm (7 lb.ft).
3. Connect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).

Interior Trim and Ornamentation - Engine Cover V8 5.0L Petrol

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.

1. NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

E134600

Installation

1. To install, reverse the removal procedure.

Interior Trim and Ornamentation - Engine CoverTDV6 3.0L Diesel

Removal and Installation

Removal

1. Remove the oil filler cap.

- 2.

Installation

1. To install, reverse the removal procedure.

Interior Trim and Ornamentation - Rear Quarter Trim Panel

Removal and Installation

Removal

1. Fold down the rear seat backrest.
2. Release the door aperture weatherstrip.

E49778

3. Release the safety belt anchor.

- Remove and discard the bolt.

E49594

4. Release the tailgate aperture seal.

5. Remove the support spigot from the tailgate.

- Release the clip.

6. Remove the rear quarter trim panel.

- Remove the Torx screw.
- Lift the storage box lid and using a firm grip, release the window clips by pulling the trim inboard.
- Release the remaining 6 plastic clips using a suitable tool.
- Disconnect the 2 electrical connectors.

7. NOTE: Do not disassemble further if the component is removed for access only.

Remove the stowage tray.

- Release the cover.

8. Remove the audio control switch.

- Release the 2 clips.

9. Remove the accessory socket.

E49782

Installation

1. Install the accessory socket.
2. Install the audio control switch.
 - Secure the clips.
3. Install the stowage tray.
 - Install the cover.
4. Install the rear quarter trim panel.
 - Install the clips.
 - Tighten the Torx screw to 8 Nm (6 lb.ft).
 - Connect the electrical connector.
5. Install the support spigot to the tailgate.
 - Install the clip.
6. Install the tailgate aperture seal.

7. Install the safety belt anchor.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).

8. Install the door aperture weatherstrip.

9. Return the seat backrest to the upright position.

Interior Trim and Ornamentation - A-Pillar Trim Panel

Removal and Installation

Removal

1. Release the door weatherstrip to access the A-pillar upper trim panel and instrument panel end panel.

2. Remove the instrument panel end panel.
 - Release the clip.

3. Remove the A-pillar upper trim panel.
 - Release the screw cover.
 - Remove and discard the Torx screw.
 - Release the clip.

4. NOTE: Do not disassemble further if the component is removed for access only.

Installation

1. Install the screw cover and clip from the A-pillar upper trim panel.
2. Install the A-pillar upper trim panel.
 - Secure with the clip.
 - Install a new Torx screw and tighten to 3 Nm (2 lb.ft).
 - Install the screw cover.
3. Install the instrument panel end panel.
 - Secure with the clip.

Interior Trim and Ornamentation - Cowl Side Trim Panel

Removal and Installation

Removal

1. Remove the front scuff plate trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Driver side: Remove the footrest trim panel bolt.
 - Remove the cover.

E56799

3. Remove the cowl side trim panel.
 - Driver side: Release the hood release lever.
 - Release from the 2 clips.

E56800

Installation

1. Install the cowl side trim panel.
 - Align the hood release lever.
 - Secure with the clips.
2. Driver side: Tighten the footrest trim panel bolt to 5 Nm (4 lb.ft).
 - Install the cover.
3. Install the front scuff plate trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Interior Trim and Ornamentation - B-Pillar Upper Trim Panel

Removal and Installation

Removal

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the B-pillar lower trim panel.
For additional information, refer to: [B-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Release the safety belt lower anchor from the seat.

- Remove the bolt cover.
- Passenger side, disconnect the electrical connector.
- Remove the Torx bolt.

E45102

4. **NOTE:** Make sure the seat belt height adjuster is at its lowest point prior to removal of the B-pillar upper trim panel.

Remove the B-pillar upper trim panel.

- Release the front and rear door weatherstrips for access.
- Release the 2 lower clips, then the remaining upper clip.
- Release the safety belt.

E45728

Installation

1. Install the B-pillar upper trim panel.
 - Secure with the clips.
 - Attach the safety belt.
 - Attach the door weatherstrips.
2. Attach the safety belt lower anchor to the seat.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
 - Passenger side, connect the electrical connector.
 - Install the bolt cover.
3. Install the B-pillar lower trim panel.
For additional information, refer to: [B-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Interior Trim and Ornamentation - B-Pillar Lower Trim Panel

Removal and Installation

Removal

1. Remove the B-pillar lower trim panel.

- Release weatherstrip from both sides of the B-pillar lower trim panel.
- Release the 4 clips.

E43145

2. NOTE: Do not disassemble further if the component is removed for access only.

Remove 4 clips from the B-pillar lower trim panel.

E43146

Installation

1. To install, reverse the removal procedure.

Interior Trim and Ornamentation - D-Pillar Trim Panel

Removal and Installation

Removal

1. Remove the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Vehicles fitted with 7 seats: Release the seat belt.
 - Remove and discard the bolt.
3. Remove the D-pillar upper trim panel.
 - Release the 4 clips.
 - Disconnect the electrical connector.

4. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the speaker.

- Remove the 3 screws.

Installation

1. To install, reverse the removal procedure.
 - Tighten the new Torx bolt to 40 Nm (30 lb.ft).

Interior Trim and Ornamentation - C-Pillar Lower Trim Panel

Removal and Installation

Removal

1. Fold down the rear seat backrest.
2. Release the door aperture weatherstrip.

E49778

3. Release the safety belt anchor.

- Remove and discard the bolt.

E49594

4. Release the tailgate aperture seal.

5. Remove the support spigot from the tailgate.

- Release the clip.

6. Remove the C-pillar lower trim panel.

- Remove the Torx screw.
- Release the 8 clips.
- Disconnect the 2 electrical connectors.

E49781

7. NOTE: Do not disassemble further if the component is removed for access only.

Remove the stowage tray.

- Release the cover.

8. Remove the audio control switch.

- Release the 2 clips.

9. Remove the accessory socket.

E49782

Installation

1. Install the accessory socket.

2. Install the audio control switch.

- Secure the clips.

3. Install the stowage tray.

- Install the cover.

4. Install the C-pillar lower trim panel.

- Install the clips.
- Tighten the Torx screw to 8 Nm (6 lb.ft).
- Connect the electrical connector.

5. Install the support spigot to the tailgate.

- Install the clip.

6. Install the tailgate aperture seal.

7. Install the safety belt anchor.

- Tighten the Torx bolt to 45 Nm (33 lb.ft).

8. Install the door aperture weatherstrip.

9. Return the seat backrest to the upright position.

Interior Trim and Ornamentation - C-Pillar Upper Trim Panel

Removal and Installation

Removal

1. Fold down the rear seat backrest.
2. Release the door aperture weatherstrip.
3. Release the safety belt lower anchor.
 - Remove and discard the Torx bolt.
4. Release the upper trim access cover.
5. Remove the C-pillar upper trim panel.
 - Remove and discard the Torx screw.
 - Release the 4 clips.
 - Release the safety belt from the seat.

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the 4 clips from the C-pillar upper trim panel.

Installation

1. Install the clips to the C-pillar upper trim panel.
2. Install the C-pillar upper trim panel.
 - Attach the safety belt.
 - Secure with the clips.

- Install a new Torx screw and tighten to 3 Nm (2 lb.ft).
3. Install the upper trim access cover.
 4. Install the safety belt lower anchor.
 - Tighten the new Torx bolt to 40 Nm (30 lb.ft).
 5. Install the door aperture weatherstrip.
 6. Return the seat backrest to the upright position.

Interior Trim and Ornamentation - Front Door Trim Panel

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.
- NOTE: **Some variation in the illustrations may occur, but the essential information is always correct.**

1. **1. CAUTIONS:**

 Take extra care not to damage the component.

 Make sure that the clips are correctly located.

Disconnect the tweeter speaker electrical connector.

2.

3.

E126175

4. 4. CAUTIONS:

- ⚠ Take extra care not to damage the component. Apply masking tape to the end of the screwdriver.
- ⚠ When removing the chrome finisher from the trim panel, make sure the components are not damaged. If necessary protect the surrounding areas using masking tape.
- ⚠ Make sure that the clips are correctly located.

E126176

5. 5. CAUTIONS:

- ⚠ Take extra care not to damage the component. Apply masking tape to the end of the screwdriver.

Interior Trim and Ornamentation - Liftgate Trim Panel

Removal and Installation

Removal

1. Remove the liftgate trim panel.

- Remove the screw.
- Release the 11 clips.

2. Remove the liftgate striker trim panel.

3. NOTE: Do not disassemble further if the component is removed for access only.

Remove 6 clips from the liftgate trim panel.

Installation

1. To install, reverse the removal procedure.

Interior Trim and Ornamentation - Tailgate Trim Panel

Removal and Installation

Removal

1. Remove the tailgate upper trim panel.

- Remove the 4 screw covers.
- Remove the 4 screws.
- Release the 2 clips.

2.  **CAUTION:** To protect the paintwork, the tailgate must be supported at all times.

Release the 2 support cables from the tailgate.

- Release the 2 clips.

3. Remove the 2 support cable spigots from the tailgate.

4. Lift the tailgate hinge cover for access.

5. Remove the tailgate trim panel.

- Release from the 12 clips.

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the 12 clips from the tailgate trim panel.

E46288

Installation

1. Install the tailgate trim panel.
 - Install the clips.
2. Lower the tailgate hinge cover.
3. Tighten the support strut spigot to 25 Nm (18 lb.ft).
4. Position the support cables to the tailgate and secure with the clips.
5. Install the tailgate upper trim panel.
 - Secure with the clips.
 - Install the screws.
 - Install the screw covers.

Interior Trim and Ornamentation - Scuff Plate Trim Panel

Removal and Installation

Removal

1. Remove the B-pillar lower trim panel.
For additional information, refer to: [B-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Release the front and rear door weatherstrips to access the scuff plate trim panel.

3. Remove the scuff plate trim panel.

- Remove the 9 clips.

4. NOTE: Do not disassemble further if the component is removed for access only.

Remove the 9 clips from the scuff plate trim panel.

Installation

1. Install the scuff plate trim panel.
 - Install the clips.
 - Secure with the clips.
2. Attach the door weatherstrips.
3. Install the B-pillar lower trim panel.
For additional information, refer to: [B-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Interior Trim and Ornamentation - Headliner

Removal and Installation

Removal

1. Remove both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove both B-pillar upper trim panels.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove both C-pillar upper trim panels.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove both D-pillar upper trim panels.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
5. Remove the front overhead console.

- Carefully release the 7 clips.
- Disconnect the 3 electrical connectors.

E50142

6. Remove the rear overhead console.

- Carefully release the 9 clips.
- Disconnect the 2 electrical connectors.

7. Disconnect the RH A-pillar electrical connector.

8. Remove the sun visor.

- Remove the cover.
- Remove the 2 screws.
- Release from the clip.
- Disconnect the electrical connector.
- Repeat the above procedure for the other side.

9. Remove the sun visor retaining clip.

- Release the screw cover.
- Remove the screw.
- Repeat the above procedure for the other side.

E49688

10. Remove the passenger assist handle.

- Release the 2 screw covers.
- Remove the 2 screws.
- Repeat the above procedure for the remaining 5 handles.

E49689

11. Position the front seats fully forward.

12. Position the rear seats fully forward.

13. Remove the rear headliner trim panel.

- Release the 7 clips.
- Disconnect the electrical connector.

E49690

14. Disconnect the headliner wiring harness rear electrical connector.

E50145

15. With assistance, carefully remove the headliner.

- Release the 14 clips.

16. NOTE: Do not disassemble further if the component is removed for access only.

Remove the rear interior lamp.

- Release the clip.
- Disconnect the electrical connector.
- Repeat the above procedure for the other side.

17. Remove the headliner wiring harness.

Installation

1. Install the headliner wiring harness.
 - Secure the wiring harness to the headliner.
2. Install the interior lamp.
 - Secure with the clip.
 - Connect the electrical connector.
 - Repeat the above procedure for the other side.
3. With assistance, carefully install the headliner.
 - Secure with the clips.
4. Connect the headliner wiring harness rear electrical connector.
5. Install the rear headliner trim panel.
 - Secure the clips.

6. Reposition the rear seats.
7. Reposition the front seats.
8. Install the passenger assist handles.
 - Install the screws.
 - Secure the screw covers.
9. Install the sun visors.
 - Install the clips.
 - Install the screws.
 - Install the screw covers.
 - Connect the electrical connectors.
10. Connect the RH A-pillar electrical connector.
11. Install the rear overhead console.
 - Connect the electrical connectors.
 - Carefully secure the clips.
12. Install the front overhead console.
 - Connect the electrical connectors.
 - Carefully secure the clips.
13. Install both D-pillar upper trim panels.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
14. Install both C-pillar upper trim panels.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
15. Install both B-pillar upper trim panels.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
16. Install both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Interior Trim and Ornamentation - Loadspace Trim Panel RH

Removal and Installation

Removal

1. Remove the loadspace floor panels.

- Lift and remove the front panel.
- Lift and remove the rear panel.

E53654

2. Remove the loadspace compartment anchors.

- Remove the bolt.
- Repeat the above procedure for the other anchor.

E53651

3. Remove the loadspace trim panel.

- Release the 3 clips.

E53652

4. NOTE: Do not disassemble further if the component is removed for access only.

Installation

1. Install the trim clips.

2. Install the loadspace trim panel.

- Secure the clips.
- Position the locating pegs.

3. Install the loadspace compartment anchors.

- Position the locating peg.
- Tighten the bolt to 25 Nm (18 lb.ft).
- Repeat the above procedure for the other anchor.

E53653

Exterior Trim and Ornamentation - A-Pillar Moulding LH

Removal and Installation

Removal

- NOTE: This procedure is also applicable for the RH moulding.

1. Open the bonnet.
2. Remove the A-pillar moulding.
 - Release and discard the 5 clips.

Installation

1. NOTE: The lower clip is unique to the others and must only be installed to the lowest position on the moulding.

To install, reverse the removal procedure.

1. New clips must be used.

Exterior Trim and Ornamentation - Front Fender Moulding

Removal and Installation

Removal

1. Remove the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).

2.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

3. Remove the mud flap.

- Remove the 3 retaining screws.

E44470

4. Remove the 4 retainers.

E44471

5. Remove the fender moulding.

- Remove the 2 screws.
- Carefully release the 10 clips.

E44472

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the clips from the moulding.

E53307

Installation

1. To install, reverse the removal procedure.
2. Install the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).

Exterior Trim and Ornamentation - Rear Quarter Panel Moulding

Removal and Installation

Removal

1. Remove the mud flap.
 - Remove the 3 screws.

E45106

2. Remove the rear quarter panel moulding.
 - Remove the 3 clips from the underside of the moulding.
 - Release the 6 clips from the rear quarter panel.

E45107

3. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the clips from the moulding.

E45108

Installation

1. To install, reverse the removal procedure.

Exterior Trim and Ornamentation - Radiator Grille

Removal and Installation

Removal

1. Remove the radiator grille.

- Open the hood.
- Release the 6 clips.

Installation

1. To install, reverse the removal procedure.

Exterior Trim and Ornamentation - Rear Quarter Window Moulding

Removal and Installation

Removal

1. Open the liftgate.
2. Remove the rear quarter window moulding.
 - Remove the 4 clips.
 - Release the locating peg.

E53308

Installation

1. Install the rear quarter window moulding.
 - Position the locating peg.
 - Secure the clips.

Rear View Mirrors - Rear View Mirrors

Diagnosis and Testing

Principle of Operation

For a detailed description of the rear view mirror systems and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: Rear View Mirrors (501-09 Rear View Mirrors, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Door mirror switch condition and installation ● Door mirror condition and installation 	<ul style="list-style-type: none"> ● Battery condition and state of charge ● Fuses ● Harnesses and connectors ● Washer jet and mirror heater relay ● Memory control module(s) ● Door mirror switch(s) ● Door mirror motor(s) ● Ignition switch ● Battery Junction Box (BJB) ● Central Junction Box (CJB) ● Automatic Temperature Control (ATCM) module ● Local Interconnect Network (LIN) circuit

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Mirrors do not defrost/washer jets freeze	<ul style="list-style-type: none"> ● Fuse fault ● Washer jet and mirror heater relay fault ● Circuit fault: high resistance ● Circuit fault: short circuit to ground ● Automatic temperature control module fault 	Check the fuses. Check the operation of the washer jet and mirror heater relay. Check the washer jet and mirror heater circuits. Refer to the electrical guides. Refer to the warranty policy and procedures manual if a module is suspect.
Mirrors inoperative in one or more directions	<ul style="list-style-type: none"> ● Mechanical fault ● Switch fault ● Motor fault ● Circuit fault: high resistance ● Circuit fault: short circuit to ground 	Operate the mirror switch and listen for the motor(s). If the motor(s) can be heard, check the mechanical condition of the mirror and linkages. Rectify as necessary. Check for DTCs indicating a switch, motor or circuit fault.
Memorized mirror position is not resumed	<ul style="list-style-type: none"> ● Battery voltage below 10.5 volts ● Position not stored ● Switch operated during "one-touch" memory recall ● EEPROM fault 	Before condemning a memory component, check the function from the switch and refer to the symptoms above. Make sure the battery voltage is adequate. Make sure that the desired position is correctly stored. Make sure that the memory store/recall procedure is being followed. Refer to the relevant section of the workshop manual.
'Lazy entry' function inoperative	<ul style="list-style-type: none"> ● Remote transmitter fault (battery, transmitter programming, etc) ● Battery voltage below 10.5 volts ● Position not stored ● Switch operated during "one-touch" memory 	Check that the remote transmitter operates the central locking, etc. If it does, the fault is not with the transmitter. Make sure the battery voltage is adequate. Make sure that the desired position is correctly stored. Make sure that the memory store/recall procedure is being followed. Refer to the relevant section of the workshop manual.

Symptom	Possible Causes	Action
	recall ● EEPROM fault	

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Central Junction Box \(CJB\)](#) (100-00 General Information, Description and Operation) / [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Door Module \(DDM/PDM\)](#) (100-00 General Information, Description and Operation).

Rear View Mirrors - Interior Mirror

Removal and Installation

Removal

1. If installed, remove the interior mirror upper and lower covers.

- Release the 2 clips.

E49727

2. Vehicles with an auto-dimming interior mirror, remove the interior mirror.

- Disconnect the electrical connector.
- Rotate the mirror stem at its base to release from the windshield.

E49728

3. Vehicles without an auto-dimming interior mirror, remove the interior mirror.

- Pull the mirror away from the windshield to release the clip.

E49729

Installation

1. Vehicles without an auto-dimming interior mirror, install the interior mirror.

- Slide the mirror onto the boss from above to engage the clip.

E49730

2. Vehicles with an auto-dimming interior mirror, install the interior mirror.

- Rotate the mirror stem at its base to secure to the windshield.
- Connect the electrical connector.

E49731

3. Install the interior mirror covers.

- Secure with the clips.

Seating - Seats

Description and Operation

Component Location

• NOTE: RH drive shown, LH drive similar

E137099

Item	Part Number	Description
1	-	Driver's seat cushion adjustment motor assembly
2	-	Driver's seat memory switch pack
3	-	Driver's seat non-memory switch pack
4	-	Driver's door ajar switch
5	-	Driver's seat squab motor
6	-	Driver's seat heating element
7	-	Second row RH (right-hand) seat heating element
8	-	Second row RH seat heating module
9	-	Second row LH (left-hand) seat heating element
10	-	Second row heated seat switches (vehicles without rear air conditioning)
11	-	Second row LH seat heating module
12	-	Front passenger seat heating element
13	-	Front passenger seat squab motor
14	-	Front passenger seat cushion adjustment motor assembly
15	-	Front passenger seat switch pack
16	-	CJB (central junction box)

17	-	Front heated seat switch pack (climate control system)
18	-	Memory control module
19	-	Front passenger seat power relay

OVERVIEW

Seat Configuration

E138147

Discovery is available in a 5 or 7 seat configuration. The driver's seat has the option of an 8-way power adjustment, with or without memory functionality, or a 6-way manual adjustment. The front passenger seat has the option of a 6 way power

adjustment or a 4-way, non-height, manual adjustment. On vehicles from 2008MY, the front passenger seat can be fitted with an 8-way power adjustment.

The type of second row seats depends upon whether the 7-seat option is fitted. If the vehicle supports 5 seats, the 2nd row is designed as a 60/40 split, flip and fold configuration, whereas a vehicle that supports the 7 seat option is designed as a 35/30/35 split with the 2 outer seats having the ability to 'jack-knife', allowing access to the 3rd row of seats.

All seats are available in a fabric, duragrain or leather finish depending on model specification.

MANUAL FRONT SEATS

E137621

Item	Part Number	Description
1	-	Fore and aft adjustment
2	-	Height adjustment
3	-	Backrest adjustment
4	-	Lumber support adjustment
5	-	Armrest height adjustment

Height adjustment (driver's seat only)

Pumping the handle controls seat height. Pumping the lever upwards raises the seat; downwards lowers the seat.

Recline adjustment

The angle of the backrest is adjusted by turning the rotary wheel either clockwise or anticlockwise.

Forward/backward adjustment

Lifting the tomel bar at the front of the seat and sliding the seat to the desired position achieves the forwards/backwards adjustment.

Lumber support adjustment

A hand wheel in the side of the seat provides for adjustment of lumbar support.

Folding armrest adjustment (if fitted)

Some vehicles are fitted with adjustable front seat armrests. These are used in the horizontal position or can be stowed vertically alongside the seat back rest. The horizontal position can be adjusted for height by turning the knob set into the end of the armrest.

POWER OPERATED FRONT SEATS (NON-MEMORY)

E137620

Item	Part Number	Description
1	-	Bolster adjustment: A - Bolster inflate; B - Bolster deflate
2	-	Lumbar support adjustment
3	-	Backrest adjustment
4	-	Height adjustment
5	-	Cushion tilt adjustment
6	-	Fore and aft adjustment

Forward/Backward adjustment

Push and hold the switch forwards or backwards to move the seat to the desired position.

Seat back adjustment

Twist the switch forwards or backwards until the desired seat back angle is achieved.

Seat cushion height adjustment

Push the switch up or down to raise or lower the cushion.

Front Seat Motors

• NOTE: On vehicles from 2008MY, the passenger seat can also be fitted with 8-way electrical adjustment.

The seat motors are a permanent magnet motor type coupled to a rack and pinion assembly. Should the motor seize or stick an internal thermal cut-out switch will trip to remove voltage from the motor. Two pins within each of the seat switch packs control the seat motors. Both pins are normally earthed. Operating the switch applies voltage to one of the pins while the other pin remains earthed. Operating the switch in the opposite direction reverses power and earth to the motor allowing the motor to run in the opposite direction.

DRIVER'S MEMORY SEAT

E137100

Item	Part Number	Description
1	-	Lock/unlock button
2	-	Memory preset buttons
3	-	Memory store button

Once the power operated driver's seat, steering column and exterior mirrors are adjusted, the vehicle can memorize these settings for future use.

1. Press the memory store (M) button to activate the memory function. The switch indicator will illuminate.
2. Press one of the preset buttons within 5 seconds to memorize the current settings. MEMORY (1, 2 or 3) SETTINGS SAVED will be displayed on the message center, accompanied by an audible chime to confirm the settings have been memorized.
3. To recall a stored position press the relevant preset button. MEMORY (1, 2 OR 3) RECALLED will be displayed in the message center.

• NOTE: A seat position will only be memorized during the 5 second active period. Any existing settings will be over-written when programming a memory position.

- NOTE: If the driver's seat or steering column are adjusted during entry or exit operation, automatic movement will stop.

Memory Recall

Memory recall has three memory positions stored for the seats, exterior mirrors and electric steering column (where fitted). The switches for this function are located on driver's seat outer side trim panel. Pressing the appropriate numbered memory switch allows the seat to start moving to the position appropriate to that memory.

When a memory recall is initiated, to limit the overall current consumption, only two-seat axis will move towards their intended position at any one time. To minimize current load as the motors start, the initiation of each axis is phased with a 10ms delay between each motor starting.

The following procedure will store a memory position:

- Ensure reverse gear is not engaged
- Manually adjust the seat to the desired position, using the seat switches
- Press and release the 'memory store' switch
- Press and release the desired numbered memory switch within 5 seconds

If any of the seat adjustment or memory switches are activated during a 'one touch' memory recall, the recall will be overridden and the seat will begin to move in the direction corresponding to the switch that has been pressed.

Both mirrors move simultaneously about the vertical axis first (left/right), and then, once all vertical axis movements are complete, about the horizontal axis (up/down). To minimize the number of mirror motor's required, a method of sharing is implemented, which dictates that all movement about one axis is complete before movement about the other axis commences.

Mirror movement coincides with the following table:

Action	Control Module Pin 14	Control Module Pin 7	Control Module Pin 13	Control Module Pin 8
Driver Mirror Up	Battery	-	-	-
Driver Mirror Down	Ground	-	-	-
Driver Mirror Left	-	Ground	-	-
Driver Mirror Right	-	Battery	-	-
Passenger Mirror Up	-	-	Battery	-
Passenger Mirror Down	-	-	Ground	-
Passenger Mirror Left	-	-	-	Ground
Passenger Mirror Right	-	-	-	Battery

Lazy Entry

Pressing the unlock button on the remote transmitter will initiate a memory recall. This feature is known as 'lazy entry'. If the seat movement, memory switch or the lock button on the remote transmitter is pressed, then the 'lazy entry' feature will stop immediately.

The memory settings are stored within **EEPROM (electrically erasable programmable read only memory)** of the memory control module each time the ignition switch is cycled from position II to position I. These are the positional values that a lazy entry request uses when the remote unlock button for that particular key is next pressed.

The lazy entry feature can be activated or deactivated via the customer personalization feature of the high line instrument cluster. This provides the driver with the option to enable or disable lazy entry as required.

For additional information, refer to: [Information and Message Center](#) (413-08 Information and Message Center, Description and Operation).

Immediate Adjustment

Pressing one of the manual adjustment switches will initiate the corresponding motor for that axis until the switch is released.

Only two seat motors can be driven at any one time. However, due to the sharing of relays, there are certain combinations of motors that cannot be driven together. The following table indicates which axis can and cannot be operated at the same time:

	Recline Up	Recline Down	Tilt Up	Tilt Down	Height Up	Height Down	Slide Forward	Slide Backward
Recline Up	-	No	Yes	Yes	Yes	Yes	Yes	Yes
Recline Down	No	-	Yes	Yes	Yes	Yes	Yes	Yes
Tilt Up	Yes	Yes	-	No	Yes	Yes	No*	No*
Tilt Down	Yes	Yes	No	-	Yes	Yes	No*	No*
Height Up	Yes	Yes	Yes	Yes	-	No	No*	No*
Height Down	Yes	Yes	Yes	Yes	No	-	No*	No*
Slide Forward	Yes	Yes	No*	No*	No*	No*	-	No
Slide Backward	Yes	Yes	No*	No*	No*	No*	No	-

Key

- - = Not applicable
- Yes = Can be activated together
- No = Cannot be activated together (Physically impossible)
- No* = Cannot be activated together (Relay sharing restriction)

If two axis are being driven and a third axis is requested to move, the third switch request is ignored until either of the two axis switches, already active, are released. The third axis movement may only be initiated providing the switch has been released and re-selected.

Seat adjustment can be initiated simultaneously with any mirror movement.

REVERSE GEAR MIRROR POSITION

To give the driver a clear view of the kerbs when reversing, the exterior door mirrors can be dipped when reverse gear is selected. The level of mirror dipping is set to a predetermined amount when the vehicle leaves the factory but has the ability to be customer programmed.

The following procedure will store a reverse gear mirror position:

- Perform a memory recall procedure
- Ensure reverse gear is engaged
- Manually adjust the mirrors to the desired position
- Press and release the 'memory store' switch
- Press and release the desired numbered memory switch
- Reverse gear mirror dip setting will be stored for that particular memory setting.

A single chime will be emitted from the instrument cluster to indicate that the store operation has been successful and 'Mirror Dip Stored' message will be displayed in the message center.

Once this sequence has been completed, the stored mirror position will be the position that the mirrors move to when reverse gear is next selected.

Storing a memory position with reverse gear selected only affects reverse gear mirror positions, the remainder of the memory positions remain unchanged.

To protect against an accidental setting, the mirror position will only be stored if a mirror adjustment has been made since reverse gear was selected. If there is no reverse gear mirror position stored, then a default setting, stored in the memory control module, is adopted.

There are three customer personalization memory settings per key. For each of these settings there are 3 possible reverse gear mirror position stores. This equates to a possible nine reverse gear mirror position settings. personalization memory setting relates to the 3 most recent ignition keys.

E137622

Item	Part Number	Description
A	-	Most recent ignition key
B	-	Second most recent ignition key
C	-	Third most recent ignition key
1	-	First reverse gear mirror position store
2	-	Second reverse gear mirror position store
3	-	Third reverse gear mirror position store

The reverse gear mirror position feature can be activated or deactivated via the customer personalization feature of the high line instrument cluster. This provides the driver with the option to enable or disable reverse gear mirror position as required.

For additional information, refer to: [Information and Message Center](#) (413-08 Information and Message Center, Description and Operation).

Information regarding the reverse gear mirror status, for both manual and automatic transmissions, is transmitted as a message on the LIN (local interconnect network) bus.

When the reverse gear mirror position feature is toggled 'OFF', all 3 memory settings associated with that personalization memory will return to the default reverse gear mirror settings.

- **NOTE:** Reverse gear status is only available with the ignition in position II.

When reverse gear is de-selected, the mirror position immediately prior to reverse selection will be resumed, unless a memory recall has been requested whilst reverse has been selected, in which case the mirrors will move to the requested memory position when reverse is de-selected.

On vehicles fitted with the ZF automatic transmission there is a delay of 0.5 second following the selection of reverse gear, prior to the reverse mirror position being recalled. This is to prevent any movement of the mirrors as the gear selector is moved through the reverse position on the way to, and from, the park position.

STEERING COLUMN ADJUST (where fitted)

The memory control module controls the electric adjustable steering column in a rake (up and down) and reach (in and out). The steering column can be adjusted for rake and reach by operating the rotary joystick control switch on the LH side of the steering column.

Item	Part Number	Description
1	-	Electric adjustment
2	-	Manual adjustment
3	-	Heated steering wheel

Entry/Exit Mode

Entry/Exit mode provides automatic movement of the steering column and driver's seat to allow easier entry to or exit from the vehicle.

Entry/Exit mode is selected by setting the steering column adjustment switch to the 'AUTO' position.

- NOTE: If the adjustment switch is moved away from 'AUTO' whilst the steering column is tilted away, the steering column will move back to its memorized position. Entry/Exit mode will then be cancelled.
- NOTE: If the adjustment switch is moved during entry/exit operation, steering column movement will stop.

Exit

When the ignition key is removed, the steering column will move to the uppermost rake and innermost reach positions and the driver's seat will move slightly rearwards and lower.

Entry

When the key is inserted in the ignition the steering column and seat will return to their previous positions. If, however, the memorised driver position has been changed (using the seat memory switches or another key transmitter), the steering wheel and seat will move to the new position.

Steering Column Control

Adjustment of the steering column is achieved by a single DC (direct current) motor. Each adjustment movement is transmitted through a solenoid actuated clutch; one clutch for reach movement and one for rake movement.

When engaged, a clutch can be released only if the system is unstressed. As the clutches are mounted on the same motor spindle, the sequence for position adjustment is as follows:

- Engage the selected clutch by powering the appropriate solenoid
- After a time period (approximately 0.1 of a second), the motor is powered in the desired direction
- When the motor reaches the stop position the solenoid and motor is released/unpowered. The clutch remains engaged under stress
- After a time period (approximately 0.1 of a second), the motor is powered in the opposite direction to enable the clutch to disengage when the stress is released.

Motor Rotation Direction	Clockwise	Counter Clockwise
Reach movement	IN	OUT
Rake movement	UP	DOWN

Simultaneous rake and reach movements are not possible since the motor must reverse direction as soon as the first axis has reached its required position.

Steering column rake and reach is controlled via potentiometer feedback.

AUDIBLE AND VISUAL CONFIRMATIONS

An audible confirmation is generated by the instrument cluster to provide confirmation to the driver that the requested operation has been successfully completed. The following operations support an audible confirmation:

Operation	Audible Confirmation	Conditions
Memory Store	Single Chime	Successful store operation completed
Memory Recall	Double Chime	Only issued if all axis of movement successfully reach the intended position
Reverse Gear Mirror Position Store	Single Chime	Successful store operation for reverse mirror position completed

In addition to audible confirmation there is also a visual confirmation via the instrument cluster message center. For additional information, refer to: [Information and Message Center](#) (413-08 Information and Message Center, Description and Operation).

MEMORY CONTROL MODULE

E 138149

Memory Control Module Location (LHD shown, RHD similar)

Item	Part Number	Description
1	-	Memory control module

The memory control module, located under the driver's seat, relies upon a number of inputs and controls a number of outputs. As with all electronic control modules, the unit needs information regarding the current operating conditions of the engine and other related systems before it can make calculations, which determine the appropriate outputs.

All memory values are stored in the non-volatile memory, [EEPROM](#). The current motor positions, which are monitored by the control modules integral Hall sensors, are stored in the [EEPROM](#). If a loss of power occurs, upon power reconnection

the current motor position are recalled from memory and adopted as the current positions. This will allow the relative memory positions to be retained without any need to re-calibrate. The memory control module checks the integrity of all data stored in the [EEPROM](#) each time it exits stand-by mode. In the event that the data is corrupt, the control module adopts the default values for all of the programming options. All memory positions are deemed as invalid and the software will perform as if there are no memory positions stored. Memory store operations will reset the relevant memory and allow full functionality.

Stall Detection

Seat, steering column (where fitted) and mirror motors are deemed to have stalled if there is no change in the inputs that are received from the corresponding feedback sensors for 200ms (seat), 1000ms (mirror & steering column) while that axis is being driven.

If a stall condition is detected then the drive to that axis is cancelled for the remainder of that memory operation (memory recall) or until the switch is re-selected (manual movement).

If the motor movement has stopped due to loss of sensor feedback, either stall or sensor failure, then that axis may be activated again, to move past the stall position, by re-selecting the appropriate switch. This allows control of the motor to be maintained if sensor feedback is lost.

Upon re-selection of movement, if sensor pulses are detected then the motor will continue to be driven until the switch is released or another stall condition is detected. If sensor feedback is not detected then the motor is only driven for 0.5 second and then stops until the switch is released and then pressed again, when a further 0.5 second of activation is permitted, and so on.

For all seat motor and steering column manual movements, whenever a motor is driven and a stall occurs, the memory control module records the position at which the stall occurred. If movement occurs beyond a stall position, then that position is erased from the control modules memory. This will always allow movement past a previously recorded stall position once movement has been registered beyond that position. This is the case for both manual and memory movement.

Initialization

When a replacement memory control module is fitted to a seat it should be initialized so that the control module can learn the seats and steering column maximum and minimum adjustment values. This is achieved by:

- adjusting all seat movement axis from one end of travel to the other; slide, recline, height and tilt
- adjusting all steering column movement from one end of travel to the other; rake and reach.

Battery Monitor

If the battery voltage drops below 10.5 Volts, then the memory control module ignores all requests for a memory recall, including lazy entry, or easy entry/exit until the battery voltage has reached 11.5 Volts. This will conserve as much power in the vehicle battery as possible to enable engine cranking.

Stand-by Mode

The memory control module supports a stand-by mode to keep power consumption to a minimum.

The control module will enter stand-by mode upon receipt of a [LIN](#) bus 'SLEEP' message from the [CJB](#). Alternatively, a time period of 3 seconds after the [LIN](#) bus network has remained quiet provided there are no motors being driven at that time and there are no valid switch requests.

If there is a failure with the [LIN](#) bus network then the seat will be operational in 'inch mode' only.

If the control module is being prevented from entering stand-by mode due to motor movement, memory recall or switch operation, then it will enter stand-by mode when the current function has terminated.

• **NOTE:** In the case of a memory recall, all memory recall operations should be carried out before entering stand-by mode, not just the current motor movement.

The control module will exit stand-by mode if there is any [LIN](#) bus activity. When the control module exits stand-by mode it must verify the 'System Enable Status' in order to recognize when it should respond to a switch request.

SEAT HEATING

E138150

Front Seats

Front Seat Heater Switches

E138151

Item	Part Number	Description
1	-	LH front seat heater switch
2	-	RH front seat heater switch

The heated front seat system is available on both manual and electric seats and is controlled by the Automatic Temperature Control Module (ATCM).

When the front seat heater switch is operated, power is supplied to the heater elements in the seat, causing the seat to heat up. The ATCM senses seat temperature via the sensor in the cushion and regulates voltage to the seat heater elements to maintain a constant temperature.

For additional information, refer to: [Control Components](#) (412-04 Control Components, Description and Operation).

Rear Seat Heaters

Rear Seat Heater Switches

- NOTE: [Rear air conditioning variant shown](#)

E138152

The [RH](#) and [LH](#) rear seats support three integral heating elements, squab, back rest and bolster. The optional rear child booster seat also supports an integral seat-heating element.

- **NOTE:** The rear center seat is not available with seat heating.

The rear seat heaters are enabled when the ignition switch is position II, and operate at one of two temperature settings. With the first press of a rear seat heater switch the relative rear seat heat control module ([RH](#) or [LH](#)) adopts the higher temperature setting, supplies a power feed to the related rear seat heater elements and illuminates two amber **LED (light emitting diode)**'s in the switch. At the second press of the switch the control module adopts the lower temperature setting and extinguishes one of the **LED**'s. At the third press of the switch the control module de-energizes the heater elements and extinguishes the second **LED**. The seat heaters remain on until selected off or the ignition is turned off.

The rear seat heat control modules receive an input from a temperature sensor in [RH](#) and [LH](#) rear seats, and regulate the power feed of the heater elements to control the seat temperature at the appropriate temperature setting between 35 and 45 °C (95 and 113 °F). The actual temperature settings vary with the type of seat covering, to allow for the different heat conduction properties of the different seat covering materials.

DIAGNOSTICS

The exchange of information between the diagnostic unit and the memory control module is via the [CJB](#), which are interconnected via the hi-speed [CAN \(controller area network\)](#) bus and [LIN](#) bus. There is a non-volatile memory (**EEPROM**) for saving detected errors. Its contents are not lost when the power supply is disconnected. Only a Land Rover approved diagnostic system can erase the error memory.

Seating - Seats

Diagnosis and Testing

Principle of Operation

For a detailed description of the seating systems and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Seats](#) (501-10 Seating, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Seat runners ● Seat frames ● Seat movement switch condition and installation ● Seat heater switch condition and installation ● Seat motor(s) condition and installation ● Steering column switch condition and installation ● Steering column condition and installation ● Door mirror switch condition and installation ● Door mirror condition and installation 	<ul style="list-style-type: none"> ● Battery condition and state of charge ● Fuses ● Harnesses and connectors ● Seat movement switch(s) ● Seat heater switch(s) ● Seat heater elements ● Seat motor(s) ● Seat module(s) ● Memory control module(s) ● Steering column switch ● Steering column motor ● Door mirror switch(s) ● Door mirror motor(s) ● Ignition switch ● Battery Junction Box (BJB) ● Central Junction Box (CJB) ● Local Interconnect Network (LIN) circuit

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Seat does not move when the switch is operated (forward, backward, tilt, etc)	<ul style="list-style-type: none"> ● Runner or mechanism jammed ● Switch fault ● Motor fault ● Thermal cut-out engaged ● Circuit fault ● Module fault 	Check for obstructions at the seat runners, mechanisms, etc, rectify as necessary. The thermal cut-out may engage if there is a motor or mechanism fault. Check for DTCs indicating a switch, motor or module fault.
Steering column does not move when the switch is operated	<ul style="list-style-type: none"> ● Switch fault ● Motor fault ● Clutch/Solenoid fault 	Check for DTCs indicating a switch, motor or clutch/solenoid fault.
Mirrors do not move when the switch is operated	<ul style="list-style-type: none"> ● Mechanical fault ● Switch fault ● Motor fault ● Circuit fault: high resistance ● Circuit fault: short circuit to ground 	For mirror tests, refer to the relevant section of the workshop manual.
Memorized seat/steering column/mirror position is not resumed	<ul style="list-style-type: none"> ● Battery voltage below 10.5 volts ● Position not stored ● Switch operated during "one-touch" memory recall ● EEPROM fault 	Before condemning a memory component, check the function from the switch and refer to the symptoms above. Make sure the battery voltage is adequate. Make sure that the desired position is correctly stored. Make sure that the memory store/recall procedure is being followed. Refer to the relevant section of the workshop manual.

Symptom	Possible Causes	Action
"Lazy entry" function inoperative	<ul style="list-style-type: none"> ● Remote transmitter fault (battery, transmitter programming, etc) ● See list for "position is not resumed" 	Check that the remote transmitter operates the central locking, etc. If it does, the fault is not with the transmitter. Refer to "position is not resumed".
Entry/Exit mode inoperative	<ul style="list-style-type: none"> ● Switch not in AUTO mode ● Switch fault ● Motor fault ● Clutch/Solenoid fault 	Make sure the function is enabled and that the switch is correctly set. Check for DTCs indicating a switch, motor or clutch/solenoid fault.
Seat does not get warm	<ul style="list-style-type: none"> ● Switch fault ● Fuses ● Circuit fault ● Temperature sensor ● Battery voltage is greater than 16.5 volts 	Check the LEDs at the switches as a quick check of the switch function. If the LEDs illuminate when the switches are operated, there is power to the switches and the switches are operating at least one level. Check the seat heater circuits, refer to the electrical guides. Check the temperature sensor function. If the battery voltage is higher than 16.5 volts for more than 5 seconds, seat heating is suspended. Refer to the relevant section of the workshop manual.
Part(s) of the seat does not get warm	<ul style="list-style-type: none"> ● Element fault 	There are up to three elements in each seat, if the rest of the seat operates normally, check the element connections and continuity. Refer to the electrical guides.

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Front Seat Module \(DSM/PSM\)](#) (100-00 General Information, Description and Operation).

Seating - Front Seat Cushion

Removal and Installation

Removal

• NOTE: In this procedure the cushion is removed as an assembly. There is a separate procedure showing removal of the cushion cover.

E55647

1. Remove the front seat cushion assembly.

- Release and disconnect the 2 electrical connectors.
- Remove the 4 Torx bolts.

Installation

1. Install the front seat cushion assembly.

- Tighten the Torx bolts to 25 Nm (18 lb.ft).
- Connect and secure the electrical connectors.

Seating - Front Seat

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. NOTE: Torx bolts may be re-used.

Release the front seat.

- Remove the bolt covers.
- Remove and the 5 Torx bolts.

E45101

3. Release the safety belt lower anchor from the seat.

- Remove the bolt cover.
- Passenger side, disconnect the electrical connector.
- Remove and discard the Torx bolt.

E45102

4. With assistance, remove the front seat.

- Protect the rocker panel.
- Remove the bolt.
- Disconnect the 2 electrical connectors.
- Release the 2 wiring harness clips.

Installation

1. With assistance, install the front seat.

- Connect the electrical connectors.
- Secure the wiring harness clips.

2. Attach the safety belt lower anchor to the seat.

- Tighten the new Torx bolt to 40 Nm (30 lb.ft).
- Passenger side, connect the electrical connector.
- Install the bolt cover.

3. Secure the front seat.

- Tighten the Torx bolts to 40 Nm (30 lb.ft).
- Install the bolt covers.

4. Connect the battery ground cable.

Seating - Third Row Seat

Removal and Installation

Removal

- NOTE: Third row seats must be removed as a pair.

1. Remove the loadspace compartment anchors.

- Remove the 4 Torx bolts.

2. Remove the loadspace trim panels.

- Release from the 4 clips.

3. NOTE: Torx bolts may be re-used.

Remove the third row seats.

- Release the trim cover.
- Remove the 10 Torx bolts.

E 56005

E56006

4. NOTE: Do not disassemble further if the component is removed for access only.

Separate the third row seats.

- Remove the seat frame finisher.
- Drill out the 6 rivets.
- Remove the 2 brackets.

Installation

1. Attach the third row seats.

- Install the brackets.
- Install the rivets.

2. Install the third row seats.

- Tighten the Torx bolts to 40 Nm (30 lb.ft).
- Secure the trim cover.

3. Install the loadspace trim panels.

- Secure in the clips.

4. Install the loadspace compartment anchors.

- Tighten the Torx bolts to 25 Nm (18 lb.ft).

Seating - Rear Seat Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

- NOTE: This procedure shows the removal and installation of both the LH and the RH seats.

1. NOTE: The Torx bolts can be re-used.

Release the RH rear seat.

- Fold the LH seat cushion forward.
- Remove the 4 Torx bolts.
- Fold down the rear seat backrest.

2. Remove the RH rear seat.

3. NOTE: The Torx bolts can be re-used.

Release the LH rear seat.

- Fold the LH seat cushion forward.
- Remove the 6 Torx bolts.
- Fold down the rear seat backrest.

4. With assistance, remove the LH rear seat assembly.

Installation

1. With assistance, install the LH rear seat assembly.

- Position the seat on the dowels.

2. Secure the LH rear seat.

- Return the seat backrest to the upright position.
- Tighten the Torx bolts to 40 Nm (30 lb.ft).
- Fold the seat cushion rearwards.

3. Install the RH rear seat.

- Position the seat on the dowels.

4. Secure the RH rear seat.

- Return the seat backrest to the upright position.
- Tighten the Torx bolts to 40 Nm (30 lb.ft).
- Fold the seat cushion rearwards.

Seating - Rear Seat Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. NOTE: The Torx bolts can be re-used.

Release the rear seat.

- Remove the front 2 Torx bolts.
- Fold the seat assembly forwards.
- Disconnect the electrical connector.
- Remove the rear 2 Torx bolts.

