Artek Media 1042 Plummer Cir. SW Rochester, MN 55902

www.artekmedia.com

"High resolution scans of obsolete technical manuals"

If your looking for a quality scanned technical manual in PDF format please visit our WEB site at <u>www.artekmedia.com</u> or drop us an email at <u>manuals@artekmedia.com</u> and we will be happy to email you a current list of the manuals we have available.

If you don't see the manual you need on the list drop us a line anyway we may still be able to point you to other sources. If you have an existing manual you would like scanned please write for details, This can often be done very reasonably in consideration for adding your manual to our library.

Typically the scans in our manuals are done as follows;

- 1) Typed text pages are typically scanned in black and white at 300 dpi.
- 2) Photo pages are typically scanned in gray scale mode at 600 dpi
- Schematic diagram pages are typically scanned in black and white at 600 dpi unless the original manual had colored high lighting (as is the case for some 70's vintage Tektronix manuals).

If you purchased this manual from us (typically through our Ebay name of ArtekMedia) thank you very much. If you received this from a well-meaning "friend" for free we would appreciate your treating this much like you would "share ware". By that we mean a donation of at least \$5-10 per manual is appreciated in recognition of the time (a manual can take as much as 40 hours to reproduce, book, link etc.), energy and quality of effort that went into preserving this manual. Donations via PayPal go to: manuals@artekmedia.com or can be mailed to us the address above.

Thanks par & Symmeth

INSTRUMENT SERIAL NUMBERS

Each instrument has a serial number on a panel insert, tag, or stamped on the chassis. The first number or letter designates the country of manufacture. The last five digits of the serial number are assigned sequentially and are unique to each instrument. Those manufactured in the United States have six unique digits. The country of manufacture is identified as follows:

| B000000 | Tektronix, Inc., Beaverton, Oregon, USA |
|---------|---|
| 100000 | Tektronix Guernsey, Ltd., Channel Islands |
| 200000 | Tektronix United Kingdom, Ltd., London |
| 300000 | Sony/Tektronix, Japan |
| 700000 | Tektronix Holland, NV, Heerenveen, |
| | The Netherlands |

OPERATORS SAFETY SUMMARY

The general safety information in this part of the summary is for both operating and servicing personnel. Specific warnings and cautions will be found throughout the manual where they apply, but may not appear in this summary.

TERMS

In This Manual

CAUTION statements identify conditions or practices that could result in damage to the equipment or other property.

WARNING statements identify conditions or practices that could result in personal injury or loss of life.

As Marked on Equipment

CAUTION indicates a personal injury hazard not immediately accessible as one reads the marking, or a hazard to property including the equipment itself.

DANGER indicates a personal injury hazard immediately accessible as one reads the marking.

SYMBOLS

In This Manual

This symbol indicates where applicable cautionary or other information is to be found.

As Marked on Equipment

DANGER - High voltage.

Protective ground (earth) terminal.

ATTENTION - refer to manual.

Power Source

This product is intended to operate from a power source that will not apply more than 250 volts rms between the supply conductors or between either supply conductor and ground. A protective ground connection by way of the grounding conductor in the power cord is essential for safe operation.

Grounding the Product

This product is arounded through the grounding conductor of the power cord. To avoid electrical shock, plug the power cord into a properly wired receptacle before connecting to the product input or output terminals. A protective ground connection by way of the grounding conductor in the power cord is essential for safe operation.

Danger Arising From Loss of Ground

Upon loss of the protective-ground connection, all accessible conductive parts (including knobs and controls that may appear to be insulating) can render an electric shock.

Use the Proper Power Cord

Use only the power cord and connector specified for your product.

Use only a power cord that is in good condition.

Refer cord and connector changes to qualified service personnel.

Use the Proper Fuse

To avoid fire hazard, use only the fuse of correct type, voltage rating and current rating as specified in the parts list for your product.

Refer fuse replacement to qualified service personnel.

Do Not Operate in Explosive Atmospheres

To avoid explosion, do not operate this product in an explosive atmosphere unless it has been specifically certified for such operation.

Do Not Remove Covers or Panels

To avoid personal injury, do not remove the product covers or panels. Do not operate the product without the covers and panels properly installed.

Do Not Operate Without Covers (for TM 500 plugins only)

To avoid personal injury, do not operate this product without covers or panels installed. Do not apply power to the plug-in via a plug-in extender.

SERVICE SAFETY SUMMARY

FOR QUALIFIED SERVICE PERSONNEL ONLY

Refer also to the preceding Operators Safety Summary.

Do Not Service Alone

Do not perform internal service or adjustment of this product unless another person capable of rendering first aid and resuscitation is present.

Use Care When Servicing With Power On

Dangerous voltages exist at several points in this product. To avoid personal injury, do not touch exposed connections and components while power is on. Disconnect power before removing protective panels, soldering, or replacing components.

Power Source

This product is intended to operate from a power source that will not apply more than 250 volts rms between the supply conductors or between either supply conductor and ground. A protective ground connection by way of the grounding conductor in the power cord is essential for safe operation.

CONSIGNES DE SECURITE

Ce rappel des consignes générales de sécurité s'adresse à la fois aux utilisateurs et au personnel de maintenance. Avertissements et précautions à respecter sont annotés au long de ce manuel à chaque fois que l'utilisation du TM 515 l'exige. Il est à noter que ceux-ci peuvent ne pas figurer dans cette rubrique de rappel.

TERMES

Dans ce manuel

Les paragraphes intitulés ATTENTION identifient les circonstances ou opérations pouvant entraîner la détérioration de l'appareil ou de tout autre équipement.

Les paragraphes intitulés AVERTISSEMENT indiquent les circonstances dangereuses pour l'utilisateur (danger de mort ou risque de blessure).

Repères gravés sur l'appareil

CAUTION (ATTENTION) : ce mot identifie les zones de risque non immédiatement perceptibles ou un risque éventuel de détérioration de l'appareil.

DANGER (DANGER) : ce mot indique les zones de risque immédiat pouvant entraîner blessures ou mort.

SYMBOLES

Dans ce manuel

 \triangle

Ce symbole signifie «se reporter au manuel».

Gravés sur l'appareil

DANGER - Haute tension

Borne de masse de protection (terre)

ATTENTION - se reporter au manuel

Source d'alimentation

L'appareil est conçu pour fonctionner à partir d'une source d'alimentation maximale de 250 V efficaces entre les conducteurs d'alimentation ou entre chaque conducteur d'alimentation et la terre. Pour utiliser l'appareil en toute sécurité, une connexion à la masse, réalisée au moyen d'un conducteur prévu dans le cordon d'alimentation est indispensable.

TM 515

Mise à la masse de l'appareil

Une fois installé dans le châssis d'alimentation, l'appareil est relié à la masse à l'aide d'un conducteur du cordon d'alimentation. Pour éviter tout choc électrique, insérer la prise du cordon d'alimentation dans une prise de distribution correspondante avant de connecter l'entrée ou les sorties de l'appareil.

