WARRANTY

All TEKTRONIX instruments are warranted against defective materials and workmanship for one year. Any questions with respect to the warranty should be taken up with your TEKTRONIX Field Engineer or representative.

All requests for repairs and replacement parts should be directed to the TEKTRONIX Field Office or representative in your area. This will assure you the fastest possible service. Please include the instrument Type Number or Part Number and Serial Number with all requests for parts or service.

Specifications and price change privileges reserved.

SECTOR CARD TEST FIXTURE**067-0745-00****Usage**

The Sector Card Test Fixture is used in the test, calibration, and repair of 1803 sector cards. The fixture provides all stimulus required to test and calibrate the functions of a sector card.

Components

Sector Card Test Fixture	067-0745-00
Test Fixture Power Supply	016-0343-00
Connector Post, 8 each	134-0013-00
Connector Post, 8 each	134-0014-00
Extender Card	670-4132-00

Optional

Test Leads, red, 6 each	012-0031-00
Test Leads, black, 2 each	012-0039-00

Front Panel Description

For this description, the front panel is divided into three areas that correspond to the main functions. (See Figure 1-1.)

- Area 1. (Front portion) is the general logic data source and sector card input/output sources.
- Area 2. (Right-hand portion of the top) is the clock function.
- Area 3. (Left-hand portion of the top) is the sample and hold voltage source.