E55970

2. Remove the rear seat assembly.

Installation

1. Install the rear seat assembly.

2. Secure the rear seat.

- Connect the electrical connector.
- Tighten the rear Torx bolts to 45 Nm (33 lb.ft).
- Fold seat assembly rearwards.
- Tighten the front Torx bolts to 45 Nm (33 lb.ft).

Seating - Front Seat Cushion Cover

Removal and Installation

Removal

1. Remove the front seat cushion assembly.
For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).

2. Release the front seat cushion cover.

- Release the 13 clips.

E55966

3. Remove the front seat cushion cover.

- Remove the 12 hog rings.

E56020

Installation

1. Install the front seat cushion cover.

- Install the hog rings.
- Attach the cover and secure with the clips.

2. Install the front seat cushion assembly.

For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).

Seating - Front Seat Cushion Heater Mat

Removal and Installation

Removal

1. Remove the front seat cushion cover.
For additional information, refer to: [Front Seat Cushion Cover](#) (501-10 Seating, Removal and Installation).
2. Remove the front seat cushion heater mat.

E55962

Installation

1. Install the front seat cushion heater mat.
2. Install the front seat cushion cover.
For additional information, refer to: [Front Seat Cushion Cover](#) (501-10 Seating, Removal and Installation).

Seating - Third Row Seat Cushion Cover

Removal and Installation

Removal

1. Remove the occasional seat cushion assembly.

- Remove the 2 Torx bolts.

E56012

2. Remove the third row seat cushion latch covers.

- Remove the 4 screws.

E56007

3. NOTE: Note the fitted position.

Remove the third row seat cushion cover.

- Remove the 2 spacers.
- Release the 7 clips.

E56008

Installation

1. To install, reverse the removal procedure.

- Tighten the Torx bolt to 25 Nm (18 lb.ft).

Seating - Third Row Seat Cushion

Removal and Installation

Removal

• NOTE: In this procedure the cushion is removed as an assembly. There is a separate procedure for removing and installing the cushion cover.

E56012

1. Remove the third row seat cushion.

- Remove the 2 Allen bolts.
- Release the cushion from the seat frame.

Installation

1. NOTE: Ensure seat cushion return springs are correctly located.

Install the third row seat cushion.

- Attach the cushion to the seat frame.
- Tighten the Allen bolts to 25 Nm (18 lb.ft).

Seating - Rear Seat Cushion Cover Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

• NOTE: This procedure shows the removal and installation of both the LH and the RH covers.

1. Fold the seat cushion forward.
2. Release the rear LH seat cushion cover.
 - Release the clip.

E55996

3. Remove the rear LH seat cushion cover.
 - Remove the 21 hog rings.

E56015

4. Release the rear RH seat cushion cover.
 - Release the clip.

E56016

E55997

Installation

1. Install the rear seat cushion cover.
 - Install the hog rings.

- Attach the retaining clip.

2. Fold the seat cushion rearwards.

Seating - Rear Seat Cushion Cover Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. Remove the outer backrest hinge cover.

- Fold the seat assembly forwards.
- Remove the screw.

2. Remove the inner backrest hinge cover.

- Release the backrest cover side clip.
- Release the 2 clips.
- Remove the screw.

3. Remove the rear seat cushion side finisher.

- Remove the 2 screws.

4. Remove the seat rear release strap finisher.

- Remove the screw.

5. Remove the seat front release strap finisher.

- Remove the screw.

E55992

6. Remove the seat cushion finishers.

- Remove the 2 screws.

E55993

7. Remove the rear safety belt buckle.

- Remove the Torx bolt.
- Release the spring.

E55994

8. Release the rear seat cushion cover.

- Release the 15 clips.

E55995

E56017

9. Remove the rear seat cushion cover.

- Remove the 22 hog rings.

Installation

1. Install the rear seat cushion cover.

- Install the hog rings.
- Install the clips.

2. Install the rear safety belt buckle.

- Attach the spring.
- Tighten the Torx bolt to 45 Nm (33 lb.ft).

3. Install the seat cushion finishers.

- Tighten the screws.

4. Install the seat front release strap finisher.

- Remove the screw.
- Tighten the screw.

5. Install the seat rear release strap finisher.

- Tighten the screw.

6. Install the inner backrest hinge cover.

- Attach the clips.
- Tighten the screw.

7. Install the outer backrest hinge cover.

- Tighten the screw.
- Fold seat assembly rearwards.

8. Install the rear seat cushion side finisher.

- Tighten the screws.

Seating - Front Seat Track Motor

Removal and Installation

Removal

1. Raise the seat base for access.
2. Remove the drive cable.
 - Disconnect the seat motor electrical connector.

E131397

3. Remove the 2 clips.

E131398

4. Remove the front seat track motor.

E131399

Installation

1. Install the front seat track motor.
 - Install the drive cable.
 - Install the 2 clips.
2. Install the drive cable.
 - Connect the seat motor electrical connector.

Seating - Front Seat Height Adjustment Motor

Removal and Installation

Removal

- NOTE: Front seat height adjustment motor is supplied as part of the front seat frame assembly.

1. Remove the front safety belt buckle.
For additional information, refer to: Front Safety Belt Buckle (501-20, Removal and Installation).
2. Remove the front seat cushion assembly.
For additional information, refer to: Front Seat Cushion (501-10, Removal and Installation).
3. Remove the front seat backrest assembly.
 - Release and disconnect the 2 electrical connectors.
 - Remove the 4 Torx bolts.

E56071

4. Remove the front seat electrical connector bracket.
 - Remove the 4 screws.

E56072

5. Remove the front seat tilt motor.
 - Release the 3 wiring harness clips.
 - Remove the 4 Torx bolts.

E56073

E56074

6. Remove the front seat position sensor.

- Remove the 2 nuts.

E56075

7. Remove the front seat height adjustment motor.

- Disconnect the electrical connector.
- Remove the 8 nuts.

Installation

1. Install the front seat height adjustment motor.

- Tighten the nuts to 25 Nm (18 lb.ft).
- Connect the electrical connector.

2. Install the front seat position sensor.

- Tighten the nuts to 4 Nm (3 lb.ft).

3. Install the front seat tilt motor.

- Tighten the Torx bolts to 10 Nm (7 lb.ft).
- Attach the wiring harness.

4. Install the front seat electrical connector bracket.

- Tighten the screws.

5. Install the front seat backrest assembly.

- Tighten the Torx bolts to 25 Nm (18 lb.ft).
- Connect and secure the electrical connectors.

6. Install the front seat cushion assembly.

For additional information, refer to: Front Seat Cushion (501-10, Removal and Installation).

7. Install the front safety belt buckle.

For additional information, refer to: Front Safety Belt Buckle (501-20, Removal and Installation).

Seating - Front Seat Tilt Motor

Removal and Installation

Removal

1. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

2. Remove the front seat cushion side finisher.

- Remove the 2 Torx screws.
- Release from the 3 clips.

E56089

3. Release the front seat control switch.

- Remove the 2 screws.
- Remove the 2 clips.

E55961

4. Remove the front seat cushion assembly.
For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).

5. Remove the front seat tilt motor assembly.

- Remove the 4 Torx bolts.
- Disconnect the 7 electrical connectors.

E55963

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the seat module bracket.

- Remove the 2 Torx bolts.

E55964

Installation

1. Install the seat module bracket.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
2. Install the front seat tilt motor assembly.
 - Tighten the 4 Torx bolts to 10 Nm (7 lb.ft).
 - Connect the electrical connectors.
3. Install the front seat cushion assembly.
For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).
4. Install the front seat cushion side finisher.
 - Secure in the clips.
 - Tighten the screws.
5. Install the front seat control switch.
 - Secure in the clips.
 - Tighten the screws.
6. Install the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

Seating - Front Seat Recliner Motor

Removal and Installation

Removal

1. Remove the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).
2. Remove the front seat backrest pad.
3. Remove the front seat recliner motor.

- Disconnect the electrical connector.
- Remove the Torx bolt.
- Remove the front seat backrest shaft clip.
- Remove the front seat backrest shaft.

E55965

Installation

1. Install the front seat recliner motor.
 - Install the front seat backrest shaft.
 - Install the front seat backrest shaft clip.
 - Tighten the Torx bolt to 10 Nm (7 lb.ft).
 - Connect the electrical connector.
2. Install the front seat backrest pad.
3. Install the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).

Seating - Front Seat Control Switch

Removal and Installation

Removal

1. Remove the front seat cushion side finisher.

- Remove the 2 screws.
- Release from the 3 clips.

E55954

2. Remove the front seat control switch.

- Disconnect the electrical connector.
- Release the front seat control switch harness.
- Remove the 2 screws.
- Remove the 2 clips.

E55961

Installation

1. Install the front seat cushion side finisher.

- Secure in the clips.
- Tighten the screws.

2. Install the front seat control switch.

- Secure in the clips.
- Tighten the screws.
- Connect the electrical connector.
- Attach the wiring harness.

Seating - Front Seat Backrest Cover

Removal and Installation

Removal

• WARNINGS:

To avoid accidental deployment, the restraints control module backup power supply must be depleted. Wait at least one minute after disconnecting the battery ground cable(s) before commencing any repair or adjustment to the supplemental restraint system (SRS), or any component(s) adjacent to the SRS sensors. Failure to follow these instructions may result in personal injury.

Always wear safety glasses when working on an air bag equipped vehicle and when handling an air bag module. Failure to follow this instruction may result in personal injury.

To minimize the possibility of premature deployment, do not use radio key code savers when working on the supplemental restraint system. Failure to follow this instruction may result in personal injury.

To minimize the possibility of injury in the event of premature deployment, always carry a live air bag module with the bag and trim cover pointed away from the body. Failure to follow this instruction may result in personal injury.

To minimize the possibility of premature deployment, live air bag modules must only be placed on work benches which have been ground bonded and with the trim cover facing up. Failure to follow these instructions may result in personal injury.

Never probe the electrical connectors of air bag modules or any other supplemental restraint system component. Failure to follow this instruction may result in personal injury.

Painting over the driver air bag module trim cover or instrument panel could lead to deterioration of the trim cover and air bags. Do not for any reason attempt to paint discolored or damaged air bag module trim covers or instrument panel. Install a new component. Failure to follow this instruction may result in personal injury.

Make sure that sufficient time has elapsed after disconnecting the battery ground cable(s), before commencing work on the supplemental restraint system (SRS). Failure to follow these instructions may result in personal injury.

1. Make the SRS system safe.

For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. Remove the front safety belt buckle.

For additional information, refer to: [Front Safety Belt Buckle](#) (501-20A Safety Belt System, Removal and Installation).

3. Remove the front seat cushion side trim.

- Remove the 2 screws.
- Release from the 3 clips.

E55954

4. Remove the front seat backrest hinge cover.

- Remove the 2 screws.
- Release from the clip.

5. Remove the front seat backrest assembly.

- Release the retaining clips and disconnect the three electrical connectors.
- Remove the 4 Torx bolts.

E55956

6. Remove the front seat grab handles.

- Remove the bolt covers.
- Remove the 2 bolts.

7. NOTE: Head restraint release latch is underneath backrest cover.

Remove the front seat head restraint.

- Release the front seat head restraint latch.

8. Remove the seat armrest.

For additional information, refer to: Front Seat Armrest (501-10, Removal and Installation).

9. Remove the front seat lumbar adjustment knob.

- Pull sharply to release from lumbar mechanism.

10. Release the front seat backrest cover.

- Release the 5 clips.
- Release the tension straps.

11. Remove the front seat backrest cushion and cover from the front seat frame.

- Remove the 3 hog rings.

Installation

1. Install the front seat backrest cover.

- Install the hog rings.
- Install the clips.
- Attach the tension straps.

2. Install the front seat lumbar adjustment knob.

- Push firmly to secure to the lumbar mechanism.

3. Install the seat armrest.

For additional information, refer to: Front Seat Armrest (501-10, Removal and Installation).

4. Install the front seat head restraint.

5. Install the front seat grab handles.

- Tighten the bolts to 25 Nm (18 lb.ft).
- Install the bolt covers.

6. Install the front seat backrest assembly.
 - Tighten the Torx bolts to 25 Nm (18 lb.ft).
 - Connect and secure the electrical connectors.
7. Install the front seat backrest hinge cover.
 - Tighten the screws.
 - Fit the clip.
8. Install the front seat cushion side trim.
 - Position and secure in the clips.
 - Install the screws.
9. Install the front safety belt buckle.
For additional information, refer to: [Front Safety Belt Buckle](#)
(501-20A Safety Belt System, Removal and Installation).

Seating - Third Row Seat Backrest Cover

Removal and Installation

Removal

1. Fold the seat cushion assembly forwards.
2. Remove the seat backrest hinge inner covers.

- Release the clip.

3. Remove the seat backrest latch covers.

- Remove the 2 screws.

4. Remove the seat backrest cover.

- Fold the seat cushion forward.
- Release the 14 clips.

Installation

1. To install, reverse the removal procedure.

Seating - Front Seat Backrest Heater Mat

Removal and Installation

Removal

1. Remove the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).
2. NOTE: Front seat cushion heater mat shown in illustration. Removal of backrest heater mat is the same.

Remove the front seat backrest heater mat.

E55962

Installation

1. Install the front seat backrest heater mat.
2. Install the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).

Seating - Rear Seat Backrest Cover Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

- NOTE: This procedure shows the removal of both the LH and RH covers.

1. LH seat only: Remove the safety belt retractor cover and guide.

- Remove the 2 screws.

2. Remove the rear seat release handle.

3. Remove the rear seat release handle finisher.

- Remove the screw.

4. Remove the rear seat head restraint.

- Depress the 2 retaining clips.

5. Remove the rear seat head restraint retaining clips.

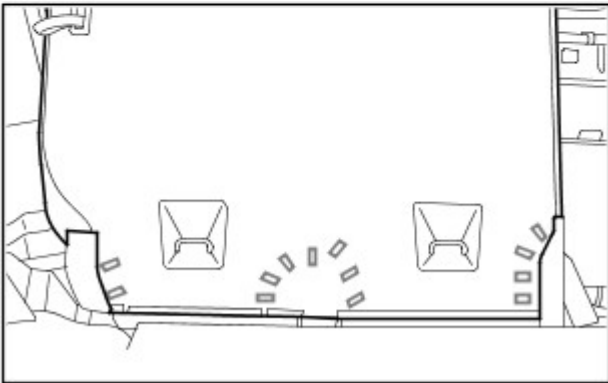

6. Release the rear LH seat backrest cover.

- Release the 10 clips.

7. Remove the rear LH seat backrest cover.

- Remove the 41 hog rings.

E56013

8. Release the rear RH seat backrest cover.

- Release the 9 clips.

E56002

9. Remove the rear RH seat backrest cover.

- Remove the 24 hog rings.

E56014

Installation

1. Install the rear seat backrest cover.

- Install the hog rings.
- Attach the clips.

2. Install the rear seat head restraint retaining clips.

3. Install the rear seat head restraint.

4. Install the rear seat release handle finisher.

- Tighten the screw.

5. Install the rear seat release handle.

6. Install the safety belt guide and retractor cover.

- Attach the safety belt guide and retractor cover.
- Tighten the screws.

Seating - Rear Seat Backrest Cover Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. Remove the inner backrest hinge cover.

- Release the backrest cover side clip.
- Remove the screw.
- Release the 2 clips.

E55971

2. Remove the outer backrest hinge cover.

- Remove the screw.

E55972

3. Remove the rear seat cushion side finisher.

- Remove the 2 screws.

E55973

4. Remove the luggage strap tether.

- Remove the Allen bolt.

E55974

5. Remove the rear seat head restraint.

- Depress the 2 retaining clips.

6. Remove the rear seat head restraint retaining clips.

7. Remove the rear seat release handle.

8. Remove the rear seat release handle finisher.

- Remove the screw.

9. Disconnect the backrest heater mat electrical connector.

- Release the rear seat cushion side clip.

10. Remove the rear seat backrest assembly.

- Remove the 3 Torx bolts.

11. Release the rear seat backrest cover.

- Release the 5 clips.

12. Remove the rear seat backrest cover.

- Remove the 16 hog rings.

Installation

1. Install the rear seat backrest cover.

- Install the 16 hog rings.

- Attach the 4 clips.
2. Install the rear seat backrest assembly.
 - Tighten the Torx bolts to 45 Nm (33 lb.ft).
 3. Connect the backrest heater mat electrical connector.
 - Attach the rear seat cushion side clip.
 4. Install the rear seat release handle finisher.
 - Tighten the screw.
 5. Install the rear seat release handle.
 6. Install the rear seat head restraint retaining clips.
 7. Install the rear seat head restraint.
 8. Install the luggage strap tether.
 9. Install the rear seat cushion side finisher.
 - Tighten the screws.
 10. Install the outer backrest hinge cover.
 - Tighten the screws.
 - Tighten the screw.
 11. Install the inner backrest hinge cover.
 - Attach the clips.
 - Tighten the screw.
 - Attach the backrest cover side clip.

Seating - Seat Track Vehicles Without: Power Seats

Removal and Installation

Removal

1. Remove the front safety belt buckle.
For additional information, refer to: [Front Safety Belt Buckle](#) (501-20A Safety Belt System, Removal and Installation).

2. Remove the front seat cushion side trim.

- Remove the 2 Torx screws.
- Release from the 4 clips.

E56089

3. Remove the front seat base trim.

- Remove the screw.
- Release the 2 clips.

E55967

4. Remove the front seat base.

- Remove the 6 nuts.

E55968

5. Remove the front seat cushion assembly.
 - Release and disconnect the 2 electrical connectors.
 - Remove the 4 Torx bolts.

E59785

E59784

6. Remove the seat track assembly.
 - Remove the 4 Torx bolts.

Installation

1. Install the seat track assembly.
 - Tighten the Torx bolts to 25 Nm (18 lb.ft).
2. Install the front seat cushion assembly.
 - Tighten the Torx bolts to 25 Nm (18 lb.ft).
 - Connect and secure the electrical connectors.
3. Install the front seat base.
 - Tighten the nuts to 25 Nm (18 lb.ft).
4. Install the front seat base trim.
 - Secure in the clips.
 - Tighten the screw.
5. Install the front seat cushion side trim.

- Secure in the clips.
- Tighten the screws.

6. Install the front safety belt buckle.

For additional information, refer to: [Front Safety Belt Buckle](#)
(501-20A Safety Belt System, Removal and Installation).

Seating - Seat Track Vehicles With: Power Seats

Removal and Installation

Removal

- NOTE: The front seat track motor is supplied as part of the front seat lower frame assembly.

1. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
2. Remove the front seat cushion side trim.

- Remove the 2 Torx screws.
- Release from the 4 clips.

E56089

3. Release the seat control switch.

- Remove the 2 screws.
- Remove the 2 clips.

E55961

4. Remove the front seat base trim.

- Remove the screw.
- Release the 2 clips.

E55967

5. Remove the front seat base.

- Remove the 6 nuts.

E55968

6. Remove the front seat track motor.

- Disconnect the electrical connector.
- Release the electrical connector.
- Remove the 8 nuts.

E55969

7. Remove the front seat track motor assembly from the seat rails.

- Remove the 4 bolts.
- Release the flexi drive from the seat rails.

E126877

Installation

1. Make sure the seat rails are installed as a matched pair as supplied.

- Make sure the seat rails are correctly aligned.

2. Install the front seat track motor assembly to the seat rails.

- Install the 4 bolts.
- Tighten the nuts to 10 Nm (7 lb.ft).

3. Install the front seat track motor.

- Tighten the nuts to 22 Nm (16 lb.ft).
- Connect the electrical connector.
- Secure the electrical connector.

4. Install the front seat base.

- Tighten the nuts to 22 Nm (16 lb.ft).

5. Install the front seat base trim.

- Secure in the clips.
- Tighten the screw.

6. Install the front seat cushion side trim.

- Secure in the clips.
- Tighten the screws.

7. Install the seat control switch.

- Secure in the clips.
- Tighten the screws.

8. Install the front seat.

For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

Seating - Front Seat Manual Height Adjustment Lever

Removal and Installation

Removal

1. Remove the drivers side seat slides.
For additional information, refer to: [Seat Track - Vehicles With: Power Seats](#) (501-10 Seating, Removal and Installation).
2. Remove the front seat cushion base.
For additional information, refer to: [Front Seat Cushion](#) (501-10 Seating, Removal and Installation).
- 3.

4.

5. TORQUE: 25 Nm

6. CAUTIONS:

 Tie straps must be fitted, failure to follow this instruction may result in personal injury.

 Failure to follow this instruction may cause damage to the vehicle.

Secure the seat base using the 4 tie straps supplied, as shown.

- Using the seat height adjuster, lower the seat base to its lowest position.

E130243

7. Release the arm from the height adjuster.

- Remove the Torx bolt.

E130245

8. Drill out the 4 rivets.

E130244

Installation

1. To install, reverse the removal procedure.

Glass, Frames and Mechanisms -**Sealants**

Application	Land Rover Sealant kit Part No.
Windshield	CES 500020

Glass, Frames and Mechanisms - Glass, Frames and Mechanisms

Description and Operation

E50596

Item	Part Number	Description
1.	-	Front screen
2.	-	Finisher
3	-	Heated front screen connectors

FRONT SCREEN

The laminated front screen is bonded, and sealed, to the body aperture using PU sealant. Heat bonded to the inner surface of the screen is the optical unit for the rain sensor and the interior mirror mounting boss.

Vertical fine-wire multi-strand elements are fitted between the glass laminations to de-ice and demist the screen. At the bottom of the screen six horizontal heating elements bonded to the interior glass surface prevent the wiper blades freezing to the screen during adverse weather conditions.

For additional information, refer to: Control Components (412-04 Control Components, Description and Operation).

The screen is supplied with the heating element flat foil connectors fitted to a moulded sealed terminal block. This terminal block is wired to a connector for connecting to the vehicle harness.

REAR SCREEN

Rear Screen Components

E50597

Item	Part Number	Description
1.	-	Rear screen
2.	-	Heated rear screen connectors
3	-	Rear wiper motor aperture
4	-	Sealant

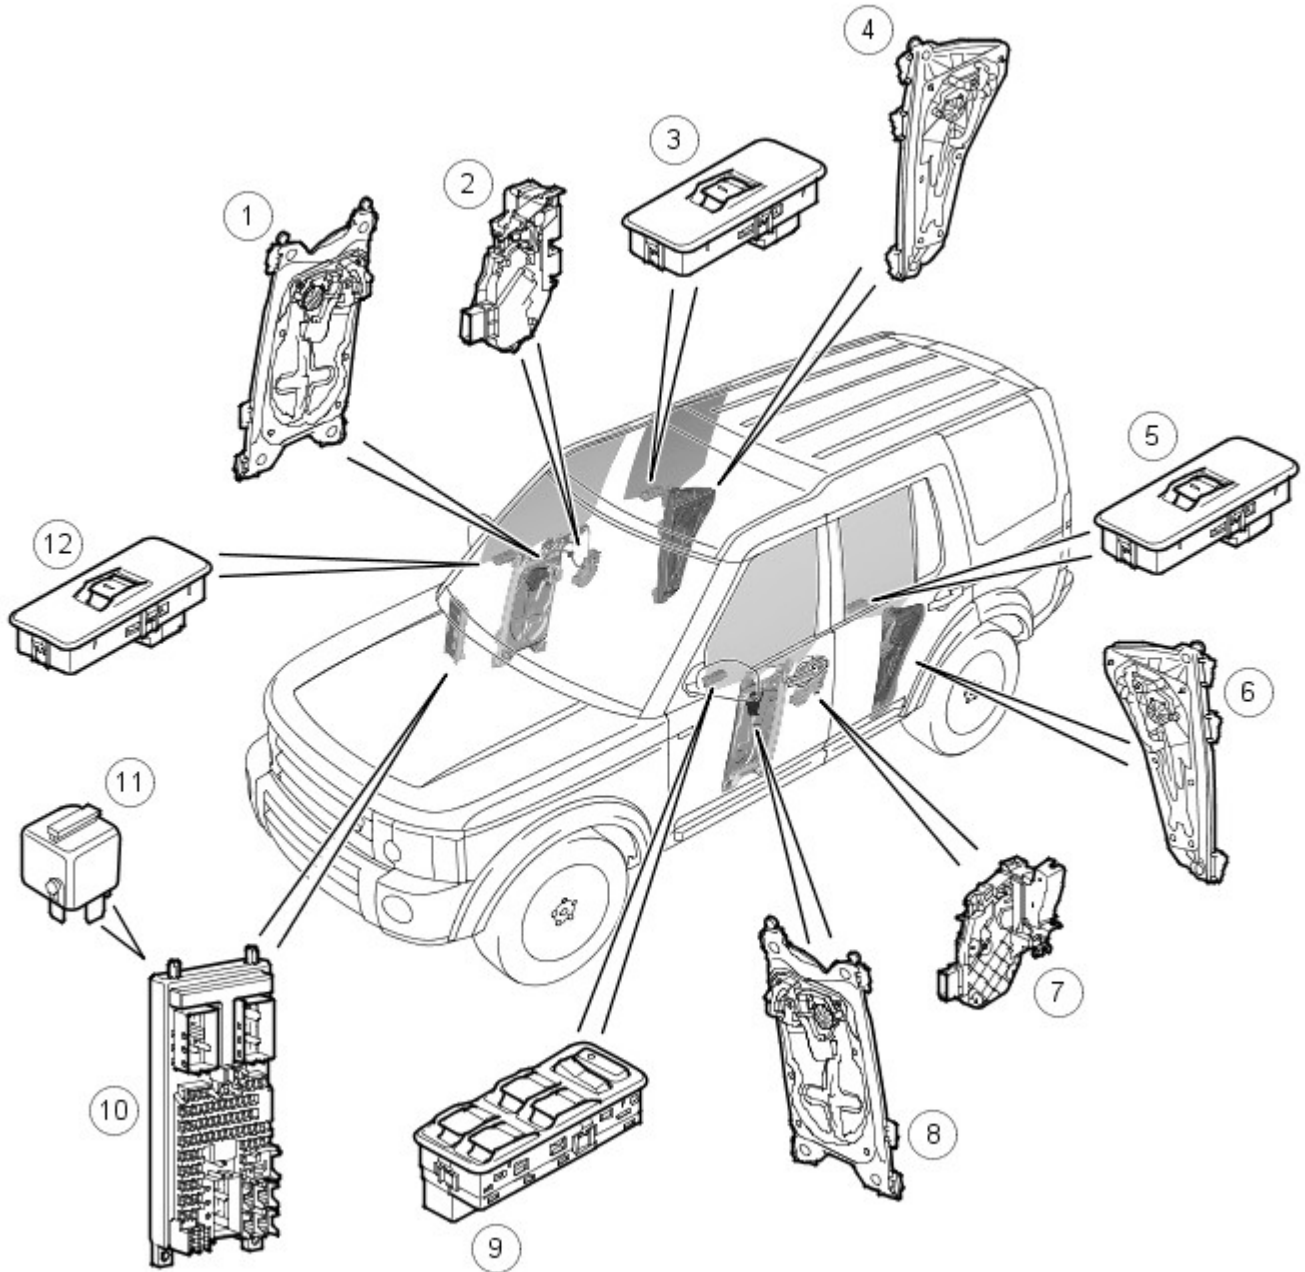

The tempered glass tinted green rear window is bonded to the upper tail doorframe using PU sealant. Fitted to the inner surface of the rear screen are the heating elements and an extra FM antenna for diversity tuning, if fitted. For additional information, refer to: Antenna (415-02 Antenna, Description and Operation).

The heating element is connected by 2 lucar terminals while the antenna is connected to the vehicle by a twin and single stud connector at the top of the screen. For additional information, refer to: Control Components (412-04 Control Components, Description and Operation).

WINDOW REGULATOR CONTROL

Windows Component Location

- NOTE: LH drive shown, RH drive similar.

E47512

Item	Part Number	Description
1	-	Passenger front window motor
2	-	Front passenger door latch (ajar switch)
3	-	RH rear window switch
4	-	RH rear window motor
5	-	LH rear window switch
6	-	LH rear window motor
7	-	Drivers door latch (ajar switch)
8	-	Drivers window motor
9	-	Drivers window switch pack
10	-	Central Junction Box (CJB)
11	-	Window lift relay
12	-	Passenger front window switch

GENERAL

Electric windows are installed in all four doors. The drivers front window incorporates a self-contained 'Anti-trap' regulator, which features one-shot up and one-shot down functionality. All the passenger windows are hard wired and are powered via the window lift relay in the Central Junction Box (CJB). The one-shot and one-shot down feature is also fitted to the front passenger window of vehicles from 2007 model year onwards .

Should any of the passenger windows have opposing up/down requests from two separate switches, for example, the drivers door switch and the switch on the operating window, then the operation of that window will cease, until one or both of the switches are released.

System Inputs and Outputs

Inputs	Outputs
Ignition switch	CJB window enable signal
Drivers door switch pack	CJB window power feeds
Front passenger door window switch	Front window lift motors (LH and RH)
Rear passenger door window switch (LH and RH)	Rear window lift motors (LH and RH)
Drivers door ajar switch	-
Front passenger door ajar switch	-

IGNITION SWITCH

The window lift system is enabled during ignition switch positions I and II, but disabled during cranking.

T4 can be used to monitor the state of the ignition switch.

WINDOW SWITCHES

Individual window switches are installed in each of the three passenger doors. Window switches for all of the windows, are installed in the drivers door in the top surface of the door trim.

All window switches are of the non-latching rocker type and contain illumination bulbs that operate when the side lamps or headlamps are on.

The drivers window switch (and passenger window switch from 2007 model year onwards) has two switching positions in each direction, inch up/down and one-shot up/down. Operating the switch to the second detent position will activate the one-shot feature. All the passenger windows have conventional power motors, providing an inch up/down operation whilst the corresponding switch is held.

When the switches in the drivers door are used to operate the passenger windows or to isolate the rear windows, the drivers door switch pack outputs a signal to the relevant window regulator. While the isolator is engaged, the rear regulators ignore inputs from the rear window switches, and the drivers door switch pack illuminates a LED in the isolator switch.

With the switches in the rest position, there is battery voltage at both sides of each switch as well as at the window motors. Operating any switch provides a ground path through the switch to the window motor. Operating the switch in the opposite direction switches the voltage path and the earth path to the motor allowing the motor to run in the opposite direction.

Power for window operation is supplied from the window lift relay located in the CJB. When energised, the window lift relay provides feed to the following fuses, which are also located in the CJB:

- 30 (25 Amps)
- 17 (20 Amps)
- 31 (20 Amps).

Fuse	Description
Fuse 7	Drivers window regulator
Fuse 17	Drivers switch pack, RH rear - up/down RH rear window switch via isolator
Fuse 30	Drivers switch pack, front passenger - up/down Front passenger switch - up/down
Fuse 31	Drivers switch pack, LH rear - up/down LH rear window switch via isolator

6	Switch illumination power supply	Input
7	Down power supply to window regulator	Output
8	Power supply from drivers door switch pack	Input

T4 can not be used to monitor the state of the window switches because they are part of a hard wired circuit.

FRONT DOOR AJAR SWITCHES

Window operation is immediately disabled when a front door is opened during a 40 second timeout period. The door ajar switches are located in the front door latch mechanisms.

T4 can be used to monitor the state of the front door ajar switches.

ENABLE LINES

The use of enable lines limits the windows to operate when the ignition switch is in position I or II, and for a period of forty seconds once the ignition has been switched off. If the drivers door or the front passenger door is opened within the forty second period, window operation will be disabled. No window operation is possible during vehicle cranking.

WINDOW REGULATORS

Cable operated window regulators powered by an electric motor are installed in each of the doors.

Front Window Regulators

E47513

Item	Part Number	Description
1	-	Window Glass
2	-	Fixing points
3	-	Glass carrier
4	-	Window motor
5	-	Mounting frame
6	-	Cable

The front window regulator and motor is supplied as an assembly and is handed. Each assembly comprises a front and rear runner, a continuous cable and a motor.

The runners are secured in the door frame with four screws. The door glass is located in two carriers, which are located in tracks in the runners. The glass is retained in friction pads in each carrier and secured with clamp screws.

Each carrier is attached to the cable which, in turn, is attached to a drum driven by the motor. When the motor is operated the drum pulls the cable in the required direction to raise or lower the glass.

Rear Window Regulators

E47514

Item	Part Number	Description
1	-	Window Glass
2	-	Fixing points
3	-	Window motor
4	-	Mounting frame
5	-	Glass carrier

The rear window regulator and motor is supplied as an assembly and is handed. Each assembly comprises a runner, a continuous cable and a motor.

The runner is secured in the door frame with four bolts. The door glass is located in a carrier located in a track in the runner. The glass is retained in friction pads in the carrier and secured with a clamp screw.

The carrier is attached to the cable which, in turn, is attached to a drum driven by the motor. When the motor is operated, the drum pulls the cable in the required direction to raise or lower the glass.

ANTI-TRAP

The anti-trap function is enabled for the drivers window closing in both the inching and one-shot modes. If the anti-trap feature is activated while a window is closing, the window motor is reversed for 0.5 second.

A Hall sensor, located in the drivers window regulator, monitors the speed of the motor and if the speed decreases below a set threshold, indicating an obstruction, the power feed to the motor is reversed so the window goes back down.

In an emergency the anti-trap function can be overridden by holding the window switch in the one-shot closed position.

After the battery has been disconnected it is necessary to initialize the drivers door window motor to be able to operate the one-shot up function.

Driver's Door Window Motor Initialisation

- Operate the drivers window switch until the window glass is in the fully closed position, continue to operate the window switch for a further two seconds
- Release the window control switch
- Operate the drivers window switch in the closed position and continue to operate the window switch for a further two seconds
- Operate the drivers window switch until the window is in the fully open position (one-shot down)

• NOTE: If the drivers window motor initialisation has been completed correctly, when the drivers window switch is operated, the window should move to the fully closed position (one-shot up) automatically. If the window does not fully close automatically (one-shot up), repeat the complete procedure.

- Operate the drivers window switch once to the close position.

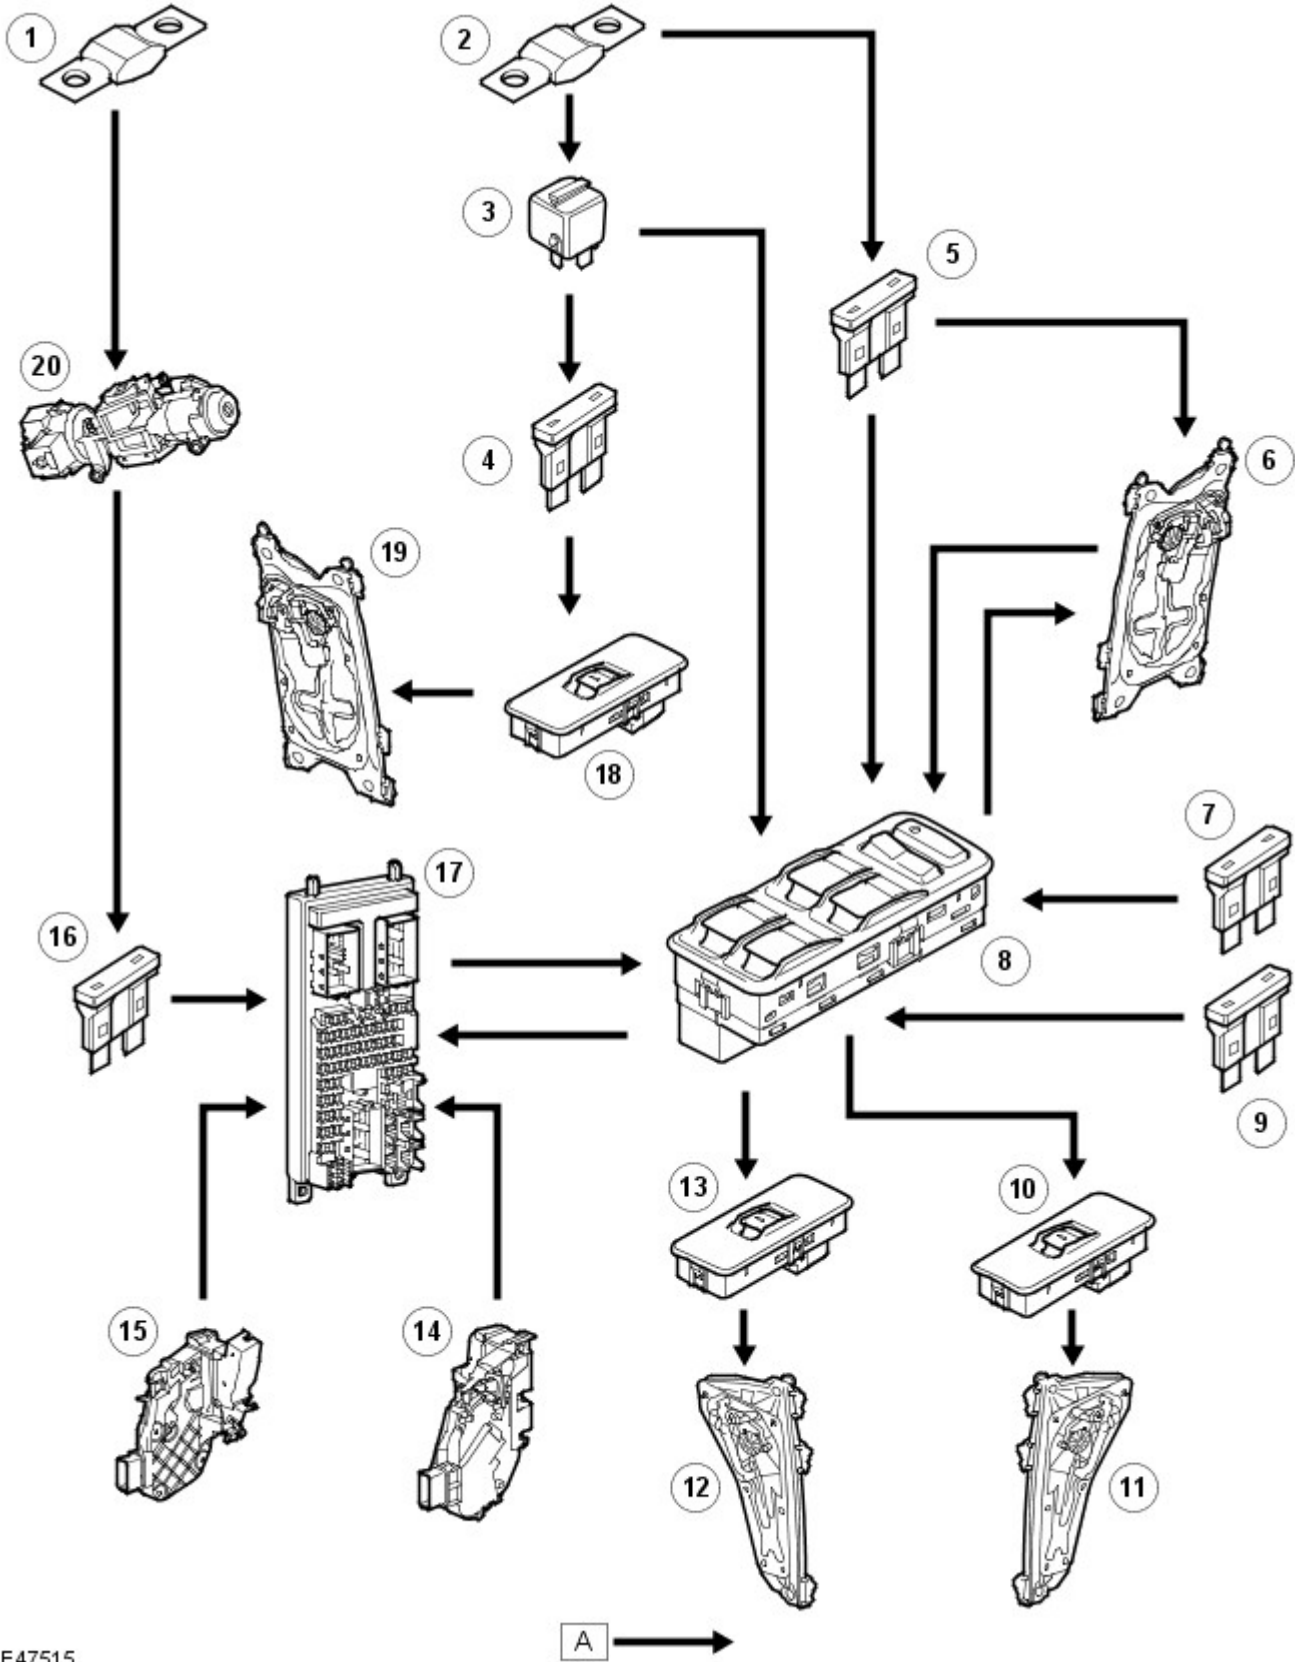

Driver's Door Anti-trap Regulator Pin Out Information

Connector C0740

Glass, Frames and Mechanisms - Glass, Frames and Mechanisms

Diagnosis and Testing

Principle of Operation

For a detailed description of the glass, frames and mechanisms and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Glass, Frames and Mechanisms](#) (501-11 Glass, Frames and Mechanisms, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. **1.** Verify the customer concern.
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Window control switches condition and installation ● Window motors/regulators ● Window channels/runners ● Window cables ● Door window glass retaining brackets 	<ul style="list-style-type: none"> ● Fuses ● Harnesses and connectors ● Window lift relay ● Window control switches ● Window motors

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **4.** If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Window(s) inoperative	<ul style="list-style-type: none"> ● Fuse(s) ● Switch fault ● Front switch isolator fault ● Motor/Regulator fault ● Channel/Runner fault ● Cable fault ● Harness fault 	<ul style="list-style-type: none"> ● Check the fuses. Check the suspect window operation from the individual door switch and from the driver door master switch (it is unlikely that both switches would fail at the same time, so if the window is inoperative from either switch, suspect a fault other than a switch). If the inoperative window is a rear unit, check the function of the isolator at the master switch. ● If the concern persists and a noise cannot be heard when operating the door window glass, GO to Pinpoint Test B.
Window(s) 'one-shot' function inoperative	<ul style="list-style-type: none"> ● Window motor initialization required ● Switch fault 	<ul style="list-style-type: none"> • NOTE: Do not install a new door window regulator motor for this concern. <p>If the battery has been disconnected, carry out the initialization procedure. REFER to: Door Window Motor Initialization (501-11 Glass, Frames and Mechanisms, General Procedures). Check the switch function after initialization.</p>
Rear window does not defrost	<ul style="list-style-type: none"> ● Fuse ● Switch fault ● Relay fault ● Element fault ● Circuit fault 	Check fuse. Check the operation of the heated rear window switch and relay. Check the element for continuity. Check the heated rear window circuit. Refer to the electrical guides.
Window(s) noisy during operation	<ul style="list-style-type: none"> ● Channel/Runner fault ● Cable fault ● Motor/Regulator fault 	<ul style="list-style-type: none"> • NOTE: Door window glass retaining bracket adjustment procedure <p>GO to Pinpoint Test A.</p>
Slow or partial window operation	<ul style="list-style-type: none"> ● Fuse ● Switch fault ● Relay fault ● Element fault ● Circuit fault 	GO to Pinpoint Test C.
Rear door window glass bounce back	<ul style="list-style-type: none"> ● Window motor initialization required (using the manufacturers approve diagnostic system) 	<ul style="list-style-type: none"> • NOTE: Do not install a new door window regulator motor for this concern. <p>Refer to IDS/SDD.</p>

Symptom	Possible Causes	Action
Front door window glass bounce back	<ul style="list-style-type: none"> Window motor initialization required Channel/Runner fault 	<ul style="list-style-type: none"> NOTE: Do not install a new door window regulator motor for this concern. GO to Pinpoint Test D .

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Door Module \(DDM/PDM\)](#) (100-00 General Information, Description and Operation).