En cas de coupure de la connexion de masse, tous les éléments conducteurs accessibles (y compris boutons et commandes apparaissant isolants) peuvent provoquer un choc électrique.

Utiliser le fusible approprié

Pour éviter tout risque d'accident (incendie...) n'utiliser que le fusible recommandé pour votre appareil.

Le fusible de remplacement doit toujours correspondre au fusible remplacé : même type, même tension et même courant. Un remplacement de fusible ne doit être effectué que par un personnel qualifié.

Ne pas utiliser l'appareil en atmosphères explosives

Pour éviter toute explosion, ne pas utiliser cet appareil dans une atmosphère de gaz explosifs.

Ne pas démonter les capots ou les panneaux

Pour éviter toute blessure, ne pas ôter les capots ou les panneaux. N'utiliser l'appareil que si ceux-ci ont été correctement remis en place.

Ne pas utiliser l'appareil sans les capots de protection

Pour éviter tout risque de blessure, ne pas utiliser cet appareil alors que les capots ou panneaux n'ont pas été installés. Ne pas appliquer les alimentations au tiroir par l'intermédiaire d'un prolongateur.

SICHERHEITSANGABEN FÜR DEN ANWENDER

Die allgemeinen Sicherheitsinformationen in diesem Teil der Angaben dienen dem Anwender- und Servicepersonal. Spezielle Warnungen und Hinweise sind überall im Handbuch zu finden, müssen jedoch in diesen Angaben nicht erscheinen.

BEGRIFFE

In diesem Handbuch

VORSICHTSHINWEISE erläutern Bedingungen, die zur Zerstörung des Gerätes oder anderer Gegenstände führen könnten.

WARNUNGSHINWEISE erläutern Bedingungen, die zu Personenschäden führen können oder lebensgefährlich sind.

Markierungen auf dem Gerät

CAUTION - VORSICHT weist darauf hin, daß durch zufälliges Berühren an einer nicht unmittelbar zugänglichen Stelle Personenschaden entstehen kann, oder Schaden am Gerät selbst.

DANGER – GEFAHR weist darauf hin, daß durch zufälliges Berühren an einer zugänglichen Stelle Personenschaden entstehen kann.

SYMBOLE

In diesem Handbuch

Dieses Symbol zeigt an, wo Vorsicht walten zu lassen ist, oder wo Informationen zu finden sind.

Markierungen auf dem Gerät

GEFAHR - Hochspannung.

Schutzerdungskontakt.

ACHTUNG - beziehen Sie sich auf das Handbuch.

Netzspannungsversorgung

Die Betriebsspannung für dieses Gerät darf 250 V_{eff} nicht überschreiten und ist an die Versorgungsleitungen bzw. an eine Versorgungsleitung und Masse anzulegen. Innerhalb des Netzanschlußkabels muß ein Schutzleiter vorhanden sein, der mit Gerätemasse verbunden ist.

Masseanschluß des Gerätes

Dieses Gerät wird über den Schutzleiter der Versorgungseinheit mit Erdpotential verbunden. Zur Vermeidung von elektrischen Schlägen ist vor der Beschaltung der Ein- und Ausgänge der Netzstecker in eine korrekt verdrahtete Steckdose einzustecken. Verwenden Sie den Schutzleiter nicht als einzige Verbindung zwischen zwei oder mehreren Geräten. Zur Vermeidung von elektrischen Schlägen sind die Geräte untereinander mit separaten Leitungen zu verbinden.

Verwendung einer richtigen Sicherung

Zur Vermeidung von Brandschäden sind nur Sicherungen zu verwenden, die in den Teilelisten dieses Gerätes aufgeführt sind und die in Spannungs- und Stromwert entsprechend sind. Ersatz von Sicherungen ist nur von geschultem Personal vorzunehmen.

Arbeiten Sie nicht in explosiver Umgebung

Zur Vermeidung von Explosionen ist die Inbetriebnahme dieses Gerätes in explosiver Umgebung zu unterlassen, wenn das Gerät nicht dafür geeignet ist.

Entfernen Sie keine Gehäuseabdeckungen

Zur Vermeidung von Personenschäden sind keine Gehäuseteile zu entfernen. Auch ist das Gerät ohne Gehäuse nicht in Betrieb zu nehmen.

Arbeiten Sie nicht ohne Gehäuseabdeckung

Zur Vermeidung von Personenschäden ist das Gerät nicht ohne Gehäuse in Betrieb zu nehmen. Der Einschub sollte nicht über einen Verlängerungsadapter betrieben werden.

ご使用の前に

この章では操作する方およびサービス・エンジニアの方 に安全にお取扱いいただくための注意事項が述べられてい ます。

機器使用に際して

人体への危険を防止するため、カバーやパネルを取りは ずしたまま作動させないで下さい。またアラグイン・エク ステンダでプラグインと電源を接続しないで下さい。

TM 515 Five Compartment Portable Power Module.

SPECIFICATION

INTRODUCTION

Instrument Description

The TM 515 is a five-wide power module compatible with most TM 500 plug-ins. It provides unregulated ac and dc supplies and nondedicated power transistors for use by the plug-ins. This mainframe does not have a high-power compartment but does feature forced-air cooling. Available options allow the rear interface to be customized (Option 5), operation from power sources with a line frequency of up to 400 Hz (Option 6), and specific interconnections for specialized plug-ins (Option 7).

Performance Conditions

The values listed below are valid only when the instrument is operated at an ambient temperature between 0° C and $+50^{\circ}$ C.

ELECTRICAL CHARACTERISTICS

OPERATING INSTRUCTIONS

GENERAL

Installation

For full installation instructions refer to the procedure at the end of this section.

Power Source

The TM 515 is designed to operate from a power source with its neutral at or near earth (ground) potential with a separate safety-earth conductor. It is not intended for operation from two phases of a multi-phase system. The standard instrument has a 48 Hz to 60 Hz line frequency range for fan operation. Option 6 extends the upper limit of this range to 400 Hz.

Power Usage

With five plug-ins installed, the TM 515 may require up to 240 watts at the upper limits of the high line voltage ranges. Actual power consumption depends on the particular plug-in configuration and operating modes selected.

Loading Considerations. The power capability of the TM 515 can best be used by carefully planning the plug-in configuration, the external loads, and the resulting power distributions. Optimum conditions may be obtained by:

- 1. Having equal loads in all compartments.
- 2. Dissipating as much power as possible in the external loads.
- 3. Operating the system in an ambient temperature near 25°C.

The TM 515 has no high-power compartment, so care should be taken in selecting plug-ins, since some units may not operate at full capability in this module. For instance, some TM 500 power supply type plug-ins will not produce maximum rated current when powered from this module. Combinations of other plug-ins also may not operate at full capability. An example here might be three units rated at 75 watts maximum power dissipation each. All plug-ins working at their maximum rating would probably blow the line fuse, if the thermal cut-out didn't operate first. Each plug-in is provided access to a pair of heat-sinked, series-pass transistors, one NPN and the other PNP. These transistors enable the plug-ins to operate in power ranges not possible if the power were to be dissipated in the plug-ins themselves.