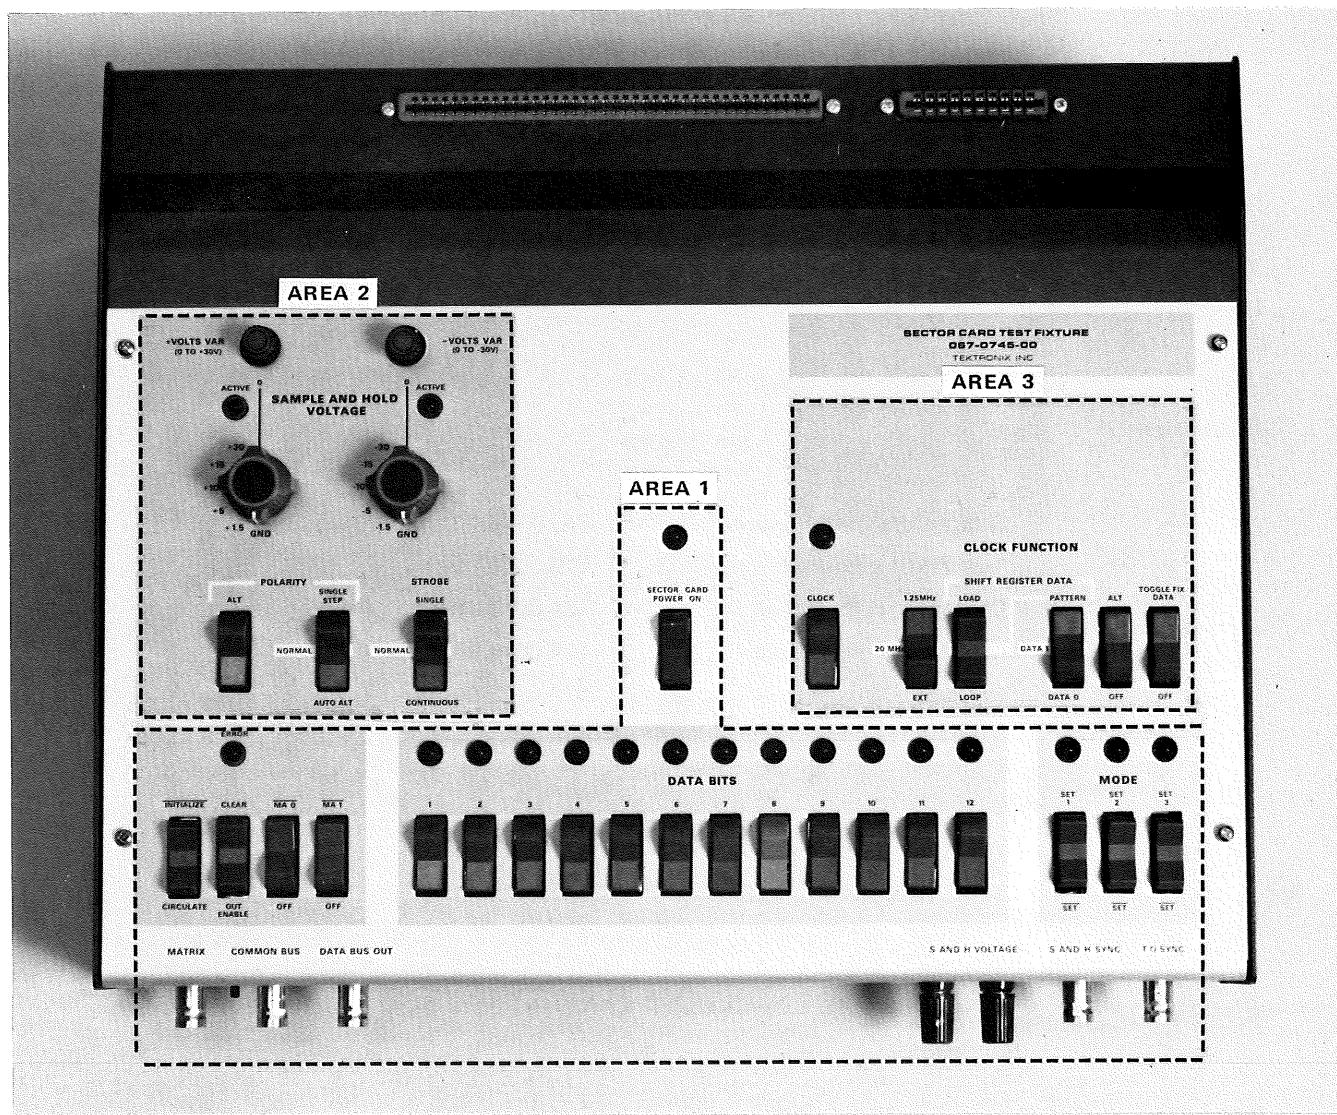

Figure 1-1. Front Panel Areas and Corresponding Functions.

Area 1. General Logic Data Source

- Sector Card Power On: Controls the DC power to the sector card under test. Also provides an initialize signal to the sector card and to the fixture logic and clock functions. The lamp above the switch indicates the status of the sector power.
- DATA BITS 1-12: Momentary contact switches that will turn the data bits on or off as indicated. These bits are applied to the input of the mode and setup register on the sector card via the connector at the top of the fixture.
- MODE 1-2-3/SET/SET: These three switches determine which of the sector card's mode registers will receive data. Depressing a MODE switch to its SET position will set the data selector by the DATA:BIT(1-12) switches into the selected mode register. Depressing a MODE switch to the SET position will remove the data selected by DATA BIT(1-12) switches from the selected mode register.

When a MODE switch is pressed, either SET or SET, the DATA BITS lamps indicate the status of the data bits in the selected mode register. The bit status is displayed only when the switch is held depressed.

- MA0: A two-position switch that controls the MA0 signal to the sector card. Depressing the switch applies MA0 to the sector card.
- MA1: A two-position switch that controls the MA1 signal to the sector card. Depressing the switch applies MA1 to the sector card.
- ERROR CLEAR/-/OUT ENABLE: A three-position switch with the center position being neutral. Pressing the switch toward ERROR CLEAR, will hold the ERROR CLEAR line of the sector card high until released. The switch is spring loaded only in the ERROR CLEAR direction. Pressing the switch toward OUT ENABLE will hold the OUT ENABLE line of the sector card high. The lamp above the switch lights when the sector card has generated an error. The indicator lamp monitors pin L on J2 and pin 6 on J1 of the sector card.
- INITIALIZE/-/CIRCULATE: A three-position switch with the center position being neutral. Pressing the switch to the INITIALIZE position will hold the INITIALIZE line of the sector card low until released. The INITIALIZE position will also clear the test fixture DATA BITS and the fixture's internal mode registers. This switch is spring-loaded only in the INITIALIZE position. When selected, the CIRCULATE position will apply a high true signal to the CIRCULATE line of the sector card under test.