Pinpoint Test

PINPOINT TEST A : WINDOW(S) NOISY DURING OPERATION	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK THE DOOR WINDOW GLASS IS SECURE	
	<ol style="list-style-type: none"> Remove the door window glass outer waist seal. Check if the door glass installed correctly and secured to the door window regulator.
	Is the door window glass correctly installed and secure? Yes GO to A2 . No Install a new door window glass as necessary. REFER to: Front Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation).
A2: CHECK THE OPERATION OF THE DOOR WINDOW REGULATOR MOTOR	
	<ol style="list-style-type: none"> Remove the door window glass as necessary. REFER to: Front Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation). Operate the door window regulator four times.
	Does the door window regulator operate correctly (without noise)? Yes Ensure that an anti-rattle pad (available from the parts department) is installed to the door window glass retaining bracket and installed correctly. REFER to: Front Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation). Test the system for normal operation. If the concern persists, GO to A3 . No Install a new door window regulator motor as necessary. REFER to: Front Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
A3: CHECK THAT THE DOOR WINDOW GLASS SEAL IS FREE FROM FOREIGN MATERIAL	
	<ol style="list-style-type: none"> Check for any foreign material or obstruction in the door window glass seal.
	Is the door window glass seal free from foreign material? Yes GO to A4 . No Remove any foreign material from door window glass seal and lubricate the seal. Test the system for normal operation.
A4: CHECK THAT THE DOOR WINDOW GLASS SEAL IS INSTALLED CORRECTLY	
	<ol style="list-style-type: none"> Check that the door window glass seal is installed correctly.
	Is the door window glass seal installed correctly? Yes GO to A5 . No Install the door window glass seal correctly. Test the system for normal operation.
A5: CHECK THAT THE DOOR WINDOW GLASS SEAL IS NOT WORN IN THE CHANNELS	
	<ol style="list-style-type: none"> Visually check that the door window glass seal is not worn in the door channels.
	Is the door window glass seal worn in the channels? Yes Install a new door window glass seal as necessary. Test the system for normal operation. No Install the door window glass and adjust the door window glass. Test the system for normal operation.
PINPOINT TEST B : WINDOW(S) INOPERATIVE (MOTOR NOISE CANNOT BE HEARD)	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
B1: CHECK FOR DOOR WINDOW REGULATOR MOTOR NOISE	
	<ol style="list-style-type: none"> Operate the door window regulator motor as necessary.
	Is there a noise from the door window regulator motor when operated? Yes GO to B2 . No

	<p>Install a new door window regulator motor as necessary. REFER to: Front Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).</p>
--	---

B2: CHECK THAT THE DOOR WINDOW GLASS SEAL IS FREE FROM FOREIGN MATERIAL

	<p>1 Check for any foreign material or obstruction in the door window glass seal.</p>
	<p>Is the door window glass seal free from foreign material? Yes GO to B3. No Remove any foreign material from door window glass seal and lubricate the seal. Test the system for normal operation.</p>

B3: CHECK THAT THE DOOR WINDOW GLASS SEAL IS INSTALLED CORRECTLY

	<p>1 Check that the door window glass seal is installed correctly.</p>
	<p>Is the door window glass seal installed correctly? Yes GO to B4. No Install the door window glass seal correctly. Test the system for normal operation.</p>

B4: CHECK THAT THE DOOR WINDOW GLASS SEAL IS NOT WORN IN THE CHANNELS

	<p>1 Visually check that the door window glass seal is not worn in the door channels.</p>
	<p>Is the door window glass seal worn in the channels? Yes Install a new door window glass seal as necessary. Test the system for normal operation. No Install the door window glass. Adjust the door window glass referring to the door window glass retaining bracket procedure at the end of this section (see below). Test the system for normal operation. If the concern persists, Test the system for normal operation.</p>

PINPOINT TEST C : SLOW OR PARTIAL WINDOW OPERATION

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
C1: CHECK THE OPERATION OF THE DOOR WINDOW REGULATOR MOTOR	
	<p>1 Remove the door window glass as necessary. REFER to: Front Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation) / Rear Door Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation).</p>
	<p>2 Operate the door window regulator as necessary.</p>
	<p>Does the door window regulator operate correctly? Yes GO to C2. No GO to C5.</p>

C2: CHECK THAT THE DOOR WINDOW GLASS SEAL IS FREE FROM FOREIGN MATERIAL

	<p>1 Check for any foreign material or obstruction in the door window glass seal.</p>
	<p>Is the door window glass seal free from foreign material? Yes GO to C3. No Remove any foreign material from door window glass seal and lubricate the seal. Test the system for normal operation.</p>

C3: CHECK THAT THE DOOR WINDOW GLASS SEAL IS INSTALLED CORRECTLY

	<p>1 Check that the door window glass seal is installed correctly.</p>
	<p>Is the door window glass seal installed correctly? Yes GO to C4. No Install the door window glass seal correctly. Test the system for normal operation.</p>

C4: CHECK THAT THE DOOR WINDOW GLASS SEAL IS NOT WORN IN THE CHANNELS

	<p>1 Visually check that the door window glass seal is not worn in the door channels.</p>
	<p>Is the door window glass seal worn in the channels? Yes Install a new door window glass seal as necessary. Test the system for normal operation. No Adjust the door window glass referring to the door window glass retaining bracket procedure at the end of this section (see below). Test the system for normal operation.</p>

C5: CHECK THE VOLTAGE TO THE DOOR WINDOW REGULATOR MOTOR

• NOTE: The door window regulator motor can be removed from the regulator. Install a new door window regulator motor not the complete assembly for this concern.

	<p>1 Using a multimeter, check the voltage to the door window regulator motor.</p>
	<p>Is the voltage greater than 10 volts? Yes Install a new door window regulator motor as necessary. No Repair the wiring harness. Test the system for normal operation. If the concern continues, install a new door window regulator motor as necessary.</p>

PINPOINT TEST D : FRONT DOOR WINDOW GLASS BOUNCE BACK

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
D1: CHECK WINDOW MOTOR INITIALIZATION	
	<p>1 Initialize the door window motor. REFER to: Door Window Motor Initialization (501-11 Glass, Frames and Mechanisms, General Procedures).</p>
	<p>Did the initialization work? Yes Test the system for normal operation. No GO to D2.</p>
D2: CHECK THAT THE DOOR WINDOW GLASS SEAL IS FREE FROM FOREIGN MATERIAL	
	<p>1 Check for any foreign material or obstruction in the door window glass seal.</p>
	<p>Is the door window glass seal free from foreign material? Yes GO to D3. No Remove any foreign material from door window glass seal and lubricate the seal. Test the system for normal operation.</p>
D3: CHECK THAT THE DOOR WINDOW GLASS SEAL IS INSTALLED CORRECTLY	
	<p>1 Check that the door window glass seal is installed correctly.</p>
	<p>Is the door window glass seal installed correctly? Yes GO to D4. No Install the door window glass seal correctly. Test the system for normal operation.</p>
D4: CHECK THAT THE DOOR WINDOW GLASS SEAL IS NOT WORN IN THE CHANNELS	
	<p>1 Visually check that the door window glass seal is not worn in the door channels.</p>
	<p>Is the door window glass seal worn in the channels? Yes Install a new door window glass seal as necessary. Test the system for normal operation. No GO to D5.</p>
D5: CHECK THE DOOR WINDOW GLASS IS SECURE	
	<p>1 Remove the door window glass outer waist seal.</p>
	<p>2 Check if the door glass installed correctly and secured to the door window regulator.</p>
	<p>Is the door window glass correctly installed and secure? Yes Test the system for normal operation. No Adjust the door window glass referring to the door window glass retaining bracket procedure in this procedure. Test the system for normal operation. If the concern persists, install a new door window regulator motor as necessary. REFER to: Front Door Window Regulator and Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).</p>

Door window glass retaining bracket adjustment procedure

1. **1.** Remove the door window glass as necessary.
REFER to: [Front Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation) / [Rear Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
2. **2.** Check for any foreign material or obstruction in the door window glass seal and channels. Clean all areas prior to adjustment to allow correct alignment.
3. **3.** Release but do not remove the door window glass retaining bracket(s) bolt(s).
4. **4.** Push the door window glass retaining bracket(s) to the edge of the door window glass to achieve minimum parallel gap.
5. **5.** Tighten the door window glass retaining bracket(s) bolt(s).
 - Tighten the retaining bolt(s) to 6Nm.

E136430

6. **6.** Apply lubricate (RYL500010) to the lower part of the door window glass retaining brackets prior to installation of the door window glass.
7. **7.** Install the door window glass as necessary.
REFER to: [Front Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation) / [Rear Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
8. **8.** Check the system for normal operation.

Door glass channel setting procedure

1. **1.** Remove the door trim panel as necessary.
REFER to: [Front Door Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) / [Rear Door Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

E45509

2. • **NOTE:** Do not remove the door window glass channel.
2. Release the door window glass channel retaining bolt.
3. **3.** Lower the door window glass.

4. **4.** Tighten the door window glass channel retaining bolt.
5. **5.** Check the system for normal operation.

Glass, Frames and Mechanisms - Door Window Motor Initialization

General Procedures

1. NOTE: After the battery has been disconnected it is necessary to initialize each door window motor separately to operate the "one-touch" up function.

• **NOTE:** Make sure a minimum of 2 minutes from initial disconnect of battery has elapse prior to reconnecting the battery. The initialising of the window glass motor must be conducted with the engine running.

Operate the window control switch until the door window glass is in the fully closed position, continue to operate the window control switch for a further two seconds.

2. Release the window control switch.

3. Operate the window control switch in the closed position and continue to operate the window control switch for a further two seconds.

4. Operate the window control switch until the door window glass is in the fully open position ("one-touch" down).

5. NOTE: If the door window motor initialization has been completed correctly, when the window control switch is operated, the door window glass should move to the fully closed position ("one-touch" up) automatically.

• **NOTE:** If the door window glass does not fully close automatically ("one-touch" up), repeat the complete procedure.

Operate the window control switch once to the close position.

6. Repeat the door window motor initialization for each door window motor.

Glass, Frames and Mechanisms - Front Door Window Glass

Removal and Installation

Special Tool(s)

 <p>501-114</p> <p>E54200</p>	<p>501-114 Release Lever, Door Glass</p>
--	--

Removal

1. *Special Tool(s):* [501-114](#)

2.

Installation

1.  **CAUTION:** Make sure that the door glass retaining brackets are pushed to the edge of the door window glass to achieve minimum parallel gap.
- **NOTE:** This operation must be done for both retaining brackets.

Torque: 6 Nm

E140674

2. **2. CAUTIONS:**

 Make sure that any grease or lubricant is removed from the retaining brackets prior to installation of the anti-rattle pads.

 Make sure that the anti-rattle pad is installed in the orientation illustrated.

• **NOTE:** This operation must be done for both retaining brackets.

3. To install, reverse the removal procedure.

Glass, Frames and Mechanisms - Rear Door Window Glass

Removal and Installation

Removal

• NOTE: Once the rear door window fixed glass has been removed the rear door glass can be simply lifted and removed from the door.

• NOTE: The door glass should be lowered by approximately one third.

1. Remove the rear door window fixed glass.
For additional information, refer to: [Rear Door Fixed Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

2. Remove the rear door window glass.

3. NOTE: Do not disassemble further if the component is removed for access only.

• NOTE: Note the fitted position.

Remove the glass retaining clip.

- Remove the Torx bolt.
- Remove the spacer washer.
- Remove the flat washer.

Installation

1. Install the glass retaining clip.

- Install the spacer.
- Install the washer.
- Tighten the Torx screws to 8 Nm (6 lb.ft).

2. Install the rear door window glass.

3. Install the rear door window fixed glass.

For additional information, refer to: [Rear Door Fixed Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

Glass, Frames and Mechanisms - Liftgate Window Glass

Removal and Installation

Removal

• CAUTIONS:

Always protect paintwork and glass when removing exterior components.

Always protect the interior components when removing body glass.

Lay the glass on felt covered supports. Do not stand on edge as this can cause chips which subsequently develop into cracks.

• NOTE: The following equipment is required: | Cutting wire and handles | Kent knife | Glazing knife | Glass replacement kit | Sealant applicator gun | Suction cups | A felt covered table or stand to support glass

1. Remove the rear wiper arm.
For additional information, refer to: [Rear Wiper Pivot Arm](#) (501-16 Wipers and Washers, Removal and Installation).
2. Remove the rear wiper drive spindle seal.

E48470

3. Remove the liftgate lower trim panel.
For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ormentation, Removal and Installation).

E47638

4. Remove the liftgate upper trim panel.

- Release the 4 clips.

E48471

5. Remove the liftgate side trim panel.

- Release the 4 clips.
- Repeat the above procedure for the other side.

E48472

6. Disconnect both heated rear window electrical connectors.

E48473

7.  **WARNING:** Eye protection must be worn.

With assistance, remove the liftgate window glass.

- Carefully cut through the sealant using a glazing knife or cutting wire.
- Attach the suction cups.
- Noting fitted position, remove the 5 spacers.

E48474

Installation

1. Carefully remove the sealant from the body to leave a smooth surface.

2. Install the liftgate window glass.

- Install the spacers equally as shown.
- Use masking tape to establish reference marks as an alignment aid.

3. Remove the liftgate window glass.

- Clean the component mating faces.

4. Apply etch primer to any bare metal.

5. Apply primer over the etch primer.

6. Apply glass primer to the sealant face on the liftgate window glass and allow to cure.

7. Apply activator over the old sealant on the liftgate and allow to cure.

8. Fit a pre-cut nozzle to the sealer cartridge, remove the lid, shake out the crystals and fit the cartridge to the applicator gun.

- Modify the nozzle to achieve a bead section in the shape of a right angle triangle with a base of 8 mm and a vertical height of 12 mm.

9. Apply a continuous bead of sealant to the liftgate window glass as shown.

10. With assistance, install and align the liftgate window glass.

- Lightly press the window glass to seat the sealer.

11. Test the sealer for leaks, apply additional sealer if necessary. If water is used, allow sealer to dry before testing. Spray water around the glass and check for leaks. Mark any area that leaks. Dry the glass and sealer then apply additional sealer.

12. Connect the heated rear window electrical connectors.

13. Install the liftgate side trim panel.

- Secure with the clips.
- Repeat the above procedure for the other side.

14. Install the liftgate upper trim panel.

- Secure with the clips.

15. Install the liftgate lower trim panel.

For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and

Installation).

16. Install the rear wiper drive spindle seal.

17. Install the rear wiper arm.

For additional information, refer to: [Rear Wiper Pivot Arm](#)
(501-16 Wipers and Washers, Removal and Installation).

Glass, Frames and Mechanisms - Rear Door Fixed Window Glass

Removal and Installation

Removal

1. Remove the rear door window motor and regulator assembly.
For additional information, refer to: [Rear Door Window Regulator and Motor](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
2. Lower the rear door glass to the bottom of the door.
 - Remove the wedge.
3. Remove the rear door frame trim.
 - Release the 2 clips.
 - Carefully release the door trim.
4. Carefully remove the inner waist seal.

5. Release the lining from the glass rear channel.
6. Remove the rear door window fixed glass.
 - Remove the grommet.
 - Loosen the Torx screw, but do not remove it completely at this stage.
 - Pull the lower edge of the glass forward to release it from the door frame.

Installation

1. Install the rear door window fixed glass.
 - Make sure the locating peg on the fixed glass has engaged with the door frame.
 - Tighten the Torx screw to 10 Nm (7 lb.ft).
2. Install the channel lining.
3. Install the inner waist seal.
4. Install the door frame trim.

- Clean the component mating faces.
- Remove backing tape from adhesive strip.
- Secure the clips.

5. NOTE: Wedge the glass in this position.

Raise the rear door glass fully.

- Engage the door glass with the channel.

6. Install the rear door window motor and regulator assembly.
For additional information, refer to: [Rear Door Window Regulator and Motor](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

Glass, Frames and Mechanisms - Windshield Glass

Removal and Installation

Removal

• CAUTIONS:

Always protect paintwork and glass when removing exterior components.

Always protect the interior components when removing body glass.

Lay the glass on felt covered supports. Do not stand on edge as this can cause chips which subsequently develop into cracks.

• NOTE: The following equipment is required: | Cutting wire and handles | Kent knife | Glazing knife | Windshield replacement kit | Sealant applicator gun | Suction cups | A felt covered table or stand to support glass

1. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
2. Remove both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove the rain sensor.
For additional information, refer to: [Rain Sensor](#) (501-16 Wipers and Washers, Removal and Installation).
4. Remove the roof moulding.
 - Release the 6 clips.
 - Repeat the above procedure for the other side.

5. **WARNING:** Eye protection must be worn.

With assistance, remove the windshield glass.

- If installed, disconnect the 4 electrical connectors.
- Carefully cut through the sealant using a glazing knife or cutting wire.
- Attach the suction cups.
- Noting fitted position, remove the 4 spacers.

Installation

1. Carefully remove the sealant from the body to leave a smooth surface.

2. Install the windshield glass.

- Install the spacers equally as shown.
- Use masking tape to establish reference marks as an alignment aid.

3. Remove the windshield glass.

- Clean the component mating faces.

4. Apply etch primer to any bare metal.

5. Apply primer over the etch primer.

6. Apply glass primer to the sealant face on the windshield glass and allow to cure.

7. Apply activator over the old sealant on the windshield glass and allow to cure.

8. Fit a pre-cut nozzle to the sealer cartridge, remove the lid, shake out the crystals and fit the cartridge to the applicator gun.

- Modify the nozzle to achieve a bead section in the shape of a right angle triangle with a base of 8 mm and a vertical height of 12 mm.

9. Apply a continuous bead of sealant to the windshield glass as shown.

10. With assistance, install the window glass.

- Lightly press the window glass to seat the sealer.
- Connect the electrical connectors.

11. Test the sealer for leaks, apply additional sealer if necessary. If water is used, allow sealer to dry before testing. Spray water around the glass and check for leaks. Mark any area that leaks. Dry the glass and sealer then apply additional sealer.

12. Install the roof mouldings.

- Secure with the clips.

13. Install the rain sensor.

For additional information, refer to: [Rain Sensor](#) (501-16 Wipers and Washers, Removal and Installation).

14. Install both A-pillar upper trim panels.

For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

15. Install the plenum chamber panel.

For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).

Glass, Frames and Mechanisms - Glass Roof Panel

Removal and Installation

Removal

• CAUTIONS:

Always protect paintwork and glass when removing exterior components.

Always protect the interior components when removing body glass.

Lay the glass on felt covered supports. Do not stand on edge as this can cause chips which subsequently develop into cracks.

• NOTE: The following equipment is required: | Cutting wire and handles | Kent knife | Glazing knife | Glass replacement kit | Sealant applicator gun | Suction cups | A felt covered table or stand to support glass

1. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the roof moulding.
 - Release the 3 clips.
 - Repeat the above procedure for the other side.

E50911

3. Remove the antenna.
 - Disconnect the cable.
 - Remove the 2 screws.

E50912

4.  **WARNING:** Eye protection must be worn.

With assistance, remove the roof panel fixed glass.

- Carefully cut through the sealant using a glazing knife or cutting wire.
- Attach the suction cups.
- Noting fitted position, remove the 11 spacers.

E50913

Installation

1. Carefully remove the sealant from the body to leave a smooth surface.
2. Install the roof panel fixed glass.
 - Install the spacers equally as shown.
 - Use masking tape to establish reference marks as an alignment aid.

E50914

3. With assistance, remove the roof panel fixed glass.
 - Clean the component mating faces.
4. Apply etch primer to any bare metal.
5. Apply primer over the etch primer.
6. Apply glass primer to the sealant face on the roof panel fixed glass and allow to cure.
7. Apply activator over the old sealant on the roof panel and allow to cure.
8. Fit a pre-cut nozzle to the sealer cartridge, remove the lid, shake out the crystals and fit the cartridge to the applicator gun.
 - Modify the nozzle to achieve a bead section in the shape of a right angle triangle with a base of 8 mm and a vertical height of 12 mm.
9. Apply a continuous bead of sealant to the roof panel fixed glass as shown.

E50915

10. With assistance, install and align the roof panel fixed glass.

- Lightly press the roof panel fixed glass to seat the sealer.

11. Test the sealer for leaks, apply additional sealer if necessary. If water is used, allow sealer to dry before testing. Spray water around the glass and check for leaks. Mark any area that leaks. Dry the glass and sealer then apply additional sealer.

12. Install the antenna.

- Tighten the screws.
- Connect the cable.

13. Install the roof mouldings.

- Secure with the clips.

14. Install the headliner.

For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Glass, Frames and Mechanisms - Rear Quarter Window Glass

Removal and Installation

Removal

• CAUTIONS:

Always protect paintwork and glass when removing exterior components.

Always protect the interior components when removing body glass.

Lay the glass on felt covered supports. Do not stand on edge as this can cause chips which subsequently develop into cracks.

• NOTE: The following equipment is required:

- Cutting wire and handles
- Kent knife
- Glazing knife
- Glass replacement kit
- Sealant applicator gun
- Suction cups
- A felt covered table or stand to support glass

1. Remove the D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the rear quarter window glass panel.
 - Release the 3 clips.

E49794

3. Disconnect the rear quarter window glass antenna connector.

E49795

E49796

4.  **WARNING:** Eye protection must be worn.

 **CAUTION:** Care must be taken not to damage the air bag curtain module when cutting through the sealant.

With assistance, remove the rear quarter window glass.

- Carefully cut through the sealant using a glazing knife or cutting wire.
- Attach the suction cups.
- Noting fitted position, remove the 4 spacers.

Installation

1. Carefully remove the sealant from the body to leave a smooth surface.
2. Apply etch primer to any bare metal.
3. Apply primer over the etch primer.
4. Apply glass primer to the sealant face on the rear quarter window glass and allow to cure.
5. Apply activator over the old sealant on the rear quarter window glass and allow to cure.
6. Fit a pre-cut nozzle to the sealer cartridge, remove the lid, shake out the crystals and fit the cartridge to the applicator gun.
 - Modify the nozzle to achieve a bead section in the shape of a right angle triangle with a base of 8 mm and a vertical height of 12 mm.
7. Apply a continuous bead of sealant to the rear quarter window glass as shown.

E49797

8. With assistance, install and align the rear quarter window glass.
 - Install the spacers equally as shown.
 - Lightly press the window glass to seat the sealer.
9. Test the sealer for leaks, apply additional sealer if necessary. If water is used, allow sealer to dry before testing. Spray water around the glass and check for leaks. Mark any area that leaks. Dry the glass and sealer then apply additional sealer.
10. Connect the rear quarter window glass antenna connector.
 - Clean the component mating faces.
11. Install the rear quarter window glass panel.
 - Secure with the clips.
12. Install the D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Glass, Frames and Mechanisms - Front Door Window Regulator and Motor

Removal and Installation

Removal

• NOTE: Removal steps in this procedure may contain installation details.

1. Refer to: [Front Door Trim Panel](#) (501-05 Interior Trim and Ornammentation, Removal and Installation).
2. Refer to: [Front Door Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

3.

4. *Torque:*

- Front door window regulator and motor retaining bolts 10 Nm
- Front door window regulator and motor retaining nuts 10 Nm
- Door window glass guide channel retaining bolt 10 Nm

Installation

1. To install, reverse the removal procedure.

Glass, Frames and Mechanisms - Rear Door Window Regulator and Motor

Removal and Installation

Special Tool(s)	
 501-114 E54200	Door glass release lever 501-114

Removal

- NOTE: The door glass should be lowered by approximately one third.

1. Remove the rear door trim panel.
For additional information, refer to: Rear Door Trim Panel (501-05, Removal and Installation).

2. Remove the speaker.

- Disconnect the electrical connector.
- Remove the 4 screws.

E46344

3. Carefully remove the outer waist seal.

- Remove the screw.

E46345

4. NOTE: Wedge the glass in this position.

Using the special tool, release the clip and lift the glass to the top of the door frame.

E46346

5. Remove the window motor and regulator assembly.

- Disconnect the electrical connector.
- Remove the 4 bolts.
- Remove the 2 nuts.
- Rotate the assembly 90 degrees clockwise, to remove the upper part of the assembly from the rear side of the aperture first.

E46347

Installation

1. Install the window motor and regulator assembly.
 - Tighten the bolts and nuts to 10 Nm (7 lb.ft).
 - Connect the electrical connector.

2. Secure the glass to the glass regulator.

- Remove the wedge.
- Lower the glass.

3. Install the outer waist seal.

4. Install the speaker

- Tighten the screws.
- Connect the electrical connector.

5. Install the rear door trim panel.

For additional information, refer to: Rear Door Trim Panel (501-05, Removal and Installation).

Glass, Frames and Mechanisms - Front Door Window Control Switch

Removal and Installation

Removal

1. Remove the window control switch.

- Carefully release the switch.
- Disconnect the 3 electrical connectors.

Installation

1. To install, reverse the removal procedure.

Glass, Frames and Mechanisms - Rear Door Window Control Switch

Removal and Installation

Removal

1. Remove the window control switch.
 - Carefully release the front of the switch.
 - Disconnect the electrical connector.

Installation

1. To install, reverse the removal procedure.

Instrument Panel and Console - Instrument Panel

Description and Operation

E51470

Item	Part Number	Description
1	-	Instrument Panel
2	-	Steering column cover
3	-	Cup holders
4	-	Centre console
5	-	Glovebox

COOL BOX

On some vehicles, a cool box is incorporated in the centre console between the two front seats.

E47881

Item	Part Number	Description
1	-	Cubby box lid
2	-	Cubby box tray
3	-	Container
4	-	On/Off switch
5	-	Thermoelectric cooler heatsink
6	-	Fan
7	-	Electrical connector

The cool box is an open topped container with an aluminum liner and an insulating outer layer. A thermoelectric cooler is installed in the front of the container. The top of the container is covered by the cubby box tray and the cubby box lid. An electrical connector on the front of the cool box connects the cool box to the console harness.

Operation of the thermoelectric cooler is controlled by an on/off switch on the top front edge of the container. A permanent battery feed is supplied to the on/off switch from the central junction box (CJB). A light emitting diode (LED) in the on/off switch is illuminated while the cool box is selected on.

The thermoelectric cooler is a solid state heat pump that uses the Peltier Effect to cool the inside of the cool box. The Peltier Effect occurs when a direct current is passed through a circuit of two dissimilar conductors, which are connected together at two junctions; this causes one junction to become cold and one junction to become hot. The potential difference between the two conductors creates an electric field at each junction; when a current is then applied to the circuit the charge flows against the direction of the electric field at one junction, causing it to absorb heat, and with the direction of the electric field at the other junction, causing it to release heat. In thermoelectric coolers, a number of these circuits (known as couples) are connected together, in series, and sandwiched between ceramic plates, then connected to a heatsink and fan. On the cool box, the cold side of the thermoelectric cooler is attached to the aluminum liner and the heatsink and fan are installed on the insulating outer layer.

Peltier Effect Circuit

E47882

Item	Part Number	Description
1	-	Conductor material A
2	-	Hot junction
3	-	Conductor material B
4	-	Battery
5	-	Cold junction

When the on/off switch is selected on, the LED in the switch illuminates and power is supplied to the thermoelectric cooler. The couples in the thermoelectric cooler then transfer heat from the liner of the cool box to the heatsink, and the fan runs to cool the heatsink.

CONTROL DIAGRAM

• **NOTE:** Some variation in the illustrations may occur, but the essential information is always correct.

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the instrument panel driver side reinforcement.
For additional information, refer to: [Instrument Panel Driver Side Reinforcement](#) (501-12 Instrument Panel and Console, Removal and Installation).
4. Remove the passenger side register trim panel.
For additional information, refer to: [Passenger Side Register Trim Panel](#) (412-01 Air Distribution and Filtering, Removal and Installation).
5. Remove the stowage compartment tray.
 - Release the 4 clips.

6. Remove the instrument panel speaker.
For additional information, refer to: [Instrument Panel Speaker](#) (415-03 Speakers, Removal and Installation).
7. Remove both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
8. Remove the sunload sensor.
 - Release the clips.
 - Disconnect the electrical connector.

9. Remove the instrument panel passenger side reinforcement upper retaining screws.

10. Release the passenger air bag module bracket.

- Remove the 2 Torx screws.

11. Disconnect the 3 electrical connectors from the passenger air bag module.

12. NOTE: Avoid dropping the screw inside the instrument panel.

Remove 1 Torx screw and 1 bolt, from the instrument panel upper section speaker aperture.

13. Release the instrument panel wiring harness.

- Release the 2 clips.

E52203

14. With assistance, remove the instrument panel upper section.

- Remove the 5 Torx screws.

E124712

15. NOTE: Do not disassemble further if the component is removed for access only.

Remove the passenger air bag module.

- Remove the 4 nuts.

E47176

E47193

16. Remove the windshield defroster duct.

- Remove the 7 screws.

Installation

1. Install the windshield defroster duct.

- Tighten the screws.

2. Install the passenger air bag module.

- Tighten the nuts to 10 Nm (7 lb.ft).

3. With assistance, install the instrument panel upper section.

- Tighten the screws.
- Attach the wiring harness.

4. Tighten the instrument panel upper section speaker aperture bolt to 10 Nm (7 lb.ft).

5. Secure the passenger air bag module bracket.

- Tighten the Torx screws to 25 Nm (18 lb.ft).

6. Connect the passenger air bag module electrical connectors.

7. Install the instrument panel passenger side reinforcement upper retaining screws.

8. Install the sunload sensor.

- Connect the electrical connector.
- Secure with the clips.

9. Install the A-pillar trim panels.

For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

10. Install the speaker

For additional information, refer to: [Instrument Panel Speaker](#) (415-03 Speakers, Removal and Installation).

11. Install the stowage compartment tray.

- Secure the 4 clips.

12. Install the passenger side register trim panel.

For additional information, refer to: [Passenger Side Register Trim Panel](#) (412-01 Air Distribution and Filtering, Removal and Installation).

13. Install the instrument panel driver side reinforcement.

For additional information, refer to: [Instrument Panel Driver Side Reinforcement](#) (501-12 Instrument Panel and Console, Removal and Installation).

14. Connect the battery ground cable.

For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).

Instrument Panel and Console - Instrument Panel

Removal and Installation

Removal

• NOTE: Some variation in the illustrations may occur, but the essential information is always correct.

1. Remove the engine cover.
For additional information, refer to: [Engine Cover - V6 4.0L Petrol](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) / [Engine Cover - V8 5.0L Petrol](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) / [Engine Cover - 2.7L V6 - TdV6](#) (501-05 Interior Trim and Ornamentation, Removal and Installation) / [Engine Cover - TDV6 3.0L Diesel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Evacuate the air conditioning (A/C) system.
For additional information, refer to: [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) (412-00 Climate Control System - General Information, General Procedures).

3.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

4. Drain the cooling system.
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03A Engine Cooling - TDV6 2.7L Diesel, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03B Engine Cooling - TDV6 3.0L Diesel, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - V6 4.0L Petrol, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03D Engine Cooling - V8 5.0L Petrol, General Procedures).
5. Remove the floor console.
For additional information, refer to: [Floor Console](#) (501-12 Instrument Panel and Console, Removal and Installation).
6. Remove both cowl side trim panels.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

7. Remove the driver side closing trim panel.

- Release the clip.
- Remove the 2 screws.
- Disconnect the electrical connector.

E47923

8. Remove the passenger side closing trim panel.

- Release the clip.
- Remove the 2 screws.
- Disconnect the electrical connector.

E47530

9. Release the door check strap from the A-pillar.

- Remove the 2 Torx bolts.

E51196

12. Remove the door.

- Disconnect the electrical connector.

E83983

13. Remove the front seats.

For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

14. Release the transmission selector lever cable.

- Remove the clip.
- Release the cable.

E44788

15. Remove the transmission selector lever.

- Remove the 4 bolts.

E54438

16. Disconnect the steering column intermediate shaft from the steering column.

- Note the fitted position.
- Remove the special bolt and discard the nut.

E49465

17. Disconnect 2 drain tubes from the heater housing.

E51199

18. Position the heater housing center ducts aside for access.

E51200

19. Remove 2 Torx bolts from the instrument panel center bracket.

E51201

20. Remove the instrument panel center speaker grille.

- Release the 4 clips.

E124403

21. Remove the instrument panel upper section to body bolt.

E51203

22. Remove the plenum chamber panel.

For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).

23. Remove the instrument panel carrier to bulkhead Torx bolt.

E51204

24.  **CAUTION:** Before disconnecting or removing the components, make sure the area around the joint faces and connections are clean. Plug open connections to prevent contamination.

Disconnect 2 heater hoses from the bulkhead.

- Release the 2 clips.

25. Release 2 A/C lines from the body.

- Remove the nut.

26.  **CAUTION:** Immediately cap all refrigerant lines to prevent ingress of dirt and moisture.

Release 2 A/C lines from the bulkhead.

- Remove the bolt.
- Remove and discard the O-ring seals.

27. Remove the 2 adapter panels.

- Remove the 4 nuts.

28. Release the 3 ground cables from the driver side lower A-pillar.

- Remove the 2 nuts.

29. Disconnect the 5 electrical connectors from the driver side lower A-pillar.

30. Release the 3 ground cables from the passenger side lower A-pillar.

- Remove the 2 nuts.

31. Disconnect the 5 electrical connectors from the passenger side lower A-pillar.

32. Disconnect the heater motor electrical connector.

33. Disconnect 2 central junction box (CJB) electrical connectors.

34. Disconnect 2 electrical connectors from the instrument panel center reinforcement.

35. If installed, disconnect the instrument panel center reinforcement fibre optic cables.

- Disconnect the electrical connector.

36. Driver side: Remove the heater housing to bulkhead Torx bolt.

37. Passenger side: Remove the heater housing to bulkhead Torx bolt.

E51214

38. With assistance, remove the instrument panel.

- Remove the 4 Torx bolts.

E51215

Installation

1. With assistance, install the instrument panel.

- Tighten the Torx bolts to 25 Nm (18 lb.ft).

2. Passenger side: Install the heater housing to bulkhead Torx bolt and tighten to 6 Nm (4 lb.ft).

3. Driver side: Install the heater housing to bulkhead Torx bolt and tighten to 6 Nm (4 lb.ft).

4. Connect the instrument panel center reinforcement fibre optic cables.

5. Connect the instrument panel center reinforcement electrical connectors.

6. Connect the CJB electrical connectors.

7. Connect the heater motor electrical connector.

8. Connect the electrical connectors to the passenger side lower A-pillar.

9. Connect the ground cables to the passenger side lower A-pillar.

- Tighten the nuts to 10 Nm (7 lb.ft).

10. Connect the electrical connectors to the driver side lower A-pillar.

11. Connect the ground cables to the driver side lower A-pillar.

- Tighten the nuts to 10 Nm (7 lb.ft).

12. Install the adapter panels.

- Tighten the nuts to 10 Nm (7 lb.ft).

13. Secure the A/C lines to the bulkhead.

- Tighten the nuts to 10 Nm (7 lb.ft).

- Install new O-ring seals.

15. Connect the bulkhead heater hoses.

- Tighten the bolt to 10 Nm (7 lb.ft).

16. Install the instrument panel carrier to bulkhead Torx bolt and tighten to 25 Nm (18 lb.ft).
17. Install the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
18. Install the instrument panel upper section to body bolt and tighten to 10 Nm (7 lb.ft).
19. Install the speaker grille.
 - Secure with the clips.
20. Install the instrument panel center bracket Torx bolts and tighten to 25 Nm (18 lb.ft).
21. Attach the heater housing center ducts.
22. Connect the drain tubes to the heater housing.
23. Connect the steering column intermediate shaft.
 - Install the special bolt and tighten the new nut to 22 Nm (16 lb.ft).
24. Install the transmission selector lever.
 - Tighten the bolts to 10 Nm (7 lb.ft).
25. Attach the transmission selector lever cable.
 - Install the clip.
26. Install the front seats.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
27. With assistance, install the door assembly.
 - Connect the electrical connector.
 - Secure the electrical connector.
 - Secure the grommet.
 - Tighten the bolts to 10 Nm (7 lb.ft).
28. Attach the door check strap to the A pillar.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
29. Install the driver side closing trim panel.
 - Connect the electrical connector.
 - Secure the clip.
 - Tighten the screws.
30. Install the passenger side closing trim panel.
 - Connect the electrical connector.
 - Secure the clip.
 - Tighten the screws.
31. Install the cowl side trim panels.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
32. Install the floor console.
For additional information, refer to: [Floor Console](#) (501-12 Instrument Panel and Console, Removal and Installation).
33. Refill the cooling system.
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03A Engine Cooling - TDV6 2.7L Diesel, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03B Engine Cooling - TDV6 3.0L Diesel, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - V6 4.0L Petrol, General Procedures) / [Cooling System Draining, Filling and Bleeding](#) (303-03D Engine Cooling - V8 5.0L Petrol, General Procedures).

34. Recharge the A/C system.

For additional information, refer to: [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) (412-00 Climate Control System - General Information, General Procedures).

35. Install the engine cover.

For additional information, refer to: [Glove Compartment](#) (501-12 Instrument Panel and Console, Removal and Installation).
4. Detach the door weatherstrip and remove the side trim panel.

E124315

1. Release the trim panel retaining clip.
2. Remove the trim panel.

5. Remove the passenger side footwell duct.

- Remove the clip.

E51923

6. Remove the stowage compartment tray.

- Release the 4 clips.

E51925

7. Remove the passenger side support bracket lower retaining screws.

E124622

8. Remove the instrument panel passenger side reinforcement.

- Remove the 11 Torx screws.
- Disconnect the electrical connector.

E124520

9. NOTE: Do not disassemble further if the component is removed for access only.

Remove the glove compartment lamp.

E51928

10. Remove the glove compartment damper.

- Remove the Torx screw.

E51929

11. NOTE: Note the position of the hinge pin and spring prior to removal.

Remove the stowage compartment lid.

- Remove the 2 hinge pins.
- Release the 2 hinge springs.
- Remove the Torx screw and remove the damper.

E51930

12. Remove the glove and stowage compartment strikers.

- Remove the 4 Torx screws.

Installation

1. Install the glove compartment damper.
 - Tighten the Torx screw.
2. Install the stowage compartment lid.
 - Install the damper and tighten the Torx screw.
 - Attach the hinge springs.
 - Install the hinge springs.
3. Install the glove and stowage compartment strikers.
 - Tighten the screws.
4. Install the glove compartment lamp.
5. Install the instrument panel passenger side reinforcement.
 - Connect the electrical connector.
 - Tighten the Torx screws.
6. Install the passenger side support bracket lower retaining screws.
7. Install the passenger side footwell duct.
 - Install the clip.
8. Install the stowage compartment tray.
 - Secure the clips.
9. Install the side trim panel and attach the door weatherstrip.
10. Install the glove compartment.
For additional information, refer to: [Glove Compartment](#) (501-12 Instrument Panel and Console, Removal and Installation).
11. Install the instrument panel center reinforcement.
For additional information, refer to: [Instrument Panel Center Reinforcement](#) (501-12 Instrument Panel and Console, Removal and Installation).

8	-	Interior Antenna - luggage compartment
9	-	Door Antenna - left-hand-rear
10	-	Door Antenna - left-hand-front
11	-	Interior Antenna - front compartment (passive start only)
12	-	Interior Antenna - front compartment

OVERVIEW

The hinged panels are secured with latches and strikers. A remotely operated central locking system controls the locking

and unlocking of the door and luggage compartment latches.

A radio frequency Smart Key allows the vehicle to be locked and unlocked by pressing the appropriate handset buttons. Two levels of central locking system are available:

- Remote central locking, and an
- optional passive entry.

The passive entry and associated passive start system allows the driver to unlock and start the vehicle without using a vehicle key in a door-lock or ignition switch. The passive entry system is an optional fitment while the passive start system is a standard fitment on all vehicles. The passive start system is combined with the passive anti-theft immobilization system.

For additional information, refer to: [Anti-Theft - Passive](#) (419-01B Anti-Theft - Passive, Description and Operation).

Emergency access to the vehicle is provided by a concealed key barrel located in the front left-hand door handle. The key barrel is concealed by a plastic cover which can be removed by inserting the blade of the emergency key into a slot in the cover. The removable emergency key blade is located in the Smart Key.

Operation of the key barrel unlocks the vehicle but does not disarm the alarm system. Locking and unlocking conditions using the emergency key in the door key barrel are:

- If the alarm is not armed the vehicle can be centrally unlocked.
- If the alarm is armed the door only can be opened and the alarm will be triggered.
- The vehicle cannot be double locked or the alarm system armed using the emergency key.

The vehicle can be centrally locked and unlocked from inside using the interior handle release levers on the front doors only. The driver can select locking options, single point entry or drive away locking for example, from a menu available on the touch screen.

Central Locking – Radio Frequency Remote System

The radio frequency central locking system provides locking and unlocking from inside the vehicle and outside within a 20 meter range. The system is operated using buttons on the Smart Key, which transmits radio frequency signals to the radio frequency receiver.

Additional buttons on the Smart Key provide for the convenience operation of the headlamp delay, panic alarm and tailgate release.

Depending on vehicle market, functions offered by the Smart Key include:

- Double locking the doors from outside the vehicle if the lock button on the Smart Key is pressed twice within 3 seconds.
- Drive-away locking - switched on or off by the customer using the vehicle security settings menu available on the touch screen.
- Single or two stage unlocking - single-stage unlocking unlocks all doors with a single press; two-stage unlocking unlocks the driver's door only with a single press and all other doors with a second press.

Changing the unlocking mode between single stage and two-stage also affects the unlocking mode for passive entry (see below). The single or two-stage unlocking function can be switched on or off, as can remote global open or close for the electric windows using the vehicle security settings menu available on the touch screen.

The fuel filler flap is locked by the global locking function. It is not locked by drive-away locking, or if doors are locked from inside the vehicle using the handles.

Actuated from the front door levers only, the doors can be locked from inside the vehicle by pressing the interior door release levers inwards and unlocked by pulling the levers. The touch-screen incorporates a valet mode feature which inhibits access to the glove box while also limiting the use of the touch-screen.

On leaving the vehicle with passive entry the user must press an external button on the door handle once to centrally lock the vehicle or twice within 3 seconds to double lock. The user has a further 3 seconds to pull the door handle to check the vehicle is locked without the Smart Key proximity function unlocking the door again. Pulling the handle after the 3 seconds has lapsed will unlock the door as normal.

If any aperture is not fully closed when the locking process is initiated, either passively or by the Smart Key transmitter, the locking function will be inhibited and an audible error indication will be given. If the ignition is left on an audible warning will be given if the user exits the vehicle, if the user attempts to lock the vehicle (ignition on), another audible indication will be given, and the locking function will be inhibited.

If the door is closed without locking and no key left in the car the ignition will be switched off immediately. If the ignition is left on at any time without starting the vehicle it will switch off automatically after 60 minutes.

If the door is opened by the mechanical key, the full alarm system will sound until the user enters the vehicle and presses either:

- the start/stop button, or
- Smart Key unlock button.

• **NOTE:** If the KVM (keyless vehicle module) fails to locate the Smart Key, a message 'SMART KEY NOT FOUND REFER TO HANDBOOK' will appear in the instrument cluster message center and the keyless start back-up process will have to be used to mobilize and start the vehicle.

Keyless Start Backup

If the vehicle has been unlocked using the emergency key blade or the Smart Key is not detected by the vehicle, it will be necessary to use the keyless start backup to disarm the alarm and start the engine. The following process must be followed in this event:

- Position the Smart Key against the underside of the fascia, on the outboard side of the steering column, with the buttons facing downwards. This is the location of the IAU (immobilizer antenna unit).
- Holding the Smart Key in position and the brake / clutch pedal depressed, press the start/stop button to start the engine.

Smart Key positioned next to immobilizer antenna unit

E129977

This process bypasses the data exchange between the KVM and the [CJB \(central junction box\)](#); this is an inductive process and will operate if the battery in the Smart Key is discharged. A transponder within the Smart Key is detected by the IAU. The IAU confirms the code output from the transponder and communicates this code confirmation with the [CJB](#) via a LIN (local interconnect network) bus connection. The [CJB](#) then initiates the vehicle start process in the normal manner.

PASSIVE ENTRY SYSTEM

The passive entry system is controlled by the KVM and low frequency antennas in each door handle and one in the rear bumper; antennas are also strategically situated within the vehicle. When inside the vehicle, the antennas ensure the Smart Key is always within the active transmission zone of the antennas no matter where the Smart Key is placed inside the vehicle. For this reason the orientation and positioning of the antennas is critical to the correct functioning of the system.

The vehicle can be unlocked without the use of a key-blade or buttons on the Smart Key.

When an external door handle is grasped and the Smart Key is within one meter (3.3ft.) of the handle; the Smart Key receives a low-frequency signal transmitted from the handle.

The Smart Key responds with a radio frequency transmission of its authorization code. The radio frequency signal is received by the Radio-Frequency receiver and passed to the keyless vehicle module which checks and approves the code as valid.

The KVM then drives the fast latch directly to allow the door to be opened. The keyless vehicle module also transmits an unlock request to the [CJB](#). The [CJB](#) then passes an unlock request to the door modules.

Door-handle antenna operating area

E117707

Locking of the vehicle is performed by pressing one of the buttons located on each exterior door handle, with the Smart Key within a one meter range of the vehicle. When the door handle button is pressed, the KVM transmits a low-frequency signal via the handle antenna to the Smart Key. The Smart Key transmits a radio frequency signal which is verified by the KVM and allows the doors to be locked or double locked and the alarm system to be armed.

To double lock the vehicle, the button on the exterior door handle must be pressed twice within three seconds, with the Smart Key within one meter range of the vehicle. If a door, hood or the tailgate door is ajar when an attempt to lock the vehicle is made, an error tone is emitted and no locking action will occur. For additional information, refer to: [Anti-Theft - Active](#) (419-01A Anti-Theft - Active, Description and Operation).

When unlocking the vehicle using passive entry with single stage unlocking selected and a valid Smart key present, grasping the door handle will centrally unlock the vehicle. When the vehicle is configured for two stage unlocking and the drivers door handle is grasped with a valid Smart Key present only the drivers door will unlock, however if a passenger door handle is grasped with a valid Smart Key present the vehicle will centrally unlock.

- NOTE: Placing the key in a metallic container, a metal briefcase for example, may hinder its operation.
- NOTE: Passive locking will only activate if the key is outside the vehicle. If no key is present, two audible error warnings will sound.

To globally close the vehicle pressing and holding the button on the door handle locks the vehicle, arms the alarm and closes all open windows, not the sunroof. The windows will stop closing when the button is released.

Capacitive Door Handle

The new exterior door operates using the following principle. A capacitive plate is molded internally within the handle, the vehicle exterior body acts as a second capacitive plate; air between the two acts as an insulator. The control electronics within the door handle evaluate the capacitance of the circuit, when a hand interrupts the space between the electrical field is altered and thus the capacitance of the capacitor. This signal is used to trigger the KVM to initiate the unlock process. This signal is calibrated so as not to detect false activations, for example, rain water or soiling.

- NOTE: Extreme water levels can trigger an unlock signal, for example, when washing a locked vehicle with a hose or high powered jet nozzle, providing the key is in the detection zone.

CONTROL DIAGRAM

- NOTE: **A** = Hardwired; **F** = RF transmission; **N** = Medium Speed CAN; **W** = LF transmission; **AH** = Serial Communication Link

Item	Part Number	Description
1	-	Battery
2	-	EJB (engine junction box)
3	-	CJB
4	-	Tailgate release switch
5	-	Door handle, lock/unlock switch and antenna – right-hand-front
6	-	Door latch and fast latch - right-hand-front
7	-	Door handle, lock/unlock switch and antenna – left-hand-front
8	-	Door latch and fast latch - left-hand-front
9	-	Door handle, lock/unlock switch and antenna – right-hand-rear
10	-	Door latch and fast latch - right-hand-rear
11	-	Door handle, lock/unlock switch and antenna – left-hand-rear
12	-	Door latch and fast latch - left-hand-rear
13	-	Radio frequency receiver
14	-	Smart Key
15	-	Antenna
16	-	Antenna
17	-	Antenna
18	-	Antenna
19	-	Antenna
20	-	Antenna
21	-	Antenna
22	-	Keyless Vehicle Module

PRINCIPLES OF OPERATION

Passive Entry - Locking/Unlocking Process

The vehicle unlocking procedure is carried out in the following way.