Operating Temperatures

The TM 515 can be operated in an ambient air temperature of 0°C to 50°C. Thermal cutout devices protect the system by disconnecting the power to the TM 515 Power Module when internal temperatures rise above a safe operating level. These devices automatically return power to the unit when the internal temperatures return to a safe level.

Since the TM 515 can be stored in temperatures between -40° C and $+75^{\circ}$ C, allow the instrument's chassis to return to within the operating limits before applying power.

Plug-in Modules

It is not necessary that all the plug-in compartments be filled in order to operate the Power Module. The only modules needed are those necessary to accomplish the task.

The TM 515 should be turned off before inserting or removing any plug-ins as arcing may occur and result in circuit damage.

Module Installation

1. Check the location of the plastic barriers on the TM 515 interconnecting jack to ensure that their locations match the slots in the edge of the plug-in circuit board.

2. Take off the PLUG-IN RETAINER by unscrewing the three bolts holding it in place on the lower side of the front aperture.

Operating Instructions—TM 515

3. Align the plug-in chassis with the upper and lower guides of the selected compartment. Insert the plug-in and press firmly to the circuit board in the interconnecting jack. (Remove the plug-in by pulling on the white release latch in the lower left corner of the front panel.)

4. Replace the PLUG-IN RETAINER removed in step 2.

Turn-on Procedure

Press the POWER switch, found on the rear panel of the TM 515, to its ON position. Some plug-ins have independent power switches, usually labeled OUTPUT, controlling application of module power to the plug-in. Press these switches to activate these plug-ins once the Modular Power is turned on.

BUILDING A SYSTEM

Family Compatibility

Mechanically, the plug-ins are very similar to other Tektronix products. However, they are not electrically compatible. Therefore, the TM 515 interface has barrier keys on the mating connectors between pins 6 and 7 to ensure that incompatible plug-ins cannot be inserted. See Fig. 2-1. A compatible plug-in will have a matching slot between pins 6 and 7 of its main circuit board edge connector. This slot and barrier combination is the primary keying assignment.

TM 500-compatible plug-ins are also identified by the white color of the release latch.

Customizing the Interface

The modularity of this instrumentation system provides for many different functions to be performed by the plugin modules. Specific functions are grouped into families or classes, of which there may be several plug-in module members (e.g., Power Supplies, Signal Sources, and Measurement). Each modular member of a functional family will have a second slot unique to its family located in its edge connector. The TM 515 user can "program" one or more compartments to accept only members of that family by installing a second barrier key in the interface connector to match the module's slot location. An entire TM 515 can be modified in this manner to set instruction systems for specific work functions. To order extra barrier keys refer to the Mechanical Parts list.

Jumper wires can be used to further specialize the interface. Compartments can be made to "talk" to each other by connecting jumpers on the front side of the

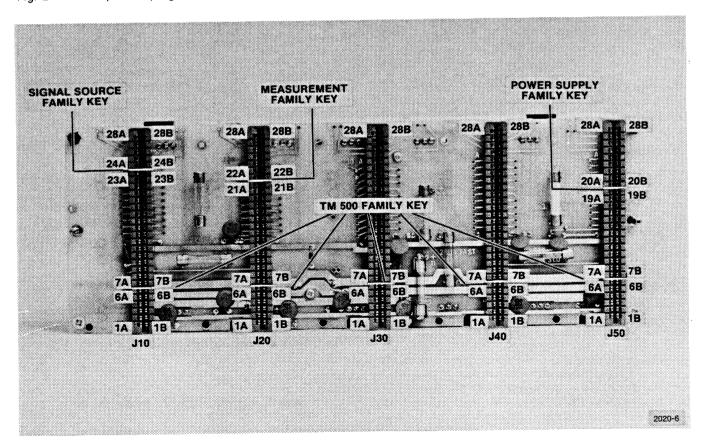

Fig. 2-1. Interface Board.

interface board, using pins 14 through 28 (both A and B sides) of the interconnecting jacks. For a further description of this see Option 5 in the Options Section of this manual. Also refer to each plug-in's manual for the I/O assignments of each pin at the rear interface. Once having made interconnections of a specialized nature, it is recommended that barrier keys be installed to ensure module compatibility with the wiring.

INSTALLATION AND PRE-TURN ON PROCEDURE

Front & Rear Cover Removal

The white plastic pieces located left and right toward both ends of this cabinet are the clamps that hold the covers in place. To release them, simply pull the leading edges (left and right) out away from the case.

Pull the rear edge of each clamp clear of its pressure ridge and the end cover comes off (see Fig. 2-2).

USE OF BAIL

The Single Angle Bail Wire used to hold this cabinet of instruments at a convenient viewing angle is stored inside the front cover. If desirable, remove it from storage mounts and install according to the viewing angle desired for this package. (See Fig. 2-3.)