- **MATRIX LOAD:** When pressed, this switch connects a pull-down resistor to -5.2 volts. This is for a MECL load, to test the sector card logic that is connected to the DELTA T SUBSYSTEM via the 50-ohm matrix. When the switch is released, the load is disconnected.
- **MATRIX:** BNC connector that is connected to the MATRIX pin (J1 pin 40) of the sector card under test.
- **COMMON BUS:** BNC connector that is connected to the COMMON BUS pin (J1 pin 38) of the sector card under test.
- **DATA BUS OUT:** BNC connector that is connected to the DATA BUS OUT pin (J1 pin V) of the sector card under test.
- **S AND H VOLTAGE:** Two connectors provided for monitoring the voltage that is connected to the sector card when adjusting the sample and hold voltages.
- **S AND H SYNC:** The signal from this BNC connector is used as a trigger signal when using the AUTO ALT mode of the SAMPLE AND HOLD VOLTAGE. Allows user to synchronize an oscilloscope to the sample and hold voltage that is changing polarity.
- **T₀ SYNC PATTERN SYNC:** The signal(s) from this BNC connector are used as triggers to synchronize a user scope, either on the T₀ signal or PATTERN SYNC. The signal source is determined by the setting of the switch that is adjacent to the connector. T₀ corresponds to the T₀ signal that goes to the sector card. PATTERN corresponds to a trigger that is generated once per 1032 T₀ signals.

Area 2: CLOCK FUNCTION

- **CLOCK:** A spring-loaded two-position switch that will turn the clock signal on or off. The clock output status is indicated by the lamp that is located above the switch. When on, the clock signal generates all the strobes required for the sector card.
- **1.25 MHz/20 MHz/EXT:** A three-position switch used to select the clock frequency or an external signal source. In the EXT position, the user has the option of using a built-in 10 kHz clock. The 10 kHz clock is selected by a switch on the rear panel (located next to EXT CLOCK BNC connector). This rear-panel switch selects either the 10 kHz clock or EXT source.

- SHIFT REGISTER DATA: Two switches are used for this function: PATTERN/DATA1/DATA0 and LOAD/LOOP. The PATTERN/DATA1/DATA0 switch selects the type of data that will be forced to the DATA IN BUS on the sector card. In the PATTERN position, a fixed pattern is generated by the Test Fixture. In the DATA1 or DATA0 position, a continuous logic level is asserted corresponding to the switch designation. The LOAD/LOOP switch controls the internal pattern data to the sector card. In the LOOP position, the data is continuously clocked to the sector card. When the switch is momentarily depressed to the LOAD position, the pattern data is clocked for a count of 1032 and then the fixture clock is turned off. This is especially useful for loading the shift register of the sector, and then changing the mode of the register so that register is connected to register. This allows the user to verify the content of the shift register. The center position of the switch is neutral.
- PAT1/PAT0: This switch is used to select the logic level to the PATTERN line to the sector card under test.
- TOGGLE FIX DATA: This two-position switch is used to dynamically troubleshoot mode bits. SHIFT REGISTER DATA switch must be in the LOOP position with the TOGGLE FIX DATA switch in the ON position, the MODE selected will alternately SET and ~~SET~~ the mode bits. Note: the indicator lamps for the MODE switches will always indicate the MODE selection.

Area 3: SAMPLE AND HOLD VOLTAGE

- ROTARY SWITCHES: These two voltage-supply switches have the following selections: GND, 1.5 V, 5 V, 10 V, 15 V, 30 V, and a variable position. Each voltage supply has a status lamp that is labeled ACTIVE.
- Polarity: This function is controlled by two switches: ALT and SINGLE STEP/NORMAL/AUTO ALT.
- ALT: This switch is used momentarily to change voltage polarity.
- SINGLE STEP/NORMAL/AUTO ALT: This switch permits the user to change the sample and hold voltage polarity and create a sample and hold strobe signal when set to the AUTO ALT position. The user can single-step through this process by holding the switch in the SINGLE STEP position.