With the key within one meter of the approached door and the handle grasped a signal is sent to the KVM which responds with the following simultaneous actions:

- The KVM energizes the low frequency antenna in the door handle which transmits a 125 KHz signal to the key.
- On receipt of the low frequency signal the Smart Key transmits a radio frequency signal '433.92 MHz Europe' '315 MHz NAS / ROW' containing its authorization code to the RF (radio frequency) receiver.
- The RF receiver relays the code, via a serial communication line, to the KVM which checks and approves the code as valid.
 - The KVM will only respond if the radio frequency signal produced is from a valid key for the vehicle.
- The KVM transmits the unlock request to the [CJB](#) via the medium-speed [CAN \(controller area network\)](#) bus.
- The [CJB](#) confirms and sends the request, via the medium speed [CAN](#) bus, to the front door modules.
- The front door modules respond with the following simultaneous actions:
 - Drive the motors to unlock the front doors.
 - Transmit the door unlock request via a [LIN \(local interconnect network\)](#) data signal to the rear door modules.
- The rear door modules drive the motors to unlock the rear doors.
- When the door handle reaches 80 percent of its travel the handle clutch switch is closed and grounded sending a hardwired switched signal to the KVM.
- The KVM drives the fast latch release motors in the door latch assemblies releasing the door latches as the approached door handle is pulled through its full travel, the door can be opened.

Handles, Locks, Latches and Entry Systems - Locks, Latches and Entry Systems

Diagnosis and Testing

Principle of Operation

For a detailed description of the locks, latches and entry systems and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Handles, Locks, Latches and Entry Systems](#) (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Incorrectly aligned door(s), hood or tailgate ● Fuel filler door lock actuator ● Hood release handle ● Hood release cables ● Hood latch(es) ● Exterior door handle(s) ● Interior door handle(s) ● Cable(s) ● Tailgate release switch ● Rear window release switch 	<ul style="list-style-type: none"> ● Fuses ● Wiring harness ● Wiring connector(s) ● Door lock actuator(s) ● Remote transmitter (key-fob or smart key) ● Central locking switches ● Controller Area Network (CAN) circuits ● Radio frequency (RF) receiver ● Central junction box (CJB) ● Loose or corroded connections

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

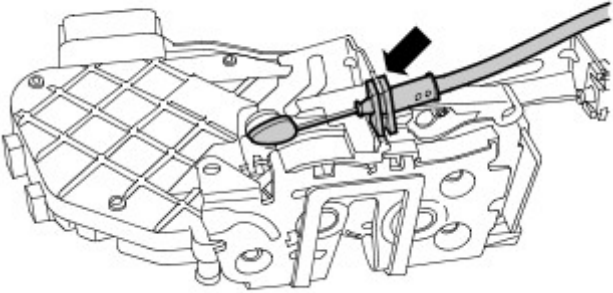

Symptom	Possible causes	Action
Door(s) will not open from outside	<ul style="list-style-type: none"> ● Exterior door handle condition/installation ● Exterior release cable disconnected from exterior door handle or door latch ● Door latch failure 	<ul style="list-style-type: none"> ● Check the exterior door handle condition and installation ● Check the condition and security of the exterior release cable ● Check the operation of the latch GO to Pinpoint Test A.
Door(s) will not open from inside	<ul style="list-style-type: none"> ● Child lock(s) engaged ● Interior door handle condition/installation ● Interior release cable disconnected from interior door handle or door latch ● Door latch failure 	<ul style="list-style-type: none"> ● Check that the child locks are disengaged ● Check the interior door handle condition and installation ● Check the condition and security of the interior release cable ● Check the operation of the latch. GO to Pinpoint Test A.
The message center indicates that the hood, the tailgate or a door is open when it appears to be closed Vehicle indicates a miss-lock when the hood, tailgate and doors appear to be closed	<ul style="list-style-type: none"> ● Incorrect striker alignment/adjustment ● Ajar switch circuit short circuit to ground ● Ajar switch failure 	<ul style="list-style-type: none"> ● Check/adjust the strikers as necessary ● Check for DTCs indicating an ajar switch fault. Refer to the DTC index
Fuel flap does not lock/unlock	<ul style="list-style-type: none"> ● Fuel flap cable detached from body ● Fuel flap actuator detached from mounting bracket ● Fuel flap actuator disconnected ● Fuel flap actuator failure 	<ul style="list-style-type: none"> ● Check the condition and installation of the fuel flap cable ● Check the security of the fuel flap actuator and bracket ● Check the security of the actuator electrical connector ● Check for DTCs indicating a fuel flap actuator fault. Refer to the DTC index

Symptom	Possible causes	Action
Door latching and locking function test	<ul style="list-style-type: none"> ● Door latch ● Cable fault ● Door handle ● Door lock switch ● Wiring harness ● Central junction box (CJB) 	<ul style="list-style-type: none"> • NOTE: Complete the diagnostic steps below to confirm any concern prior replacing the component ● Check for relevant stored DTCs ● Once any DTC related faults have been rectified continue with the diagnostic steps below ● The first component that should be checked when experiencing locking or latching issues are the door latch release cables, then the door latch. These can be tested as a discrete components to confirm if the specific component is working as designed or is demonstrating a fault ● Single door will not open from the outside (but opens from the inside)GO to Pinpoint Test A. ● Single Door Will Not Open From The Inside (but opens from the outside)GO to Pinpoint Test B. ● Door Latching and Locking Function TestGO to Pinpoint Test C. ● No lock / unlock function from key-fobGO to Pinpoint Test E.
Latch mounted door ajar switch test	<ul style="list-style-type: none"> ● Door latch ● Wiring harness ● Instrument cluster 	<ul style="list-style-type: none"> ● Latch Mounted Door Ajar Switch TestGO to Pinpoint Test D.
Vehicle electrical system test	<ul style="list-style-type: none"> ● Fuses ● Wiring harness ● Wiring connector(s) 	<ul style="list-style-type: none"> ● Vehicle Electrical System TestGO to Pinpoint Test E. ● Check for relevant stored DTCs ● Refer to the electrical circuit diagrams to locate the fault ● Carry out continuity test to confirm circuit integrity

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Central Junction Box \(CJB\)](#) (100-00 General Information, Description and Operation) / [Diagnostic Trouble Code \(DTC\) Index - DTC: Driver/Passenger Door Module \(DDM/PDM\)](#) (100-00 General Information, Description and Operation).

Pinpoint Test

PINPOINT TEST A : SINGLE DOOR WILL NOT OPEN FROM THE OUTSIDE (BUT OPENS FROM THE INSIDE)	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK THE EXTERIOR DOOR RELEASE CABLE TO EXTERIOR DOOR HANDLE IS INSTALLED CORRECTLY	
	<ol style="list-style-type: none"> 1 Remove the door trim panel as necessary. REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation) / Rear Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation). 2 Confirm the exterior door release cable is correctly installed to the exterior door handle
	<p>Is the cable correctly installed?</p> <p>Yes GO to A2.</p> <p>No Connect the door release cable correctly. If the cable is damaged, install a new door release cable. Test the system for normal operation.</p>
A2: CHECK THE EXTERIOR DOOR HANDLE RELEASE CONNECTION TO THE DOOR LATCH	
 <p>E45779</p>	<ol style="list-style-type: none"> 1 Confirm the exterior door handle release connection to the door latch is installed correctly

	<p>Is the exterior door handle release cable installed correctly?</p> <p>Yes GO to Pinpoint Test C.</p> <p>No Connect the door release cable correctly. If the cable is damaged, install a new door release cable. Test the system for normal operation.</p>
--	---

PINPOINT TEST B : SINGLE DOOR WILL NOT OPEN FROM THE INSIDE (BUT OPENS FROM THE OUTSIDE)

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

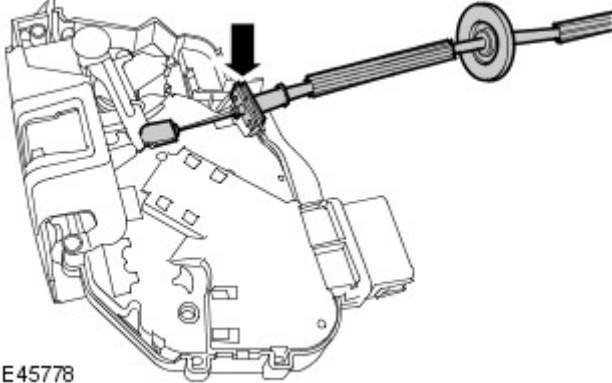

B1: CHECK THE INTERIOR DOOR RELEASE CABLE TO INTERIOR DOOR HANDLE IS INSTALLED CORRECTLY

 <p>E139354</p>	<p>• NOTE: Figure A - Child lock off position shown</p> <p>1 Make sure the child lock is disengaged (rear door only)</p>
---	--

	<p>2 Remove the door trim panel as necessary REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation) / Rear Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).</p> <p>3 Confirm the interior door release cable is correctly installed to the interior door handle</p>
--	--

	<p>Is the cable correctly installed?</p> <p>Yes GO to B2.</p> <p>No Connect the door release cable correctly. If the cable is damaged, install a new door release cable. Test the system for normal operation</p>
--	--

B2: CHECK THE INTERIOR DOOR HANDLE RELEASE CONNECTION TO THE DOOR LATCH

 <p>E45778</p>	<p>1 Confirm the interior door handle release connection to the door latch is installed correctly</p>
---	--

	<p>Is the interior door handle release cable installed correctly?</p> <p>Yes GO to Pinpoint Test C.</p> <p>No Connect the door release cable correctly. If the cable is damaged, install a new door release cable. Test the system for normal operation.</p>
--	---

PINPOINT TEST C : DOOR LATCHING AND LOCKING FUNCTION TEST

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>C1: DOOR LATCH TEST</p> <p>• NOTE: Test as a single component to ensure that the door latch is not replaced unnecessarily, when another component may be at fault</p>	<ol style="list-style-type: none"> 1 Remove door trim from door REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation) / Rear Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation). 2 Remove module plate / closing panel from door 3 Remove latch module from door REFER to: (501-14 Handles, Locks, Latches and Entry Systems) Front Door Latch (Removal and Installation), Rear Door Latch (Removal and Installation). 4 Inspect latch module for any visual damage 5 Disconnect interior release bowden cable at door latch 6 Disconnect exterior release bowden cable at door latch 7 With the latch in hand, connect the electrical connector(s) to connect door latch to door harness <p>• NOTE: THE LATCH IS NOW READY TO TEST</p> <ol style="list-style-type: none"> 8 Close all vehicle doors except the door being investigated
<div style="display: flex; flex-direction: column; align-items: center;"> <div style="display: flex; align-items: center; margin-bottom: 10px;"> <div style="border: 1px solid black; border-radius: 50%; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; margin-right: 10px;">1</div>  </div> <hr/> <div style="display: flex; align-items: center; margin-bottom: 10px;"> <div style="display: flex; align-items: center; margin-right: 10px;"> <div style="border: 1px solid black; border-radius: 50%; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; margin-right: 10px;">2</div> <div style="font-size: 48px; margin-right: 10px;">X</div> </div>  </div> <hr/> <div style="display: flex; align-items: center;"> <div style="display: flex; align-items: center; margin-right: 10px;"> <div style="border: 1px solid black; border-radius: 50%; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; margin-right: 10px;">3</div> <div style="font-size: 48px; margin-right: 10px;">✓</div> </div>  </div> </div> <p>E139349</p>	<p>• NOTE: Figure 1 - Unlatched position shown</p> <p>• NOTE: Figure 2 - First safety latched position shown</p> <p>• NOTE: Figure 3 - Fully latched position shown</p> <p>• NOTE: Test will not work if latch is only in first safety latch position</p> <ol style="list-style-type: none"> 9 Rotate latch claw (using a small screw driver or similar) to the fully latched position (Figure 3)

• NOTE: Unlocked position shown

10 Confirm that the latch interior release lever is in the unlocked position as shown

• NOTE: Locked position shown

11 Press the **lock** button on the key-fob or smart key

Does the latch interior release lever move from the unlocked position to the locked position?

Yes

[GO to C2.](#)

No

If this is a repeat test and the vehicle electrical test section has been completed and confirmed that vehicle is working correctly, then replace the door latch. If replacing latch as part of a warranty claim, please quote reference code **LKINOP** in the technician comments section of the warranty claim

Does the latch interior release lever move from the unlocked position to the locked position?

Yes

[GO to C2.](#)

No

If this is a repeat test and the vehicle electrical test section has been completed and confirmed that vehicle is working correctly, then replace the door latch. If replacing latch as part of a warranty claim, please quote reference code **LKINOP** in the technician comments section of the warranty claim

C2: TEST 1 DOOR LATCH

 <p>E139351</p>	<p>• NOTE: Locked position shown</p> <p>1 With the latch in the locked state (i.e. the latch interior release lever is in the locked position), press the key-fob or smart key unlock button</p>
	<p>Does the latch interior release lever move from the locked position to the unlocked position?</p> <p>Yes GO to C3.</p> <p>No GO to Pinpoint Test E. If pinpoint test E has been completed and confirmed that vehicle is correctly supplying signals to latch, then replace the door latch. If replacing latch as part of a warranty claim, please quote reference code UNLKINOP in the technician comments section of the warranty claim</p>
<p>C3: TEST 2 DOOR LATCH</p>	
 <p>E139352</p>	<p>• NOTE: Fully latched position shown</p> <p>1 With the latch in its unlocked state, push the latch exterior release lever against its return spring, whilst simultaneously applying a light pressure to release the latch claw using a small screw driver or similar</p>
	<p>Does the latch claw release?</p> <p>Yes GO to C4.</p> <p>No Repeat tests C2 and C3 to confirm the fault. GO to C2. If the repeat test has confirmed that the exterior release lever will not release the claw on an unlocked latch replace the door latch. If replacing latch as part of a warranty claim, please quote reference code EXTINOP in the technician comments section of the warranty claim</p>
<p>C4: TEST 3 DOOR LATCH</p>	

E139353

• NOTE: Fully latched position shown

- 1 Using a small screw driver or similar, rotate latch claw to the second fully latched position

E139354

• NOTE: Figure A - Child lock off position shown

- 2 If testing a rear door latch, ensure that the child lock is turned to the off position

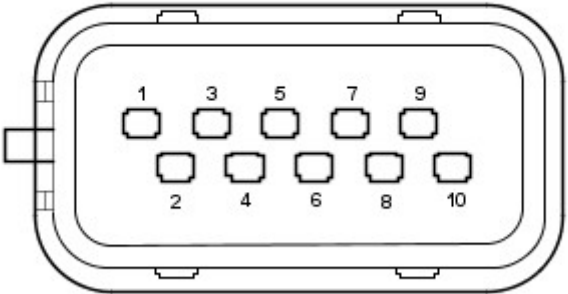

E139350

- 3 Confirm that the latch interior release lever is in the unlocked position as shown

 <p>E139355</p>	<p>4] Whilst the latch is still in its unlocked state, push the latch interior release lever against its return spring, whilst simultaneously applying a light pressure to release the latch claw using a small screw driver or similar</p>
	<p>Does the latch claw release</p> <p>Yes Latch has passed all tests to confirm its correct function. DO NOT REPLACE LATCH as part of any attempts to resolve any locking functionality issues. GO to Pinpoint Test E. To confirm vehicle electrical signal is received by the latch</p> <p>No Repeat this test GO to C4. If repeat test has confirmed that the interior release lever will not release the claw when the latch is in the unlocked state, then replace the latch. If replacing latch as part of a warranty claim, please quote reference code INTINOP in the technician comments section of the warranty claim</p>

PINPOINT TEST D : LATCH MOUNTED DOOR AJAR SWITCH TEST	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>D1: TEST 4 DOOR LATCH</p>	
<p>• NOTE: If a customer is complaining of issues relating to a door ajar signal e.g. door latch won't lock, or alarm system triggering (indicated via DTC's), there may be several components that generate the fault, including</p>	
<ul style="list-style-type: none"> ● Door Latch ajar switch ● Alarm control module ● Central junction box ● Body wiring harness / connectors ● Door wiring harness / connectors 	
<p>• NOTE: To investigate the functioning of the door ajar switch contained within the door latch, to prove or eliminate the door latch mounted door ajar switch as the root cause, follow the process below. This will prevent the unnecessary replacement of a correctly functioning door latch</p>	
	<p>1] Remove door trim from door REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation) / Rear Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).</p> <p>2] Remove module plate / closing panel from door</p> <p>3] Remove latch module from door REFER to: (501-14 Handles, Locks, Latches and Entry Systems) Front Door Latch (Removal and Installation), Rear Door Latch (Removal and Installation).</p> <p>4] Inspect latch module for any visual damage</p>

<p>1</p> 	<ul style="list-style-type: none"> • NOTE: Figure 1 - Unlatched position shown • NOTE: Figure 2 - First safety latched position shown • NOTE: Figure 3 - Fully latched position shown • NOTE: Test will not work if latch is only in first safety latch position <p>5 Using a small screw driver or similar, rotate latch claw to the second fully latched position (figure 3)</p>
<p>2</p> 	
<p>3</p>  <p>E139349</p>	
 <p>E139356</p>	<p>6 Carry out continuity test between terminals 1 and 4 (left side) or 8 and 4 (right side) with claw closed</p>
	<p>Does the continuity test pass?</p> <p>Yes The latch ajar switch is working correctly. Do not replace latch. Investigate for fault elsewhere in vehicle system</p> <p>No Release latch claw and repeat test from step 5 to confirm result. If this is a repeat test and you are sure that the ajar switch does not provide continuity when fully latched. Replace the latch. If replacing latch as part of a warranty claim, please quote reference code AJARINOP in the technician comments section of the warranty claim</p>

PINPOINT TEST E : VEHICLE ELECTRICAL SYSTEM TEST

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
E1: TEST 5 LOCK COMMAND	

 <p>E139357</p>	<p>1 Disconnect electrical connector from latch</p>
	<p>2 Close all vehicle doors apart from door being investigated, please note which door, left side or right side is under investigation</p> <p>3 Monitor the circuit for momentary power when locking the vehicle via the key-fob or smart key between terminals 1 and 10 left side or 8 and 10 right side</p>
	<p>Is there momentary power (for approx 8 seconds) between terminals 1 and 10 left side or 8 and 10 right side when locking the vehicle via the key-fob or smart key</p> <p>Yes The vehicle electrical system is locking correctly, providing the signal to the latch. GO to E2.</p> <p>No Refer to the electrical circuit diagrams and investigate why vehicle electrical system is not providing signals to the latch. Using the manufacturer approved diagnostic system check for logged DTCs to localize the fault</p>
<p>E2: TEST 6 UNLOCK COMMAND</p>	
	<p>1 Monitor the circuit for momentary power when unlocking the vehicle via the key-fob or smart key between terminals 1 and 9 left side or 8 and 9 right side</p>
	<p>Is there momentary power (for approx 8 seconds) between terminals 1 and 9 left side and 8 and 9 right side when unlocking the vehicle via the key-fob or smart key</p> <p>Yes The vehicle electrical system is unlocking correctly, providing the signal to the latch. Plug electrical connector back in to latch. Rebuild vehicle and check for correct operation</p> <p>No Refer to the electrical circuit diagrams and investigate why vehicle electrical system is not providing signals to the latch. Using the manufacturer approved diagnostic system check for logged DTCs to localize the fault</p>

Handles, Locks, Latches and Entry Systems - Tailgate Striker Adjustment

General Procedures

1. Check for an equal gap and alignment to the adjacent panels. If incorrect, follow the adjust procedure below.

E46273

2. Remove the tailgate striker trim panel.
3. Loosen the 2 tailgate striker bolts.

E46274

4. Close the tailgate and check for an equal gap and alignment to the adjacent panels.
5. Open the tailgate and tighten the tailgate striker bolts to 25 Nm (18 lb.ft).
6. Install the tailgate striker trim panel.

Handles, Locks, Latches and Entry Systems - Liftgate Striker Adjustment

General Procedures

1. Check for an equal gap and alignment to the adjacent panels. If incorrect, follow the adjust procedure below.

E45607

2. Remove the liftgate striker trim panel.

E45600

3. Loosen the 2 liftgate striker bolts.
4. Close the liftgate and check for an equal gap and alignment to the adjacent panels.
5. Open the liftgate and tighten the liftgate striker bolts to 25 Nm (18 lb.ft).
6. Install the liftgate striker trim panel.

Handles, Locks, Latches and Entry Systems - Ignition Lock Cylinder

Removal and Installation

Removal

• NOTE: This procedure is for removal and installation of the ignition lock cylinder. The ignition lock and door lock cylinders are replaced in sets.

1. Fully extend the steering column for access.
2. Remove the steering column upper shroud.
 - Release the 4 clips.

3. Remove the steering column lower shroud.
 - Remove the 3 Torx screws.
 - Release the steering column adjustment lever.

4. Remove the passive coil.
 - Disconnect the electrical connector.
 - Release the 2 clips.

5. Remove the ignition lock cylinder.
 - Turn the ignition key to position 1.
 - Insert a pin, not exceeding 2 mm diameter, through the access hole in the ignition lock cylinder housing to depress the plunger, and release the ignition lock cylinder.

Installation

1. Install the ignition lock cylinder.

- Turn the ignition key to position 1.
- Locate into guides and depress the plunger.

2. Install the passive coil.

- Secure the clips.
- Connect the electrical connector.

3. Install the steering column shrouds.

- Tighten the Torx screws.
- Secure the clips.
- Secure the adjustment lever.

Handles, Locks, Latches and Entry Systems - Hood Latch Release Handle

Removal and Installation

Removal

1. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Disconnect the hood release cable from the connecting box.

- Open the connecting box cover.

3. Remove the hood release lever housing.

- Remove the bolt.
- Disconnect the hood release cable.

Installation

1. Install the hood release lever housing.
 - Connect the hood release cable.
 - Tighten the bolt to 5 Nm (3.7 lb.ft).
2. Attach the hood release cable to the connecting box.
 - Close the connecting box cover.
3. Install the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Handles, Locks, Latches and Entry Systems - Front Door Latch

Removal and Installation

Removal

1. Remove the window motor and regulator assembly.
For additional information, refer to: Front Door Window Regulator and Motor (501-11, Removal and Installation).

2.  **CAUTION:** Release the exterior door handle and screw cover clips from inside the door.

Remove the front door exterior handle.

For additional information, refer to: [Exterior Front Door Handle](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

3. Release the remote control cable.
 - Release the grommet.

4. Release the door exterior handle mechanism.
 - Remove the adhesive tape from the access hole.
 - Remove the Torx screw.
 - Remove the locking pin.

5. Remove the front door latch assembly.
 - Disconnect the electrical connector.
 - Remove the 3 Torx screws.

E45777

6. NOTE: Do not disassemble further if the component is removed for access only.

Remove the door latch remote control cable.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

E45778

7. Release the exterior door handle mechanism cable from the door latch.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

E45779

8. LH side: Release the door lock cylinder cable from the door latch.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

E45780

Installation

1. LH side: Connect the door lock cylinder cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

2. Connect the door exterior handle mechanism cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

3. Install the remote control cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

4. Set the exterior handle mechanism.

- Rotate the lever.
- Engage the retaining tang.

5. Install the front door latch assembly.

- Tighten the Torx screws to 10 Nm (7 lb.ft).
- Connect the electrical connector.

6. Install the door exterior handle mechanism.

- Position the mechanism to the door.
- Fit the locking pin.
- Fit and tighten the Torx screw.

7. LH side: Position the control cables into the retainers.

8. Position the remote control cable to the door.

- Install the grommet.

9. Install the front door exterior handle.

For additional information, refer to: [Exterior Front Door Handle](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

10. Install the window motor and regulator assembly.

For additional information, refer to: Front Door Window Regulator and Motor (501-11, Removal and Installation).

Handles, Locks, Latches and Entry Systems - Rear Door Latch

Removal and Installation

Removal

1. Remove the rear door window motor and regulator assembly.
For additional information, refer to: [Rear Door Window Regulator and Motor](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

2.  **CAUTION:** Release the exterior door handle and screw cover clips from inside the door.

Remove the rear door exterior handle.

For additional information, refer to: [Exterior Rear Door Handle](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

3. Release the remote control cable.

- Release the grommet.

4. Release the door exterior handle mechanism.

- Remove the 2 Torx screws.
- Remove the locking pin.

5. Remove the rear door latch assembly.

- Disconnect the electrical connector.
- Remove the 3 Torx screws.

6. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the door latch remote control cable.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

7. Release the exterior door handle mechanism cable from the door latch.

- Release the cable from the abutment bracket.
- Remove the cable from the lever.

E45779

Installation

1. Connect the door exterior handle mechanism cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

2. Install the remote control cable to the door latch.

- Connect the cable to the lever.
- Secure the cable to the abutment bracket.

3. Set the exterior handle mechanism.

- Rotate the lever.
- Engage the retaining tang.

E45781

4. Install the rear door latch assembly.

- Tighten the Torx screws to 10 Nm (7 lb.ft).
- Connect the electrical connector.

5. Install the door exterior handle mechanism.

- Position the mechanism to the door.
- Fit the locking pin.
- Install and tighten the Torx screws.

6. Position the remote control cable to the door.

- Install the grommet.

7. Install the rear door exterior handle.

For additional information, refer to: [Exterior Rear Door Handle](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

8. Install the rear door window motor and regulator assembly.
For additional information, refer to: [Rear Door Window Regulator and Motor](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).

Handles, Locks, Latches and Entry Systems - Liftgate Latch

Removal and Installation

Removal

1. Remove the tailgate trim panel.
For additional information, refer to: [Tailgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

2. Remove the tailgate water shedder.

3. Release the liftgate latch.

- Remove the 3 Torx screws.

E45598

4. Remove the liftgate latch.

- Disconnect the electrical connector.
- Release the liftgate latch to actuator cable.

E45599

Installation

1. Install the liftgate latch.

- Attach the liftgate latch to actuator cable.
- Connect the electrical connector.
- Tighten the Torx screws to 10 Nm (7 lb.ft).

2. Install the tailgate water shedder.

3. Install the tailgate trim panel.

For additional information, refer to: [Tailgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

4. Adjust the liftgate striker.

For additional information, refer to: [Liftgate Striker Adjustment](#) (501-14 Handles, Locks, Latches and Entry Systems, General Procedures).

Handles, Locks, Latches and Entry Systems - Door Lock Cylinder

Removal and Installation

Removal

1. Remove the front door lock cylinder cover.

- Use the ignition key.

2. NOTE: The Torx screw remains in the door lock housing.

Remove the front door lock cylinder.

- Open the door.
- Remove the access plug.
- Loosen the Torx screw to release the lock.

Installation

1. To install, reverse the removal procedure.

Handles, Locks, Latches and Entry Systems - Tailgate Latch

Removal and Installation

Removal

1. Remove the tailgate speaker assembly.
For additional information, refer to: [Tailgate Speaker](#) (415-03 Speakers, Removal and Installation).

2. Remove the tailgate latch assembly.

- Remove the 3 Torx bolts.
- Disconnect the electrical connector.
- Remove the latch.
- Remove the latch plate.
- Remove the latch actuator assembly.

3. NOTE: Do not disassemble further if the component is removed for access only.

Remove the latch actuator.

- Remove the 2 screws.

Installation

1. Install the latch actuator.

- Tighten the screws.

2. Install the tailgate latch assembly.

- Install the latch actuator assembly.
- Install the latch plate.
- Install the latch.
- Tighten the Torx screws to 25 Nm (18 lb.ft).
- Connect the electrical connector.

3. Install the tailgate speaker assembly.

For additional information, refer to: [Tailgate Speaker](#) (415-03 Speakers, Removal and Installation).

4. Adjust both the tailgate strikers.

For additional information, refer to: [Tailgate Striker Adjustment](#) (501-14 Handles, Locks, Latches and Entry Systems, General Procedures).

Handles, Locks, Latches and Entry Systems - Exterior Front Door Handle

Removal and Installation

Removal

- NOTE: This procedure details removal and installation of both the LH and RH exterior front door handles.
- NOTE: If the exterior handle is to be removed in conjunction with additional door internal items, then it is recommended that the exterior handle and screw cover be released from the inside of the door, after removal of the door trim pad, regulator and motor.

1. NOTE: Vehicles with passive entry system.

Remove the window regulator assembly.
For additional information, refer to: [Front Door Window Regulator and Motor \(501-11, Removal and Installation\)](#).

2. Disconnect the electrical connector.

3. NOTE: All vehicles.

LH side: Remove the private lock.
For additional information, refer to: [Door Lock Cylinder \(501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation\)](#).

4. NOTE: Removal of the screw cover may break the retaining clips.

- NOTE: If the screw cover is to be removed in conjunction with additional door internal items, then it is recommended that the screw cover be released from the inside of the door, after removal of the door trim pad, regulator and motor.

RH side: Remove the screw cover.

- Release the 2 clips.

E66202

5. To remove the exterior front door handle, after removal of the door trim pad and regulator.

- Using a nylon mallet, carefully release the clip.
- Remove the 2 gaskets.

6. NOTE: Vehicles without passive entry system.

To remove the exterior front door handle, without removal of the door trim pad.

- Slide the handle firmly rearward, then pivot the handle away from the door to remove it.
- Remove the 2 gaskets.

E55256

Installation

1. NOTE: Use a length of cord to hold the lock lever against spring pressure while engaging the outside handle.

To install, reverse the removal procedure.

E55272

Handles, Locks, Latches and Entry Systems - Exterior Rear Door Handle

Removal and Installation

Removal

• NOTE: If the exterior handle is to be removed in conjunction with additional door internal items, then it is recommended that the exterior handle and screw cover be released from the inside of the door, after removal of the door trim pad, regulator and motor.

1. NOTE: Removal of the screw cover may break the retaining clips.

• NOTE: If the screw cover is to be removed in conjunction with additional door internal items, then it is recommended that the screw cover be released from the inside of the door, after removal of the door trim pad, regulator and motor.

Remove the screw cover.

- Release the 2 clips.

2. To remove the exterior rear door handle, without removal of the door trim pad.

- Slide the handle firmly rearward, then pivot the handle away from the door to remove it.
- Remove the 2 gaskets.

3. To remove the exterior rear door handle, after removal of the door trim pad and regulator.

- Using a nylon mallet, carefully release the clip.
- Remove the 2 gaskets.

Installation

1. NOTE: Use a length of cord to hold the lock lever against spring pressure while engaging the outside handle.

To install, reverse the removal procedure.

E55272

Handles, Locks, Latches and Entry Systems - Liftgate Latch Actuator

Removal and Installation

Removal

1. Remove the tailgate trim panel.
For additional information, refer to: [Tailgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

2. Release the liftgate actuator.

- Loosen the 2 bolts.
- Disconnect the electrical connector.

3. Remove the actuator cover.

- Remove the 2 Torx screws.

4. Remove the liftgate actuator.

- Release the liftgate latch to actuator cable.

Installation

1.  CAUTION: It is possible to incorrectly install the cable, ensure the ferrule and clip are fully engaged.

Attach the actuator to the liftgate latch cable.

2. Install the cover.

- Tighten the Torx screws.

3. Install the liftgate actuator.

- Tighten the bolts to 10 Nm (7 lb.ft).
- Connect and secure the electrical connector.

4. Install the tailgate trim panel.

For additional information, refer to: [Tailgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Wipers and Washers -

Capacities

Item	Description
Windscreen washer reservoir	6.3 litres (11.0 pints) (6.6 US quarts)

General Specifications

Item	Description
Front wiper motor make	Trico
Rear wiper motor make	Mitsuba
Windscreen washer pump make	MES
Power washer pump make	Textron

Torque Specifications

Description	Nm	lb-ft
Front wiper arms to linkage nut	18	13
Rear window wiper motor nuts	10	7
Rear wiper arm to motor nut	18	13
Wiper linkage to front wiper motor:		
Nut	25	18
Bolts	10	7
Wiper linkage to body bolts	6	4
Washer reservoir and pump assembly to body bolts	6	4
Washer reservoir and pump assembly to bumper armature bolts	22	16

Wipers and Washers - Wipers and Washers

Description and Operation

Wiper and Washer System Component Location

E43318

Item	Part Number	Description
1	-	Front washer jets
2	-	Wiper control switch
3	-	Rain/Light sensor
4	-	Rear wiper linkage and motor assembly

5	-	Rear wiper relay (located in the Central Junction Box (CJB))
6	-	Wiper relay 1 (located in the Battery Junction Box (BJB))
7	-	Wiper relay 2 (located in the BJB)
8	-	Front wiper linkage and motor assembly, including wiper arms and blades
9	-	Washer reservoir and pumps
10	-	Headlamp washer jets

GENERAL

The wiper and washer system is controlled by the Central Junction Box (CJB) on receipt of requests made by the driver or the rain/light sensor unit (if fitted). All wiper functions for the front and rear wipers are controlled from a multi-function wash/wipe switch assembly located on the right hand side of the steering column.

The wiper and washer system comprises:

- Front and rear wiper motors
- A front wiper linkage
- Two front and one rear wiper arms and blades
- Two front washer jets and one rear washer jet
- A washer reservoir and pump
- A wash/wipe control column switch.

The following optional items can be added to enhance the wiper system:

- A rain/light sensor for automatic wiper control
- Heated front washer jets
- Headlamp washers
- Low fluid level sensor (fitted to vehicles with headlamp washers).

The wiper system can be optionally equipped with a rain/light sensor. The sensor, located below the interior rear view mirror, detects rain drops on the windscreen and automatically operates the wipers in the intermittent mode. The column stalk switch must be in the intermittent position for rain/light sensor controlled wiper operation.

The front wiper system has five stages of operation and six intermittent delay periods.

The five wiper stages are as follows:

- Flick wipe
- Off
- Intermittent
- Normal (slow) speed continuous
- Fast speed continuous

Speed Control Intermittent Mode

The intermittent, slow and fast speeds are affected by road speed, providing the speed control intermittent wipe mode has been configured. The intermittent wiper delay periods change with the road speed, with the delay decreasing as the road speed increases.

Speed Dependant Wipe Mode

When the speed dependant wipe mode has been configured, the normal continuous operation changes to intermittent operation when the vehicle is stationary. The fast speed operation changes to normal operation when the vehicle is stationary.

The wiper and washers operate with the ignition switch in positions I or II. Wiper functions are suspended during engine cranking to reduce battery power consumption under high load conditions.

Diagnostic information for the wiper system is available and can be retrieved using T4.

CENTRAL JUNCTION BOX

The CJB is an integrated unit located behind the fascia on the passenger side of the bulkhead. The CJB contains fuses, relays and a number of microprocessors, which control the power supply and functionality of the wash/wipe system and other vehicle systems.

Inputs and Outputs

The CJB receives and sends the following wiper and washer system inputs and outputs:

Inputs	Outputs
Intermittent front wipe switch	Front wiper motor (normal)
Rear wipe park switch	Front wiper motor (fast)
Rain/light sensor, if fitted	Washer motors
Normal (slow) speed continuous switch	Heated washer jets (if fitted)
Fast speed continuous switch	Rear wiper motor relay
Flick wipe switch	Headlamp power wash motor
Front screen wash switch	-
Rear screen wash switch	-
Ignition switch	-
Lighting switch	-
Low level reservoir status, via CAN	-
Vehicle speed, via CAN	-
Front wiper motor park switch	-

Inputs	Outputs
Reverse switch, via CAN	-
Tail gate open switch	-
Ambient temperature, via CAN	-

FRONT WIPER ASSEMBLY

The front wiper assembly comprises:

- Wiper motor and linkage assembly
- Wiper arms and blades
- Washer reservoir and pumps.

Wiper Linkage

E43319

Item	Part Number	Description
1	-	RH pivot housing assembly
2	-	Link rod
3	-	Bracket
4	-	Bush
5	-	Motor assembly
6	-	Bush
7	-	Washer
8	-	Bolt
9	-	Link rod

The wiper linkage and motor assembly are available as separate components. The wiper linkage and motor differs between LH and RH drive models.

The assembly is located below the plenum grill in the engine compartment and is secured with bushes, sleeves and bolts. The rubber bushes isolate the assembly from the body mountings.

The linkage assembly comprises a main tube, with a pivot housing at each end and the motor is attached directly to the tube. A motor crank is positively attached to the motor output shaft. Two link rods then attach to the motor crank which transfers power directly to each pivot crank.

The motor crank converts rotary motion from the motor output shaft into linear movement of the link rods. The cranks, connected between the each link rod and pivot housing, convert the linear motion to reciprocating motion at the pivot housing. This reciprocating motion is passed to the wiper arms and blades causing the blades to wipe an arc across the windscreen.

Wiper Motor

The motor assembly comprises a dc motor, which drives a gear wheel via a worm drive attached to the motor spindle. The gear wheel has a central spigot, which provides the attachment point for the motor crank.

The motor is connected electrically by a five-pin connector. The connector supplies two battery voltage feeds to the motor

(when switched). The motor has three sets of brushes with one brush connected to ground. One feed is direct to the motor brush opposite the ground brush and operates the motor at normal (slow) speed. The second feed is connected to a motor brush, which is offset from the ground brush and operates the motor at fast speed. With the power supplied through this brush, the current flows through fewer coil windings. This results in a lower resistance to the current flow to the ground brush and gives a higher motor rotational speed.

Output control of the wiper motor is through a double contact relay. The relay is located in the Battery Junction Box (BJB).

The motor has an internal track switch, which signals the CJB when the wipers have reached the park position. The park signal is closed circuit when the wipers are in the park position. When the wipers are switched off and the CJB receives the park position signal from the motor, the CJB shorts the motor via a relay bridge circuit. This short circuit has the effect of applying a brake to the motor, giving precise positioning of the wiper blades in the park position.

Wiper Arms

E43321

Item	Part Number	Description
1	-	Spindle caps
2	-	RH Wiper arm
3	-	Wiper blades
4	-	LH wiper arm
5	-	Self locking nuts

The wiper arms are positively located on tapered splines on the wiper linkage spindles.

The wiper arm has a pivot point, midway between the spindle attachment and the blade. A tension spring is connected to the wiper arm on each side of the pivot point and applies pressure to maintain the wiper blade in contact with the windscreen.

The wiper blades are attached to the wiper arms with clips that allow the blade to pivot. The wiper blades comprise of a sprung steel curved backbone which applies the pressure evenly to the windscreen, to which is applied the wiping lip to the bottom surface and an aerofoil section to the top which presses the blades onto the windscreen at high vehicle speeds.

REAR WIPER ASSEMBLY

The rear wiper assembly comprises:

- Wiper motor
- Rear washer pump
- Rear washer jet
- Wiper arm and blade.

Wiper Motor

E43322

Item	Part Number	Description
1	-	Motor assembly
2	-	Harness connector
3	-	Washers
4	-	Pivot housing connection
5	-	Wiper arm
6	-	Spindle cap
7	-	Self locking nut

The rear wiper and washers operation is controlled by the CJB, via the rear wiper relay, which is located in the LH rear 'D' post.

The rear wiper motor is located in the upper tail gate, behind a trim panel. The assembly is secured to the body of the upper tail gate with three M6 nuts. Bushes isolate the motor assembly from the body, which help reduce the transmission of motor operating noise to the tail gate.

The motor is located on a worm drive gearbox mechanism, which converts the rotary motion of the motor output spindle into the required arc for the rear wiper blade.

The feed hose, for the separate rear washer jet, is located at the rear of the motor spindle. The hose is connected to a 90 degrees connector allowing the washer fluid to flow through the centre of the motor spindle. A Non-Return Valve (NRV) is located in the hose, near the motor, and prevents fluid returning to the reservoir.

The motor spindle is a conventional design with a taper spline location for the wiper arm and a threaded shank to secure the arm to the spindle.

Wiper Arm

The wiper arm is similar in design to the front wiper arms. The arm attachment hole has tapered splines, which mate with the splines on the wiper spindle. The arm is secured to the wiper motor spindle with a nut. The wiper arm has a pivot point, close to the spindle attachment. A tension spring is connected to the wiper arm on each side of the pivot point and applies pressure to maintain the wiper blade in contact with the windscreen.

The wiper blade is attached to the wiper arm with a clip that allows the blade to pivot. The blade comprises a number of levers and yokes to, which the rubber wiper blade is attached. The levers and yokes ensure that the pressure applied by the arm tension spring is distributed evenly along the full length of the blade and also allow the blade to adjust to the curvature and contour of the windscreen.

A plastic cap located on the arm pivot point, covers the spindle attachment nut.

WASHER RESERVOIR AND PUMPS

E43323

Item	Part Number	Description
1	-	Filler tube and cap
2	-	Front and rear washer pump
3	-	Headlamp washer pump (if fitted)
4	-	Fluid level sensor
5	-	Reservoir

The windscreen washer system comprises:

Vehicles without headlamp washers:

- A reservoir
- A washer pump
- Two washer jets
- Hoses

Vehicles with headlamp washers:

- A reservoir
- Two washer pumps
- A level sensor
- Four washer jets - two windshield and two headlamp washers
- Hoses

The plastic, moulded reservoir is located in the LH wheel arch, behind the liner and has a capacity of 11.08 pints (6.3 litres). It is secured to the body and front panel with bolts. A boss on the reservoir locates in a slot in the front panel and provides additional support.

The reservoir has two recessed holes on its rear face, which provide location for the combined front pump, rear pump and headlamp washer pumps. The pumps are push fitted into grommets, which seal the pumps in their locations. A hole in the top of the reservoir allows for the fitment of a flexible filler tube. The front and rear wash hoses are integrated into the harness and so follow its routing. The headlamp washer hose comes front the bumper around the bottle to attach to the headlamp washer pump.

A hole with a grommet in the side of the reservoir provides the location for the fluid level sensor.

The low level sensor has a float, with integral magnet. The sensor has a contact, which is normally closed when the reservoir is full. When the fluid level reduces to approximately 1 litre, the magnetic float pivots down, which causes the switch contact to open. This open circuit is sensed by the instrument cluster, which displays the low fluid level message and transmits the switch status on the CAN bus.

The sensor cannot determine the precise amount of fluid in the reservoir, but can detect when the fluid level has fallen below a certain point. When the fluid level is low, the magnetic float closes the sensor contacts, completing a circuit through the sensor. This completed circuit is sensed by the instrument cluster, to which the sensor is directly connected.

The fluid level sensor is monitored continuously by the instrument cluster. The instrument cluster checks the fluid level sensor when the ignition is switched on to give the driver an early warning of the low fluid level. The instrument cluster then monitors the sensor value over a 25 second period when the ignition is on to prevent invalid messages due to fluid 'sloshing' in the reservoir.

When a low fluid level signal is transmitted to the high line instrument cluster, a 'WASHER FLUID LOW' message is displayed in the instrument cluster's message centre. On the low line instrument cluster a low fluid level indicator is illuminated. The first display of this message, or illumination of the indicator, is accompanied by a 'chime' sound to alert the driver to the low fluid level.

HEADLAMP WASHERS

E43324

Item	Part Number	Description
1	-	Headlamp washer jets
2	-	Reservoir
3	-	Washer fluid tube

The headlamp washer assembly is located below each headlamp.

The headlamp washer operation is controlled by the CJB via a headlamp washer relay. The relay is located in the Battery Junction Box (BJB).

Head Lamp Wash Only (No Wipe Function)

The headlamp washers are only active when the headlamps and ignition are switched on. If the washer reservoir fluid level becomes low, the instrument cluster sends a message, via the CAN bus, to the CJB, which suspends headlamp wash operation to preserve washer fluid in the reservoir.

With the ignition and lights on, headlamp wash is activated on the first operation of the wiper column control switch in the wash/wipe position. The CJB then suspends headlamp wash activation for the next 10 minutes and four operations of the wash/wipe switch.

The CJB monitors the operation of the wash/wipe switch and maintains a counter to restrict headlamp washer operation to every fourth operation of the wash/wipe switch in conjunction with a 10 minute timer. The timer prevents a second operation of the headlamp washers within a 10 minute period. Should the washer switch be activated for more than four programmed wipe requests during the 10 minute period, the headlamp washer will remain disabled. Only the next consecutive programmed wipe request, after the 10 timer has expired, will the headlamp washers be enabled. The counter and timer are reset when the ignition is switched off.

When headlamp wash is active, the CJB energises the washer pump twice per cycle. The headlamp washer pump is powered for a 0.5 second period.

RAIN/LIGHT SENSOR

E43325

Item	Part Number	Description
1	-	Adhesive pad
2	-	Optical element
3	-	Sub-assembly light guide
4	-	Heater
5	-	Housing
6	-	Locking device
7	-	Printed Circuit Board (PCB)
8	-	Screws
9	-	Cover
10	-	Contact pins

The rain/light sensor is located at the upper edge of the windscreen, behind the interior rear view mirror. The sensor is mounted on an optical unit, which is heat bonded to the inner surface of the windscreen during manufacture. If damage occurs to the optical unit or the windscreen, then a new windscreen will be required and installation can only be performed by an authorised Land Rover dealer.

The rain sensor must be re-initialised to a new windscreen, if fitted, or if transferred to another vehicle, the new rain sensor assembly will automatically re-initialise when powered-up for the first time. In order for this to occur successfully it must be fitted and connected to the optical filaments (bonded to the screen assembly).

The rain/light sensor unit attaches to the optical unit via two clips, which latch onto formed tags on the optical unit. Positive retention is achieved by two retaining clips, which force the clips onto the tags. The retaining clips must be withdrawn to facilitate sensor removal.