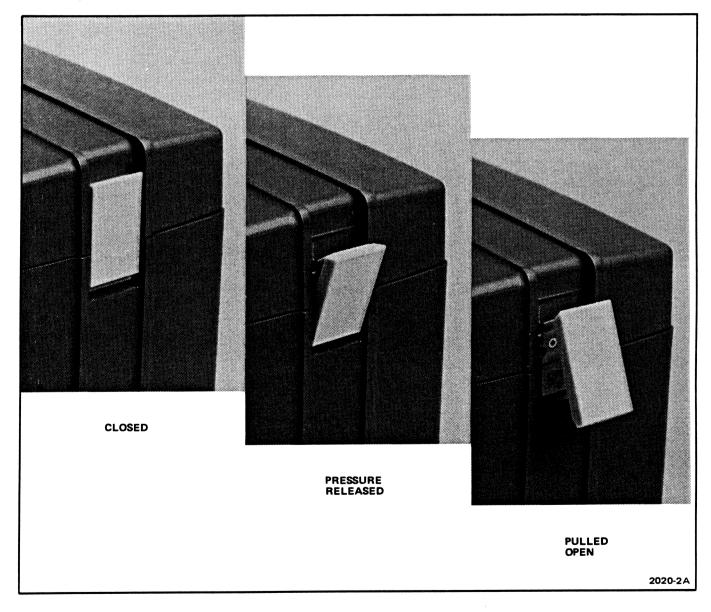

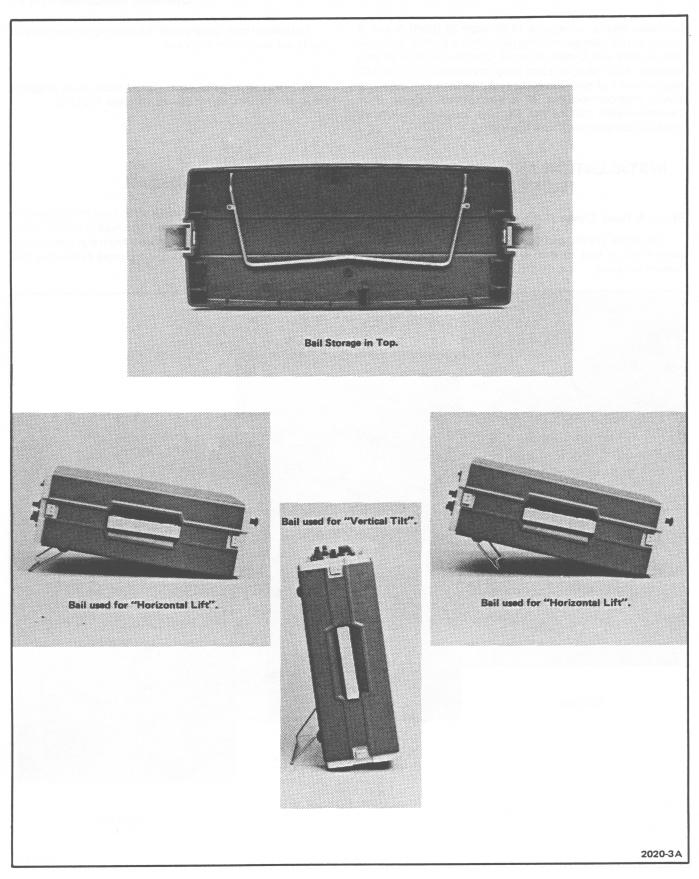

Fig. 2-2. End Clamp Detail.

Operating Instructions—TM 515

LINE VOLTAGE SELECTOR & FUSE

AFTER REMOVING THE REAR COVER AND BEFORE PLUGGING LINE CORD IN:

1. Check, through the clear plastic cover, that the appropriate Line Selector Block is in the In-Service position for the line voltage you expect to use this instrument on. Also check that the proper Fuse is in the Line Fuse Holder that screw mounts into the rear of this instrument (Fig. 2-4A).

- 2. If a change is needed, follow these steps:
- a. Remove the two hold-down screws on the clear plastic line selector cover and lift it off. This gives easy access to the Line Selector Blocks located on the rear of this instrument. See Figs. 2-4 and 2-5.
- b. Remove Improper Block and then install Proper Block for Low, Medium, or High line voltage expected. Install Improper Block on the storage pins so it doesn't get lost, and replace the Clear Plastic Cover.

c. Turn the Fuse Holder Knob in the direction of the arrow and pull it clear of the instrument. Remove improper Fuse and install proper one. (Alternate & Spare Fuses are stored in blank holders on the Main Interface Board. It will be necessary to remove the Power Supply from the cabinet to obtain these fuses. See Cabinet Removal directions under Maintenance, Section 4 of this manual.)

3. Pull the ac Power Cord clear of the Fan-Exhaust Housing.

4. If necessary, change the line cord Power Plug to match the power source receptacle or use an adapter. **Also** make sure the Power Switch on the back is OFF.

- 5. Plug the cord into the power source.
- 6. Insert the desired plug-ins.
- 7. This completes Installation and Pre-Turn On.

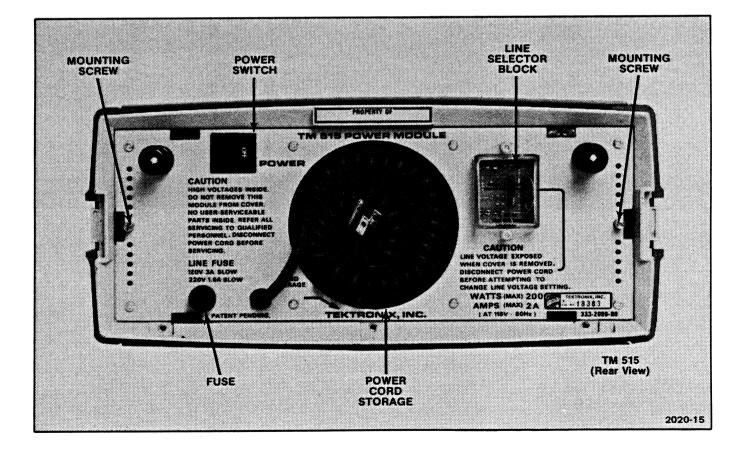

Fig. 2-4A. Rear View.

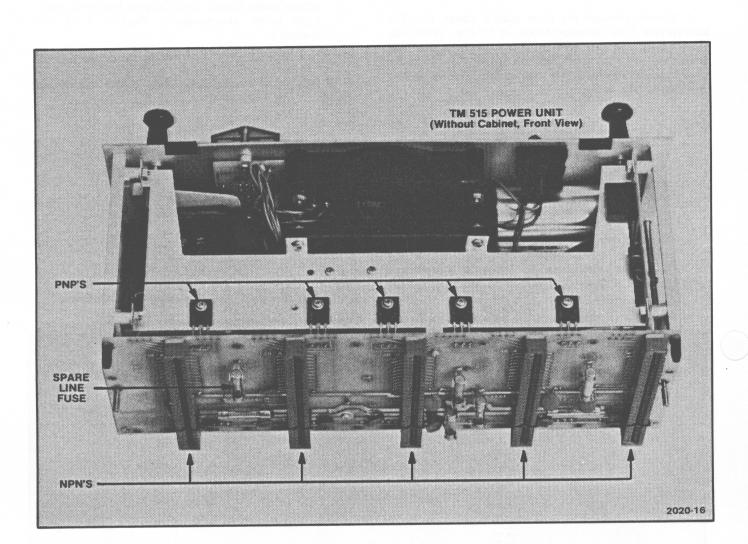

Fig. 2-4B. Front View.

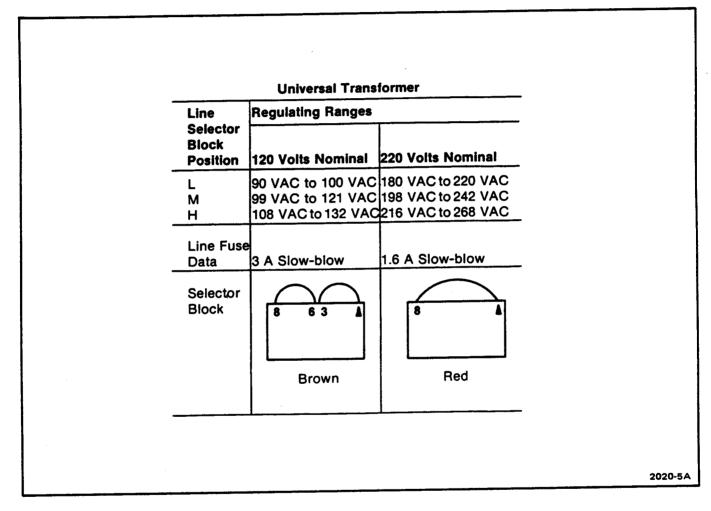

Fig. 2-5. Line Voltage Selector and Fuse.

INSTRUCTIONS D'UTILISATION

Installation

Les instructions complètes d'installation figurent à la fin de ce chapitre.