NOTE

Eight single steps are required to change polarity and create one sample and hold strobe. This function is useful for skewing the sample and hold on a sector card between two voltage levels.

NORMAL is a neutral position.

- **STROBE:** This three-position switch will generate a single strobe (≈ 2.5 ms) or a continuous strobe level to the sector card under test. Pressing the switch to the SINGLE position generates a single sample and hold strobe to the sector card under test. The CONTINUOUS position produces a continuous "true" sample and hold strobe level. NORMAL is a neutral position.

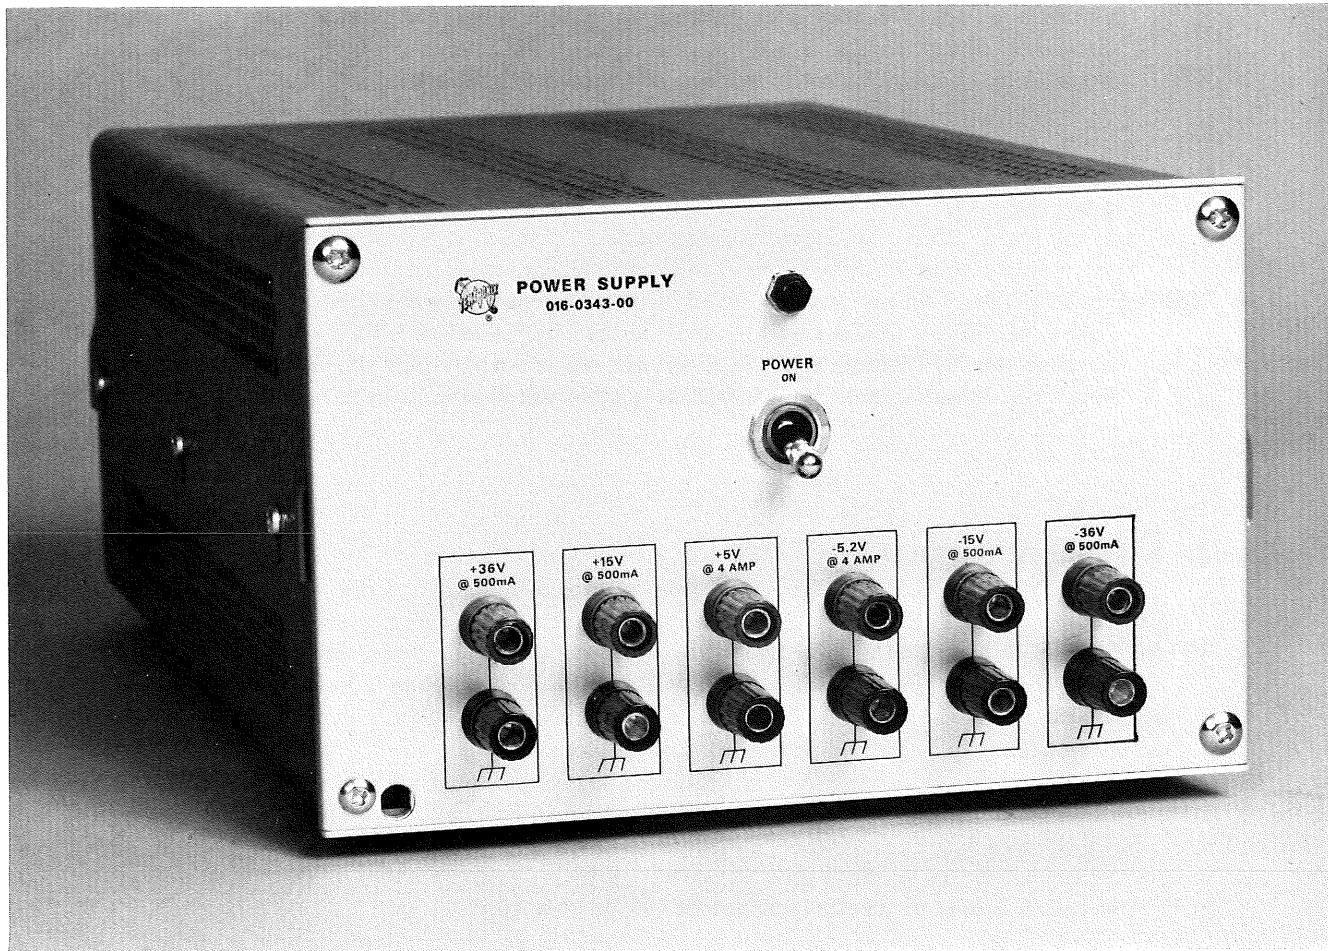

Figure 1-2. Power Supply.

Example:

- (1) To program the Invert Data function set Bit #1 and press MODE 1 to the SET position.
- (2) To close module #2 reed switch, set Bit #12 and press MODE 3 to the SET position.

REPLACEABLE ELECTRICAL PARTS

PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

SPECIAL NOTES AND SYMBOLS

- | | |
|------|--|
| X000 | Part first added at this serial number |
| 00X | Part removed after this serial number |

ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.

REPLACEABLE MECHANICAL PARTS

PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

SPECIAL NOTES AND SYMBOLS

X000 Part first added at this serial number

00X Part removed after this serial number

FIGURE AND INDEX NUMBERS

Items in this section are referenced by figure and index numbers to the illustrations.

INDENTATION SYSTEM

This mechanical parts list is indented to indicate item relationships. Following is an example of the indentation system used in the description column.

1 2 3 4 5	Name & Description
	<i>Assembly and/or Component</i>
	<i>Attaching parts for Assembly and/or Component</i>

	<i>Detail Part of Assembly and/or Component</i>
	<i>Attaching parts for Detail Part</i>

	<i>Parts of Detail Part</i>
	<i>Attaching parts for Parts of Detail Part</i>