The sensor provides information to the CJB for the optimum wiper operation for the prevailing conditions to maintain the screen in a clear condition at all times. The rain/light sensor is an optical unit, which operates on an infrared waveband. The sensor uses the principle of the laws of reflection on interfacing surfaces between materials with differing refraction properties.

Rain Sensor Functionality

E43326

Item	Part Number	Description
A	-	Clean and dry windscreen
B	-	Wet and dirty windscreen
1	-	Windscreen - Outside surface
2	-	Optical unit
3	-	Transmitter diodes (100% light transmitted)
4	-	Rain/Light sensor unit
5	-	Receiver diodes (100% received)
6	-	Water droplets/film
7	-	Receiver diodes (less than 100% light received)
8	-	Lost light

The rain/light sensor contains transmitter and receiver diodes, which transmit and receive infrared light, which is directed onto the windscreen via an optical unit. The light is directed at an angle so that the light is reflected 100% on the outside surface of the screen and is transmitted back into the optical unit. To receive a 100% reflection, the outer screen surface must be clean and dry.

The rain/light sensor is active when the wiper column control switch is in the intermittent position. The rain/light sensor suspends wiper operation when the area of the windscreen for the rain/light sensor is dry and operates the wipers continuously when the windscreen is subject to heavy rainfall.

The sensitivity of the rain/light sensor can be adjusted by the driver using the intermittent rotary switch on the wiper stalk. Six sensitivity levels of the sensor can be selected, which has the effect of increasing or decreasing the wiper delay period, allow driver adjustment for the prevailing conditions. When several continuous wipe cycles have taken place, the sensor will maintain the continuous operation to avoid switching back to intermittent from a continuous wipe and back again.

The rain/light sensor receives vehicle speed information from the Anti-lock Braking System (ABS) module on the Local Interconnect Network (LIN) bus via the CJB. The sensor increases the sensitivity as the speed increases to optimise wiper operation. When the vehicle speed is reduced to less than 5 mph (8 km/h), the sensitivity is automatically reduced. Below this speed the wipers will only operate continuously in very heavy rain.

Automatic Headlamp Operation

A light sensor is incorporated in the housing of the rain/light sensor to control the operation of the automatic headlamps.

The automatic headlamps will function when the lighting control switch is in the 'AUTO' position and the CJB receives a lights on signal from the rain/light sensor.

For additional information, refer to: Exterior Lighting (417-01, Description and Operation).

WIPER CONTROL COLUMN SWITCH

E43327

Item	Part Number	Description
1	-	Wash/wipe control column switch
2	-	Intermittent variable delay rotary control
3	-	Intermittent/continuous rear wipe
4	-	Rear wash position
5	-	Fast speed wipe position
6	-	Normal speed wipe position
7	-	Intermittent/rain sensor wipe position
8	-	Flick wipe position
9	-	Front windscreen washer control

The wiper control column switch is located on the right hand side of the steering column and controls all front and rear wiper functions.

The switch comprises 8 switch positions and the intermittent rotary control. The switch positions each complete a combination of earth paths to connections on the CJB. The CJB interprets the selected combination of switches and operates the respective function accordingly.

Flick Wipe

Moving the switch down selects the front wiper flick wipe function. The front wipers will operate at fast speed for as long as the flick wipe switch position is operated. Once the switch is released the front wiper motor will revert to a normal (slow) speed operation until a park position has been detected.

Intermittent

Moving the switch up one position from 'OFF', selects intermittent front wiper operation. The rotary potentiometer on the stalk selects one of six delay periods. The delay period is also influenced by vehicle speed (should speed control intermittent wipe mode be configured), using a signal value derived from the ABS control module. The selected delay period decreases with an increase in road speed. When a rain/light sensor is incorporated into the system, the intermittent position also initiates wiper operation controlled by the rain/light sensor. The sensitivity of the rain/light sensor is also adjusted by rotating the rotary switch to one of the six positions.

The rotary switch selects differing output values for each position. The switch is wired to three data input terminals of the CJB.

Rotary Switch Position	Output Data 1	Output Data 2	Output Data 3
1	Yes	-	-
2	Yes	Yes	-
3	-	Yes	-
4	-	Yes	Yes
5	Yes	Yes	Yes
6	Yes	-	Yes

The time delay periods for the vehicle stationary and when moving at different speeds are shown in seconds (by speed CLASS) in the following tables:

Class	Speed Increase - MPH (KPH)	Speed Decrease - MPH (KPH)
0	Vehicle speed <5 (8), remain in class 0 Vehicle speed >5 (8), increment to class 1	-
1	Vehicle speed >5 (8) and <20 (32), remain in class 1 Vehicle speed >20 (32), increment to class 2	Vehicle speed = 0, Revert to class 0 Vehicle speed > 0 and <20 (32), remain in class 1
2	Vehicle speed >20 (32) and <40 (64), remain in class 2 Vehicle speed >40 (64), increment to class 3	Vehicle speed <10 (16), revert to class 1 Vehicle speed >10 (16) and <40 (64), remain in class 2
3	Vehicle speed >40 (64) and <60 (96), remain in class 3 Vehicle speed >60 (96), increment to class 4	Vehicle speed <30 (48), revert to class 2 Vehicle speed >30 (48) and <60 (96), remain in class 3
4	Vehicle speed >60 (96) and <80 (128), remain in class 4 Vehicle speed >80 (128), increment to class 5	Vehicle speed <50 (80), revert to class 3 Vehicle speed >50 (80) and <80 (128), remain in class 4
5	Vehicle speed >80 (128), remain in class 5 -	Vehicle speed <70 (112), revert to class 4 -

Key:

- < = Less than
- > = Greater than.

Rear Wiper Speed Class Matrix

Rotary Position	Speed Class					
	0	1	2	3	4	5
Position 1	6	5	4	3	2	0
Position 2	10	8	6	4	2	1
Position 3	14	11	8	5	3	1
Position 4	18	15	11	8	5	2
Position 5	22	18	13	9	6	3
Position 6	26	21	16	11	7	4

Front Wiper Speed Class Matrix

Rotary Position	Speed Class					
	0	1	2	3	4	5
Position 1	3.5	3	2.5	2	1.5	1
Position 2	5	4	3.5	3	2.5	2
Position 3	7	6.5	6	5	4	3
Position 4	9	8	7	6	5	4
Position 5	11	9.5	8	7	6	5
Position 6	13	11	9	8	7	6

The rotary switch positions also influence the operation of the rain/light sensor (when fitted) by adjusting its sensitivity. Refer to the Rain/Light Sensor section for details.

Normal (Slow) Speed

The normal (slow) speed continuous wiper operation is selected by moving the switch vertically to the second detente position from 'OFF'. The wipers will operate continuously when the vehicle is moving. When the vehicle is stationary, or less than 5 mph (8 km/h), the CJB operates the wipers in the intermittent mode (if speed dependant wipe mode is configured), using a 3 second intermittent delay period.

Fast Speed

The fast speed continuous wiper operation is selected by moving the switch vertically to the third detente position. The wipers will operate continuously at fast speed when the vehicle is moving. When the vehicle is stationary, or less than 5 mph (8 km/h), the CJB operates the wipers in normal (slow) speed mode (if speed dependant wipe mode is configured).

Wash/Wipe

When the non-latching wiper stalk button is pushed the front screen washer is operated. If the wipers are off and the button is pressed for less than 0.5 seconds, only the washer will operate. If the button is pressed for more than 0.5 seconds, the wipers will come on and perform two wipes. When headlamp washers are fitted, the headlamp washers will operate if the front windscreen washer is operated and the headlamps are on – refer to headlamp wash section for detail of operation. The CJB monitors the wash/wipe switch operation and after the switch is released, if a programmed wipe is enabled, the CJB allows two further wipe cycles to be completed.

Rear Wash/wipe

Moving the switch rearwards, towards the driver, selects the intermittent rear wash/wipe function. The intermittent delay period will vary according to the sensitivity settings and vehicle speed.

When the switch is moved rearwards to the second position and held, the washer pump will operate. If the switch is operated for more than 10 seconds, the pump will be disabled. When the switch is released, the rear wiper will complete a further two full wipe cycles and then operate on an intermittent function until selected off.

HEATED WINDSCREEN WASHER JETS

Two windscreen washer jets are located in the rear trim panel on the bonnet outer surface. The washer fluid feed hose from the front screen pump is connected to a 'Y' piece connector located between the two jets. Two short lengths of hose connect the jets to the 'Y' piece. Each jet contains a NRV to prevent washer fluid draining back to the reservoir and also to limit the amount of washer fluid, which can be forced by gravity from the jet during cornering.

Each washer jet has two ball nozzles, which can rotate in their housing's to obtain the optimum fluid application onto the windscreen. Each washer jet contains a heater element, which prevents the fluid freezing in the nozzles in very cold conditions and a Positive Temperature Coefficient (PTC) sensor, which regulates the temperature. The jet heater elements are controlled by the Automatic Temperature Control Module (ATCM) and a heated washer jet relay in the BJB. For additional information, refer to: Control Components (412-04, Description and Operation).

REVERSE GEAR INPUT

The intermittent delay period (below) depends on speed dependant wipe mode being enabled or disabled.

The rear wiper also operates if reverse gear is selected and the front wipers are on. If the front wipers are operating continuously when reverse is selected, the rear wiper will also operate continuously as long as reverse gear is engaged. If the front wipers are operating intermittently when reverse is engaged, the rear wiper will complete one wipe cycle then wipe intermittently.

On vehicles fitted with rain/light sensor, when reverse gear is selected while the front wipers are in intermittent mode but the rain/light sensor indicates that the front wipers are off, the rear wiper will not operate. If the rain/light sensor subsequently calls for a single wipe, the rear wiper will operate a single wipe cycle. If the rain/light sensor calls for a slow or fast wipe, the rear wiper will operate continuously.

The CJB will operate the rear wiper (providing the front wipers are on) upon receipt of a reverse gear signal from the Electronic Automatic Transmission (EAT) module on the CAN bus, via the instrument cluster. On vehicles with manual transmission, the gear position signal is transmitted directly from the transfer box control module and picked by the CJB as an CAN bus message, via the instrument cluster.

'TAIL GATE OPEN' DISABLE

If the rear wiper is switched on or is already running and the tail gate is opened, the rear wiper should not start to run, or should immediately become disabled during a wipe cycle. If the tail gate is subsequently closed, the wiper will resume its normal operation after a delay of three seconds. Should the vehicle speed input be more than 4 mph (6km/h), then the tail gate switch will be deemed as closed.

The CJB receives the 'tail gate open' signal directly from the upper tail gate central locking motor.

FRONT AND REAR WIPER MOTOR BLOCKING PROTECTION

The wiper park signal is also used by the CJB for blocking protection of the front wiper motor. This feature protects the motor in the event of the wiper operation being obstructed.

If the CJB does not receive a wiper park signal status change for a period of 6 seconds, when the wiper motor is active, the CJB removes the power supply to the motor. The motor will remain disabled until either an alternative motor mode has been selected, or the ignition has been moved to position 0 and back to position I. Should a stall condition be achieved 3 times during a single ignition position I status, then the wiper relay will remain disabled, regardless of wiper switch positions, for 180 seconds. The CJB will not automatically switch the motor on, to prevent the risk of injury. The wiper switch must be moved off and then on to reactivate the wiper motor. The blocking protection is active in all wiper switch positions and can only be reset by turning the ignition off.

The rear wiper algorithm contains the same logic as mentioned above.

DIAGNOSTICS

The diagnostic socket allows the transfer of information between the CJB, the rain/light sensor and T4. The diagnostic socket is located in the lower fascia closing panel, on the driver's side, below the steering column.

The rain/light sensor performs an internal self-test in the first 50ms from the ignition being switched to position I and can store fault codes, which can be used to diagnose faults or non-function of the rain/light sensor. The faults are stored in a non-volatile memory which retains the logged fault codes even when the power supply is disconnected. If a rain/light sensor fault prevents the sensor from operating, the CJB will control wiper operation as if a rain/light sensor is not installed in the system.

The CJB monitors all inputs and outputs relative to the wiper system and other CJB controlled functions on the LIN bus. If a fault is detected, a code applicable to that fault is stored in a fault log. Two fault logs are provided within the CJB for internal and external faults.

Wipers and Washers - Wipers and Washers

Diagnosis and Testing

Principle of Operation

For a detailed description of the wipers and washers systems and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Wipers and Washers](#) (501-16 Wipers and Washers, Description and Operation).

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. **1.** Verify the customer concern.
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Windshield and rear window for damage or contamination e.g. road film or general residue deposits ● Wiper blades, arms and linkage for wear, security, damage and freedom of movement ● Windshield/Rear window/Headlamp washer fluid level ● Washer pipes and jets for leaks, restrictions and damage 	<ul style="list-style-type: none"> ● Battery condition and state of charge ● Fusible links ● Fuses ● Relays ● Electrical connections ● Front and rear wiper motors ● Wiper switch ● Washer pumps ● Rain/light sensor ● Heated front washer jets ● Ignition switch ● Light switch ● Ambient air temperature sensor ● Central Junction Box (CJB) ● Battery Junction Box (BJB) ● Anti-Lock Braking System (ABS) module ● Automatic Temperature Control Module (ATCM) ● Instrument Cluster (IPC) module ● Controller Area Network (CAN) circuits

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step
4. **4.** If the cause is not visually evident, verify the symptom and refer to the Symptom Chart, alternatively check for Diagnostic Trouble Codes (DTCs) and refer to the DTC Index.

Symptom Chart

Symptom	Possible Causes	Action
Wiper blade(s) drag/judder across the windshield/rear window	<ul style="list-style-type: none"> ● Contamination of the windshield/rear window ● Incorrectly installed wiper arm(s) ● Wiper arm(s) incorrectly aligned to the screen ● Wiper arm(s) spring tension inadequate 	Clean the windshield/rear window. Check for the correct installation and tension of the wiper arm(s). Refer to the relevant section of the workshop manual. Rectify as necessary.
Very slow operation of the wiper(s) across the windshield/rear window	<ul style="list-style-type: none"> ● Low battery voltage ● Front wiper linkage seized or fouling ● Wiper circuit fault ● Wiper switch fault, high resistance 	Check the battery condition and state of charge. Check the wiper linkage for fouling. Disconnect the motor from the linkage. Refer to the relevant section of the workshop manual. Check the linkage operation. Check for DTCs indicating a wiper circuit fault. Rectify as necessary.
Wiper(s) inoperative		
Noisy operation of wiper(s)	<ul style="list-style-type: none"> ● Wiper motor/linkage fault 	Lift the wiper arm(s) from the windshield/rear window and recheck the noise level during the wiper sweep operation.

Symptom	Possible Causes	Action
Noisy operation of washers	<ul style="list-style-type: none"> ● Washer motor(s) faulty ● Washer system blocked or partially blocked 	Listen for washer motor operation. Check and top up washer fluid level. Check and rectify blocked washer circuit. Check the wiper/washer circuit for DTCs indicating a fault. Rectify as necessary.
Washers do not operate	<ul style="list-style-type: none"> ● Fluid level low ● Washer circuit blocked ● Washer circuit faulty 	

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Central Junction Box \(CJB\)](#) (100-00 General Information, Description and Operation).

Wipers and Washers - Windshield Washer Reservoir

Removal and Installation

Removal

1. Remove the front bumper cover.
For additional information, refer to: Front Bumper Cover (501-19, Removal and Installation).

2. Remove the windshield washer reservoir filler neck.

- Release the windshield washer reservoir filler neck from the coolant expansion tank.
- Remove and if necessary, discard the seal.

E52624

3. **NOTE:** Some fluid spillage is inevitable during this operation.

Disconnect the 2 hoses from the windshield washer reservoir pumps.

- Drain the washer reservoir fluid.
- Disconnect the 3 electrical connectors.

E94895

4. Remove the windshield washer reservoir.

- Remove the 4 bolts.

5. NOTE: Do not disassemble further if the component is removed for access only.

Remove the windshield washer pump.

- Remove and if necessary, discard the seal.

6. Remove the headlamp washer pump.

- Remove and if necessary, discard the seal.

Installation

1. Install the windshield washer pump.

- If necessary, install a new seal.

2. Install the headlamp washer pump.

- If necessary, install a new seal.

3. Install the windshield washer reservoir.

- Tighten the M6 bolts to 6 Nm (4 lb.ft).
- Tighten the M8 bolt to 25 Nm (18 lb.ft).

4. Connect the 2 hoses to the windshield washer reservoir pumps.

- Connect the electrical connectors.

5. Install the windshield washer reservoir filler neck.

- If necessary, install a new seal.
- Lubricate the seal.
- Secure in the clip.

6. Install the front bumper cover.

For additional information, refer to: Front Bumper Cover (501-19, Removal and Installation).

Wipers and Washers - Windshield Washer Pump

Removal and Installation

Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove the LH fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
3. Release the windshield washer pump hoses.
 - Drain the washer reservoir fluid.
4. Disconnect the windshield washer pump electrical connector.
5. Remove the windshield washer pump.
 - Discard the O-ring seal.

Installation

1. Install the windshield washer pump.
 - Install a new O-ring seal.
2. Connect the windshield washer pump electrical connector.
3. Connect the windshield washer pump hoses.
4. Install the fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
5. Lower the vehicle.
6. Top-up the windshield washer reservoir.

Wipers and Washers - Rain Sensor

Removal and Installation

Removal

1. Remove the interior mirror.
For additional information, refer to: [Interior Mirror](#) (501-09 Rear View Mirrors, Removal and Installation).
2. Remove the rain sensor.

E49707

- Release the 2 clips.
- Disconnect the electrical connector.

Installation

1. To install, reverse the removal procedure.

Wipers and Washers - Front Wiper Pivot Arm

Removal and Installation

Removal

1. Noting the fitted position, remove the front wiper pivot arm.

- Remove the nut cover.
- Remove the nut.

2. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the wiper blade.

- Release the clip.

Installation

1. To install, reverse the removal procedure.

- Tighten the nut to 18 Nm (13 lb.ft).

Wipers and Washers - Windshield Wiper Motor

Removal and Installation

Removal

1. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
2. Remove the windshield wiper motor and linkage.

- Remove the 2 bolts.
- Remove the 2 clips.
- Disconnect the electrical connector.

3. NOTE: Do not disassemble further if the component is removed for access only.

Noting the fitted position, remove the wiper linkage.

- Remove the 2 bolts.
- Remove the nut.

Installation

1. Install the wiper linkage.
 - Tighten the bolts to 10 Nm (7 lb.ft).
 - Tighten the nut to 25 Nm (18 lb.ft).
2.  CAUTION: Make sure the windshield wiper motor is located on its stud prior to installing the bolts.

Install the windshield wiper motor and linkage.

- Tighten the bolts to 6 Nm (4 lb.ft).
 - Connect the electrical connector.
 - Install the clips.
3. Install the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).

Wipers and Washers - Headlamp Washer Jet

Removal and Installation

Removal

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the front fog lamp.
For additional information, refer to: [Front Fog Lamp](#) (417-01 Exterior Lighting, Removal and Installation).
3. Release the washer jet assembly.
 - Release the clip.

E47039

4. Remove the washer jet.
 - Release the hose clip and disconnect the hose.

E47040

Installation

1. To install, reverse the removal procedure.

Wipers and Washers - Headlamp Washer Pump

Removal and Installation

Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove the LH fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
3. Release the headlamp washer pump hose.
 - Drain the washer reservoir fluid.
4. Disconnect the headlamp washer pump electrical connector.
5. Remove the headlamp washer pump.
 - Discard the O-ring seal.

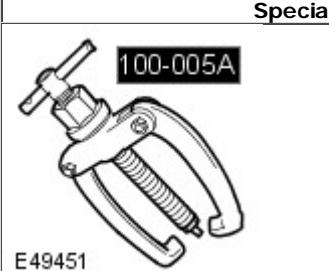

Installation

1. Install the headlamp washer pump.
 - Install a new O-ring seal.
2. Connect the headlamp washer pump electrical connector.
3. Connect the headlamp washer pump hose.
4. Install the fender splash shield.
For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
5. Lower the vehicle.
6. Top-up the windshield washer reservoir.

Wipers and Washers - Rear Wiper Pivot Arm

Removal and Installation

Special Tool(s)	
 <p>100-005A</p> <p>E49451</p>	<p>General purpose puller 100-005A (LRT-99-500A)</p>

Removal

1. Noting the fitted position and using the special tool, remove the rear wiper pivot arm.

- Remove the nut cover.
- Remove the nut.

2. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the wiper blade.

- Release the clip.

Installation

1. To install, reverse the removal procedure.

- Tighten the nut to 15 Nm (11 lb.ft).

Wipers and Washers - Rear Window Wiper Motor

Removal and Installation

Removal

1. Remove the liftgate trim panel.
For additional information, refer to: [Liftgate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the rear window wiper arm.
For additional information, refer to: [Rear Wiper Pivot Arm](#) (501-16 Wipers and Washers, Removal and Installation).
3. Remove the rear window wiper motor.
 - Disconnect the electrical connector.
 - Release the clip.
 - Remove the 3 nuts.

4. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the 3 rubber insulators.

- Remove the metal inserts.

Installation

1. To install, reverse the removal procedure.
 - Tighten the nuts to 10 Nm (7 lb.ft).

GENERAL

E48078

Item	Part Number	Description
1	-	Access panel
2	-	Switch

The sunroof is electrically operated through a two-way rocker switch located on the roof mounted centre console. An electric motor, attached to the sunroof frame, drives the glass sunroof panel to the tilt or open positions. The glass panel is operated by two cables, which are driven by the motor.

The sunroof frame is bolted to eleven mounting points on the roof panel. The frame is a large injection moulding and supports all of the sunroof components. Two aluminium guides held in the frame, on each side. The sunroof motor attaches to the rear of this frame. The motor is supported on the frame with three screws.

The sunroof glass panel is attached to the guide at the extreme front and rear. The tilt and slide positions are achieved by driving the attachment points on the panel over two fixed curves, one in the guide and one fixed to the panel.

Sunroof Motor

E48079

The sunroof motor has a worm drive, which drives a gear in a cast housing attached to the end of the motor. The gear has

a small pinion gear attached to the outer part of its spindle. The pinion engages with the helixed cables to form a rack and pinion drive. Rotation of the motor turns the pinion, which in turn drives the cables in the required direction.

Sunroof Motor Pin Out Information

Pin	Description	Input/Output
1	Hall sensor Ground	-
2	Hall sensor Supply	Input
3	Hall sensor Speed	Output
4	Hall sensor Direction	Output
5	Motor A	Input
6	Motor B	Input

The two cables are attached either side of the pinion. One end of each cable is attached to the guide. The opposite end is trapped in its position on the pinion by a metal insert in the frame. The cables run in channels in the frame to the guides. As the sunroof panel is closed, the cables are pushed through channels in the rear of the frame. The displaced cable is guided into a further two channels in the frame, which protect the cable and prevent the cable snagging creating noise. The cables are made from rigid spring steel and therefore can pull as well as push the sunroof along the guides.

A sun blind is also located in the guides integrated into the frame. The sunblind is operated manually, independently of the glass panels position. To move to the closed position the sunblind handle is pushed forward until it latches into the frame. To move the sunblind to the open position the sunblind handle is pushed up, to unlatch and either released or retracted to the open position. The sunblind can only be in either the fully open or fully closed positions.

Drain hoses are connected to the front and rear corners of the frame. The drain hoses are located inside of the cabin on the 'A' and 'C' post pillars to allow water, which has collected in the frame to escape. A one-way valve is fitted to the end of each drain hose to prevent the ingress of dirt and moisture.

SUNROOF CONTROL MODULE

The sunroof control module is mounted on the rear of the frame, and is connected to the motor at one end as described above, and to the vehicle electrical system at the other. It takes the inputs from the vehicle, such as LIN (Local Interconnect Network) bus signals and switch signals, and controls motor movement appropriately. It also contains the algorithm for the anti-trap system.

Sunroof Control Module Pin Out Information

Pin	Description	Input/Output
1	Switch Ground	-
2	Switch Open	Input
3	Switch Close	Input
4	Not used	-
5	Not used	-
6	Emergency (see note below)	Input
7	ECU Ground	-
8	Battery	Input
9	Not used	-
10	Not used	-
11	Not used	-
12	LIN	Input

• NOTE: Pin 6 is for use in an emergency only in the event of the vehicle LIN bus not being functional. It is not connected on the vehicle harness or in the connector.

• NOTE: Putting pin 6 to ground will enable the sunroof control module but without one touch operation or anti trap. The sunroof will not require re-calibrating unless the battery has been disconnected.

• NOTE: The sunroof control module will remain awake and enabled until pin 6 is disconnected again. Under no circumstances is this pin to be left grounded for long periods.

• NOTE: There is no emergency key access in the headlining for manual sunroof operation should the motor fail for any reason.

OPERATION

The sunroof can be operated with the ignition in power modes 4 accessory or 6 on. The sunroof can also be operated for up to 40 seconds after the ignition power mode 0 'off' provided the driver's or passenger's door is not opened. During the 40 second period the one touch function is inoperative.

The motor contains a micro-switch and a Hall effect sensor. Two gears, driven by the motor at one end of the pinion drive spindle, trip the micro-switch every thirteen revolutions of the spindle. When the micro-switch is tripped, the sunroof control module senses an open circuit signal. The sunroof control module, to calculate the exact position of the sunroof, uses the signal from the micro-switch combined with signals received from the Hall effect sensor. The Hall effect sensor is also responsible for the operation of the anti-trap function.

If the anti-trap feature is activated while the sunroof is closing, the roof panel is reversed for 200mm or as far as possible. The Hall sensor, located in the sunroof motor, monitors the speed of the motor and if the speed decreases below a set threshold, indicating an obstruction, the power feed to the motor is reversed so the sunroof goes back. In an emergency the anti-trap function can be overridden by holding the sunroof switch in the closed position.

Tilt

With the sunroof panel closed, pushing the upper part of the rocker switch operates the sunroof motor to 'tilt' the rear of the sunroof upwards. The motor operates for as long as the switch is operated until the glass is tilted to its full extent. If the switch is released before the full tilt position is reached, the sunroof panel stops at the chosen position. A single press (between 0.5 and 1 second) of the switch operates the motor so that the panel automatically retracts to the fully tilted position.

When the tilt function is requested, the cables pull the guide rearward, forcing the panel attachment up a curve, which raises the sunroof panel to the tilt position.

With the sunroof panel in the tilted position, pushing the lower part of the rocker switch operates the sunroof motor to lower the sunroof panel. The motor operates to lower the panel for as long as the switch is operated until the panel is fully lowered. If the switch is released before the fully lowered position is reached, the sunroof panel stops at the chosen position.

Open (slide)

With the sunroof panel tilted, pushing the upper part of the rocker switch operates the sunroof motor to raise the sunroof panel and retract it backwards. A single press (between 0.5 and 1 second) of the switch operates the motor so that the panel automatically retracts to the fully open position. When the panel retracts, a wind deflector automatically raises at the front of the sunroof aperture, which serves to reduce wind noise.

When the open function is requested, the cables pull in a rearward direction, driving the glass panel attachments to slide the panel over the exterior roof skin.

With the sunroof panel half or fully open, pushing the lower part of the switch operates the motor to close the sunroof panel. A single press (between 0.5 and 1 second) of the switch operates the motor so that the panel automatically closes to the fully tilted position.

If only partial opening or closing is desired, pressing the switch momentarily (less than 0.5 seconds) in either direction will stop the sunroof panel movement. When movement is desired in either direction, pressing the switch will operate the motor to move the panel.

The sunroof has an 'anti-trap' function which prevents the sunroof panel from closing if an obstruction is sensed. When an obstruction is sensed, the motor will automatically retract the panel by 200mm or as far as possible. When the obstruction is removed, the panel can be closed by the normal method.

Battery Disconnection

If the battery has been disconnected, the one touch and anti-trap function will become inoperative. Pressing the lower part of the sunroof switch for 20 seconds will start the sunroof's calibration routine. The sunroof will complete a full cycle in order to re-learn the parameters required for one-touch open and close and the anti-trap function. The sunroof will still have manual movement available until the sunroof is re-calibrated.

Inspect, clean and lubricate the cable(s) and guides. Check the glass panel seal. Check the roof opening panel alignment. Refer to the relevant section of the workshop manual.
Wind noise	<ul style="list-style-type: none"> ● Damage to the glass panel seal ● Cable(s) sticking/damaged ● Roof opening panel not correctly aligned 	Check the glass panel seal. Inspect, clean and lubricate the cable(s) and guides. Check the roof opening panel alignment. Refer to the relevant section of the workshop manual.

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00.
REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Central Junction Box \(CJB\)](#) (100-00 General Information, Description and Operation).

Roof Opening Panel - Roof Opening Panel Alignment

General Procedures

1. With the roof opening panel closed, check the alignment of the glass to the roof panel. The glass should be central in its aperture. Profile of sunroof to body:

1. Front edge, set flush or up to 1.0 mm (0.040") low.
1. Rear edge, set flush or up to 1.0 mm (0.040") high.

2. Open the roof opening panel blind.

3. Loosen the 6 roof opening panel Torx bolts.

4. Align the roof opening panel.

- Tighten the Torx screws to 6 Nm (4 lb.ft).

5. Close the roof opening panel blind.

Roof Opening Panel - Roof Opening Panel

Removal and Installation

Removal

1. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Release the 4 drain hoses from the roof opening panel.
3. Disconnect the roof opening panel motor electrical connector.

4. With assistance, remove the roof opening panel assembly.
 - Remove the 11 bolts.

E49601

5.  **CAUTION:** Do not depress the RH plunger to remove the blind.

• **NOTE:** Do not disassemble further if the component is removed for access only.

• **NOTE:** Note the fitted position.

Remove the roof opening panel blind.

- Twist to release the handle.
- Depress the LH plunger.

E49602

6. Remove the roof opening panel motor.

- Remove the 3 Torx screws.
- Remove the spacer.

Installation

1. Install the roof opening panel motor.

- Install the spacer.
- Tighten the Torx screws to 4 Nm (3 lb.ft).

2. **NOTE:** Align to the position noted on removal.

Install the roof opening panel blind.

- Secure in the guides.
- Locate the tensioner peg.
- Depress the LH plunger.

3. With assistance, install the roof opening panel assembly.

- Clean the component mating faces.
- Tighten the bolts to 10 Nm (7 lb.ft).

4. Connect the roof opening panel motor electrical connector.

5. Connect the drain hoses.

- Make sure the drain hoses are clear prior to connection.

6. Install the headliner.

For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

7. Using T4, configure a new roof opening panel.

- 8.** If the battery has been disconnected, the one touch and anti-trap function will become inoperative. Close the roof opening panel and continue to hold the switch for a further 20 seconds to allow the sunroof to complete a full cycle. This will complete the roof opening panels calibration routine and reset these functions.

Roof Opening Panel - Roof Opening Panel Glass

Removal and Installation

Removal

1. Open the roof opening panel blind.
2. Open the roof opening panel to the tilt position.
3. Remove the roof opening panel glass.

- Remove the 3 Torx screws.
- Repeat the above procedure for the other side.

Installation

1. Install the roof opening panel glass.
 - Install the Torx bolts, but do not tighten fully at this stage.
2. Align the roof opening panel glass.
For additional information, refer to: [Roof Opening Panel Alignment](#) (501-17 Roof Opening Panel, General Procedures).

Roof Opening Panel - Roof Opening Panel Motor

Removal and Installation

Removal

1. Remove both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove both B-pillar upper trim panels.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Remove the front overhead console.

- Carefully release the 7 clips.
- Disconnect the electrical connector.

E50142

4. Remove the sun visor.

- Remove the cover.
- Remove the 2 screws.
- Release from the clip.
- Disconnect the electrical connector.
- Repeat the above procedure for the other side.

E49687

5. Remove the sun visor retaining clip.

- Release the screw cover.
- Remove the screw.
- Repeat the above procedure for the other side.

E49688

6. Remove the passenger assist handle.

- Release the 2 screw covers.
- Remove the 2 screws.
- Repeat the above procedure for the other side.

E49689

7. Lower the headliner for access.

- Release the 4 clips.

E56036

8. Remove the roof opening panel motor.

- Disconnect the electrical connector.
- Remove the 3 Torx screws.
- Remove the spacer.

E55446

Installation

1. Install the roof opening panel motor.

- Install the spacer.

- Tighten the Torx screws to 4 Nm (3 lb.ft).
 - Connect the electrical connector.
2. Position the headliner.
- Secure with the clips.
3. Install the passenger assist handles.
- Install the screws.
 - Secure the screw covers.
4. Install the sun visors.
- Install the clips.
 - Install the screws.
 - Install the screw covers.
 - Connect the electrical connectors.
5. Install the front overhead console.
- Connect the electrical connector.
 - Carefully secure the clips.
6. Install both B-pillar upper trim panels.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
7. Install both A-pillar upper trim panels.
For additional information, refer to: [A-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
8. Using T4, configure a new roof opening panel motor.
9. If the battery has been disconnected, the one touch and anti-trap function will become inoperative. Close the roof opening panel and continue to hold the switch for a further 20 seconds to allow the sunroof to complete a full cycle. This will complete the roof opening panel calibration routine and reset these functions.

Roof Opening Panel - Roof Opening Panel Module

Removal and Installation

Removal

1. Remove the rear overhead console.

- Carefully release the 9 clips.
- Disconnect the 2 electrical connectors.

E50143

2. Remove the roof opening panel module.

- Slide the module to the LH side to release it from the bracket.
- Disconnect the 2 electrical connectors.

E55397

Installation

1. Install the roof opening panel module.

- Connect the electrical connectors.
- Secure the module to the bracket.

2. Install the rear overhead console.

- Connect the electrical connectors.
- Carefully secure the clips.

3. Using T4, configure a new roof opening panel module.

4. If the battery has been disconnected, the one touch and anti-trap function will become inoperative. Close the roof

opening panel and continue to hold the switch for a further 20 seconds to allow the sunroof to complete a full cycle. This will complete the roof opening panels calibration routine and reset these functions.

Bumpers -

Description	Nm	lb-ft
Front bumper bolts	25	18
Windshield washer reservoir bolts	5	3.5
Front bumper cover bolts	5	3.5

Bumpers - Front Bumper

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.

1. Disconnect the battery ground cable.

Refer to: Specifications (414-00, Specifications).

2. Refer to: [Front Bumper Cover](#) (501-19 Bumpers, Removal and Installation).

E123468

3. **3.** NOTE: Support as necessary.

Torque: 10 Nm

E123467

4. **4.**  CAUTION: Take extra care not to damage the component.

- NOTE: Support as necessary.

E123469

Installation

5. **NOTE:** With assistance remove the component.

Torque: 25 Nm

1. To install, reverse the removal procedure.

Bumpers - Front Bumper Cover

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.

1. Disconnect the battery ground cable.

Refer to: Specifications (414-00, Specifications).

2. Refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ormentation, Removal and Installation).

3.  **WARNING:** Make sure to support the vehicle with axle stands.

Raise and support the vehicle.

4. Remove both the front wheels and tires.

5.

6. **NOTE:** The procedure must be carried out on both sides.

Torque: 1 Nm

7.  CAUTION: Take extra care not to damage the wiring harnesses.

8. Torque: 5 Nm

9. Torque: 5 Nm

10. Torque: 5 Nm

11. **11.** NOTE: With assistance remove the component.

E 123484

12. **12.** NOTE: Do not disassemble further if the component is removed for access only.

Torque: 1 Nm

E 123485

13. Torque: 1.5 Nm

14.

15. Torque: 1 Nm

E123488

16.  CAUTION: Make sure the locating tangs are aligned. Failure to follow this instruction may result in damage to the vehicle.

E123489

Installation

1. To install, reverse the removal procedure.

Bumpers - Front Bumper Lower Cover

Removal and Installation

Removal

- NOTE: Removal steps in this procedure may contain installation details.

1.

Installation

1. To install, reverse the removal procedure.

Bumpers - Rear Bumper Cover

Removal and Installation

Removal

All vehicles

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove both rear lamp assemblies.
For additional information, refer to: [Rear Lamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).
3. Remove both rear quarter panel mouldings.
For additional information, refer to: [Rear Quarter Panel Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
4. Remove 4 screws, 2 clips and 2 bolts from the rear bumper cover.

5. With assistance, remove 4 clips from the inner edge of the bumper cover.

- Tilt the tailgate for access.
- Open the tailgate hinge cover.

6. Remove the rear bumper cover.

- Release from the 12 clips.
- If installed, disconnect the parking aid sensor wiring harness electrical connector.

7. NOTE: Do not disassemble further if the component is removed for access only.

Remove the towing eye cover.

- Remove the 2 screws.

8. Remove the rear bumper trim panel.

- Release the 11 clips.

9. Remove the bumper insert.

- Remove the 3 screws.

Vehicles with parking aid

10. Remove the parking aid sensor wiring harness.

- Disconnect the 4 electrical connectors.

Vehicles with parking aid

11. Remove the parking aid sensor.

- Release the 2 clips.
- Repeat the above procedure for the remaining 3 sensors.

Vehicles with parking aid

12. Remove the parking aid sensor trim panel.

- Release the 3 clips.
- Repeat the above procedure for the remaining 3 sensor trim panels.

Installation

Vehicles with parking aid

1. Install the parking aid sensor trim panels.

Vehicles with parking aid

2. Install the parking aid sensors.

Vehicles with parking aid

3. Install the parking aid sensor wiring harness.

- Connect the electrical connectors.

4. Install the bumper insert.

- If installed, secure the parking aid sensor wiring harness.

- Tighten the screws.
5. Install the rear bumper trim panel.
 6. Install the towing eye cover.
 - Tighten the screws.
 7. Install the rear bumper cover.
 - If installed, connect the parking aid sensor wiring harness electrical connector.
 - Secure with the clips.
 - Tighten the screws.
 - Tighten the bolts to 10 Nm (7 lb.ft).
 8. Install both rear quarter panel mouldings.
For additional information, refer to: [Rear Quarter Panel Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
 9. Install both of the rear lamp assemblies.
For additional information, refer to: [Rear Lamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).

Safety Belt System -

Torque Specifications

Description	Nm	lb-ft
Front safety belt retractor Torx bolt	40	30
Front safety belt buckle Torx bolt	40	30
+ Front safety belt upper anchor Torx bolt	40	30
Second row safety belt retractor Torx bolt	40	30
+ Second row safety belt upper anchor Torx bolt	40	30
Third row safety belt retractor Torx bolt	40	30
+ Third row safety belt upper anchor Torx bolt	40	30
Luggage compartment Torx bolts	25	18
Rear safety belt buckle Torx bolt	25	18
Rear safety belt buckle - RH - Torx bolt	40	30
Rear safety belt buckle - LH - Torx bolt - 60-40 split	25	18
Rear center safety belt buckle Torx bolt - 40-20-40 split	40	30
Rear safety belt buckle Torx bolt - 40-20-40 split	25	18
+ Rear seat Torx bolts	40	30

+ New Torx bolt must be fitted

Safety Belt System - Safety Belt System

Diagnosis and Testing

Principle of Operation

For a detailed description of the safety belt system and operation, refer to the relevant description and operation section of the workshop manual REFER to: Safety Belt System (501-20 Safety Belt System, Description and Operation).

Safety Information

• WARNINGS:

To avoid accidental deployment the back-up power supply must be depleted before beginning any work on the SRS system or its components. Failure to follow this instruction may result in personal injury

Do not use a multimeter to probe an SRS module. It is possible for the power from the multimeter battery to trigger the activation of the module. Failure to follow this instruction may result in personal injury

• NOTE: Do not to use a cellular phone or to have a cellular phone in close proximity when working on the SRS system or components

Power supply depletion

Before beginning any work on the SRS system or related components:

1. **1.** Remove the ignition key
2. **2.** Disconnect the battery leads, ground first
3. **3.** Wait 2 minutes for the power circuit to discharge

There are comprehensive instructions on the correct procedures for SRS system repairs, refer to the relevant section of the workshop manual

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle

• NOTE: Check and rectify basic faults before beginning diagnostic routines including pinpoint tests

1. **1.** Verify the customer concern by operating the safety belt
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Check for the installation of non-standard accessories which may affect or obstruct the function of the safety belt system ● Frayed or damaged webbing ● Missing or damaged button stop ● Pretensioner(s) Buckles/Stalks 	<ul style="list-style-type: none"> ● Fuses ● Wiring harness fault ● Correct engagement of electrical connectors ● Loose or corroded connections ● Warning lamp bulb(s) ● Impact sensor(s) ● Buckle sensor(s) ● Pretensioner(s) ● Belt tension sensor(s) ● Restraints control module

3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step
4. **4.** If the cause is not visually evident, carry out the test methods described below, alternatively check for diagnostic trouble codes and refer to the relevant diagnostic trouble code index

For a complete list of all diagnostic trouble codes that could be logged on this vehicle, please refer to section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Restraints Control Module \(RCM\)](#) (100-00 General Information, Description and Operation).

Symptom Chart for Safety Belt Rows 1, 2 and 3

Symptom	Possible Causes	Action
Safety belt jammed - Webbing tight	<ul style="list-style-type: none"> ● Backlock effect-in action (webbing retracted quickly and came to sudden stop) ● Safety belt retractor not installed correctly ● Rear centre belt only. Mini-button (webbing travel limit stop) missing and seat squab has been moved 	<ul style="list-style-type: none"> ● GO to Pinpoint Test A. ● GO to Pinpoint Test E. ● GO to Pinpoint Test H. ● See the automatic locking retractor description below

Symptom	Possible Causes	Action
	<ul style="list-style-type: none"> causing tight fit Automatic locking retractor activated (clicking – during retraction only) 	
Seat squab will not fold/jammed	<ul style="list-style-type: none"> • NOTE: Rear centre belt only • Mini-button (webbing travel limit stop) missing and seat squab has been moved causing excessive tension 	<ul style="list-style-type: none"> • GO to Pinpoint Test H.
Safety belt jammed - Webbing loose	<ul style="list-style-type: none"> • Safety belt webbing trapped in seat • Safety belt retractor webbing guide loose • Twist in webbing • Interference in webbing routing • D-loop not rotating correctly 	<ul style="list-style-type: none"> • GO to Pinpoint Test B. • GO to Pinpoint Test C. • GO to Pinpoint Test D. • GO to Pinpoint Test E. • GO to Pinpoint Test G.
Safety belt - Intermittent jamming	<ul style="list-style-type: none"> • Safety belt retractor not installed correctly 	<ul style="list-style-type: none"> • GO to Pinpoint Test F.
Safety belt - Slow retraction	<ul style="list-style-type: none"> • Safety belt retractor webbing guide loose • Twist in safety belt webbing • Interference in webbing routing • Safety belt retractor not installed correctly • D-loop not rotating correctly • Foreign object/debris 	<ul style="list-style-type: none"> • GO to Pinpoint Test C. • GO to Pinpoint Test D. • GO to Pinpoint Test E. • GO to Pinpoint Test F. • GO to Pinpoint Test G. • GO to Pinpoint Test E.

Safety Belt - Not extracting	<ul style="list-style-type: none"> • Backlock effect-in action (webbing retracted quickly and came to sudden stop) • Safety belt retractor not installed correctly • Safety belt retractor webbing guide loose • Twist in safety belt webbing • D-loop not rotating correctly • Interference in webbing routing • Foreign object/debris • Automatic locking retractor activated (clicking – during retraction only) 	<ul style="list-style-type: none"> • GO to Pinpoint Test A. • GO to Pinpoint Test F. • GO to Pinpoint Test C. • GO to Pinpoint Test D. • GO to Pinpoint Test G. • GO to Pinpoint Test E. • GO to Pinpoint Test E. • See the automatic locking retractor description below
Safety belt - Noisy during operation	<ul style="list-style-type: none"> • Automatic locking retractor activated (clicking–during retraction only) • Interference in webbing routing (rubbing) 	<ul style="list-style-type: none"> • GO to Pinpoint Test B. • GO to Pinpoint Test E.
Safety belt buckle - Not latching / jammed	<ul style="list-style-type: none"> • Foreign object/debris 	 CAUTION: Do not insert any objects or tools into the buckle head <ul style="list-style-type: none"> • GO to Pinpoint Test I.

Inertia Reel Safety Belts

The vehicle is equipped with (two row one), (three row two), and (two row three (seven seat versions only)) inertia reel safety belts

These safety belts are "**dual sensitive**" which means that they have:

- **Car sense system - A vehicle motion sensor, which locks the safety belt webbing under braking, cornering, on steep hills and in adverse camber conditions, when parked on a steep incline or driveway or two wheels on a high curb**
- **Webb sense system - A webbing motion sensor, which locks when the safety belt webbing is extracted suddenly**

The safety belts in the following positions are equipped with an automatic locking retractor function:

Carline	Market	Seat position	Automatic Locking Retractor Installed	From Model Year
Defender (L316)	All	All	No	2007
Discovery / Range Rover Sport (L319/L320)	All	Driver	No	2008
Discovery / Range Rover Sport (L319/L320)	US	Passenger	Yes	2005
Discovery / Range Rover Sport (L319/L320)	All	Driver	No	2005
Discovery / Range Rover Sport (L319/L320)	ROW	Passenger	No	2005
Discovery (L319)	All	Row 2	Yes	2005
Discovery (L319)	All	Row 3	Yes	2005
Range Rover Sport (L320)	All	Row 2	Yes	2006
Freelander (L359)	All	Driver	No	2007
Freelander (L359)	ROW	Passenger	No	2007
Freelander (L359)	US	Passenger	Yes	2007
Freelander (L359)	ROW	Row 2	No	2007
Freelander (L359)	US	Row 2	Yes	2007

Carline	Market	Seat position	Automatic Locking Retractor Installed	From Model Year
Range Rover Evoque (L358)	All	Driver	No	2011
Range Rover Evoque (L358)	ROW	Passenger	No	2011
Range Rover Evoque (L358)	US	Passenger	Yes	2011
Range Rover Evoque (L358)	ROW	Row 2	No	2011
Range Rover Evoque (L358)	US	Row 2	Yes	2011
Range Rover (L322)	All	Driver	No	2003
Range Rover (L322)	ROW	Passenger	No	2003
Range Rover (L322)	US	Passenger	Yes	2003
Range Rover (L322)	ROW	Row 2	No	2003
Range Rover (L322)	US	Row 2	Yes	2003

The **automatic locking retractor function** is a feature to secure a child seat or heavy load to the seat

Activation	Deactivation
<ul style="list-style-type: none"> NOTE: When automatic locking retractor is activated, no further webbing can be drawn from the safety belt retractor, prior to disengagement of the automatic locking. This can be mistaken as a jammed safety belt retractor 	Automatic locking retractor is deactivated by allowing the webbing to retract until the clicking stops (close to park position)
Activated by total extraction of the webbing	
When activated the automatic locking retractor is identified by a clicking noise during webbing retraction	When deactivated the automatic locking retractor safety belt changes state, from a static safety belt to an automatic safety belt

Safety Belt Locking Test

With the vehicle stationary and on level ground take firm hold of the safety belt webbing (on the tongue side of the upper safety belt anchor) and withdraw sharply, **the retractor should lock**. Preventing further webbing release (**repeat this test 3 times**). Any safety belt retractor which fails to lock **must not be used** and a **new safety belt must be installed**.