Source d'alimentation

Cet appareil est conçu pour fonctionner à partir d'une source d'alimentation dont le neutre se trouve au potentiel de la terre ou en est très peu différent, avec un conducteur de protection mis à la terre et séparé. Il n'a pas été prévu pour fonctionner entre deux phases d'un réseau multiphasé.

L'appareil standard fonctionne dans une plage de fréquence réseau de 48 Hz à 60 Hz (ventilateur). L'option 06 porte la limite supérieure de cette plage à 400 Hz.

Consommation

Avec cinq tiroirs installés dans le châssis d'alimentation, le TM 515 peut nécessiter jusqu'à 240 W de puissance dans la gamme supérieure de la tension réseau. La consommation effective est fonction des caractéristiques du tiroir et du mode d'utilisation sélectionnés.

Considérations de charge. Afin d'employer au mieux la capacité de puissance du TM 515, il faut déterminer avec grand soin la configuration des tiroirs, les charges externes ainsi que les consommations respectives. Une utilisation optimale consiste :

- 1. À répartir des charges égales dans les cinq compartiments.
- 2. A consommer le maximum de puissance dans les charges extérieures.
- A utiliser l'ensemble à une température ambiante d'environ 25°C.

Le TM 515 ne possède pas de compartiment forte puissance. La sélection des tiroirs doit donc être soigneusement effectuée, puisque certains appareils ne fonctionnent pas selon leurs pleines possibilités dans ce module. Par exemple, certains tiroirs d'alimentation de la série TM 500 ne fournissent pas leur courant maximal lorsqu'ils sont alimentés par ce module. Des combinaisons avec d'autres tiroirs peuvent également empêcher une utilisation à capacité maximale. Supposons trois tiroirs consommant une puissance maximale de 75 W chacun. Tous ces tiroirs travaillant selon leurs pleines possibilités peuvent détruire le fusible réseau si le disjoncteur thermique ne se met pas en action auparavant. Le TM 515 alimente chaque tiroir par l'intermédiaire d'une paire de transistors (un NPN et un PNP) montés sur châssis servant de radiateur. Ces transistors, montage série, permettent d'abaisser les tensions d'alimentation nécessaires au tiroir utilisé sans dissiper de puissance dans les tiroirs euxmêmes.

Température de fonctionnement

Le TM 515 peut être utilisé à une température ambiante comprise entre 0°C et 50°C. Un disjoncteur thermique protège l'ensemble en déconnectant la source d'alimentation du TM 515 lorsque la température interne dépasse un seuil de fonctionnement de sécurité. Ce dispositif rétablit automatiquement l'alimentation de l'appareil lorsque la température interne est redevenue normale.

Puisque le TM 515 peut être stocké à une température comprise entre -40° C et $+75^{\circ}$ C, il faut laisser au châssis le temps d'atteindre la température normale d'utilisation avant de mettre l'appareil sous tension.

Tiroirs

Il n'est pas nécessaire d'utiliser tous les compartiments pour faire fonctionner le châssis d'alimentation. Les seuls modules nécessaires sont ceux requis pour réaliser une fonction.

ATTENTION

Couper l'alimentation du TM 515 avant l'insertion ou l'extraction de tout tiroir, des arcs électriques risquant de détériorer les circuits.

Installation du module

1. Verifier que les détrompeurs en plastique situés sur les connecteurs du TM 515 correspondent aux encoches du circuit imprimé du tiroir utilisé.

2. Retirer le dispositif de retenue (PLUG IN RETAINER) maintenant les tiroirs en place, en dévissant les trois vis situées au bas de l'ouverture frontale.

3. Aligner les rainures supérieures et inférieures du tiroir avec les guides du compartiment sélectionné. Insérer le tiroir et le pousser à fond pour que le circuit imprimé se place

Instructions d'utilisation - TM 515

correctementdans le connecteur (pour extraire le tiroir, tirer sur la tirette de verrouillage située au coin inférieur gauche du panneau avant).

4. Remettre en place le dispositif «PLUG IN RETAINER».

Mise en service

Appuyer sur le commutateur POWER, situé sur le panneau arrière du TM 515, pour le placer sur la position ON. Certains tiroirs sont munis de commutateurs de mise en service indépendants, normalement dénommés OUTPUT. Ceux-ci transmettent les alimentations du châssis d'alimentation vers le tiroir sélectionné. Appuyer sur ces boutons pour mettre ces tiroirs en service une fois que le commutateur POWER est sur ON.

CONCEPTION D'UN SYSTEME

Compatibilité

Mécaniquement, les tiroirs modulaires de la série TM 500 sont très similaires aux autres familles de produits Tektronix. Cependant, ils ne sont pas compatibles électriquement. Par conséquent, l'interface du TM 515 est muni de détrompeurs situés sur les connecteurs correspondants, entre les broches 6 et 7. Cette conception empêche l'insertion de tout tiroir qui ne serait pas compatible. Se reporter à la figure 2-1. Un tiroir compatible doit posséder une encoche correspondante au détrompeur entre les broches 6 et 7 sur le connecteur de son circuit imprimé principal. L'association d'une encoche et de son détrompeur permet l'identification de la fonction et assure la compatibilité des tiroirs.

La tirette de sécurité de couleur blanche est un autre moyen d'identifier la compatibilité des tiroirs de la série TM 500.

Conception de l'interface selon les besoins spécifiques du client

La modularité de ce système permet de réaliser une multitude de fonctions à l'aide des tiroirs. Des fonctions spécifiques sont regroupées par familles ou catégories, chacune de ces familles pouvant comprendre plusieurs tiroirs, par exemple, les familles d'alimentations, de générateurs de signaux, d'instruments de mesures, etc... Chaque tiroir modulaire, membre d'une famille réalisant la même fonction et située sur l'extrémité du connecteur. L'utilisateur du TM 515 peut donc «programmer» un ou plusieurs compartiments afin que ceux-ci n'acceptent que les membres d'une même famille. Pour cela, il suffit d'installer un second détrompeur sur le

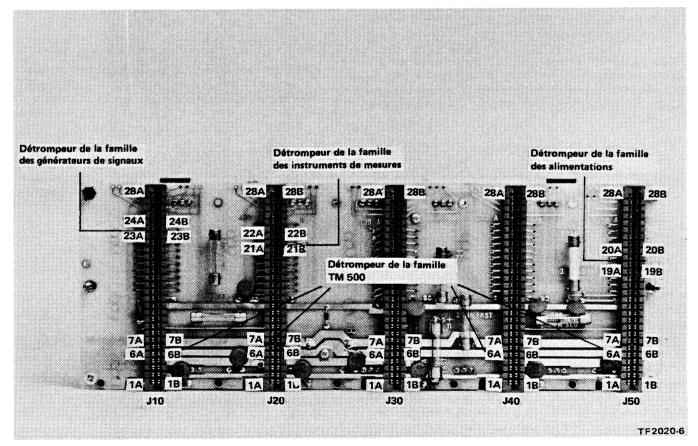

Fig. 2-1. Carte d'interface.

connecteur d'interface en face de l'encoche correspondante. Un appareil TM 515 complet peut être personnalisé de cette manière, permettant d'établir le système d'instructions pour des fonctions spécifiques. Pour obtenir des détrompeurs supplémentaires, se référer à la liste des pièces mécaniques de rechange contenues dans le manuel en anglais.