Attaching Parts always appear in the same indentation as the item it mounts, while the detail parts are indented to the right. Indented items are part of, and included with, the next higher indentation. The separation symbol --- * --- indicates the end of attaching parts.

Attaching parts must be purchased separately, unless otherwise specified.

ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.

MANUAL CHANGE INFORMATION

At Tektronix, we continually strive to keep up with latest electronic developments by adding circuit and component improvements to our instruments as soon as they are developed and tested.

Sometimes, due to printing and shipping requirements, we can't get these changes immediately into printed manuals. Hence, your manual may contain new change information on following pages.

A single change may affect several sections. Since the change information sheets are carried in the manual until all changes are permanently entered, some duplication may occur. If no such change pages appear following this page, your manual is correct as printed.

SERVICE NOTE

Because of the universal parts procurement problem, some electrical parts in your instrument may be different from those described in the Replaceable Electrical Parts List. The parts used will in no way alter or compromise the performance or reliability of this instrument. They are installed when necessary to ensure prompt delivery to the customer. Order replacement parts from the Replaceable Electrical Parts List.

CALIBRATION TEST EQUIPMENT REPLACEMENT

Calibration Test Equipment Chart

This chart compares TM 500 product performance to that of older Tektronix equipment. Only those characteristics where significant specification differences occur, are listed. In some cases the new instrument may not be a total functional replacement. Additional support instrumentation may be needed or a change in calibration procedure may be necessary.