DTC Index

For a list of diagnostic trouble codes that could be logged on this vehicle, please refer to Section 100-00 or for removal and installation/description and operation see Section 501-20

Diagnostic Guide Inertia Reel Safety Belts

PINPOINT TEST A : BACKLOCK	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: BACKLOCK	
	<ol style="list-style-type: none"> 1 Visually inspect the condition of the suspect safety belt 2 Draw a maximum of 20mm of the webbing from the safety belt retractor with moderate force. Then release the webbing 3 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes No further action required No For first row safety belt GO to Pinpoint Test C . For second and third row safety belts GO to Pinpoint Test B .

PINPOINT TEST B : WEBBING-TRAPPED IN SEAT	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
B1: WEBBING-TRAPPED IN SEAT	
	<ol style="list-style-type: none"> 1 Visually inspect the condition of the suspect safety belt 2 Lift the seat base or release the seat backrest as required 3 Free the trapped webbing, allow the webbing to retract Note: If the automatic locking retractor is activated, allow the webbing to retract until the clicking stops 4 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes No further action required No GO to Pinpoint Test C .

PINPOINT TEST C : SAFETY BELT RETRACTOR-WEBBING GUIDE LOOSE	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
C1: SAFETY BELT RETRACTOR-WEBBING GUIDE LOOSE	
	<ol style="list-style-type: none"> 1 Refer to 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point) and safety belt retractor 2 Check the webbing is not trapped or twisted and is centrally located on the safety belt retractor spindle 3 Attempt to withdraw the webbing from the safety belt retractor NOTE: If the safety belt webbing is jammed, the automatic locking retractor could be engaged 4 To release the automatic locking retractor, manually wind the webbing onto the spindle until the automatic locking retractor deactivates (clicking stops) 5 Fully extract webbing

	6 Confirm webbing guide location is correct , Confirm the fixing lugs are correctly located in the retractor frame
	7 Allow webbing to retract
	8 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No GO to Pinpoint Test D.

PINPOINT TEST D : TWIST IN WEBBING	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
D1: TWIST IN WEBBING	
	1 Refer to section 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point)
	2 Twist the webbing back the correct way in the loop
	3 Pass the twist through the pillar loop or escutcheon as required
	4 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No GO to Pinpoint Test E.

PINPOINT TEST E : INTERFERENCE-WEBBING ROUTING	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
E1: INTERFERENCE-WEBBING ROUTING	
	1 Refer to the 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point)
	2 Remove obstructions and foreign objects ensure the webbing does not catch or rub
	3 Confirm the safety belt does not contact the wiring harness
	4 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No GO to Pinpoint Test E.

PINPOINT TEST F : SAFETY BELT RETRACTOR-INCORRECT INSTALLATION	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
F1: SAFETY BELT RETRACTOR-INCORRECT INSTALLATION	
	1 Refer to the 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point) and the safety belt retractor
	2 Refer to the 501-20 removal and installation section of the workshop manual, correctly reinstall the safety belt retractor ensure that the locating "T bar" and "anti rotation pins" are correctly located
	3 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No Replace as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component

PINPOINT TEST G : D-LOOP NOT ROTATING CORRECTLY	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
G1: D-LOOP NOT ROTATING CORRECTLY	
	1 Refer to the 501-20 removal and installation section of the workshop manual, remove any trim panels required to expose the D loop (anchor point) and the safety belt retractor
	2 Ensure there are no obstructions and the webbing does not catch or rub, the D loop (anchor point) rotates correctly and if installed the confirm the height adjuster operates correctly
	3 Check for correct operation twice
	Does the webbing move freely then retract correctly? Yes Refer to the 501-20 removal and installation section of the workshop manual, reinstall any trim panels, ensure there are no obstructions and the webbing does not catch or rub. No further action required No

Replace as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component

PINPOINT TEST H : MINI BUTTON-MISSING/DAMAGED

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
H1: MINI BUTTON-MISSING/DAMAGED	
• NOTE: This test applies to the rear centre safety belt retractor installed in the seat back	
	<ol style="list-style-type: none"> <li data-bbox="304 311 1479 383">1 Refer to the 501-20 removal and installation section of the workshop manual, remove the seat cushion and the plastic escutcheon at the top of the seat back (where the webbing exits to expose the lower anchor fixing point of the center safety belt) <li data-bbox="304 383 1479 412">2 Remove the lower anchorage of the safety belt <li data-bbox="304 412 1479 439">3 With the seat back correctly latched, allow up to 20mm webbing to retract, then extract the webbing
	<p>Is the mini-button (webbing travel limit stop) correctly installed to the webbing and in good condition?</p> <p>Yes Feed the mini-button back through the plastic escutcheon if required. Correctly reinstall the escutcheon to the seat back, extract the webbing then allow to retract, ensure the mini-button comes to rest outside the escutcheon stop</p> <p>No Replace as required. Refer to the warranty policy and procedures manual, or determine if any prior approval programme is in operation, prior to the installation of a new module/component</p>

PINPOINT TEST I : SAFETY BELT BUCKLE-NOT LATCHING/JAMMED

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
I1: SAFETY BELT BUCKLE-NOT LATCHING/JAMMED	
 CAUTION: Do not insert any objects or tools into the buckle head	
	<ol style="list-style-type: none"> <li data-bbox="304 824 1479 853">1 Visually inspect the buckle head for evidence of damage. If damaged replace as required <li data-bbox="304 853 1479 902">2 Depress the buckle release (red button) and (Using a torch) carry out visual inspection for any evidence of debris/material or foreign objects in the buckle head <li data-bbox="304 902 1479 952">3 If required remove the pretensioner from the vehicle. Remove the seat. Remove the pretensioner from the seat frame <li data-bbox="304 952 1479 1001">4 Do not insert any objects or tools buckle head With the buckle removed invert and attempt to shake out any debris <li data-bbox="304 1001 1479 1032">5 Attempt to latch the tongue in the buckle
	<p>Does the seat belt buckle operate correctly</p> <p>Yes Reinstall any components, no further action required</p> <p>No Replace the pretensioner, Refer to section 501 20</p>

Safety Belt System - Front Safety Belt Retractor

Removal and Installation

Removal

1. Position the front seat fully forwards.
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the B-pillar upper trim panel.
For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Release the safety belt upper anchor from the B-pillar.
 - Remove and discard the Torx bolt.

5. Release the front seat switch pack trim panel for access.

- Remove the 2 screws.

6. Remove the front safety belt retractor.

- Remove and discard the Torx bolt.

E45813

Installation

1. Install the front safety belt retractor.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).

2. Install the front seat switch pack trim panel.

- Tighten the screws.

3. Attach the safety belt upper anchor.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).

4. Install the B-pillar upper trim panel.

For additional information, refer to: [B-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Safety Belt System - Second Row Center Safety Belt Retractor Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

1. Release the safety belt retractor cover and guide

- Remove the 2 screws.
- Remove the safety belt guide.
- Remove the retractor cover.

2. Remove the safety belt lower anchor.

- Raise the seat cushion.
- Remove and discard the nut.

3. Remove the safety belt retractor assembly.

- Remove and discard the Torx bolt.

Installation

1. Install the safety belt retractor assembly.

- Tighten the new Torx bolt to 40 Nm (30 lb.ft).

2. Install the safety belt guide and retractor cover.

- Attach the safety belt guide and retractor cover.
- Tighten the screws.

3. Install the safety belt lower anchor.

- Tighten the new nut to 40 Nm (30 lb.ft).
- Lower the seat cushion.

Safety Belt System - Second Row Center Safety Belt Retractor Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. Remove the center seat.

For additional information, refer to: [Rear Seat - Vehicles With: 40/20/40 Split Seat](#) (501-10 Seating, Removal and Installation).

2. Release the safety belt retractor cover and guide

- Remove the 2 screws.
- Remove the safety belt guide.
- Remove the retractor cover.

3. Remove the safety belt lower anchor.

- Fold the LH outer seat assembly forwards.
- Remove and discard the Torx bolt.

4. Remove the safety belt retractor assembly.

- Remove and discard the Torx bolt.

Installation

1. Install the safety belt retractor assembly.

- Tighten the new Torx bolt to 40 Nm (30 lb.ft).

2. Install the safety belt guide and retractor cover.

- Attach the safety belt guide and retractor cover.
 - Tighten the screws.
- 3.** Install the safety belt lower anchor.
- Tighten the new nut to 40 Nm (30 lb.ft).
 - Lower the seat cushion.
- 4.** Install the center seat.
For additional information, refer to: [Rear Seat - Vehicles With: 40/20/40 Split Seat](#) (501-10 Seating, Removal and Installation).

Safety Belt System - Second Row Safety Belt Retractor

Removal and Installation

Removal

1. Remove the C-pillar upper trim panel.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Remove the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Release the safety belt upper anchor.
 - Remove and discard the Torx bolt.

E49593

4. Remove the second row safety belt retractor.
 - Remove and discard the Torx bolt.

E49594

Installation

1. Install the second row safety belt retractor.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
2. Install the safety belt upper anchor.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
3. Install the C-pillar lower trim panel.
For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Install the C-pillar upper trim panel.
For additional information, refer to: [C-Pillar Upper Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Safety Belt System - Third Row Safety Belt Retractor

Removal and Installation

Removal

1. Remove the D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
2. Release the safety belt upper anchor.
 - Remove and discard the Torx bolt.

3. Remove the third row safety belt retractor.
 - Remove and discard the Torx bolt.

Installation

1. Install the third row safety belt retractor.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
2. Install the safety belt upper anchor.
 - Tighten the Torx bolt to 40 Nm (30 lb.ft).
3. Install the D-pillar upper trim panel.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Safety Belt System - Front Safety Belt Buckle

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
4. Remove the seat backrest hinge cover.
 - Remove the 2 screws.

E56486

5. Remove the front safety belt buckle.

- Remove the Torx bolt.
- Disconnect the 2 electrical connectors.
- Release the wiring harness.

Installation

1. Install the front safety belt buckle.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).
- Connect the electrical connectors.
- Attach the wiring harness.

2. Install the seat backrest hinge cover.

- Tighten the screws.

3. Install the front seat.

For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

4. Connect the battery ground cable.

Safety Belt System - Rear Safety Belt Buckle Vehicles With: 40/20/40 Split Seat

Removal and Installation

Removal

1. Remove the inner backrest hinge cover.

- Release the backrest cover side clip.
- Remove the screw.
- Release the 2 clips.

E55971

2. Remove the rear seat cushion side finisher.

- Remove the 2 screws.
- Release the tension strap.

E55973

3. Remove the safety belt buckle.

- Fold the seat assembly forwards.
- Remove the Torx bolt.
- Release the tension spring.

E55994

Installation

1. Install the safety belt buckle.

- Attach the tension spring.
- Tighten the Torx bolt to 25 Nm (18 lb.ft).
- Fold seat assembly rearwards.

2. Install the rear seat cushion side finisher.

- Attach the tension strap.
- Tighten the screws.

3. Install the inner backrest hinge cover.

- Attach the clips.
- Tighten the screw.
- Attach the backrest cover side clip.

Safety Belt System - Rear Safety Belt Buckle LH Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

1. Remove the safety belt buckle.

- Raise the seat cushion.
- Release the retaining strap.
- Remove the Torx bolt.
- Release the tension spring.

Installation

1. Install the safety belt buckle.

- Attach the tension spring.
- Tighten the Torx bolt to 25 Nm (18 lb.ft).
- Attach the retaining strap.
- Lower the seat cushion.

Safety Belt System - Rear Safety Belt Buckle RH Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

1. Release the RH rear seat.

- Fold the seat cushion forward.
- Remove and discard the 4 Torx bolts.
- Fold down the rear seat backrest.

2. Remove the RH rear seat.

3. Remove the rear seat cushion side finisher.

- Remove the screw.

4. Remove the safety belt buckle.

- Raise the seat cushion.
- Release the retaining strap.
- Remove and discard the bolt.

Installation

1. Install the safety belt buckle.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).
- Attach the retaining strap.
- Lower the seat cushion.

2. Install the rear seat cushion side finisher.

- Tighten the screw.

3. Install the RH rear seat.

- Position the seat on the dowels.

4. Secure the RH rear seat.

- Return the seat backrest to the upright position.
- Tighten the new bolts to 40 Nm (30 lb.ft).
- Fold the seat cushion rearwards.

Safety Belt System - Rear Center Safety Belt Buckle Vehicles With: 60/40 Split Seat

Removal and Installation

Removal

1. Release the RH rear seat.

- Fold the seat cushion forward.
- Remove and discard the 4 Torx bolts.
- Fold down the rear seat backrest.

2. Remove the RH rear seat.

3. Remove the rear seat cushion side finisher.

- Raise the seat cushion.
- Remove the screw.

4. Remove the safety belt buckle.

- Release the retaining strap.
- Remove and discard the bolt.

Installation

1. Install the safety belt buckle.

- Tighten the Torx bolt to 40 Nm (30 lb.ft).
- Attach the retaining strap.
- Lower the seat cushion.

2. Install the rear seat cushion side finisher.

- Tighten the screw.

3. Install the RH rear seat.

- Position the seat on the dowels.

4. Secure the RH rear seat.

- Return the seat backrest to the upright position.
- Tighten the new bolts to 40 Nm (30 lb.ft).
- Fold the seat cushion rearwards.

Supplemental Restraint System -

Torque Specifications

Supplemental Restraint System - Air Bag and Safety Belt Pretensioner

Supplemental Restraint System (SRS)

Description and Operation

COMPONENT LOCATION - SHEET 1 OF 2

E45250

Item	Part Number	Description
1	-	supplemental restraint system (SRS) warning indicator
2	-	Driver air bag
3	-	Clockspring
4	-	Passenger air bag deactivation indicator
5	-	Passenger air bag
6	-	Passenger air bag deactivation switch (all except NAS (north American specification) and Australia)
7	-	restraints control module (RCM)

COMPONENT LOCATION - SHEET 2 OF 2

E45249

Item	Part Number	Description
1	-	Door side impact sensor
2	-	B pillar side impact sensor
3	-	Rear quarter side impact sensor
4	-	Third row side air curtain
5	-	First and second row side air curtain
6	-	Safety belt pretensioner and buckle switch
7	-	Seat position sensor
8	-	Occupant classification module (NAS only)
9	-	Seat cushion pressure sensor (NAS only)
10	-	Seat cushion pressure pad (NAS only)
11	-	Safety belt tension sensor (NAS only)

12	-	Side air bag
13	-	Front impact sensors

GENERAL

The SRS provides additional protection for occupants in certain vehicle accident conditions. The SRS consists of:

- A driver air bag
- A passenger air bag
- A side air bag on each front seat
- Side air curtains for first and second row seats
- Side air curtains for third row seats (where fitted)
- A pretensioner for each front safety belt
- A buckle sensor for each front safety belt
- Front and side impact sensors
- A passenger air bag deactivation indicator
- A passenger air bag deactivation switch (all except NAS and Australia)
- An occupant monitoring system for the front passenger seat
- A position sensor for the driver seat
- A SRS warning indicator
- A clockspring
- A RCM.

WARNING: All pyrotechnic devices are dangerous. Before performing any procedures on any pyrotechnic device, read all information contained within the Standard Workshop Practices section of this manual. For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

The SRS features selective activation of the air bags and pretensioners, and two stage driver and passenger air bags. The RCM monitors internal and external sensors and activates the required safety belt pretensioners and air bags if the sensors detect an impact or roll-over above preset limits.

DRIVER AIR BAG

E45251

Item	Part Number	Description
1	-	Release tool slot and guide channel
2	-	Inflator stage 1 connector
3	-	Inflator stage 2 connector
4	-	Latch spring
5	-	Locating pin and spring
6	-	Latch hook

The driver air bag forms the center pad of the steering wheel. Four pins and two latches locate and secure the driver air bag to the steering wheel. The latches consist of wire springs on each side of the driver air bag which engage with hooks in the steering wheel. The driver air bag is released from the steering wheel by pulling on the wire springs with a special tool inserted through a slot on each side of the steering wheel hub. Springs on the locating pins then push the driver air bag away from the steering wheel.

A Lucar connector attaches a ground to the driver air bag.

The driver air bag has a two stage inflator, with separate electrical connectors for each stage. The inflator contains a non-azide propellant as the gas generator.

Lines moulded into the inner surface of the driver air bag cover provide weak points that split open in a controlled manner when the driver air bag deploys. The inflated volume of the air bag is 57 liters (2.01 ft³).

PASSENGER AIR BAG

Item	Part Number	Description
1	-	Reinforcement lid
2	-	Chute
3	-	Passenger air bag
4	-	In-vehicle crossbeam
5	-	Mounting bracket
6	-	Lucar connector
7	-	Inflator connector
8	-	Deployment doors

The passenger air bag is located in the instrument panel, behind the upper glove compartment. The bottom of the passenger air bag is attached to a mounting bracket on the in-vehicle crossbeam. The top of the passenger air bag is attached to a chute, which, in turn, is attached to a reinforcement lid in the top of the instrument panel. When the air bag deploys, the chute guides the air bag to the underside of the reinforcement lid. The reinforcement lid incorporates two deployment doors that are forced open, splitting the instrument panel covering, when the air bag deploys.

A Lucar connector attaches a ground to the passenger air bag.

The passenger air bag has a two stage inflator, with separate electrical connectors for each stage. The inflator contains a non-azide propellant as the gas generator. The inflator uses a high pressure mix of air and hydrogen gas as the inflation medium. The inflated volume of the air bag is 130 liters (4.59 ft³).

SIDE AIR BAGS

- NOTE: Left side air bag shown, right side air bag is mirror image

E45253

Item	Part Number	Description
1	-	Seat backrest frame
2	-	Side air bag
3	-	Cable
4	-	Inflator

A side air bag is attached to the outside of each front seat backrest frame, under the backrest cover.

The side air bags are handed, and each consist of a moulded plastic case which contains the folded air bag and the inflator. A cable connects the igniter of the inflator to a connector in the main seat harness connector block located under the front edge of the seat cushion.

When the air bag deploys it forces the front edge of the moulded plastic case apart and splits open the backrest cover.

The side air bags use compressed argon as the inflation medium. The inflated volume of each side air bag is 12 liters (0.42 ft³).

SIDE AIR CURTAINS

The side air curtains are designed to protect the head and upper body in side impact and roll-over situations. The first and second row side air curtains are a standard fit on all vehicles. The third row side air curtains are fitted on seven seat vehicles only. The side air curtains use compressed argon as the inflation medium.

First and Second Row Side Air Curtain

- NOTE: Right side air curtain shown, left side air curtain is mirror image

E45254

Item	Part Number	Description
1	-	Air curtain anchorage points
2	-	Non inflatable section of air curtain
3	-	Air curtain clip (manufacturing aid)
4	-	Front gas guide attachment
5	-	Inflatable section of air curtain
6	-	B pillar ramp
7	-	Securing screws
8	-	Active tether device
9	-	Rear tether anchor
10	-	Rear tether
11	-	Cant rail clip
12	-	Gas guide pipe
13	-	Inflator electrical connector
14	-	Inflator
15	-	Inflator mounting bracket

The first and second row side air curtains are installed on the cant rails above the front and rear doors, behind the headliner.

Each side air curtain has an inflator, which is attached to the header rail by a mounting bracket and two screws. The inflator is connected to the air curtain by a gas guide pipe.

The gas guide pipe and air curtain are secured along the cant rail by a fixing at the front of the gas guide pipe, two fixings at the B pillar ramp, two clips and two screws, and two fixings at the end of the gas guide pipe and C pillar ramp.

At the rear of the air curtain, an active tether device is clipped in two positions down the C pillar. At the bottom of the active tether device is a fixing anchorage.

The front of the air curtain is secured to the A pillar by two fixings.

When the side air curtain deploys, it breaks out of the B pillar ramp and the clips on the cant rail and extends downwards from behind the headliner. The deploying air curtain is tensioned between the anchorage points on the A pillar and the active tether device on the C pillar. This retains the air curtain in position against the upper part of the doors and the B pillar.

Third Row Side Air Curtain

- NOTE: Right side air curtain shown, left side air curtain is mirror image

E45255

Item	Part Number	Description
1	-	Securing screw
2	-	Air curtain
3	-	Securing screw
4	-	Rear tether
5	-	Gas guide pipe
6	-	Inflator mounting bracket
7	-	Inflator
8	-	Rear tether anchor
9	-	Tether housing
10	-	Rear tether
11	-	Front tether anchor

The third row side air curtains are installed on the cant rails above the rear quarter windows, behind the headliner.

Each side air curtain has an inflator, which is attached to the D pillar by a mounting bracket and two screws. The inflator is connected to the air curtain by a gas guide pipe. The gas guide pipe and air curtain are secured to the cant rail by two screws. Tethers are attached to the front and rear of the air curtain. The front tether is anchored to the C pillar. The rear tether is anchored to the D pillar and held in position by a tether housing.

When a third row side air curtain deploys, it extends downwards from behind the headliner. The expanding air curtain tightens the tethers, which retain the air curtain in position against the rear quarter window.

PRETENSIONERS

E45256

Item	Part Number	Description
1	-	Safety belt buckle
2	-	Boot
3	-	Anchor bolt
4	-	Piston and tube
5	-	Electrical connectors for inflator and buckle switch

The pretensioners are used to tighten the front safety belts during a collision to ensure the occupants are securely held in their seats. A pretensioner is integrated into each front safety belt buckle.

Each pretensioner has a tube containing an inflator and a piston. The inflator is connected to the RCM. The piston is attached to a steel cable, the opposite end of which is attached to the safety belt buckle.

On receipt of a fire signal from the RCM, the inflator generates nitrogen gas that rapidly expands to drive the piston along the tube, pulling the cable and drawing the safety belt buckle downwards.

SAFETY BELT SENSORS

The buckle of each front safety belt incorporates a Hall effect sensor that provides a safety belt status signal to the RCM. The RCM broadcasts the status of the two front safety belts on the high speed controller area network (CAN) bus for use by the instrument cluster.

IMPACT SENSORS

E45257

Impact sensors are installed in the front and both sides of the vehicle. The use of multiple impact sensors provides shorter air bag trigger times, through faster detection of lateral and longitudinal acceleration, and improves detection accuracy.

There are two front impact sensors attached to brackets on the body front support frame, just above each front longitudinal.

There are six side impact sensors located in the passenger compartment, as follows:

- One attached to each front door.
- One attached to the base of each B pillar.
- One installed in each rear quarter, above the rear wheelarch.

Each impact sensor incorporates an accelerometer and a microcontroller powered by a feed from the RCM. The power feed also provides the interface connection through which the impact sensor communicates with the RCM using serial data messages. Acceleration is evaluated by the microcontroller and transmitted to the RCM, which then makes the decision on whether or not to activate the air bags and pretensioners.

When the ignition is switched on the RCM supplies power to the impact sensors, which perform a self test. After satisfactory self tests the impact sensors continually output 'sensor active' messages to the RCM. If a fault is detected the relevant impact sensor sends a fault message, instead of the sensor active message, to the RCM. The RCM then stores a related fault code and illuminates the SRS warning indicator.

PASSENGER AIR BAG DEACTIVATION INDICATOR

E45258

Item	Part Number	Description
1	-	Deactivation indicator (NAS and Japan)
2	-	Deactivation indicator (all except NAS and Japan)

The passenger air bag deactivation indicator is installed on the center switch pack of the instrument panel. When appropriate, the indicator illuminates to advise front seat occupants that the passenger air bag is disabled. Operation of the indicator is controlled by the RCM based on seat occupancy status derived from the occupant classification system (NAS vehicles) or the passenger air bag deactivation switch (all except NAS and Australian specification vehicles).

The RCM illuminates the indicator when:

- The passenger air bag is deactivated with the passenger air bag deactivation switch (where fitted). OR
- Required by passenger seat occupant monitoring (NAS vehicles only).

PASSENGER AIR BAG DEACTIVATION SWITCH

E45259

The passenger air bag deactivation switch provides a method of manually disabling the passenger air bag on all vehicles except Australian specification and those fitted with the occupant classification system. The switch is installed in the front passenger end of the instrument panel and is operated by the ignition key.

When the passenger air bag deactivation switch is operated, it changes a ground connection between two pins in the connectors of the RCM. When the passenger air bag deactivation switch is selected to OFF, the RCM disables the passenger air bag and, if the front passenger seat is occupied, illuminates the passenger air bag deactivation indicator.

OCCUPANT SENSING

There are 2 types of occupant sensing:

- In all markets except North America, vehicles have an occupant detection system to activate the seat belt minder
- On NAS vehicles, an occupant classification system provides signals to the RCM to allow the correct arming of the passenger air bag and corresponding indicator.

Occupant Detection System

E46657

Item	Part Number	Description
1	-	Seat cushion
2	-	Pressure switch

The occupant detection system can only determine if the front passenger seat is occupied or unoccupied. The occupant detection system consists of a pressure switch installed between the foam padding and the cover of the front passenger seat cushion.

The pressure switch incorporates a number of load cells connected in series and embedded in a plastic film. Weight on the pressure sensor increases the resistance of the circuit.

The instrument cluster supplies a reference voltage to the pressure switch and measures the current draw to determine the occupancy status. From the occupancy status, and the status of the front passenger safety belt (received from the RCM on the high speed CAN bus), the instrument cluster determines the belt minder status.

Occupant Classification System

⚠ WARNING: All Land Rover vehicles, with the exception of Defender, are equipped with passenger air bags. Passenger air bags offer well documented benefits in crash protection for adult front passenger seat occupants but their deployment can be harmful to children and infants sat in the front passenger seat of the vehicle. Land Rover recommends that children and infants are placed in the rear seats of the vehicle.

• NOTE: All new Land Rover vehicles sold in North America comply with the FMVSS208 legislation due to the fitment of the occupant classifications system.

E45261

Item	Part Number	Description
1	-	Seat cushion
2	-	Pressure pad
3	-	Pressure tube
4	-	Pressure sensor
5	-	Safety belt tension sensor
6	-	Occupant classification module

Occupant classification system comprises an ECU, attached to the underside of the seat, a silicon filled bladder with a pressure sensor fitted between the cushion foam and the seat pan and a seat belt tension sensor. When an occupant sits on the seat a pressure is created in the bladder and the occupant weight is determined from the pressure generated. The weight is compared against 4 classification thresholds. These are:

- Empty
- Occupied inhibit status (6 year old child, 3 year old child, rear facing/forward facing 12 month infant seats and booster seats)
- Occupied allow status (weight greater than 5th percentile female) and the airbag enabled/disabled as appropriate
- Indeterminate state.

Classification	Deactivation Indicator	SRS Warning Indicator
Seat unoccupied	OFF	OFF
Occupied inhibit	ON	OFF
Occupied allow	OFF	OFF
Indeterminate state	OFF	ON

OCS module contains accelerometers and algorithms to compensate for the effects of longitudinal, lateral and vertical

forces acting on the vehicle whilst being driven. The belt tension sensor is used to offset loads forced into the seat by 'cinched' child seats (where a child seat load on the seat is increased by a highly tensioned seat belt) and also dynamic belt loading (Off-road/aggressive driving styles).

The belt minder system on cars equipped with the occupant classification system uses the RCM to detect seat occupancy status based on calculations within the RCM, with the instrument cluster then determining whether a seat belt reminder should be activated based on the status of the seat belt buckle switches and vehicle speed.

SEAT POSITION SENSOR

Item	Part Number	Description
1	-	Seat frame
2	-	Mounting plate
3	-	Seat position sensor
4	-	Electrical connector
5	-	Target plate
6	-	Seat base

The seat position sensor allows the RCM to detect when the driver seat is forward of a given point on the seat track. The seat position sensor consists of a Hall effect sensor attached to the driver seat frame and a target plate on the seat base. While the ignition is on, the RCM supplies the sensor with a power supply of 12V nominal, and monitors the return voltage. When the seat frame moves forwards, the sensor moves over the target plate, which changes the reluctance of the sensor. The change of voltage is detected by the RCM and used as a switching point. The switching point is when the center of the sensor is 3 ± 4 mm from the leading edge of the target plate.

When the driver seat is forward of the switching point, the RCM increases the time delay between firing the two stages of the inflator in the driver air bag. When the driver seat is rearward of the switching point, the RCM uses the normal time delay between firing the two stages.

SRS WARNING INDICATOR

E45263

The SRS warning indicator consists of a red light emitting diode (LED) behind a SRS graphic in the tachometer of the instrument cluster.

Operation of the SRS warning indicator is controlled by a high speed CAN bus message from the RCM to the instrument cluster. The RCM illuminates the SRS warning indicator if a fault is detected, and for approximately 6 seconds during the bulb check at the beginning of each ignition cycle.

CLOCKSPRING

E45264

Item	Part Number	Description
1	-	Electrical connector for steering wheel switch packs and horn
2	-	Inner rotor
3	-	Outer housing securing lug
4	-	Driver air bag link leads
5	-	Viewing window
6	-	Drive peg
7	-	Stopper
8	-	Electrical connector for steering column harness
9	-	Outer cover

The clockspring is installed on the steering column to provide the electrical interface between the fixed wiring harness of the steering column and the components that rotate with the steering wheel, i.e. the driver air bag, the horn and the steering wheel switch packs.

The clockspring consists of a plastic cassette which incorporates an outer cover fixed to the steering column and an inner rotor which turns with the steering wheel. Four securing lugs attach the cover to the multifunction switch on the steering column. The rotor is keyed to the steering wheel by a drive peg. A lug on the underside of the rotor operates the self-cancelling feature of the turn signal indicator switch. A ribbon lead, threaded on rollers in the rotor, links two connectors on the cover to two connectors on the rotor. Link leads for the driver air bag are installed in one of the connectors on the rotor.

To prevent damage to the ribbon lead, both the steering and the clockspring must be centralized when removing and installing the clockspring or the steering wheel. The clockspring is centralized when the drive peg is at six o'clock and 50 - 100% of a yellow wheel is visible in the viewing window.

Replacement clocksprings are fitted with a stopper, which locks the cover to the rotor, in the central position. The stopper must be broken off when the replacement clockspring is installed.

RCM

E45265

The RCM is installed on the top of the transmission tunnel, in line with the B pillars, and controls operation of the SRS. The main functions of the RCM include:

- Crash detection and recording.
- Air bag and pretensioner firing.
- Self test and system monitoring, with status indication via the SRS warning lamp and non volatile storage of fault information.

A safing sensor in the RCM provides confirmation of an impact to verify if air bag and pretensioner activation is necessary. A roll-over sensor monitors the lateral attitude of the vehicle. Various firing strategies are employed by the RCM to ensure that during an accident only the appropriate air bags and pretensioners are fired. The firing strategy used also depends on the inputs from the safety belt switches and the occupant monitoring system.

An energy reserve in the RCM ensures there is always a minimum of 150 milliseconds of stored energy available if the power supply from the ignition switch is disrupted during a crash. The stored energy is sufficient to produce firing signals for the driver air bag, the passenger air bag and the safety belt pretensioners.

When the ignition is switched on the RCM performs a self test and then performs cyclical monitoring of the system. If a fault is detected the RCM stores a related fault code and illuminates the SRS warning indicator. The faults can be retrieved by the Land Rover approved diagnostic system on a dedicated link between the RCM and the diagnostic socket. If a fault that could cause a false fire signal is detected, the RCM disables the respective firing circuit, and keeps it disabled during a crash event.

SRS OPERATION

General

In a collision, the sudden deceleration or acceleration is measured by the safing sensor in the RCM and by the impact sensors. The RCM evaluates the readings to determine the impact point on the vehicle and whether the deceleration/acceleration readings exceed the limits for firing any of the air bags or pretensioners. During a collision, the RCM only fires the air bags and pretensioners if the safing sensor confirms that the data from the remote sensor(s) indicates an impact limit has been exceeded. The RCM also monitors the vehicle for a roll-over accident using the internal roll-over sensor and high speed CAN bus messages from the anti-lock brake system (ABS) module and the steering angle sensor.

The RCM incorporates the following impact thresholds to cater for different accident scenarios:

- Front impact, pretensioners.
- Front impact, driver and passenger air bags stage 1, belt unfastened.
- Front impact, driver and passenger air bags stage 2, belt unfastened.
- Front impact, driver and passenger air bags stage 1, belt fastened.
- Front impact, driver and passenger air bags stage 2, belt fastened.
- Rear impact.
- LH side impact.
- RH side impact.
- Roll-over.

The front impact thresholds increase in severity from pretensioners, through to driver and passenger air bag stage 2, belt fastened.

Firing Strategies

The seat belt pretensioners are fired when either the pretensioner impact limit or the roll-over limit is exceeded. The RCM only fires the pretensioners if the related safety belt is fastened. For the front passenger pretensioner to fire, the seat must also be occupied by a large person, i.e. someone over a given weight (NAS only).

The driver and passenger air bags are only fired in a frontal impact that exceeds the stage 1 threshold. Both stages of the inflator in the driver and passenger air bags are fired. At impacts between the stage 1 and 2 thresholds, the delay between the firing of the two stages varies with the severity of the impact; the more severe the impact the shorter the delay. At stage 2 impact thresholds and above, the two stages of the inflator are fired almost simultaneously. The passenger air bag is disabled unless the front passenger seat is occupied by a large person (NAS only), or the passenger air bag deactivation switch is on (all except NAS). The time delay between firing the two stages of the inflator in the driver air bag is increased if the driver seat is forward of the seat position sensor switching point.

If there is a fault with a safety belt buckle sensor, the RCM assumes the related safety belt is fastened for the pretensioner firing strategy and unfastened for the driver and passenger air bag firing strategies. If there is a fault with the occupant detection system, or if there is a fault with the passenger air bag deactivation switch, the RCM increase the time delay between firing the two stages of the inflator in the passenger air bag.

If a side impact limit is exceeded, the RCM fires the side air bag and the side air curtain(s) on that side of the vehicle. If the side impact limit on the front passenger side of the vehicle is exceeded, the RCM also evaluates the input from the occupant classification system, and fires the side air bag only if the front passenger seat is occupied by a large person (NAS only).

The side air curtain(s) on both sides of the vehicle are fired if the roll-over limit is exceeded.

If multiple impacts occur during a crash event, after responding to the primary impact the RCM will output the appropriate fire signals in response to any further impacts if unfired units are available.

Crash Signal

When the RCM outputs any of the fire signals, it also outputs a hard wired crash signal to the Engine Control Module (ECM) and changes the high speed CAN bus output message from 'no crash' to 'crash condition'. The high speed CAN bus message is used by the central junction box (CJB) and the FFBH (fuel fired booster heater).

On receipt of the crash signals:

- The engine control module (ECM) disables the fuel pump.
- Operation of the FFBH is disabled.
- The CJB enters the crash mode and:
 - Activates all of the unlock signals of the vehicle locking system, even if the vehicle is already unlocked. After 3 seconds, the CJB activates the unlock signals again, in case a lock button is pressed during the crash, by flailing limbs for example.
 - Ignores all locking and superlocking inputs until the crash mode is cancelled, when it returns the locking system to normal operation.
 - Activates all of the courtesy lamps, except for the approach lamps. The activated courtesy lamps remain on until they are manually switched off at the lamp unit, or the CJB crash mode is cancelled, when they return to normal operation.
 - Activates the hazard warning lamps. The hazard warning lamps remain on until cancelled by turning the ignition switch from position II to position I or 0, or until the crash mode is cancelled.

The crash mode is cancelled by cycling the ignition switch.

Supplemental Restraint System - Air Bag Supplemental Restraint System (SRS)

Diagnosis and Testing

Principle of Operation

For a detailed description of the air bag supplemental restraint system and operation, refer to the relevant Description and Operation section of the workshop manual. REFER to: [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) (501-20B Supplemental Restraint System, Description and Operation).

Safety Information

• WARNINGS:

To avoid accidental deployment the back-up power supply must be depleted before beginning any work on the SRS system or its components. Failure to follow this instruction may result in personal injury.

Do not use a multimeter to probe an SRS module. It is possible for the power from the meter battery to trigger the activation of the module. Failure to follow this instruction may result in personal injury.

• NOTE: It is advisable not to use a cellular phone or to have a cellular phone in close proximity when working on the SRS system or components.

• NOTE: Given the legal implications of a restraints system failure, harness repairs to Air Bag module circuits are not acceptable. Where the text refers to "REPAIR the circuit", this will normally mean the replacement of a harness.

Power supply depletion

Before beginning any work on the SRS system or related components:

1. 1. Remove the ignition key.
2. 2. Disconnect the battery leads, ground first.
3. 3. Wait 2 minutes for the power circuit to discharge.

There are comprehensive instructions on the correct procedures for SRS system repairs in the workshop manual. Refer to the relevant section of the workshop manual.

Inspection and Verification

CAUTION: Diagnosis by substitution from a donor vehicle is **NOT** acceptable. Substitution of control modules does not guarantee confirmation of a fault and may also cause additional faults in the vehicle being checked and/or the donor vehicle.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

1. 1. Verify the customer concern.
 - Confirm the function of the warning lamp (if the warning lamp is inoperative, system faults will be signalled by an audible chime)
2. 2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection

Mechanical	Electrical
<ul style="list-style-type: none"> ● Check for the installation of non-standard accessories which may affect or obstruct the function of the SRS system ● Check the condition of trim, etc at the SRS system components ● Sensor(s) ● Pretensioner(s) ● Air bag module(s) ● Occupant detection/classification sensors ● Seat position sensor 	<ul style="list-style-type: none"> ● Fuses ● Wiring harness ● Make sure all electrical connector(s) are engaged correctly on the air bag circuits ● Make sure the Restraints Control Module (RCM) is correctly installed ● Warning lamp bulb(s) ● Impact sensor(s) ● Buckle sensor(s) ● Pretensioner(s) ● Air bag module(s) ● Air bag deactivation switch ● Air bag deactivation warning lamp ● Occupant detection/classification sensors ● Seat position sensor ● Clockspring

3. 3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. 4. If the cause is not visually evident, check for Diagnostic Trouble Codes (DTCs) and refer to the relevant DTC Index.

DTC Index

For a list of Diagnostic Trouble Codes (DTCs) that could be logged on this vehicle, please refer to Section 100-00. REFER to: [Diagnostic Trouble Code \(DTC\) Index - DTC: Restraints Control Module \(RCM\)](#) (100-00 General Information, Description and Operation) / [Diagnostic Trouble Code \(DTC\) Index - DTC: Occupant Classification System \(OCS\)](#) (100-00 General Information, Description and Operation).

Supplemental Restraint System - Driver Air Bag Module

Removal and Installation

Special Tool(s)	
 <p>501-106</p> <p>E48291</p>	Airbag module remover 501-106

Removal

- WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

- NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the driver air bag module.
 - Using the special tool, release the clip.
 - Repeat the above procedure for the other side.
 - Disconnect the ground cable.
 - Release the clips and disconnect the 2 electrical connectors.

E48289

Installation

1.  WARNING: The SRS electrical connectors are unique. DO

NOT force, or attempt to connect electrical connectors to the wrong sockets.

 **CAUTION:** Make sure the cables/harnesses are not twisted before connecting them to the airbag module. Once connected, do not rotate the air bag module as this will cause the wires to twist, which can lead to harness damage and SRS faults.

Attach the driver air bag module.

- Connect the ground cable.
- Connect the electrical connectors.

2.  **WARNING:** Driver air bag module installation can be confirmed by hearing 2 audible clicks, 1 for each spring. The module edges should also be flush with the steering wheel.

Install the driver air bag module.

- Install top edge of module, then hinge upwards and make sure wires are connected to clips.
- Make sure the wires are not trapped behind the module.
- Hold wires in place while hinging module closed.
- Align the locating pins and springs.

Supplemental Restraint System - Passenger Air Bag Module

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the instrument panel upper section.
For additional information, refer to: [Instrument Panel Upper Section](#) (501-12 Instrument Panel and Console, Removal and Installation).
4. Remove the passenger air bag module.
 - Remove the 4 nuts.

E47176

5. **NOTE:** Do not disassemble further if the component is removed for access only.

Remove the passenger air bag module bracket.

- Remove the 2 nuts.

E47177

Installation

1. Install the passenger air bag module bracket.
 - Tighten the nuts to 10 Nm (7 lb.ft).
2. Install the passenger air bag module.

- Tighten the nuts to 10 Nm (7 lb.ft).

3. Install the instrument panel upper section.

For additional information, refer to: [Instrument Panel Upper Section](#) (501-12 Instrument Panel and Console, Removal and Installation).

Supplemental Restraint System - Rear Side Air Curtain Module

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove the side air curtain module.

- Disconnect the electrical connector.
- Remove the 5 Torx screws.
- Release the retaining strap.

E 49973

Installation

1. Install the side air curtain module.
 - Tighten the Torx screws to 10 Nm (7 lb.ft).
 - Connect the electrical connector.
 - Secure the retaining strap.
2. Install the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Connect the battery ground cable.

For additional information, refer to: Specifications (414-00, Specifications).

Supplemental Restraint System - Front Impact Severity Sensor

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).
3. Remove the front impact sensor.

- Disconnect the electrical connector.
- Remove the 2 Torx bolts.

Installation

1. Install the front impact sensor.
 - Tighten the Torx bolts to 8 Nm (6 lb.ft).
 - Connect the electrical connector.
2. Install the headlamp assembly.
For additional information, refer to: [Headlamp Assembly](#) (417-01 Exterior Lighting, Removal and Installation).

Supplemental Restraint System - Passenger Air Bag Deactivation (PAD) Switch

Removal and Installation

Removal

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the passenger side register trim panel.
For additional information, refer to: [Passenger Side Register Trim Panel](#) (412-01 Air Distribution and Filtering, Removal and Installation).
3. Remove the PAD switch.
 - Disconnect the electrical connector.
 - Release the 2 clips.

Installation

1. Install the PAD switch.
 - Connect the electrical connector.
 - Secure with the clips.
2. Install the passenger side register trim panel.
For additional information, refer to: [Passenger Side Register Trim Panel](#) (412-01 Air Distribution and Filtering, Removal and Installation).

Supplemental Restraint System - Clockspring

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• CAUTIONS:

Make sure the wheels are in the straight-ahead position. Failure to follow this instruction may result in damage to the components.

Correct clockspring alignment can be found by viewing a yellow marker through the window situated on the clockspring face. If the marker is not visible, carefully turn the clockspring. If the turning force increases before the marker is visible, reverse the direction to avoid component damage.

• NOTE: test piece

• NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Fully extend the steering column for access.
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the steering wheel.
For additional information, refer to: Steering Wheel (211-04, Removal and Installation).
4. Remove the steering column upper shroud.
 - Release the 6 clips.

5. Remove the steering column lower shroud.
 - Remove the 3 Torx screws.
 - Release the steering column adjustment lever.

6.  CAUTION: Do not dismantle the clockspring, it has no servicable parts and must be replaced as a complete assembly.

Remove the clockspring.

- Disconnect the 2 electrical connectors.
- Remove the 4 screws.

Installation

1.  CAUTION: Correct clockspring alignment can be found by viewing a yellow marker through the window situated on the clockspring face. If the marker is not visible, carefully turn the clockspring. If the turning force increases before the marker is visible, reverse the direction to avoid component damage.

To install, reverse the removal procedure.

Supplemental Restraint System - B-Pillar Side Impact Sensor

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.

For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. Remove the scuff plate trim panel.

For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

3. Remove the side impact sensor.

- Remove the 2 Torx bolts.
- Disconnect the electrical connector.

Installation

1. Install the side impact sensor.

- Connect the electrical connector.
- Tighten the Torx bolts to 8 Nm (6 lb.ft).

2. Install the scuff plate trim panel.

For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Supplemental Restraint System - C-Pillar Side Impact Sensor

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.

For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. Remove the C-pillar lower trim panel.

For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

3. Remove the side impact sensor.

- Remove the 2 Torx bolts.
- Disconnect the electrical connector.

Installation

1. Install the side impact sensor.

- Tighten the Torx bolts to 8 Nm (6 lb.ft).
- Connect the electrical connector.

2. Install the C-pillar lower trim panel.

For additional information, refer to: [C-Pillar Lower Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Supplemental Restraint System - Front Door Side Impact Sensor

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.

For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).

2. Remove the front door trim panel.

For additional information, refer to: Front Door Trim Panel (501-05, Removal and Installation).

3. Remove the front door side impact sensor.

- Disconnect the electrical connector.
- Remove the 2 Torx bolts.

Installation

1. Install the front door side impact sensor.

- Tighten the Torx bolts to 8 Nm (6 lb.ft).
- Connect the electrical connector.

2. Install the front door trim panel.

For additional information, refer to: Front Door Trim Panel (501-05, Removal and Installation).

Supplemental Restraint System - Side Air Bag Module

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).
3. Remove the front seat backrest pad.
 - Remove the front seat head restraint retaining clips.