Des cavaliers câblés peuvent spécialiser l'interface. Des compartiments peuvent ainsi «se parler» en connectant des cavaliers du côté frontal de la carte d'interface par l'intermédiaire des broches d'interconnexions 14 à 28 (côtés A et B ensemble). Pour de plus amples informations, se reporter au chapitre des options du manuel en anglais, rubrique «option 05». Se reporter également à chaque manuel de tiroir pour connaître l'assignation de chaque broche I/O (entrée/sortie) placée sur l'interface arrière. Après avoir réalisé les interconnexions pour une utilisation spécialisée, il est recommandé d'installer les détrompeurs de telle sorte qu'ils garantissent la compatibilité du module avec le câblage effectué.

INSTALLATION ET MISE EN SERVICE PRELIMINAIRE

Démontage des capots avant et arrière

Les pièces en plastique blanc, situées à gauche et à droite, aux extrémités du châssis sont les fixations qui maintiennent les capots en place. Pour les libérer, il suffit d'écarter du boîtier les extrémités avancées des fixations (gauche et droite). Tirer sur le champ arrière de chaque fixation et le couvercle peut être ôté (voir Fig. 2-2).

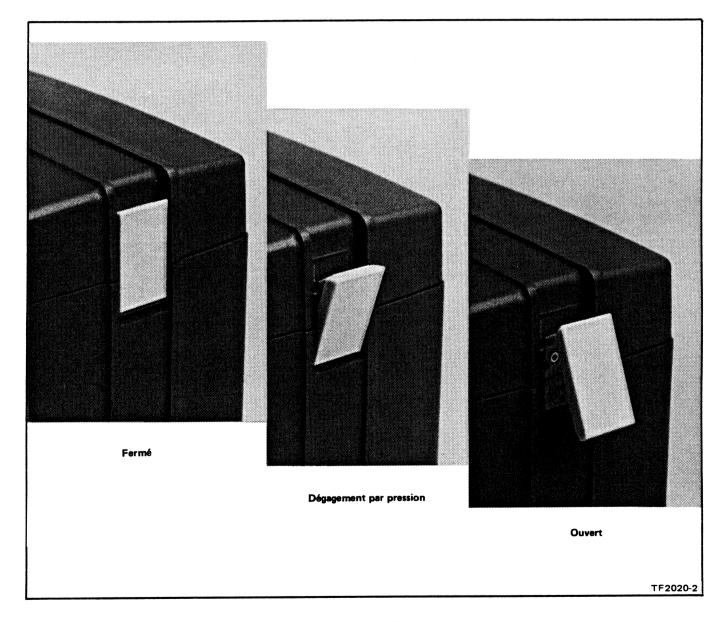

Fig. 2-2. Système de fixation.

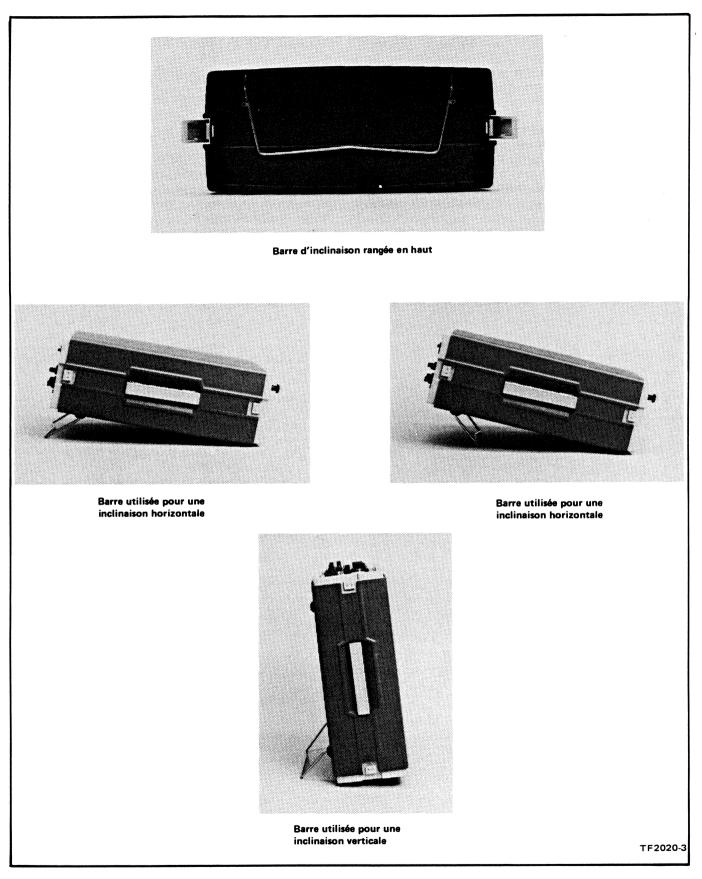

Fig. 2-3. Utilisation et rangement de la barre d'inclinaison.

UTILISATION DE LA BARRE D'INCLINAISON

La barre d'inclinaison destinée à maintenir l'appareil selon un angle de visualisation approprié est rangée à l'intérieur du capot avant. Si nécessaire, la sortir de son logement et l'installer conformément à l'angle de visualisation souhaité (Fig. 2-3).

SELECTEUR DE LA TENSION RESEAU ET FUSIBLE

APRES DEMONTAGE DU CAPOT ARRIERE ET AVANT BRANCHEMENT DU CORDON D'ALIMENTATION :

- Vérifier, à travers le capot de plastique transparent, que le connecteur de sélection de la tension réseau est positionné sur la tension réseau que vous comptez appliquer à l'appareil. Vérifier également que le porte fusible, monté à l'arrière de l'appareil à l'aide d'un écrou, contient bien le fusible approprié (voir Fig. 2-4A).
- Si l'on doit procéder à une modification, agir de la manière suivante.

a. Desserrer les deux vis de fixation situées sur le capot du sélecteur et démonter le capot. Ceci permet d'acceder aisément aux connecteurs de sélection situés sur l'arrière de l'appareil (voir Fig. 2-4 et 2-5).

b. Démonter le connecteur qui ne convient pas et installer le connecteur correct pour la plage de tension désirée : faible (LOW), moyenne (M) et haute (HIGH). Afin de ne pas l'égarer, placer le connecteur remplacé sur les broches de stockage. Remettre en place le capot de plastique transparent.

c. Tourner le bouton du porte fusible en direction de la flèche et le dégager de l'appareil. Oter le fusible ne convenant pas et mettre en place le fusible approprié. (Des fusibles de rechange sont rangés sur des supports nus sur la carte principale d'interface. Il est nécessaire de séparer l'alimentation du châssis pour accéder à ces fusibles. Se reporter aux instructions de démontage du châssis figurant au chapitre 4 concernant la maintenance, dans le manuel en anglais).