Comparison of Main Characteristics

DM 501 replaces 7D13		
PG 501 replaces 107	PG 501 - Risetime less than 3.5 ns into 50 Ω. 108 PG 501 - 5 V output pulse; 3.5 ns Risetime. 111 PG 501 - Risetime less than 3.5 ns; 8 ns Pretrigger pulse delay. 114 PG 501 - ±5 V output. 115 PG 501 - Does not have Paired, Burst, Gated, or Delayed pulse mode; ±5 V dc Offset. Has ±5 V output.	107 - Risetime less than 3.0 ns into 50 Ω. 108 - 10 V output pulse; 1 ns Risetime. 111 - Risetime 0.5 ns; 30 to 250 ns Pretrigger Pulse delay. 114 - ±10 V output. Short proof output. 115 - Paired, Burst, Gated, and Delayed pulse mode; ±10 V output. Short-proof output.
PG 502 replaces 107	PG 502 - 5 V output 108 PG 502 - Risetime less than 1 ns; 10 ns Pretrigger pulse delay. 111 PG 502 - ±5 V output 114 PG 502 - Does not have Paired, Burst, Gated, Delayed & Undelayed pulse mode; Has ±5 V output. 2101 PG 502 - Does not have Paired or Delayed pulse. Has ±5 V output.	108 - 10 V output. 111 - Risetime 0.5 ns; 30 to 250 ns Pretrigger pulse delay. 114 - ±10 V output. Short proof output. 115 - Paired, Burst, Gated, Delayed & Undelayed pulse mode; ±10 V output. Short-proof output. 2101 - Paired and Delayed pulse; 10 V output.
PG 506 replaces 106	PG 506 - Positive-going trigger output signal at least 1 V; High Amplitude output, 60 V. 067-0502-01 PG 506 - Does not have chopped feature.	106 - Positive and Negative-going trigger output signal, 50 ns and 1 V; High Amplitude output, 100 V. 0502-01 - Comparator output can be alternately chopped to a reference voltage.
SG 503 replaces 190, 190A, 190B 191 067-0532-01	SG 503 - Amplitude range 5 mV to 5.5 V p-p. SG 503 - Frequency range 250 kHz to 250 MHz. SG 503 - Frequency range 250 kHz to 250 MHz.	190B - Amplitude range 40 mV to 10 V p-p. 191 - Frequency range 350 kHz to 100 MHz. 0532-01 - Frequency range 65 MHz to 500 MHz.
TG 501 replaces 180, 180A 181 184 2901	TG 501 - Marker outputs, 5 sec to 1 ns. Sinewave available at 5, 2, and 1 ns. Trigger output - slaved to marker output from 5 sec through 100 ns. One time-mark can be generated at a time. TG 501 - Marker outputs, 5 sec to 1 ns. Sine-wave available at 5, 2, and 1 ns. TG 501 - Marker outputs, 5 sec to 1 ns. Sine-wave available at 5, 2, and 1 ns. Trigger output - slaved to marker output from 5 sec through 100 ns. One time-mark can be generated at a time. TG 501 - Marker outputs, 5 sec to 1 ns. Sine-wave available at 5, 2, and 1 ns. Trigger output - slaved to marker output from 5 sec through 100 ns. One time-mark can be generated at a time.	180A - Marker outputs, 5 sec to 1 μs. Sinewave available at 20, 10, and 2 ns. Trigger pulses 1, 10, 100 Hz; 1, 10, and 100 kHz. Multiple time-marks can be generated simultaneously. 181 - Marker outputs, 1, 10, 100, 1000, and 10,000 μs, plus 10 ns sinewave. 184 - Marker outputs, 5 sec to 2 ns. Sine-wave available at 50, 20, 10, 5, and 2 ns. Separate trigger pulses of 1 and .1 sec; 10, 1, and .1 ms; 10 and 1 μs. Marker amplifier provides positive or negative time marks of 25 V min. Marker intervals of 1 and .1 sec; 10, 1, and .1 ms; 10 and 1 μs. 2901 - Marker outputs, 5 sec to 0.1 μs. Sinewave available to 50, 10, and 5 ns. Separate trigger pulses, from 5 sec to 0.1 μs. Multiple time-marks can be generated simultaneously.

NOTE: All TM 500 generator outputs are short-proof. All TM 500 plug-in instruments require TM 500-Series Power Module.