4. **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

Remove the side air bag module.

- Release the side air bag module harness.
- Remove the 2 nuts.

Installation

1. Install the side air bag module.
 - Tighten the nuts to 10 Nm (7 lb.ft).
 - Attach the wiring harness.
2. Install the front seat backrest pad.
 - Install the front seat head restraint retaining clips.
3. Install the front seat backrest cover.
For additional information, refer to: [Front Seat Backrest Cover](#) (501-10 Seating, Removal and Installation).

Supplemental Restraint System - Side Air Curtain Module

Removal and Installation

Removal

• **WARNINGS:**

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• **NOTE:** If the SRS component is to be replaced, the bar code of the new unit must be recorded.

1. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
2. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Release the roof opening panel drain tube from the securing clips.
4. Release the tire deflation wiring harness from securing clips.
5. Remove the side air curtain module.

- Remove the 8 screws.
- Remove the 5 Torx screws.
- Disconnect the electrical connector.

Installation

1. Install the side air curtain module.
 - Tighten the Torx screws to 10 Nm (7 lb.ft).
 - Tighten the screws.
 - Connect the electrical connector.
2. Secure the tire deflation wiring harness into the clips.
3. Secure the roof opening panel drain tube into the clips.
4. Install the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

Supplemental Restraint System - Restraints Control Module (RCM)

Removal and Installation

Removal

• WARNINGS:

It is imperative that before any work is undertaken on the SRS system, the appropriate information is read thoroughly.

Always disconnect both battery cables before beginning work on the SRS system. Disconnect the ground cable first. Never reverse connect the battery.

• NOTE: If the restraints control module (RCM) is to be replaced then T4 must be connected and the correct procedures adhered to, prior to battery disconnection.

• NOTE: If the SRS component is to be replaced, the bar code of the new unit must be recorded.

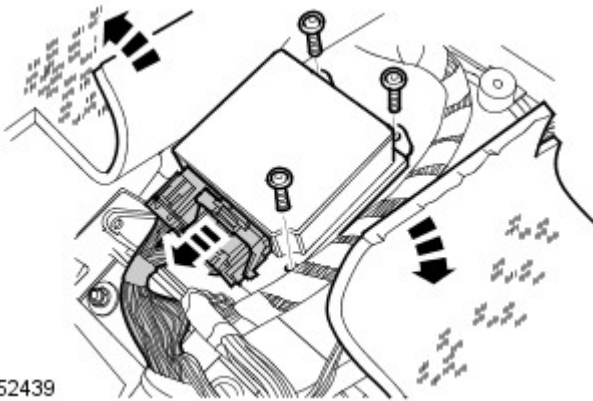

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Make the SRS system safe.
For additional information, refer to: [Standard Workshop Practices](#) (100-00 General Information, Description and Operation).
3. Remove the floor console.
For additional information, refer to: Floor Console (501-12, Removal and Installation).

CAUTION: Make sure the wiring harness is protected when cutting the carpet.

Remove the restraints control module (RCM).

- Cut the carpet for access.
- Disconnect the 2 electrical connectors.
- Remove the 3 Torx screws.

E52439

Installation

1. Install the RCM.
 - Tighten the Torx screws to 10 Nm (7 lb.ft).
 - Connect the electrical connectors.
 - Position the carpet.
2. Install the floor console.
For additional information, refer to: Floor Console (501-12, Removal and Installation).
3. Initiate a new RCM using T4.

Supplemental Restraint System - Occupant Classification Sensor

Removal and Installation

Removal

- NOTE: The occupant classification sensor is part of the passenger seat cushion. The sensor is only fitted to NAS models.

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the front seat cushion cover.
For additional information, refer to: [Front Seat Cushion Cover](#) (501-10 Seating, Removal and Installation).

Installation

1. Install the front seat cushion cover.
For additional information, refer to: [Front Seat Cushion Cover](#) (501-10 Seating, Removal and Installation).
2. Connect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
3. Using T4, configure a new occupant classification sensor.

Body Repairs - General Information - Body Repairs

Description and Operation

General Information

Introduction

The body plays a significant role in the increasing trend of ever more rapidly changing model variants. The different customer groups are strongly influenced by the design and shape of the body. At the same time the stability of the body plays the most important part in ensuring passenger and driver safety. Lightweight construction, alternative materials, composite materials, plastics and appropriate joining processes are all design features that characterise modern Land Rover vehicle bodies.

In terms of manufacturing technology, modern safety cell bodies can be produced almost without any problems. Land Rover guarantee high quality standards by ensuring that mechanical strength properties are tried and tested in numerous computer simulations, crash tests, by testing materials and by employing sophisticated manufacturing technologies. In the event of repairs it is vital that the production quality standards are upheld. This requires a well-equipped workshop, and places particular emphasis on the qualifications of the workshop technicians. Up-to-date knowledge of current manufacturing technologies and continuous training on new repair methods and techniques are vital for high-quality body repairs. The model-specific repair manuals and the general repair techniques provide valuable support when undertaking body repairs.

Always follow the repair instructions published in this manual. Failure to observe this instruction can result in serious impairment of vehicle safety. All specified safety requirements must be met after the work has been carried out.

Vehicle design

Vehicle design

E55853

Item	Part Number	Description
1	-	Body
2	-	Integral body Frame

High Strength Steels

Land Rover vehicles are constructed from a number of different steels, partly to obtain an optimised body (collision, safety, rigidity, fuel economy, etc).

Steels are divided into several groups according to their tensile and yield strength, that is to say the force necessary to bring about plastic deformation of the material.

Yield Summary

Yield is the strength at which the metal changes from elastic to plastic in behaviour, the point of no return.

Tensile Summary

Tensile strength is the breaking strength of a material when subjected to a tensile (stretching) force, the point of no return.

Abbreviation	Steel type	Yield Point
SS	Soft Steel	Maximum Yield point of 220 MPa
DP	Dual Phase Steel	Steel With a Yield Point up to 400 MPa
HS	High Strength Steel	Steel With a Yield Point 220 - 450 MPa
EHS	Extra High Strength Steel	Steel With a Yield Point 450 - 800 MPa
UHS	Ultra High Strength Steel	Steel With a Yield Point up to 1400 MPa

Ultra High Strength

The addition of ultra high strength steel in the A Pillar, B-Pillar and cantrail gives the body greater strength in a front or side impact.

No attempt should be made to straighten ultra high strength steel, due to its brittleness.

Ultra High Strength steel in body structure

E55726

Aluminium

Aluminium 6000 series is used in the hood, tailgate and liftgate. It is made from magnesium/copper aluminium alloy and is heat treated during manufacturing/paint bake process resulting in a panel with increased strength and dent resistance.

When repairing aluminium you must use tools that have only been used on aluminium and never on steel panels, this is to prevent cross-contamination

Aluminium in body structure

E55727

Magnesium

Magnesium AM60B is used to make the hood latch panel. It has good ductility and energy absorbing properties. It is also used on the instrument panel mounting beam.

No attempt should be made to weld or straighten the hood latch panel and it should be replaced in the event of an accident. If the corrosive coating is damaged it must be repaired using 'Land Rover Low Temperature Anti-Corrosion Coating', service part no VEP 501 840 PMA

Magnesium in body structure

E56195

Accident damage and diagnosis

General notes

- Exact diagnosis of the extent of damage enables proper repair planning.
- All body repairs must be carried out in accordance with the guidelines in this Body Repair Manual.
- The stability and strength properties of the body must be taken into account during body repairs. The body has exactly defined deformation patterns that must not be affected by any repair work.
- For instance, the crumple zones absorb the bulk of the impact energy. If any unprofessional repair techniques or methods are used in these areas then this can pose a fundamental threat to vehicle safety.

Hidden damage

- As well as looking at external indicators like flaked off paint, it is vital to check for hidden body damage or deformation that is not visible from the outside. Large attached parts like bumpers and inner fenders often need to be removed to allow accurate assessment of damage to underlying body parts.

Gap dimensions

For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Gap dimensions offer another alternative for diagnosis by visual inspection. If any changes or misaligned edges are apparent, then this usually indicates that the dimensions of the affected part are incorrect.

Changes in gap dimension

DEE0003919

Item	Part Number	Description
1	-	Gap too wide
2	-	Gap too small

Planning a repair

The following decisions have to be made before the repairs are started:

- Does the vehicle need to be put on a straightening jig, or can it be straightened by other means?
- Does the body need to be measured?
- Do aggregates like engine or axles need to be removed?
- • NOTE: It is preferable to repair body parts rather than to renew them, as this keeps the complete body-shell intact.
- Which body parts need to be renewed?
- Which body parts can be repaired?

Obtaining spare parts

The availability of spare parts often determines how easily the body repairs can be carried out. The following procedure is recommended:

- Obtain all the data for the vehicle, including type, vehicle identification number, trim code, engine identification letters, initial registration etc.
- Establish all of the metal parts that need to be renewed.
- Establish all of the attached parts that need to be renewed, including small parts like rivets, clips etc.

Straightening repairs

Straightening repairs are often required to restore the body to its original shape after an accident. This can be done with:

- Alignment jigs
- Universal straightening and measuring jigs

The following points must be followed to ensure that the repairs are carried out professionally and that all the dimensions are correct after the repairs have been carried out.

- Structure:
 - The repair sequence depends on the individual repair plan (taking any necessary disassembly work into account).
 - Clean the attachment areas.
 - Anchor the vehicle free of stress on the relevant system.
 - Support the aggregates to take strain off the body.
 - Decide on at least three measuring/mounting points that are undamaged and as far apart as possible (for basic adjustment).
 - Check the dimensions of the measuring/mounting points.
- Straightening:
 -
 - **NOTE: Check dimensions and gaps continuously during straightening.**

A body is always straightened in the opposite direction to that of the impact. Always carry out straightening repairs with the complete body shell assembled (do not cut out any parts beforehand). Carry out the straightening work in several stages. This prevents the risk of over stretching or of welded joints tearing out. During the individual straightening steps, relieve tension by striking with an aluminium hammer while the part is subjected to a tensile load (in the area of pre-determined folding points, dents, welded joints etc.).

CAUTION: Ultra High Strength steel in the A-Pillar, B-Pillar and cantrail cannot be straightened.

Panel Beating

Fundamentals of panel beating

- Before carrying out any sectional replacements or complete replacements of body panels, always check carefully whether the damaged panel(s) can be rectified by panel beating.
- Panel beating is usually the easiest and most economical method of repairing a damaged panel.

Examples of applications of different panel beating techniques:

- Aluminium hammer and mallet
 - Advantage: Low risk of overstretching the panel.
 - Used for repairs of small dents on panels that are accessible from both sides.
 - These two panel beating tools are usually used for "finishing repairs".

Fine straightening with an aluminium hammer and a universal dolly

- Sliding hammer
 - If the damaged panel is only accessible from the outside, use a sliding hammer to pull it back into shape. The discs or studs needed to mount the sliding hammer are welded onto the bare surface. Dents in the panel can be flattened out using controlled application of the sliding hammer.

Cutting out body parts

Depending on how the parts are joined/connected, different tools are suitable for cutting/separating body parts.

- NOTE: All other parts like interior equipment, window glass etc. must be protected against flying sparks.
- NOTE: Ensure that the milling depth is set correctly to prevent the remaining flange from being weakened.

Spot-weld mill

Spot-weld mill

DEE0003924

- Rod sander
 -
 - NOTE: Wear protective clothing. Protect any vulnerable body or glass areas against flying sparks. Remove explosive materials from the vicinity.

Any spot welds that are inaccessible for the spot-weld mill (diameter > 8 mm) should be ground out using a rod sander. The same applies to MIG spot welds or seams.

Rod sander

DEE0003925

- -
- NOTE: Underlying metal parts, wiring harnesses, hoses etc. must not be damaged - remove them beforehand if necessary.

Body saws are particularly versatile and are therefore very suitable for making severance cuts on body parts.

Short stroke saw

DEE0003926

- Reciprocating saw
 - In addition to the short stroke saw, the reciprocating saw can be used. With this, it is possible to make narrow and straight cuts to an exact depth.

Reciprocating saw

DEE0003927

Carrying out the repairs

- Complete replacement
 - In a complete replacement the entire damaged old part is removed at its original joins/connections, and a complete new part is then installed. The following illustration shows a replacement new back panel.

Replacement of a new back panel

E56124

- Sectional replacement
 - In many cases it makes technical and economical sense to carry out a sectional replacement. The two main considerations are firstly, maintaining the original overall body shell structure and secondly, keeping the repair costs to a minimum.
- The main method for sectional replacement:
 - Butt joints
 - New part and old part are joined with a continuous MIG weld seam.
 - Butt joints are most commonly used for sectional replacements on members and pillars, or on short severance cuts.

Butt joint

DEE0003929

• NOTE: The severance cut should always be kept as short as possible on sectional replacement. Only cut at the severance lines shown in the repair chapters.

Do not make any cuts near reinforcements or pre-determined folding lines.

- Prepare parts remaining on the vehicle / new parts.
 - Reshape the adjoining surface of any dented body parts that are to remain on the vehicle using a hammer and a counterhold (ensure that the old part matches the shape of the new part). Grind off left over spot welds or seams with a suitable tool.
 - Cut the new parts to shape.
 - If necessary punch or drill holes for mig plug welding.

-
- NOTE: Do not use a welding torch to remove paint residue (the heat could cause the metal to deform).

Prepare all joining flanges to a bright metal finish on both sides. Do not use an angle grinder for this purpose (this could weaken the metal and damage the zinc layer). Suitable tools: rotating wire brush, belt sander or plastic disc.

- Apply welding primer liberally to all weld flanges.
- The primer must be well stirred or shaken before use.

- NOTE: When using aerosols, take care not to contaminate adjacent parts with spray mist.

fitting the new part.

- It must be ensured that the new part fits exactly to the specified dimensions, to help this it is recommended to use such equipment as:
 - Alignment jig
 - Universal measuring system
 - Jig system
 - Ruler or tape measure
- Any attached body parts that require accurate alignment and fitting must be incorporated in this step; for instance bumpers, seals, headlamps, rear lamps and lock assembly components. If this is not done carefully it may result in water leaks, wind noises and substantial follow-on work.
- Ensure that edges line up with adjacent parts and check that gaps are consistent (compare left and right-hand sides). Make sure that the shape of the vehicle is retained.

Secure the new part

- NOTE: The need for subsequent follow-on work can be significantly reduced if aligning and tack-welding are carried out with due care.

Depending on accessibility the following methods for securing are available:

- Grip pliers (set of)
- Screw clamp (set of)
- Self-tapping screws
- Tack welds
- Using a suitable tool ensure that the edges of sectional replacements of profiled parts line up. The edge is then tack welded to ensure that it lines up.

Aligning and tack weld

DEE 0003933

Item	Part Number	Description
1	-	Tack welds
2	-	Using a suitable tool to align

- Longer joints are usually tack welded to prevent the panel from warping. It is important to carry out the tack welds in the correct sequence (see diagram).
- Weld in the new part following the instructions in the repair manual.

Correct tack welding sequence

DEE0003934

Safety measures

- The electronic control modules (ECM) fitted to vehicles make it advisable to follow suitable precautions prior to carrying out welding repair operations. Harsh conditions of heat and vibration may be generated during these operations which could cause damage to the modules. In particular, it is essential to follow the appropriate precautions when disconnecting or removing the airbag RCM. For additional information, refer to: [Specifications](#) (501-20B Supplemental Restraint System, Specifications).
- Do not allow electronic modules or lines to come into contact with the ground connection or the welding electrode.
- Connect the ground connection of the electrical welder directly to the part that is to be welded. Ensure that there are no electrically insulating parts between the ground connection and the welding point.

Resistance spot welding

Where resistance spot welds have been used in production, they must be reproduced with new spot welds in replacement where possible. All such reproduction spot welds should be spaced 25 to 30mm apart.

Setting up the equipment and co-ordinating the welding parameters

- Equipment:
 - Follow the equipment manufacturer's instructions for the equipment settings.
 - Select the correct electrode arms (as short as possible).
 - Align the electrode arms and tips exactly.
 - Electrode tips should be convex (rough shaping with a file, fine shaping with a sanding block).
- Body:
 - Ensure that the flanges to be joined lie perfectly flat to one another.
 - Prepare a bare metal joint surface (inside and outside).
- Notes on technique/method:
 - Carry out a test weld on a sample piece of the material coated in welding paste.
 - If any metal parts are located between the electrode arms then there will be a loss of induction and therefore power (adjust current setting).
 - The power needs to be adjusted for high and ultra high-strength steel.
 - Repeated welding on old welding points often leads to poor quality welds.
 - Keep the electrode tips as near as possible to an angle of 90° to the contact surface.
 - The electrodes work best if their shape is convex. Clean the contact surface of the electrodes regularly.

Resistance spot welding panels where the total thickness is 3 mm or more

For all repairs to modern Land Rover vehicles, spot-welding equipment should be suitable for reliable welding of zinc-plated, high-strength and high-tensile steels in three or more layers, up to 5 mm total thickness. If these requirements are not fulfilled, plug welding must be used for safety reasons. The electrical specifications (current, resistance, heat) of the spot-welding equipment have different validity, depending upon the type of equipment. Therefore, it is essential that the equipment manufacturer's instructions are observed with regard to the actual welding performance.

MIG / MAG welding

Setting up the equipment and co-ordinating the welding parameters

- Any joints that are MIG/MAG welded in production must also be MIG/MAG welded during repairs. Also during repairs, some resistance spot welds need to be replaced by plug welds.
 - If access is difficult, or if a suitably powerful spot welder (see above) for total panel thicknesses of 3 mm or more is not available, resistance spot welding must be partially replaced by plug welding during repairs. In this case, the increased time needed and the correspondingly more demanding corrosion protection requirements, must be taken into account.
 - Welding repairs can only be carried out properly if the equipment is set up correctly and all the welding parameters are co-ordinated.
 - Equipment:
 - Set up the equipment as directed by the manufacturer.
 - The hoses must be untwisted.
 - The core must be free of abraded rod particles.
 - The gas and current nozzles must be free of slag and scale residue.
 - Pay attention to the quality of the welding wire and the throughput of gas.
 - Body:
 - Ensure that the joint surface is correct.
 - Prepare a bare metal joint surface.
 - Maintain the correct gaps (formation of roots).
 - Notes on technique/method:
 -
 - NOTE: The increased application of heat during MIG welding destroys the welding primer/zinc layer over a much larger area than during resistance spot welding, as a result of which much more care needs to be taken when applying anti-corrosion protection afterwards.
 - NOTE: A test weld should always be carried out to ensure that the welded joint is not just a surface connection.
- Attach the ground cable right next to the welding point (ensure that good contact is made).
- During plug welding start welding on the lower panel to ensure adequate penetration.

Plug welding

DEE0003936

Item	Part Number	Description
1	-	Welding direction: circular pattern working from the inside outwards
2	-	Welding starting point: centre of hole on lower panel

Bonded glazing

- - The windscreen, side and rear windows are bonded directly onto the window frames on the body and liftgate.
- The windows are bonded primarily for reasons of adhesive strength. Bonded glazing provides additional torsional stiffness to the body.

Adhesive bonding of bonded windows

DEE0003938

Item	Part Number	Description
1	-	Rubber strip
2	-	Window frame
3	-	Adhesive
4	-	Window glass

Removing and installing bonded windows

Safety measures

- The following safety measures must always be followed to prevent personal injury:
 - Wear protective gloves.
 - Wear protective goggles.

Preparations

- Before cutting out a bonded window, undo and remove any attached parts in the cutting area that are at risk, e.g. trim panels and decorative strips, as well as all electrical connections.
- Mask any painted areas that are adjacent to the window.
- Cut off any surplus adhesive, as this makes it easier to cut out the window.
- Secure vertical windows against dropping out.

Cutting out the window

- Cut into the adhesive bead at easily accessible points using the cutting tool.
- Carefully guide the cutting tool around the window, cutting through the adhesive bead.
- Avoid touching the window frame and the body flange.
- Use cup suction tools to lift the cut-out window out of the window aperture.

General preparations for bonding

- Follow the manufacturer's instructions.
- Cut back the remaining adhesive bead on the metal flange to a residual height of about 1mm. Do not touch or clean the cut surface afterwards.
- Carefully rectify any paint damage (apply primer and top coat).
- Renew the window stops as necessary.

Bonding the window glass

- Apply an even bead of adhesive to the window or to the body flange.
- Insert the window glass into the window aperture and centre it (2 technicians required).
- Check the gaps.
- • NOTE: Open the windows and doors while the window is left to dry and do not move the vehicle (slamming doors creates excess pressure which could cause the window to become loose).

Use adhesive tape to prevent the window from falling out or slipping.

Finishing operations

- Reconnect all electrical connections and check that the components operate correctly.
- Install the attached parts and check that the fit is accurate and secure.
 - Carry out a visual inspection to ensure that the gaps and joints are even.
- Thoroughly clean the window glass.

Protective equipment and safety at work

- Various safety measures and legal requirements must be met when carrying out repairs. All regulations relating to health and safety at work must be followed.

Welding safety precautions

- The following safety precautions must be observed to prevent the risk of personal injury:
 - Safety hood (face protection)
 - Welding shield
 - Safety gloves
 - Safety shoes
 - Extraction unit for welding smoke
- Welding should always be carried out in well ventilated areas. A fire extinguisher must also always be within reach.

General body repair safety measures

Extraction unit

DEE0003940

- Sealing compound, underbody protection etc. must **not** be burned off with a naked flame. This would produce toxic gases. If for instance PVC is burned, then gases containing hydrochloric acid are produced. For this reason a suitable extraction unit should always be used when performing grinding, welding or soldering work.
- Always ensure good ventilation when working with materials that contain solvents, wear breathing equipment and use an extraction unit.
- Ear defenders should always be worn when cutting, grinding or straightening metal, as the noise levels can reach or even exceed 85 - 90 dB(A).
- When removing components from a vehicle mounted on a lifting ramp, watch out for a shift in its centre-of-gravity. When first placing the vehicle on the ramp, take into account that it may need to be secured against tipping over.
- Chains and chain clamps must be secured with safety ropes during straightening work.

Safety rope

DEE0003941

Paint Preparation

Paint repairs

Before carrying out paintwork repairs, clean the vehicle thoroughly using either a steam cleaner or high pressure washer.

Wash locally repaired areas using a mild water-mixable detergent and wipe them clean with solvent, immediately before paint application.

Ensure damaged paintwork which has led to exposed metal is abraded until the metal is clean, extending beyond the area of the original damage. Treat the bare metal with an etch phosphate to remove all traces of rust and to provide a key for new paint coats. Re-treat the affected area using either a separate acid-etch primer and two pack surfacer or an integrated etch primer/filler, and follow with a two pack paint system. Treat those surfaces not receiving paint using an approved cavity wax, following paint operations

- CAUTIONS:

When preparing bumpers for painting, ensure the PDC sensors are not damaged. Only remove the clear coat if possible. When painting the PDC sensors, do not apply excessive layers of paint as this can hinder the performance of the sensors.

When heat curing paint repairs, the temperature must not exceed 65°C (149°F). Temperature above this figure will cause the reflective elements within the headlamps and tail lamps to distort and may damage other components.

Body Repairs - Corrosion Protection - Corrosion Protection

Description and Operation

General

The corrosion protection provided in production must be carefully maintained and/or reproduced during and after body repair work. It is only then that the long-term warranty against penetrative rust damage can be assured.

Only Land Rover original bodywork components and Land Rover approved repair materials (sealer, paint etc.), are to be used for bodywork repairs.

Land Rover original parts

All Land Rover bodywork components have a cathodic base coating. Individual bodywork components are zinc plated on one or both sides (in different areas depending on vehicle model).

Together with elastic paint coating, this guarantees an optimum, highly resistant protection against corrosion caused by the impact of small objects such as gravel.

• **NOTE:** If possible, the individual protective layers (zinc, cathodic base coat) on Land Rover bodywork components must not be damaged or destroyed by sanding or other mechanical operations.

If hairline cracks at "bodywork connection areas" appear after reshaping work (e.g. at door hinges), it must be ensured that the corrosion protection provided in production is recreated. The complete paint covering must be re-created if necessary. The same applies to reshaping work on heavily profiled bodywork components (e.g. floor pan). Renew or touch-up the paint coating, sealing beads and underbody protection as necessary.

After repair, any interior surfaces which are no longer visible or accessible must be primed before cavity wax is applied. To be certain of an even coating on inner surfaces, careful application of spray (twice, with drying time in-between) must be carried out throughout the whole cavity.

If bodywork panels are strongly heated during repair work, this will invariably result in damage to or even destruction of the applied corrosion protection material. The effectiveness of the cavity protection material is reduced if heating occurs. Reworking of the affected areas is therefore vital.

Welded areas should be made good before corrosion protection is applied.

The corrosion protection measures to be taken when bodywork components are renewed are described on the following pages.

Corrosion protection of new components

All new components must be inspected for transport or storage damage such as scratches or dents. The following operations may be necessary, depending on the extent of damage:

Undamaged new component

- Do not grind the cathodic dip primer.
- Thoroughly clean with silicone remover and rob dry.

Slightly damaged new component

- Sand out scratches
- Finely sand the surrounding surface.
- Thoroughly clean with silicone remover and rub dry.
- Apply corrosion protection primer to bare areas.

Damaged new components (bumps and dents)

- Beat out the dented area sand down to bare metal.
- Apply polyester filler (only onto bare metal)
- Apply filler.
- Lightly sand the whole components.
- Thoroughly clean with silicone remover and rob dry.
- Apply corrosion protection primer to bare areas.

The clinched flanges on the hood, doors, tailgate and liftgate must be sealed with clinched flange sealer.

Weld Components

Use a rotating tress wire brush to remove the dip coat on the inside and outside of the area to be welded, taking care not to damage the zinc coating.

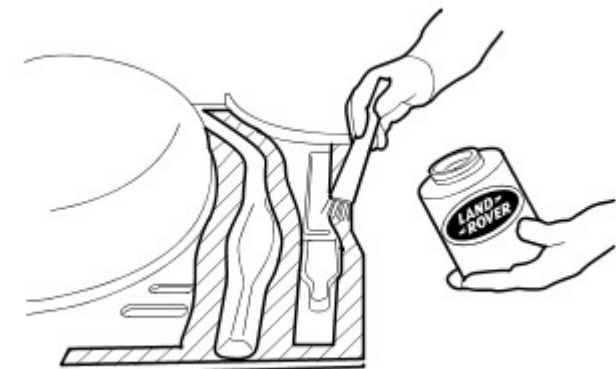

- NOTE: The area to be ground should be kept as small as possible, the corrosion protection applied in production (cathodic primer) should be retained as much as is possible.
- NOTE: The welding primer must be stirred well or shaken before application.

Clean the repair area thoroughly (silicone remover).

Apply welding primer evenly to all weld flanges (old and new components).

- NOTE: The welding primer must be allowed to dry before welding is carried out.

Apply welding primer

E56116

All weld beads must be ground down after all welding is completed, taking care not to weaken the material.

Any unevenness at the joint must be made good.

If necessary, spot weld missing T-pins for trim strip clamps into position. The vehicle must be completely cleaned of sanding dust and metal swarf because of the danger of corrosion.

Clean and prime all internal areas and those to be sealed.

- NOTE: The primer must be dry before sealing mastic or underbody protection is applied. Do not use thinners when applying sealing mastic (the mastic would not dry).

Partial renewal

The procedure to follow when partially renewing components is the same as described in the section "Welded components".

The main difference when components are partially, rather than completely renewed, concerns the preparation of butt or lap joints.

- When bodywork components are cut through, attention must be paid to the adequate removal of the paint and zinc coatings on inner areas. This specially applies to areas which are difficult to access internally.
- It is important for the weld quality that the inner area is bare metal. Zinc and paint residues in the weld area burn and cause serious hole formation during welding.
- If the zinc layer and the paint coating are not removed, the zinc and paint will burn during welding. The soot produced prevents satisfactory cavity protection.

Procedure

- The paint layer must be removed for a width of 30mm from the line of the weld using a rotating tress wire brush.
- This operation must be carried out on both the new and the old parts of the bodywork.
- Depending on the bodywork component, a 10mm width of the underlying zinc layer must also be removed along the weld line.

- NOTE: A flat scraper or a wire brush can be used instead of the rotating brush if the cavity is small. Do not use an angle grinder, which would weaken the structure.

Application of cavity wax protection on a door rocker panel after partial repair

Underbody sealer

Under floor areas and rocker outer panels are treated with a plastisol PVC underbody sealer. This material is not suitable for re-treatment. When repairing areas of underbody sealer, strip the factory-applied underbody sealer back to a suitable break point. Ensure that a clean metal surface is exposed and that the edge of the existing adheres soundly to the panel.

Apply new underbody sealer between primer and surface paint operations. Apply seam sealer as necessary before application of underbody sealer. Ensure that blanking plugs and grommets in the floor pan (except those used for wax injection) are fitted before underbody sealer application. Refit any heat-fusible plugs which have been disturbed in repair with the aid of a hot air blower, or replace with rubber grommets

CAUTION: Ensure that suspension units, wheels, tires, power unit, drive shafts, exhaust and brakes (including all mounting points) are shielded prior to application of fresh underbody sealer.

Area of underbody sealer application

E56193

Precautions during body repairs and handling

Take care when handling the vehicle in the workshop. Underbody sealers, seam sealers, underbody wax and body panels may be damaged if the vehicle is carelessly lifted.

Proprietary anti-corrosion treatments

The application of proprietary anti corrosion treatments in addition to the factory-applied treatment could invalidate the corrosion warranty and should be discouraged. This does not apply to approved, compatible, preservative waxes which may be applied on top of existing coatings.

Fitting approved accessories

When fitting accessories ensure that the vehicle corrosion protection is not affected, either by breaking the protective coating or by introducing a moisture trap.

Do not screw self-tapping screws directly into body panels. Fit suitable plastic inserts to the panel beforehand. Always

ensure that the edges of holes drilled into panels, chassis members and other body parts are protected with a suitable zinc rich or acid etch primer, and follow with a protective wax coating brushed onto the surrounding area.

Do not attach painted metal surfaces of any accessory directly to the vehicle's bodywork unless suitably protected. Where metal surfaces are bolted together always interpose a suitable interface material such as weldable zinc rich primer, extruded strip, or zinc tape.

Steam Cleaning

Due to the high pressure/temperature generated by steam cleaning equipment, there is a risk that certain adhesives and corrosion prevention material may become softened or liquified.

Take care not to allow the steam jet to dwell on one area, and keep the nozzle at least 300mm from the panel surface.

CAUTION: Do not remove wax or lacquer from underbody areas during repairs.

Inspection during maintenance servicing

It is a requirement of the corrosion warranty that the vehicle is checked for corrosion by an authorised Land Rover Authorised Repairers at least once a year, to ensure that the factory-applied protection remains effective.

Rectify any bodywork damage or evidence of corrosion found during inspection as soon as is practicable, both to minimise the extent of the damage and to ensure the long term effectiveness of the factory-applied corrosion prevention treatment.

Underbody protection repairs

Whenever body repairs have been carried out, ensure that full sealing and corrosion protection treatments are reinstated. This applies both to the damaged areas and also to areas where protection has been indirectly impaired, as a result either of accident damage or repair operations.

Remove corrosion protection from the damaged areas before straightening or panel beating. This applies in particular to panels coated with wax, PVC underbody sealer, sound deadening pads etc.

CAUTION: Do not use oxy-acetylene to remove corrosion prevention material. Large volumes of fumes and gases are liberated by these materials when they burn.

The most common method of removal is by means of a hot air blower with an integral scraper. High temperatures can be generated with this equipment which may cause fumes. Take care during its use.

Structural Adhesive

Metal to metal adhesive is applied to critical joint areas during factory assembly. The material used is a high temperature, heat cured, nitrile phenolic which serves to bond two metal surfaces and also to seal the joint against ingress of dust, moisture and fumes. This material is not suitable for service use and, during repair, should be substituted by an approved structural adhesive.

CAUTION: When separating a joint with metal to metal adhesive, it is important to avoid distortion. Heat gradually until the bond weakens sufficiently to permit panel separation.

- **NOTE:** When spot welding through metal to metal adhesive, take particular care to adjust the equipment setting to ensure a suitable weld.

Areas of structural adhesive

E56119

Item	Application	Function
1	B-pillar upper hinge RH/LH	Structural
2	B-pillar upper hinge RH/LH	Structural
3	Rear rocker panel RH/LH	Structural
4	B-pillar lower hinge RH/LH	Structural
5	Front rocker panel RH/LH	Structural
6	Front rocker panel RH/LH	Structural
7	A-pillar lower hinge RH/LH	Structural
8	A-pillar upper hinge RH/LH	Structural
9	C-pillar striker reinforcement	Structural
10	B pillar rear door aperture	Structural
11	B-pillar latch face	Structural
12	A-pillar to front door aperture	Structural
13	A-pillar to W/shield aperture	Structural

Joints symmetrically opposite to those shown are also treated. Apply 3mm diameter beads to all joints shown. Leave rocker drain points free of adhesive.

Expanding Foam Acoustic Seals

Expanding foam acoustic seals are used in various closed-sections of the body to improve vehicle refinement. The seals are installed during the vehicle body manufacture and expand during the paint process up to ten times original size, thus locking them into position. They are located such that they prevent noise accentuation along a section and reflect air borne noise away from the cabin.

The seals have split functionality depending on location. The seals located at the base of the body pillars have a primary function of preventing water ingress when wading. Their secondary function is to prevent noise and dust ingress.

The seal around the fuel filler has a primary function of preventing both fuel and water ingress. With a secondary function of preventing noise and dust ingress.

The remaining seals primary function is to prevent noise accentuation along a section and reflect air borne noise away from the cabin.

Another advantage of the seals is that they marginally increase the overall stiffness of the body and its structural performance in case of a crash.

The seals are manufactured from an expandible polymer, 'Sika Baffle 250.'

Replacing Foam Acoustic Seals

As paint oven temperatures used in a repair workshop are significantly lower than those that are used during manufacture of the vehicle, a different process is required to replace the seals.

After a repair that involves replacement of a section containing expanding foam acoustic seals, the new expanding foam acoustic seal is installed to the new section and injected with an approved acoustic foam. The acoustic foam should be injected after paint refinishing, where possible. When injecting the foam, ensure the foam fills a complete cross section of

the cavity and around the expanding foam acoustic seal.

Position of acoustic seals, front reinforcement

E56122

Item	Description	Function	Service part No
1	A-pillar upper inner	Acoustic	EUH000520
2	B-pillar lower inner	Water Ingress/Acoustic	EUH000560
3	Rocker panel middle	Acoustic	EUH000670
4	A-pillar lower inner	Water Ingress/Acoustic	EUH000550
5	B-pillar lower outer	Water Ingress/Acoustic	EUH000570
6	Rocker panel outer	Acoustic	EUH000680
7	A-pillar lower inner	Water Ingress/Acoustic	EUH000540
8	A-pillar upper outer	Acoustic	EUH000530

Position of acoustic seals, rear quarter panel

E56121

Item	Description	Function	Service part No
1	Cantrail rear	Acoustic	EUH000650
2	C-pillar outer	Acoustic	EUH000610
3	Rear wheel arch outer	Water Ingress/Acoustic	EUH000590
4	Fuel filler aperture	Water/Fuel Ingress	ARY 780030
5	D-pillar outer	Acoustic	EUH000630

Seam Sealer

A heat cured, PVC based sealant is applied to specific joint seams during factory assembly. This material is not suitable for service use and during repair, should be substituted by an approved seam sealer.

Apply seam sealers after the application of primer and before the application of top coat. The sealer must form a continuous bead, with the profile of the bead dependent on the type of seam. If the seam sealer is applied with a brush take particular care to maintain the required coverage of the seam.

Ensure that all accessible repair seams are sealed following a repair. Damaged to a vehicle often flexes areas of the body remote from the impact. As a result the seam sealer in these areas may be disturbed by subsequent straightening and repair operations. Check all seams in the vicinity of the area undergoing repair for evidence of cracked seam sealer, then clean out as required and apply fresh seam sealer using the following procedure:

- Clean the affected seam and re-treat any exposed metal areas with a suitable etch phosphate primer.
- Treat affected area with an etch-acid primer.
- Apply appropriate seam sealer as necessary.
- apply appropriate colour coat (and under body sealer as applicable).

Where seams are inaccessible following the reassembly or fitting of components, ensure that a paste-type seam sealer is applied to such seams. Certain seams also become inaccessible after the completion of panel repairs. In such instances apply seam sealer and paint before final assembly

Provided access is adequate, apply seam sealer to both sides of a repair joint. Where access is limited to one side only (eg box section), treat the affected box member with cavity wax

Seam sealer on the rear end

E56146

Underbody seam sealer

E56148

Cavity Wax

After repairs, always re-treat these areas with an approved cavity wax. In addition, treat all interior surfaces which have been disturbed during repairs whether they have been treated in production or not. This includes all Box members, cavities and door interiors.

Before wax injection, ensure that the cavity to be treated is free from any contamination or foreign matter. Where

necessary, clear out any debris.

Ensure that cavity wax is applied after the final paint process and before refitting any trim components.

During application ensure that the wax covers all flanges and seam areas and that it is adequately applied to all repaired areas of both new and existing panels.

It should be noted that new panel assemblies and complete body shells are supplied without wax injection treatment. Ensure that such treatment is carried out after repairs.

Effective cavity wax protection is vital. Always observe the following points:

- Complete all paint refinish operations before wax application.
- Check the spray pattern of injection equipment.
- Mask all areas not to be waxed
- Remove body fixings, such as seat belt retractors, if contamination is at all likely.
- Move door glasses to fully closed position before treating door interiors.
- Treat body areas normally covered by trim before refitting items.
- Check that body and door drain holes are clear after the protective wax has dried.
- Keep all equipment clean, especially wax injection nozzles

Wax injection areas, body

Body Repairs - Water Leaks - Water Leaks

Description and Operation

General

- If water leaks occur after bodywork repairs, the cause can be established using the checks described below. A systematic and logical procedure is required to locate water leaks. Before beginning extensive checks, a thorough visual inspection must be carried out.
- Visual Inspection
 - The following characteristics may indicate existing leaks:
 - Check the clearance and accurate fit of ancillary components such as the hood, tailgate, liftgate, doors, and so on.
 - Check for correct fit and possible damage to sealing elements such as blanking plugs, rubber door seals, and so on.
 - Check water drain holes for unhindered flow.
- Various tests can be used to provide further information on possible leaks:
 - Water test
 - Washer test
 - Road test
 - Chalk (powder) test

Practical execution of tests and checks

Water test

- **NOTE: Never aim a jet of water directly at a rubber seal.**
- Carry out the water test with a second person present (passenger compartment).
- Use variable washer nozzles (concentrated water jet to fine spray mist).
- Start in the lower section and spray the whole area, working upwards in stages.

Washer test

- Further tests can be carried out in the washer system.
- Some leaks originate here, or only occur here.
- The relevant passenger compartment should be checked using a torch during the wash procedure.

Road test

- If no leaks are located during the tests above, road tests should be carried out on wet roads.
- Road tests under various conditions:
 - At various speeds.
 - On various road surfaces (asphalt to cobbles).
 - With loaded or unloaded vehicle.
 - Driving through puddles (splash water).

Chalk test (powder test)

- In this test, the clamping load and the bearing surface of the seal are checked.
- Performing the test:
 - Dust the door seal with powder or coat with chalk.
 - Coat the bearing surface of the seal with a thin film of grease.
 - Slowly close the door and open it again.
 - Check the width and continuity of the imprint on the door seal.

Other test equipment

- Other equipment such as stethoscopes, UV lamps, special mirrors or ultrasound measuring instruments can be used to locate leaks.

Rectifying the leak using recommended tools, auxiliary equipment and materials

- Tools and auxiliary equipment:
 - Dry, absorbent cloths
 - Variable washer nozzle
 - Torch, fluorescent tube
 - Mirror
 - Compressed air
 - Seal lip installer
 - Wet/dry vacuum cleaner
 - Sealing compound compressor
 - Remover for interior trim
 - Cutter blade or pocket knife
 - Wedge (wood or plastic)
 - Hot air blower
 - Special mirror for concealed leaks
 - Air flow checker
- - Sealing compound (tape and plastic compound)
 - Multi-purpose sticker
 - Clinched flange sealer
 - Window sealing compound
 - Water shield (PVC)
 - Double-sided adhesive tape for water shield

- Methylated spirit (available from trade outlets)
- PU adhesive
- Silicone remover
- Tar remover

Water leaks according to mileage or running time

Increasing mileage has an effect on the problem of leaks in a vehicle. Possible influencing factors are:

- Servicing and maintenance of seals:
 - No maintenance, lack of maintenance or incorrect maintenance
 - Using an incorrect agent
- Damaged seals:
 - As a result of aging, wear or incorrect handling/assembly.
- Heavy soiling of the vehicle:
 - Heavy soiling of a vehicle can seriously impair the function of water drainage channels in particular, and also of rubber seals.
- Age-related factors:
 - Environmental factors
 - UV radiation
 - Extreme climatic conditions
- Corrosion can have a serious impact on bodywork, in particular as a result of:
 - Lightly or heavily rusted seal carriers
 - Rusted body seal welds
 - Perforation corrosion

Water leaks after body repairs

If a vehicle develops a leak after body repairs, the following points must be taken into consideration in particular:

- The correct seating of ancillary components and their seals must be checked.
- The correct alignment of doors/tailgate and liftgate must be checked. The associated seals must not be damaged and must be installed correctly.
- Check that welded seams are correctly sealed.
- The correct seating of rubber grommets must be checked.
- Directly-glazed windows must have correct and complete bonding.

Water drainage system

If a vehicle develops water leaks, then areas into which water is routed or drained should be checked first.

Water drainage system

E56126

Item	Part Number	Description
1	-	Water drainage, front
2	-	Water drainage, side and rear
3	-	Roof drainage
4	-	Engine compartment drainage

Water leaks, diagnosis and corrective action: Front passenger compartment

Windscreen

- Diagnosis:
 - Ingress of water into A-pillar area or instrument cluster area and rocker panel area.
- Cause:
 - Breaks in adhesive beads
- Corrective action:
 - The breaks in adhesive beads can be located from inside by using compressed air. The leak can be identified from outside by the escaping air.
 - The second test method is by means of a water test. The outer trims must be raised carefully using a plastic wedge. The leak should be located from inside by a second assistant.

Side windows

In the case of side windows, the same problems can arise as for a windscreen. The same corrective actions must therefore be used.

Door seal

- Diagnosis:
 - Water ingress in the lower part of the interior door trim or in the rocker panel area.

- Cause:
 - The water shield fitted behind the interior door trim exists to drain off water that has entered the door via the drainage holes, either downwards or outwards. If the water shield seal is damaged or has been fitted incorrectly, then water can get into the passenger compartment.
 - In addition to this, the drainage holes can become clogged with leaves, dirt or excess cavity protection agents. Water gathers in the door and ingresses into the passenger compartment.
 - Check water shield for damage or correct fitting.
 - If the water shield needs to be re-bonded, then approved seam sealer should be used.
 - Before the water shield is installed, the drainage holes must be checked for unhindered flow.

Door seals

- Diagnosis:
 - Ingress of water into the rocker panel area
- Cause:
 - Insufficient clamping load between seal and door.
- Corrective action:
 - Check clamping load:
 - The easiest way to check the clamping load of a seal to the respective bearing surface is by means of a paper strip test. This consists of trapping strips of paper at various points between the door and the seal, and fully closing the door. If it is possible to pull out the paper with no great resistance, then the clamping load is too low.
 - Adjust the clamping load:
 -
 - NOTE: When adjusting the clamping load, the profile alignment of the relevant components must always be taken into consideration.

The clamping load is normally adjusted using the striker. When doing so, the edge alignment from the door to the side panel, or from the front door to the rear door must be taken into account.

- Another setting method is to realign the panel flange for the seal mounting. The clamping load is increased by moving the flange towards the door.

-

• NOTE: Do not realign the flange too far in the direction of the door, as this can reduce the bearing surface of the seal to the door.

Check the bearing surface:

- Apply chalk evenly to the surface of the seal. Evenly coat the bearing surface of the door with vaseline.
- Close the door fully, the lock must engage. Open the door. The imprint of the chalk (bearing surface) can be identified in the film of grease.
- The bearing surface should be at least 5mm across at all points.

- Other causes:
 - The door seal must completely seal the door where it meets the bodywork.
 - Water can ingress directly or indirectly into the interior of the vehicle if the seal is damaged at any point.
- Corrective action:
 - A damaged or worn door seal must always be renewed in full.
 - When renewing the seal, the following must be taken into account:
 - Always fit the seal first in the area of the narrow radii (corner points).
 - Next, secure the seal to the flange evenly by tapping lightly with a rubber hammer. The installed seal must not be kinked at any point.

• NOTE: The prescribed length of a seal must not be shortened.

- Other cause:
 - The door seal is attached to the welded flange all the way round. If this welded flange is uneven or damaged at any point (usually in areas with narrow radii) then this point could be subject to leaks.
 - A stretched seal carrier can also cause a leak.
 - In both cases, water gets into the vehicle interior under the seal carrier.
- Corrective action:
 - Align the deformed welded flange using a hammer and anvil block, prevent and if necessary repair any paint damage.
- Other cause:
 - The door seal is attached to the welded flange all the way round. If this welded flange is uneven or damaged at any point (usually in areas with narrow radii) then this point could be subject to leaks.
 - A stretched seal carrier can also cause a leak.
 - In both cases, water gets into the vehicle interior under the seal carrier.