3. Dégager le cordon d'alimentation secteur du trou de logement du ventilateur.

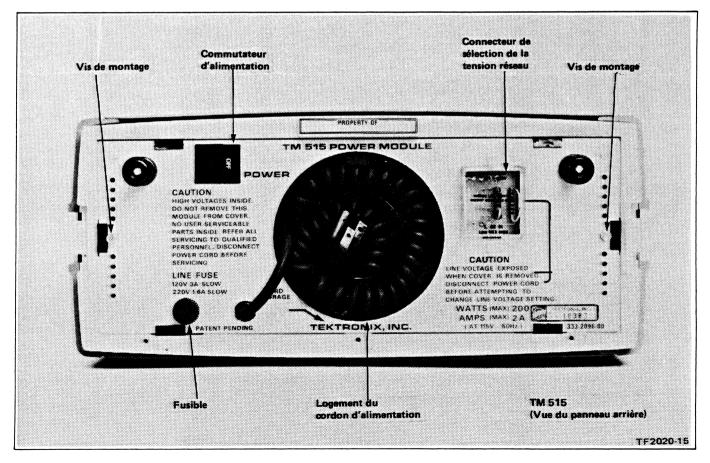

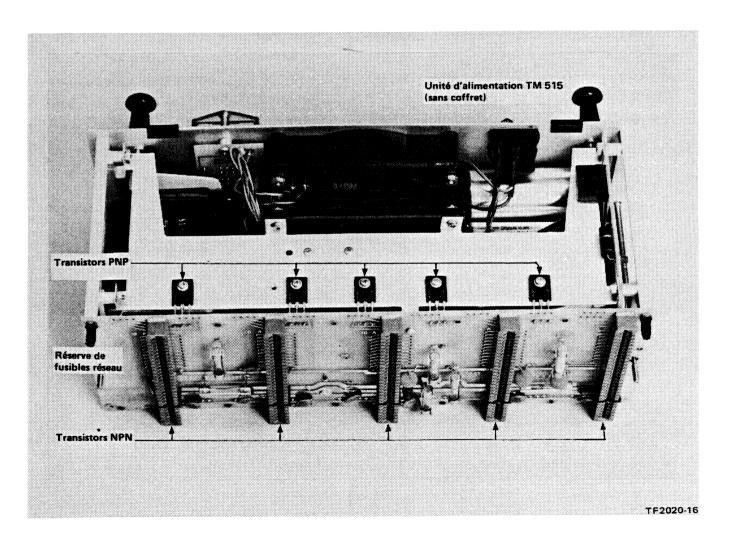

Fig. 2-4A. Panneau arrière.

Instructions d'utilisation - TM 515

- 4. Si nécessaire, remplacer la prise et le cordon secteur ou utiliser un adaptateur. S'assurer également que le commutateur POWER est sur OFF (hors service).
- 5. Connecter la prise à la source d'alimentation.

- 6. Insérer les tiroirs voulus.
- 7. Les opérations d'installation et de mise en route préliminaire sont alors achevées.

٦

ł

BEDIENUNGSANLEITUNG

Einbau

Die gesamten Einbauanweisungen finden Sie am Ende dieses Kapitels.

Netzspannung

Die Versorgungseinheit TM 515 muß an ein Lichtnetz mit neutralem oder geerdetem separatem Nulleiter angeschlossen werden. Sie ist nicht für den Anschluß an Zweioder Mehrphasennetze geeignet. In der Standardausführung benötigt die Versorgungseinheit 48 Hz bis 60 Hz Netzfrequenz für den Ventilator. Option 6 erhöht den Netzfrequenzbereich auf 400 Hz.

Leistungsaufnahme

Bestückt mit 5 Einschüben nimmt die Versorgungseinheit TM 515 bis zu 240 W an einem 220 V Netz auf. Die tatsächliche Leistungsaufnahme hängt von der Kombination der einzelnen Einschübe und deren momentanen Betriebsarten ab.

Belastungsmöglichkeiten. Der optimale Leistungsverbrauch der Versorgungseinheit TM 515 kann durch Planung der Einschubzusammensetzung, der externen Lasten und der resultierenden Verlustwärme bestimmt werden. Optimale Bedingungen werden erhalten durch:

- 1. Gleiche Belastung aller Einschubkanäle.
- 2. Verbrauch von soviel Leistung wie möglich in den externen Lasten.
- Betrieb des Systems in einer Umgebungstemperatur von etwa 25°C.

Die TM 515-Versorgungseinheit verfügt über kein Einschubfach für erhöhte Leistungsentnahme, es ist daher die Einschubbestückung zu beachten, besonders dann, wenn einige Einschübe nicht mit voller Leistungsentnahme in der Versorgungseinheit betrieben werden dürfen. Einige der TM 500-Seriennetzteile z. B. liefern nicht den maximalen Strom, wenn sie von der TM 515 versorgt werden. Auch gibt es Einschubkombinationen, bei denen die Einschübe nicht die volle Leistung abgeben dürfen. Ein Beispiel wäre die Bestückung mit drei Einschüben, die über eine Verlustleistung von je 75 W verfügen. Wenn alle die Einschübe in ihrer max. Leistung betrieben werden, wird wahrscheinlich die Netzsicherung auslösen, wenn nicht schon vorher die Thermosicherung angesprochen hat.

Jeder Einschub hat Zugriff zu einem, auf ein Kühlblech montierten Leistungstransistorpaar (als Längstransistoren arbeitend). Diese Transistoren, je ein NPN- und PNP- Typ, ermöglichen den Einschüben in Leistungsbereichen zu arbeiten, die nicht erreichbar wären, würde die Verlustleistung innerhalb der Einschübe abfallen.

Betriebstemperaturen

Die TM 515 kann in einem Umgebungstemperaturbereich von 0°C bis 50°C arbeiten. Die Geräte sind durch thermische Abschalteinrichtungen, die bei hohen Temperaturen ansprechen, wirkungsvoll geschützt. Nach der Wiederherstellung der Betriebstemperatur schaltet sich die TM 515 automatisch wieder ein.

Die Lagerung der TM 515 kann in einem Temperaturbereich von -40° C bis $+75^{\circ}$ C erfolgen. Die Inbetriebnahme hat jedoch in den vorgeschriebenen Temperaturgrenzen zu erfolgen.

Einschübe

Für die Inbetriebnahme der TM 515-Versorgungseinheit ist es nicht zwingend, alle Einschubfächer zu bestükken, es sind nur die Einschübe einzubauen, die für die Anwendung erforderlich sind.

Die Versorgungseinheit TM 515 sollte vor Einfügen oder Herausnahme eines Einschubs ausgeschaltet werden, da Funkenbildung entstehen und die Schaltkreise beschädigen könnte.