Sliding roof/tilting roof

- Diagnosis:
 - Ingress of water at sliding roof aperture
- Cause:
 - The sliding roof/tilting roof is installed in a water trap. The water drains off via the water trap, water drain holes and drain hoses. The drain hoses lead downwards on both sides via the A-pillar and C-pillar.
 - The drain holes or drain hoses can become clogged with leaves, dirt, underbody protection and so on.
- Corrective action:
 -
 - NOTE: In the case of a sliding or tilting roof, the external rubber seal and the lock actuator or latch mechanism must be checked first of all.

Check the water trap for leaks.

- Check the drain hoses for leaks and for correct connection to the water trap.
- Check the drainage system for unhindered flow, and blow out with compressed air if necessary.
- Check the external seal and the correct adjustment of the sliding roof.

Tailgate and Liftgate

- Diagnosis:
 - Ingress of water into rear headlining area and luggage area.
- Cause:
 - The leak problems of the tailgate and liftgate correspond to those of the doors.
 - In addition to this, the area to be sealed is much bigger. The routing holes for cables and hoses must also be sealed.
 - The rubber grommets for the routing holes must be checked for damage and correct seating (fully unhooked).
 - The mounting points of the tailgate and liftgate hinges may leak.
- Corrective action:
 - Check the rubber grommets and renew if necessary.
 - Check the hinge mounting points, and re-seal with sealing compound if necessary.

Forced air extraction

- Diagnosis:
 - Ingress of water into side luggage compartment area
- Cause:
 - The forced air extraction for the vehicle interior is located in the D-pillar behind the rear lights.
 - The rubber flap of the forced air extraction must be able to move freely.
- Corrective action:
 - Remove the forced air extraction.
 - Check the seal area between the bodywork and housing, as well as the rubber flap.
 - Renew seal if necessary.

Rear window and moon roof

- Diagnosis:
 - Ingress of water into the luggage compartment area
- Cause:
 - Rear window and moon roof leaking.
 - Check for leak in the same way as for leaking windscreen.

Panel connections with seal welds

- Diagnosis:
 - Ingress of water into the luggage compartment area
- Cause:
 - Several panel connections must be fitted in production in the wheelhouse and luggage compartment areas. These connections are sealed with sealing compound.
 - Uneven application of sealing compound can lead to a break in a seal weld.
- Corrective action:
 - Expose the seal weld.
 - Locate the leak in the seal weld.
 - Re-seal using sealing compound.

Hood latch Torx bolts	10	7
Hood panel bolts	25	18
Coolant expansion tank bolts	10	7

Front End Sheet Metal Repairs - Front End Sheet Metal

Description and Operation

Front end service panels

E55793

Item	Description	Service part No
1	Fender apron panel closing.	R/H ABD780100 L/H ABD780110
2	Fender apron panel reinforcement.	R/H ABD780140 L/H ABD780150
3	Fender apron panel.	R/H ABD780220 L/H ABD780230
4	Front wheelhouse.	R/H ANJ780040 L/H ANJ780050
5	Front side member.	R/H AB1780040 L/H AB1780050
6	Front wheelhouse reinforcement.	R/H AWW780020 L/H AWW780030
7	Front crossmember.	ABC780060
8	Hood latch panel.	DIN500020

Time schedules, front end

The following information shows the total time taken to replace single panels and complete assemblies. This time

includes removal of Mechanical, Electrical and Trim (MET) items, plus paint times based on Metallic Clear Over Base Paint.

The times shown were generated by Thatcham (the motor insurance repair and research centre) and are to be used as a guide only.

Single panel times

Panel Description	Petrol	Diesel
Hood	7.8	7.8
Hood latch panel	2.7	2.7
Front fender L/H	7.5	7.5
Front Fender R/H	7.5	7.5
Front Crossmember	6.0	6.0

Combination panel replacement times

The following panel combination times show the total time to remove/refit body panels, MET items and any paint process.

Combination panel times

Panel Description	Petrol	Diesel
Hood		
Front bumper		
Hood latch panel		
Front crossmember		
Front grille		
Front fender		
Total Time	17.6	17.6

Combination panel times

Panel Description	Petrol	Diesel
Hood		
Front bumper		
Hood latch panel		
Front crossmember		
Front grille		
Front fender L/H and R/H		
Total Time	18.1	18.1

Combination panel times

Panel Description	Petrol	Diesel
Body off integrated frame		
Hood		
Front bumper		
Hood latch panel		
Front side member		
Fender apron panel		
Fender apron panel reinforcement		
Front wheelhouse		
Front crossmember		
Front grille		
Front fender L/H and R/H		
Total Time	L/H 39.2 R/H 39.1	L/H 39.6 R/H 39.4

Combination panel times

Panel Description	Petrol	Diesel
Body off integrated frame		
Hood		
Front bumper		
Hood latch panel		
Front side member L/H and R/H		
Fender apron panel L/H and R/H		
Fender apron panel reinforcement L/H and R/H		
Front wheelhouse L/H and R/H		
Front crossmember		
Front grille		
Front fender L/H and R/H		
Total Time	48.8	49.2

Front End Sheet Metal Repairs - Hood Latch Panel

Removal and Installation

Removal

• **NOTE:** If the hood latch panel coating is damaged or scratched, it must be repaired using the approved coating. For additional information, refer to: [Specifications](#) (501-27 Front End Sheet Metal Repairs, Specifications).

1. Disconnect the battery ground cable.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the front bumper.
For additional information, refer to: Front Bumper (501-19, Removal and Installation).
3. Release the power steering fluid reservoir and position aside.
 - Release the clip.

4. Release the washer reservoir filler neck from the coolant tank clip.
5. Remove the 2 coolant expansion tank mounting bolts.
6. Release the coolant expansion tank.
 - Lift coolant expansion tank vertically.

7. Remove the radiator securing pegs.

8. Disconnect the hood release cable from the connecting box.

9. NOTE: Note the fitted position.

Release the wiring harness.

- Disconnect the 3 electrical connectors.
- Release the 9 clips.
- Release the grommet.
- Carefully tie the harness aside.

E55091

10. Remove the panel upper fixings.

- Remove the 4 Torx bolts.

E55092

11. Remove the panel lower fixings.

- Remove the 6 Torx bolts.

E55093

12. NOTE: Note the fitted position.

With assistance, remove the hood latch panel.

13. Noting the fitted position, remove the 6 spacers.

- Remove the 2 clips.

E55094

14. NOTE: Do not disassemble further if the component is removed for access only.

Remove the 2 horn assemblies.

- Remove the 2 air deflectors.
- Remove the 2 Torx bolts.

E55095

15. Remove the hood switch.

- Remove the 2 Torx bolts.
- Release the 2 clips.

16. Remove the RH hood latch.

- Release and remove the cable.

E55096

17. Remove the LH hood latch.

- Remove the 2 Torx bolts.

Installation

1. Install the horn assemblies.
 - Install the air deflectors.
 - Install the bolts and tighten to 10 Nm (7 lb.ft).
2. Install the LH hood latch.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
3. Install the RH hood latch.
 - Attach the hood release cable.
 - Install the hood switch.
 - Tighten the Torx bolts to 10 Nm (7 lb.ft).
4. Install the spacers.
 - Install the clips.
5. **NOTE: Align to the position noted on removal.**
 With assistance, install the hood latch panel.
6. Install the panel fixings.
 - Install and tighten the bolts to 25 Nm (18 lb.ft).
7. **NOTE: Align to the position noted on removal.**
 Install the wiring harness.
 - Connect and secure the electrical connector.
 - Carefully secure the clips.
8. Connect the hood release cable.
9. Install the radiator securing pegs.
10. Install the coolant expansion tank.
 - Position the coolant expansion tank, locate the spigot and lug.
 - Install the bolts and tighten to 10 Nm (7 lb.ft).
11. Install the windshield washer reservoir filler neck.
 - Locate in clip.
12. Install the power steering fluid reservoir.

- Position and secure to mounting bracket.

13. Install the front bumper.

For additional information, refer to: Front Bumper (501-19, Removal and Installation).

14. Open and close the hood to check the hood latch operation.

15. Adjust both of the hood latches.

- Loosen the 4 hood latch Torx bolts.
- Lower the hood and check for alignment.
- Open the hood and tighten the Torx bolts to 10 Nm (7 lb.ft).
- Check for the correct operation of the hood safety catch.
- If necessary, repeat the above adjustment procedure.

16. Connect the battery ground cable.

For additional information, refer to: Specifications (414-00, Specifications).

Front End Sheet Metal Repairs - Front Crossmember

Removal and Installation

Removal

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
3. Remove the radiator.
For additional information, refer to: [Radiator](#) (303-03A Engine Cooling - TDV6 2.7L Diesel, Removal and Installation).
4. Remove both front impact sensors.
For additional information, refer to: [Front Impact Severity Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
5. Release wiring harness from crossmember
6. Remove the fender moulding.
For additional information, refer to: [Front Fender Moulding](#) (501-08 Exterior Trim and Ornamentation, Removal and Installation).
- 7.

E55794

Item	Part Number	Description
1	-	8 spot welds.
2	-	8 spot welds.

8. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Front Side Member

Removal and Installation

Removal

- NOTE: This procedure requires the body to be removed from the integrated body frame.
- NOTE: In this procedure the front side member is replaced in conjunction with hood latch panel, front wheelhouse and the front crossmember.

1. Load vehicle onto ramp.
2. Disconnect both the battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
3. L/H side: Remove the battery.
4. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
5. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
6. Remove the front crossmember.
For additional information, refer to: [Front Crossmember](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
7. Remove the front wheelhouse.
For additional information, refer to: [Front Wheelhouse](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
8. Remove the hood.
9. Remove both hood support struts.
10. Remove the hood wiring harness.
11. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
12. Remove both wiper arms and blades.
13. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Reservoir - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
14. Remove the instrument panel.
For additional information, refer to: Instrument Panel - 2.7L Diesel (501-12 Instrument Panel and Console, Removal and Installation).
15. Remove the insulation from outer and inner bulkhead.
16. R/H side: Release the ABS modulator.
17. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02B Acceleration Control - V6 4.0L Petrol, Removal and Installation).
18. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
19. Release the wiring harness from bulkhead.
20. Release the wiring harness from fender apron panel reinforcement.
21. Release the wiring harness from the side member.
22. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: Fuel Fired Booster Heater (412-02B Auxiliary Heating, Removal and Installation).
23. Remove the scuff plate trim panel trim
For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
24. Remove the footrest
25. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
26. Release the front carpet.

27.

E55830

Item	Part Number	Description
1	-	18 spot welds.
2	-	16 spot welds.

28.

E56906

Item	Part Number	Description
1	-	6 plug welds and a butt weld.

29. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Front Side Member Section

Removal and Installation

Removal

- NOTE: This procedure requires the body to be removed from the integrated body frame.
 - NOTE: In this procedure the front side member section is replaced in conjunction with hood latch panel, front wheelhouse and the front crossmember.
1. Load vehicle onto ramp.
 2. Disconnect both the battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
 3. L/H side: Remove the battery.
 4. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
 5. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 6. Remove the front wheelhouse.
For additional information, refer to: [Front Wheelhouse](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 7. Remove the front crossmember.
For additional information, refer to: [Front Crossmember](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
 8. Remove the hood.
 9. Remove both hood support struts.
 10. Remove the hood wiring harness.
 11. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
 12. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Cooler - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
 13. Remove the instrument panel.
For additional information, refer to: Instrument Panel - 2.7L Diesel (501-12 Instrument Panel and Console, Removal and Installation).
 14. Remove the insulation from outer and inner bulkhead.
 15. R/H side: Release the ABS modulator.
 16. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02B Acceleration Control - V6 4.0L Petrol, Removal and Installation).
 17. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
 18. Release the wiring Harness from bulkhead.
 19. Release the wiring harness from fender apron panel reinforcement.
 20. Release the wiring harness from the side member.
 21. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: Fuel Fired Booster Heater (412-02B Auxiliary Heating, Removal and Installation).
 22. Remove the scuff plate trim panel trim
For additional information, refer to: [Scuff Plate Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
 23. Remove the footrest
 24. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
 25. Release the front carpet.

26.

E55831

Item	Part Number	Description
1	-	Butt weld
2	-	7 spot welds.
3	-	8 spot welds.

27. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Fender Apron Panel Reinforcement

Removal and Installation

Removal

• NOTE: In this procedure the fender apron panel reinforcement is replaced in conjunction with fender apron panel closing.

1. Disconnect both the battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
3. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
4. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
5. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Reservoir - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
6. L/H side: Remove the battery.
7. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: [Fuel Fired Booster Heater](#) (412-02B Auxiliary Heating, Removal and Installation).
8. L/H side: Remove fuel fired booster heater pipes.
9. R/H side: Remove the air cleaner.
For additional information, refer to: [Air Cleaner](#) (303-12A Intake Air Distribution and Filtering - TDV6 2.7L Diesel, Removal and Installation).
10. R/H side: Release the ABS modulator.
11. Remove the wiring harness.
12. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
13. Remove the hood.
14. Remove both hood support struts.
15. Remove the hood wiring harness.

16.

Item	Part Number	Description
1	-	Acoustic seal.
2	-	34 plug welds.
3	-	13 spot welds.
4	-	3 spot welds.
5	-	14 spot welds.

E56916

17. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Fender Apron Panel

Removal and Installation

Removal

1. Disconnect both the battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
3. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
4. Remove the radiator.
For additional information, refer to: [Radiator](#) (303-03A Engine Cooling - TDV6 2.7L Diesel, Removal and Installation).
5. Remove the radiator coolant expansion tank.
For additional information, refer to: [Coolant Expansion Tank](#) (303-03A Engine Cooling - TDV6 2.7L Diesel, Removal and Installation).
6. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Reservoir - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
7. Remove the hood.
8. Remove both hood support struts.
9. Remove the hood wiring harness.
10. Remove both wiper arms and blades.
11. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
12. L/H side: Remove the battery.
13. Remove the wiring harness
14. R/H side: Release the ABS modulator.
15. Remove the air cleaner.
For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - V6 4.0L Petrol, Removal and Installation).
16. Remove the insulation from outer bulkhead.
17. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: Fuel Fired Booster Heater (412-02B Auxiliary Heating, Removal and Installation).
18. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
- 19.

Item	Part Number	Description
1	-	14 spot-welds.
2	-	2 mig welds.
3	-	11 mig-plug welds
4	-	19 mig-plug welds.
5	-	5 mig-plug welds.

20. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

Installation

Front End Sheet Metal Repairs - Front Wheelhouse

Removal and Installation

Removal

- NOTE: This procedure requires the body to be removed from the integrated body frame.
- NOTE: In this procedure the front wheelhouse is replaced in conjunction with the front side member, hood latch panel and front crossmember.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the front side member.
For additional information, refer to: [Front Side Member](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
3. Remove the crossmember.
For additional information, refer to: [Front Crossmember](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
4. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).

5.

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Front Wheelhouse Section

Removal and Installation

Removal

- NOTE: This procedure requires the body to be removed from the integrated body frame.
- NOTE: In this procedure the front wheelhouse section is replaced in conjunction with the front side member section, front wheelhouse reinforcement, hood latch panel and front crossmember.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the front side member section.
For additional information, refer to: [Front Side Member Section](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
3. Remove the front wheelhouse reinforcement.
For additional information, refer to: [Front Wheelhouse Reinforcement](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
4. Remove the crossmember.
For additional information, refer to: [Front Crossmember](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
5. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).

6.

Item	Part Number	Description
1	-	Butt weld
2	-	15 spot welds.
3	-	7 plug welds, 9 spot welds.
4	-	20 spot welds.
5	-	9 plug welds.

7. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Fender Apron Panel Closing Panel

Removal and Installation

Removal

• **NOTE:** In this procedure the fender apron closing panel is replaced in conjunction with the fender apron panel or the fender apron panel reinforcement.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove the fender apron panel.
For additional information, refer to: [Fender Apron Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
3. Remove the fender apron panel reinforcement.
For additional information, refer to: [Fender Apron Panel Reinforcement](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).

4.

Item	Part Number	Description
1	-	7 plug welds.
2	-	2 spot welds.
3	-	2 spot welds.
4	-	5 plug welds.

E56612

5. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Front End Sheet Metal Repairs - Fender Apron Panel Reinforcement Front Section

Removal and Installation

Removal

• **NOTE:** In this procedure the fender apron panel reinforcement front section is replaced in conjunction with fender apron panel closing.

1. Disconnect both the battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
3. Remove the hood latch panel.
For additional information, refer to: [Hood Latch Panel](#) (501-27 Front End Sheet Metal Repairs, Removal and Installation).
4. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
5. L/H side: Remove the radiator coolant expansion tank.
For additional information, refer to: [Coolant Expansion Tank](#) (303-03C Engine Cooling - V6 4.0L Petrol, Removal and Installation).
6. L/H side: Remove the power steering fluid reservoir.
For additional information, refer to: [Power Steering Fluid Reservoir - TDV6 2.7L Diesel](#) (211-02 Power Steering, Removal and Installation).
7. L/H side: Remove the battery.
8. L/H side: Remove the fuel fired booster heater.
For additional information, refer to: Fuel Fired Booster Heater (412-02B Auxiliary Heating, Removal and Installation).
9. L/H side: Remove fuel fired booster heater pipes.
10. R/H side: Release the ABS modulator.
11. Remove the wiring harness.
12. Remove the hood.
13. Remove both hood support struts.
14. Remove the hood wiring harness.
- 15.

E56613

Item	Part Number	Description
1	-	Butt weld.
2	-	20 spot welds.
3	-	3 spot welds.
4	-	11 spot welds.

16. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Front End Sheet Metal Repairs - Fender Apron Panel Reinforcement Rear Section

Removal and Installation

Removal

1. Disconnect both the battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
3. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
4. L/H side: Remove the battery.
5. R/H side: Remove the air cleaner.
For additional information, refer to: [Air Cleaner](#) (303-12A Intake Air Distribution and Filtering - TDV6 2.7L Diesel, Removal and Installation).
6. R/H side: Release the ABS modulator.
7. Remove the wiring harness.
8. Remove the plenum chamber panel.
For additional information, refer to: [Plenum Chamber](#) (412-01 Air Distribution and Filtering, Removal and Installation).
9. Remove the hood.
10. Remove both hood support struts.
11. Remove the hood wiring harness.
- 12.

E56917

Item	Part Number	Description
1	-	3 spot welds.
2	-	34 plug welds.
3	-	7 spot welds.
4	-	Acoustic seal.
5	-	Butt weld.

13. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).

Installation

1. Install is the reversal of removal.

Roof Sheet Metal Repairs - Roof

Description and Operation

Roof service panels

E55791

Item	Description	Service part No
1	Roof panel	AKA780012
2	Header assembly	AKC780050
3	Roof panel (with roof opening panel)	AKB780040
4	Roof reinforcement	AKR780080
5	Roof reinforcement	AKB780031
6	Rear assembly	AKC780090
7	Rail assembly	R/H AK1780021 L/H AK1780031

paragraph

Time schedules, front end

The following information shows the total time taken to replace single panels and complete assemblies. This time includes removal of Mechanical, Electrical and Trim (MET) items, plus paint times based on Metallic Clear Over Base Paint.

The times shown were generated by Thatcham (the motor insurance repair and research centre) and are to be used as a guide only.

Single panel times

Panel Description	Petrol	Diesel
Roof panel	25.8	25.8
Roof glass support panel	1.1	1.1

Roof Sheet Metal Repairs - Roof Panel

Removal and Installation

Removal

- NOTE: The roof opening panel is supplied with the reinforcement roof aperture.
- NOTE: This procedure shows removal of the roof opening panel. For vehicles with a fixed roof, the procedure is similar.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove both side air curtain modules.
For additional information, refer to: [Side Air Curtain Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
3. Remove the windshield glass.
For additional information, refer to: [Windshield Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
4. Remove both rear quarter window glass.
For additional information, refer to: [Rear Quarter Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
5. If applicable, remove roof opening panel.
For additional information, refer to: [Roof Opening Panel](#) (501-17 Roof Opening Panel, Removal and Installation).
6. If applicable, remove glass roof panel.
For additional information, refer to: [Glass Roof Panel](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
7. Remove both front seats.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
8. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
9. Release the wiring harness from both A-pillars.
10. Release the wiring harness from the roof.
11. Remove the liftgate.
12. Remove both front door and rear door aperture weatherstrip.
13. Remove the tailgate weatherstrip.
14. Remove both front safety belt retractors.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
15. Remove both second row safety belt retractors.
For additional information, refer to: [Second Row Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
16. If applicable, remove both third row safety belt retractors.
For additional information, refer to: [Third Row Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
17. Release the carpet
18. Remove the load space trims.
19. Remove the load space carpets.
- 20.

E57137

Item	Part Number	Description
1	-	33 spot welds.
2	-	31 spot welds.(R/H is symmetrically opposite to L/H).
3	-	43 spot welds.

E57170

21.

Item	Part Number	Description
1	-	12 plug welds and 27 spot welds.
2	-	7 plug welds and 40 spot welds (R/H is symmetrically opposite to L/H).
3	-	23 spot welds.
4	-	32 spot welds.
5	-	4 plug welds. (R/H is symmetrically opposite to L/H).

22. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - Rocker Panel

Removal and Installation

Removal

1. Load vehicle onto ramp.
2. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
3. Remove the rear wheel and tire.
4. Remove the rear fender splash shield.
5. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
6. Release the front door check strap from the A-pillar and release the rear door check strap from the B-pillar.
 - Remove the 2 Torx bolts.

E51196

7. Remove the front and rear door assemblies.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

8. Remove the front and rear door weatherstrips.

9. Remove the front seat.

For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).

10. Remove the rear seat.

For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).

11. Remove the cowl side trim panel.

For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).

12. Release the wiring harness from A-pillar.

13. Remove the front safety belt retractor.

For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).

14. Remove the B-pillar side impact sensor.

For additional information, refer to: [B-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).

15. Remove the second row safety belt retractor.

For additional information, refer to: [Second Row Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).

16. Remove the C-pillar side impact sensor.

For additional information, refer to: [C-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).

17. Release the rocker panel and B-pillar wiring harness.

18. Release the carpet away from the area of repair.

19. Release the wiring harness from rocker panel and B-pillar.

20. Remove the rocker panel finisher.

21.

Item	Part Number	Description
1	-	Butt weld.
2	-	20 spot-welds.
3	-	Butt weld.
4	-	9 spot welds.
5	-	8 spot welds.
6	-	Butt weld.
7	-	35 spot welds.

22.

Item	Part Number	Description
1	-	3 plug welds.
2	-	3 plug welds.
3	-	38 plug welds.
4	-	3 plug welds.
5	-	4 plug welds.

23. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - A-Pillar Outer Panel

Removal and Installation

Removal

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the windshield glass.
For additional information, refer to: [Windshield Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
3. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
4. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
5. R/H side: Remove the ABS module.
For additional information, refer to: [Anti-Lock Brake System \(ABS\) Module](#) (206-09A Anti-Lock Control - Traction Control, Removal and Installation).
6. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02B Acceleration Control - V6 4.0L Petrol, Removal and Installation).
7. R/H side: Remove the brake booster.
For additional information, refer to: Brake Booster (206-07, Removal and Installation).
8. Remove the front door assembly.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

E51197

9. Remove the insulation from the outer and inner bulkhead.
10. Remove the front and rear door weatherstrip.
11. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
12. Release the A-Pillar wiring harness.
13. Remove the footrest.

14. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
15. Remove the front safety belt retractor.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
16. Remove the rocker panel outer trim.
17. Release the front carpet.
- 18.

Item	Part Number	Description
A	-	Cut line 55mm (2.165 inches) from A-Pillar trim hole.
1	-	Butt welds.
2	-	30 spot welds.
3	-	8 spot welds.
4	-	15 spot welds.

E55944

19.

Item	Part Number	Description
1	-	6 plug welds.
2	-	4 plug welds.
3	-	12 plug welds.
4	-	10 plug welds.
5	-	13 plug welds.

E57675

20.

Item	Part Number	Description
1	-	Areas of adhesive.
2	-	Acoustic seal.

E57676

21. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - Side Panel

Removal and Installation

Removal

1. Load vehicle onto ramp.
2. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
3. Remove the windshield glass.
For additional information, refer to: [Windshield Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
4. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
5. Remove the front and rear door assemblies.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

6. Remove front and rear door strikers.
7. Remove the insulation from the outer and inner bulkhead.
8. Remove the cowl side trim panel.
For additional information, refer to: [Cowl Side Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
9. Release the A-Pillar wiring harness.
10. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
11. R/H side: Remove the brake booster.
For additional information, refer to: [Brake Booster](#) (206-07 Power Brake Actuation, Removal and Installation).
12. R/H side: Remove the ABS module.
For additional information, refer to: [Anti-Lock Brake System \(ABS\) Module](#) (206-09A Anti-Lock Control - Traction Control, Removal and Installation).
13. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02B Acceleration Control - V6 4.0L Petrol, Removal and Installation).

14. Remove the footrest.
15. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
16. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
17. Remove the front and rear door weatherstrip.
18. Remove the front safety belt retractor.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
19. Remove the Second row safety belt retractor.
For additional information, refer to: [Second Row Center Safety Belt Retractor - Vehicles With: 60/40 Split Seat](#) (501-20A Safety Belt System, Removal and Installation).
20. Remove the third row safety belt retractor.
For additional information, refer to: [Third Row Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
21. Remove the B-Pillar side impact sensor.
For additional information, refer to: [B-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
22. Remove the side air curtain module.
For additional information, refer to: [Side Air Curtain Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
23. Remove the C-Pillar side impact sensor.
For additional information, refer to: [C-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
24. Remove the wiring harness from the B-Pillar.
25. Release the wiring harness from the rocker panel.
26. Release wiring harness from roof panel.
27. Remove the rocker panel outer trim.
28. Release the front and back carpet.
29. Remove rear wheel and tire.
30. Remove rear bumper cover.
For additional information, refer to: [Rear Bumper Cover](#) (501-19 Bumpers, Removal and Installation).
31. Remove forced air extraction grille.
32. R/H side: Remove fuel tank.
For additional information, refer to: [Fuel Tank](#) (310-01A Fuel Tank and Lines - TDV6 2.7L Diesel, Removal and Installation).
33. R/H side: Remove the fuel tank filler pipe.
For additional information, refer to: [Fuel Tank Filler Pipe](#) (310-01B Fuel Tank and Lines - TDV6 3.0L Diesel, Removal and Installation).
34. R/H side: Remove the fuel filler interlock catch.
For additional information, refer to: [Fuel Filler Interlock Catch](#) (501-03 Body Closures, Removal and Installation).
35. Remove the rear quarter window glass.
For additional information, refer to: [Rear Quarter Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
36. Remove the exhaust heatshields.
37. Remove the tailgate latch.
For additional information, refer to: [Liftgate Latch](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
38. Remove tailgate weatherstrip.
39. With assistance remove the tailgate.
40. Remove the load space trims.
41. Remove the load space carpets.
42. Release wiring harness.

43.

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - B-Pillar Outer Panel

Removal and Installation

Removal

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the rear door assembly.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

3. Remove front door striker.
4. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
5. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
6. Remove the B-pillar side impact sensor.
For additional information, refer to: [B-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
7. Remove the side air curtain module.
For additional information, refer to: [Side Air Bag Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
8. Remove the wiring harness from the B-pillar.
9. Release the wiring harness from the rocker panel.
10. Remove the front safety belt retractor.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).
11. Remove the rocker panel outer trim.
12. Release the carpet.

E55946

13.

Item	Part Number	Description
1	-	Cut line and butt weld.
2,4	-	81 spot welds.
3	-	Butt welds.

E57346

14.

Item	Part Number	Description
1	-	Adhesive.
2	-	6 plug welds.
3	-	19 plug welds.
4	-	Acoustic seal.

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - A-Pillar Reinforcement

Removal and Installation

Removal

• NOTE: In this procedure the A-Pillar reinforcement is replaced in conjunction with the A-Pillar outer panel.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the A-Pillar outer panel.
For additional information, refer to: [A-Pillar Outer Panel](#) (501-29 Side Panel Sheet Metal Repairs, Removal and Installation).
3. Remove the instrument panel.
For additional information, refer to: Instrument Panel - 2.7L Diesel (501-12, Removal and Installation).
- 4.

Item	Part Number	Description
A	-	Cut line 80mm (3.149 inches) from edge of A Pillar reinforcement.
1	-	Butt weld.
2	-	30 spot welds.
3	-	17 spot welds.

E55945

5.

Item	Part Number	Description
1	-	Butt weld
2	-	7 Plug welds.
3	-	16 plug welds.
4	-	Acoustic seal.

E57677

6. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - B-Pillar Reinforcement

Removal and Installation

Removal

- NOTE: In this procedure the B-Pillar reinforcement is replaced in conjunction with the B-pillar outer panel.
- NOTE: The B-Pillar closing panel is fitted with the B-Pillar reinforcement.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove the B-pillar outer panel.
For additional information, refer to: [B-Pillar Outer Panel](#) (501-29 Side Panel Sheet Metal Repairs, Removal and Installation).

3.

Item	Part Number	Description
A	-	Cut line 140.0mm (5.51 inches)
1	-	Butt weld.
2,3	-	81 spot welds. (including the B-Pillar closing panel.)

E55947

E57347

4.

Item	Part Number	Description
1	-	Butt weld.
2	-	Acoustic seal.
3	-	12 plug welds.

E55948

5. The B-Pillar closing panel is supplied with the cantrail. Remove the B-Pillar closing panel from the cantrail and fit the B-pillar closing panel to the B-Pillar reinforcement, as shown in graphic E55948 and E55947.

Item	Part Number	Description
1	-	9 plug welds.
2	-	4 spot welds.

6. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Side Panel Sheet Metal Repairs - Side Panel Front Section

Removal and Installation

Removal

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00, Specifications).
2. Remove the windshield glass.
For additional information, refer to: [Windshield Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
3. Remove the front fender.
For additional information, refer to: [Fender](#) (501-02 Front End Body Panels, Removal and Installation).
4. L/H side: Remove the battery junction box.
For additional information, refer to: [Battery Junction Box \(BJB\) - TDV6 2.7L Diesel](#) (418-00 Module Communications Network, Removal and Installation).
5. R/H side: Remove the brake booster.
For additional information, refer to: Brake Booster (206-07, Removal and Installation).
6. R/H side: Remove the ABS module.
For additional information, refer to: [Anti-Lock Brake System \(ABS\) Module](#) (206-09A Anti-Lock Control - Traction Control, Removal and Installation).
7. R/H side: Remove the accelerator pedal.
For additional information, refer to: [Accelerator Pedal](#) (310-02B Acceleration Control - V6 4.0L Petrol, Removal and Installation).
8. Remove the front and rear door assemblies.

- Disconnect the electrical connector
- Release the wiring harness grommet
- Release the wiring harness retaining clip
- Remove the 2 bolts

9. Remove front door striker.
10. Remove the insulation from the outer and inner bulkhead.
11. Remove the front and rear door weatherstrip.
12. Remove the footrest.
13. Release the A-Pillar wiring harness.
14. Remove the front safety belt retractor.
For additional information, refer to: [Front Safety Belt Retractor](#) (501-20A Safety Belt System, Removal and Installation).

15. Remove the B-Pillar side impact sensor.
For additional information, refer to: [B-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
16. Remove the side air curtain module.
For additional information, refer to: [Side Air Bag Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
17. Remove the front seat.
For additional information, refer to: [Front Seat](#) (501-10 Seating, Removal and Installation).
18. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
19. Remove the wiring harness from the B-Pillar.
20. Release the wiring harness from the rocker panel.
21. Release wiring harness from roof panel.
22. Remove the rocker panel outer trim.
23. Release the front and back carpet.
- 24.

Item	Part Number	Description
A	-	Cut line is 55 mm (2.165 inches) from A-Pillar trim hole.
1	-	98 spot welds.
2	-	Butt weld.
3	-	80 spot welds.
4	-	Butt weld.
5	-	8 spot welds.
6	-	15 spot welds.
7	-	Butt weld.

E56608

25.

Item	Part Number	Description
1	-	6 plug welds.
2	-	31 plug welds.
3	-	4 plug welds.
4	-	10 plug welds.
5	-	13 plug welds.
6	-	6 plug welds.

E57174

26.

Item	Part Number	Description
1	-	Areas of adhesive.
2	-	Acoustic seal.
3	-	Acoustic seal.

E57175

27. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear End Sheet Metal

Description and Operation

Rear end service panels

E55754

Item	Description	Service part No
1	Quarter panel outer	R/H ALA780100 L/H ALA780110
2	Rear side member	R/H AGA780021 L/H AGA780031
3	Rear side member	R/H AFD780080 L/H AFD780090
4	Rear floor panel	AFD780010

Rear end service panels

E55755

Item	Description	Service part No
1	Rear wheelhouse outer	R/H ALK780100 L/H ALK780110
2	Rear lamp mounting panel	R/H AME780320 L/H AME780330
3	Water drain panel	R/H AME780300 L/H AME780310
4	D-pillar closing panel	R/H AFF780060 L/H AFF780070
5	D-pillar inner lower panel assembly	R/H AGY780060 L/H AGY780070
6	Inner quarter panel	R/H ALR780220 L/H ALR780230
7	Inner quarter panel/side panel rear section	R/H ALJ780120 L/H ALJ780130

Time schedules, front end

The following information shows the total time taken to replace single panels and complete assemblies. This time includes removal of Mechanical, Electrical and Trim (MET) items, plus paint times based on Metallic Clear Over Base Paint.

The times shown were generated by Thatcham (the motor insurance repair and research centre) and are to be used as a guide only.

Single panel times

Panel Description	Petrol	Diesel
Liftgate	9.0	9.0

Panel Description	Petrol	Diesel
Tailgate	6.7	6.7
Quarter panel L/H	23.4	23.4
Quarter panel R/H	23.7	23.7

Combination panel replacement times

The following panel combination times show the total time to remove/refit body panels, MET items and any paint process.

Combination panel times

Panel Description	Petrol	Diesel
Rear bumper		
D-Pillar closing panel L/H and R/H		
Rear lamp panel		
Rear crossmember		
Rear panel		
Quarter panel		
Tailgate		
Total Time	L/H 35.6 R/H 35.9	L/H 35.6 R/H 35.9

Combination panel times

Panel Description	Petrol	Diesel
Rear bumper		
D-Pillar closing panel L/H and R/H		
Rear lamp panel L/H and R/H		
Rear panel		
Rear crossmember		
Tailgate		
Quarter panel L/H and R/H		
Total Time	62.1	62.1

Combination panel times

Panel Description	Petrol	Diesel
Body off integraed frame		
Rear floor panel section		
Rear bumper		
Rear side member section		
D-Pillar closing panel		
D-Pillar inner lower panel assembly		
Rear lamp panel		
Rear panel		
Rear crossmember		
Tailgate		
Quarter panel		
Total Time	L/H 64.1 R/H 64.3	L/H 64.3 R/H 64.5

Combination panel times

Panel Description	Petrol	Diesel
Body off integraed frame		
Rear floor panel section		
Rear bumper		
Rear side member section L/H and R/H

Rear End Sheet Metal Repairs - Quarter Panel

Removal and Installation

Removal

1. Load vehicle onto ramp.
2. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
3. Remove the rear wheel and tire.
4. Remove the rear bumper cover.
For additional information, refer to: [Rear Bumper Cover](#) (501-19 Bumpers, Removal and Installation).
5. Remove the forced air extraction grille.
6. R/H side: Remove fuel tank.
For additional information, refer to: [Fuel Tank](#) (310-01A Fuel Tank and Lines - TDV6 2.7L Diesel, Removal and Installation).
7. R/H side: Remove the fuel tank filler pipe.
For additional information, refer to: Fuel Tank Filler Pipe (310-01C Fuel Tank and Lines - 2.7L Diesel, Removal and Installation).
8. R/H side: Remove the fuel filler interlock catch.
For additional information, refer to: [Fuel Filler Interlock Catch](#) (501-03 Body Closures, Removal and Installation).
9. Remove the headliner.
For additional information, refer to: [Headliner](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
10. Remove the rear seat.
For additional information, refer to: [Rear Seat - Vehicles With: 60/40 Split Seat](#) (501-10 Seating, Removal and Installation).
11. Remove the C-pillar side impact sensor.
For additional information, refer to: [C-Pillar Side Impact Sensor](#) (501-20B Supplemental Restraint System, Removal and Installation).
12. Remove the side air curtain module.
For additional information, refer to: [Side Air Curtain Module](#) (501-20B Supplemental Restraint System, Removal and Installation).
13. Remove the rear quarter window glass.
For additional information, refer to: [Rear Quarter Window Glass](#) (501-11 Glass, Frames and Mechanisms, Removal and Installation).
14. Remove the rocker panel finisher.
15. Remove the exhaust heatshield.
16. Remove the tailgate latch.
For additional information, refer to: [Tailgate Latch](#) (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
17. Remove the tailgate weatherstrip.
18. With assistance remove the tailgate.
19. Remove the load space trims.
20. Remove the load space carpets.
21. Release the wiring harness.

22.

Item	Part Number	Description
1	-	Butt weld.
2	-	Butt weld.
3	-	50 spot welds.
4	-	5 spot welds.
5	-	40 spot welds.
6	-	9 spot welds.
7	-	Butt weld.
8	-	40 spot welds.

E56609

23.

Item	Part Number	Description
1	-	Acoustic seal.
2	-	16 plug welds.
3	-	Acoustic seal R/H.
4	-	7 plug welds.
5	-	3 plug welds.
6	-	Acoustic seal.
7	-	Acoustic seal.

E57109

24. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).

- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Inner Quarter Panel

Removal and Installation

Removal

- NOTE: In this procedure, the inner quarter panel is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).
- 3.

Item	Part Number	Description
1	-	Butt weld.
2	-	24 spot welds.
3	-	11 spot welds.
4	-	Butt weld.
5	-	40 spot welds.

E55760

4.

Item	Part Number	Description
1	-	5 plug welds.
2	-	8 plug welds.
3	-	Acoustic seals

E57103

5. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Water Drain Panel

Removal and Installation

Removal

- NOTE: In this procedure, the water drain panel is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

3.

Item	Part Number	Description
1	-	Butt weld.
2	-	12 spot-welds.
3	-	2 plug-welds.

E55934

4. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear Wheelhouse Outer

Removal and Installation

Removal

- NOTE: In this procedure, the rear wheelhouse outer is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Disconnect the parking brake cables.
For additional information, refer to: Parking Brake Cable (206-05 Parking Brake and Actuation, Removal and Installation).
3. Remove the brake line.
4. Remove the rear suspension.
For additional information, refer to: Rear Suspension (204-02 Rear Suspension, Description and Operation).
5. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

6.

Item	Part Number	Description
1	-	60 spot welds.
2	-	10 spot welds.

E55930

7.

Item	Part Number	Description
1	-	160mm (6.29) adhesive.
2	-	2 plug welds and 5 spot welds.

E57119

8. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear Lamp Mounting Panel

Removal and Installation

Removal

- NOTE: In this procedure, the rear lamp mounting panel is replaced in conjunction with the quarter panel.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).

2. Remove the quarter panel.
For additional information, refer to: [Quarter Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).

3.

E57102

Item	Part Number	Description
1	-	18 plug welds.
2	-	Adhesive.
3	-	3 plug welds.
4	-	2 plug welds.

4.

E55761

Item	Part Number	Description
1	-	16 spot welds.
2	-	11 spot welds.

5. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#) (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Back Panel

Removal and Installation

Removal

- NOTE: When replacing the back panel it is necessary to remove a section of the rear lamp panel.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove the rear bumper cover.
For additional information, refer to: [Rear Bumper Cover](#) (501-19 Bumpers, Removal and Installation).
3. Remove both D-pillar trim panels.
For additional information, refer to: [D-Pillar Trim Panel](#) (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Remove the tailgate hinge trim cover.
5. Remove the tailgate weather seal.
6. Remove the load space trims.
7. Remove the load space carpets.
8. With assistance remove the tailgate.
9. Remove the L/H exhaust heatshield tailpipe.
10. Remove the R/H exhaust heatshield tailpipe.
11. Remove the spare wheel and tire.
12. Release the back panel wiring harness.

13.

Item	Part Number	Description
1	-	20 plug welds.
2	-	42 spot welds.
3	-	4 plug welds.
4	-	21 plug welds.
5	-	4 plug welds.

E55756

14.

Item	Part Number	Description
1	-	2 plug welds. (R/H is symmetrically opposite to L/H)
2	-	30 spot welds.
3	-	7 spot welds. (R/H is symmetrically opposite to L/H)

E56870

15. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.
For additional information, refer to: [Corrosion Protection](#) (501-25B Body Repairs - Corrosion Protection, Description and Operation).
- Tolerance checks.
For additional information, refer to: [Body and Frame](#)

(501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

Installation

1. Install is the reversal of removal.

Rear End Sheet Metal Repairs - Rear Floor Panel Section

Removal and Installation

Removal

• NOTE: In this procedure, the rear floor panel section is replaced in conjunction with the back panel and rear crossmember.

1. Disconnect both battery cables.
For additional information, refer to: Specifications (414-00 Charging System - General Information, Specifications).
2. Remove the back panel.
For additional information, refer to: [Back Panel](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).
3. Remove the rear crossmember.
For additional information, refer to: [Rear Crossmember](#) (501-30 Rear End Sheet Metal Repairs, Removal and Installation).
- 4.

Item	Part Number	Description
1	-	Mig-weld.
2	-	Mig-weld.
3	-	Mig-welds and 18 plug-welds.

E55762

5. For additional information:

- Welding.
For additional information, refer to: [Body Repairs](#) (501-25A Body Repairs - General Information, Description and Operation).
- Corrosion protection.

Installation

1. Install is the reversal of removal.

Full Frame and Body Mounting -

Torque Specifications

Description	Nm	lb-ft
HO2s harness bracket bolt	10	7
Transmission support crossmember nuts and bolts	90	66
Transmission support insulator through-bolt	175	129
Transmission undershield bolts	10	7
*Integrated-body frame to body bolts	133	98

* New bolts must be installed

Full Frame and Body Mounting - Tow Bar Mounting Check

General Procedures

Special Tool(s)	
 E140509	Tow Bar Gauge JLR-501-201

- 1. Pre test:** Check the detachable tow bar locking pin is moving freely without sticking.
- 2.** Insert the tow bar into the chassis following the owners handbook instruction.

3.  **CAUTION:** The special tool must be flat against the tow bar ball before taking measurements.

Hold the special tool JLR-501-201 against the tow bar as shown, failure to follow this instruction may result in an incorrect measurement.

E140481

E140480

4.  CAUTION: Make sure the special tool is mounted flush to the tow ball.

• NOTE: Note the position of the tow bar release handle.

Install the special tool as shown.

5. Check the position of the tow bar release handle against the special tool, and observe the following:

- If the tow bar release handle points to the red area of the special tool, go to Step 6.
- If the tow bar release handle points outside of the red area of the special tool, then the tow bar mounting is correct and no further action is required.

6. Install a new tow bar and check the tow bar mounting following Steps 3 - 5.

- If the tow bar release handle points to the red area of the special tool, install a new rear crossmember. For additional information, refer to: [Rear Crossmember](#) (502-02 Full Frame and Body Mounting, Removal and Installation).

Removal and Installation

Removal

All vehicles

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Remove the transmission undershield.

- Remove the 6 bolts.

Vehicles with diesel engine

3. Release the 3 fuel lines.

- Release from the 3 clips.

4. Release the exhaust front mounting.

Vehicles with petrol engine

5. Release the HO2S wiring harness and bracket from the crossmember.

- Remove the 2 bolts.
- Tie the bracket aside.

All vehicles

6. Remove the transmission support insulator through-bolt.

- Support the transfer case.

7. Remove the crossmember.

- Remove the 4 nuts and bolts.

Installation

All vehicles

1. Install the crossmember.

- Tighten the nuts and bolts to 90 Nm (66 lb.ft).

2. Install the transmission support insulator through-bolt and tighten to 175 Nm (129 lb.ft).

Vehicles with petrol engine

Vehicles with Diesel engine  Make sure the HO2S wiring harness is not twisted more than 180 degrees and is not in contact with either the exhaust or driveshaft.

4. Secure the 3 fuel lines:

- Secure in the clips
- Attach the HO2S wiring harness and bracket to the crossmember.

5. Connect the exhaust front mounting.

- Tighten the bolts to 10 Nm (7 lb.ft).

All vehicles

6. Install the transmission undershield.

- Tighten the bolts to 10 Nm (7 lb.ft).

Full Frame and Body Mounting - Tow Bar Mounting Check

General Procedures

Special Tool(s)	
 E140509	Tow Bar Gauge JLR-501-201

- 1. Pre test:** Check the detachable tow bar locking pin is moving freely without sticking.
- 2.** Insert the tow bar into the chassis following the owners handbook instruction.

3.  **CAUTION:** The special tool must be flat against the tow bar ball before taking measurements.

Hold the special tool JLR-501-201 against the tow bar as shown, failure to follow this instruction may result in an incorrect measurement.

E140481

E140480

4.  CAUTION: Make sure the special tool is mounted flush to the tow ball.

• NOTE: Note the position of the tow bar release handle.

Install the special tool as shown.

5. Check the position of the tow bar release handle against the special tool, and observe the following:

- If the tow bar release handle points to the red area of the special tool, go to Step 6.
- If the tow bar release handle points outside of the red area of the special tool, then the tow bar mounting is correct and no further action is required.

6. Install a new tow bar and check the tow bar mounting following Steps 3 - 5.

- If the tow bar release handle points to the red area of the special tool, install a new rear crossmember. For additional information, refer to: [Rear Crossmember](#) (502-02 Full Frame and Body Mounting, Removal and Installation).

65.

Installation

All vehicles

1. CAUTIONS:

Make sure that new bolts are installed.

Make sure that all components are free and do not get caught up whilst lowering the body onto the integrated body frame.

Using an assistant install the body to the integrated body frame.

- Install the body mounts.
- With assistance align the body and integrated body frame mounts.
- Install the bolts, but do not tighten fully at this stage.

E124859

2. Remove the tie down straps securing the body.