Einschubeinbau

1. Überprüfen Sie, ob der Plastiksteg in der rückwärtigen Buchsenleiste der TM 515-Versorgungseinheit so positioniert ist, daß er mit der Aussparung in der Steckerleiste der Einschübe übereinstimmt.

2. Entnehmen Sie die Einschubrückhaltung an der unteren Einschuböffnung durch Aufschrauben der 3 Halterungen.

3. Setzen Sie den Einschub in die obere und untere Führung der Versorgungseinheit und schieben Sie ihn bis er in der hinteren Buchsenleiste einrastet. (Entfernen Sie den Einschub durch Ziehen an der weißen Entriegelungsklinke in der linken unteren Ecke jedes Frontpanels.)

4. Ersetzen Sie die unter Punkt 2 entfernte Einschubrückhalterung.

Bedienungsanleitung – TM 515

Einschaltvorgang

Zum Einschalten ist der Netzschalter auf der Rückseite der TM 515 in die Position ON (Ein) zu drücken. Einige Einschübe verfügen über einen eigenen Schalter, der nach dem Einschalten der TM 515-Versorgungseinheit zu betätigen ist.

AUFBAU EINES MESSYSTEMS

Kompatibilität

Mechanisch sind die Einschübe anderen Tektronix-Produkten sehr ähnlich, jedoch elektrisch nicht kompatibel. Aus diesem Grund besitzt die TM 515 in den Buchsenleisten zwischen den Stiften 6 und 7 Sperriegel, wodurch das Einsetzen eines falschen Einschubes verhindert wird.

Siehe Abb. 2–1. Ein kompatibler Einschub verfügt in seiner Steckerleiste zwischen den Stiften 6 und 7 über eine Aussparung. Diese Kombination von Riegel und Aussparung ist die grundsätzliche Verschlüsselung zwischen Einschüben und Versorgungseinheiten.

Darüber hinaus sind die kompatiblen TM 500-Einschübe durch einen weißen Entriegelungshebel zum Herausnehmen gekennzeichnet.

Anwenderbezogenes Interface

Durch die Modularität dieses Gerätesystems ergibt sich je nach Kombination eine vielseitige Funktionserfüllung. Die speziellen Funktionen sind in Familien bzw. Klassen zusammengefaßt, denen verschiedene Einschübe zugeordnet sind, z.B. Netzteile, Signalgeneratoren und Meßgeräte. Jeder Einschub verfügt daher je nach Familienzugehörigkeit über eine weitere Aussparung in seiner hinteren Steckeranschlußleiste, die ihn klassifiziert. Dem Anwender wird hierdurch ermöglicht, durch Einbau von weiteren Isolierstegen seine Versorgungseinheit so zu programmieren, daß die Einschubfächer nur Einschübe mit bestimmten Funktionen aufnehmen. Beziehen Sie sich bei der Bestellung weiterer Isolierstege auf die Einsatzteillisten für mechanische Teile.

Zur weiteren Spezialisierung des Interface sind Drahtbrücken zu verwenden, die eine Kommunikation der einzelnen Einschubfächer untereinander gestatten. Hierzu sind die Stifte 14 bis 28 der A- und B-Seiten zu verwenden. Eine Beschreibung hiervon ist unter Option 5 dem Kapitel 4 dieses Handbuches zu entnehmen. Darüber hinaus ist in jeder Einschubbeschreibung die Stiftbelegung der Steckerleiste zu beachten. Sind solche Zwischenverbindungen hergestellt, so ist es zwingend, auch Isolierstege einzubauen, die die Kompatibilität in der Verdrahtung sicherstellen.

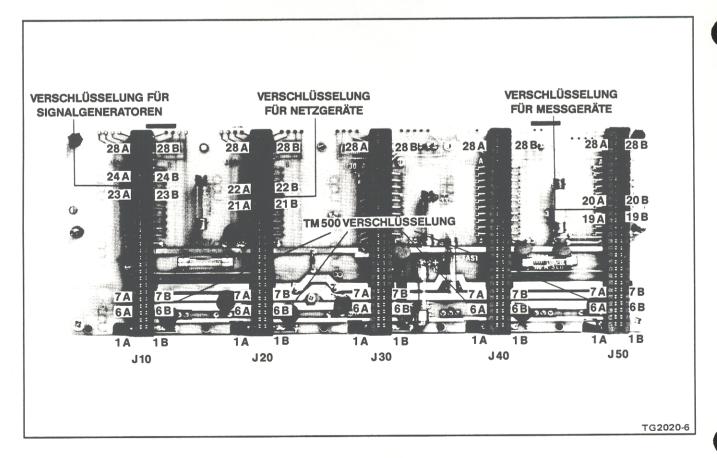

Abb. 2–1. Interface-Platine.

EINBAU UND ANLEITUNG VOR DER INBETRIEBNAHME

Entfernen der vorderen und hinteren Abdeckung

Die weißen, links und rechts am Gehäuse angebrachten Plastikteile sind die Halteklammern der Abdeckhauben.

Zum Entfernen der Abdeckungen sind die Halteklammern an ihren Kanten einfach nach außen zu drücken, wonach sie sich aus den Verriegelungen herausklappen lassen (siehe Abb. 2–2).

GEBRAUCH DES STANDBÜGELS

Der Standbügel, zur Aufstellung des Gerätes in einem günstigen Betrachtungswinkel, ist in der Frontabdekkung des Gerätes untergebracht. Falls gewünscht, kann der Bügel aus der Halterung in der Frontabdeckung entfernt und entsprechend dem gewünschten Betrachtungswinkel montiert werden.

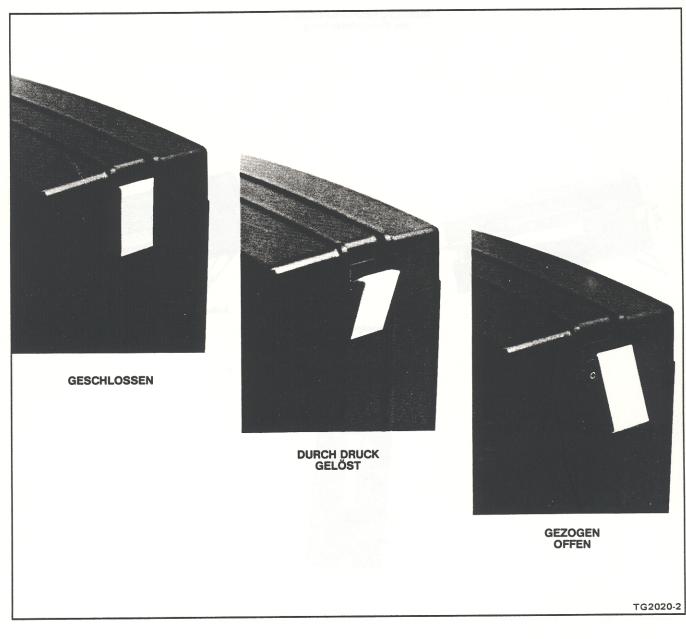

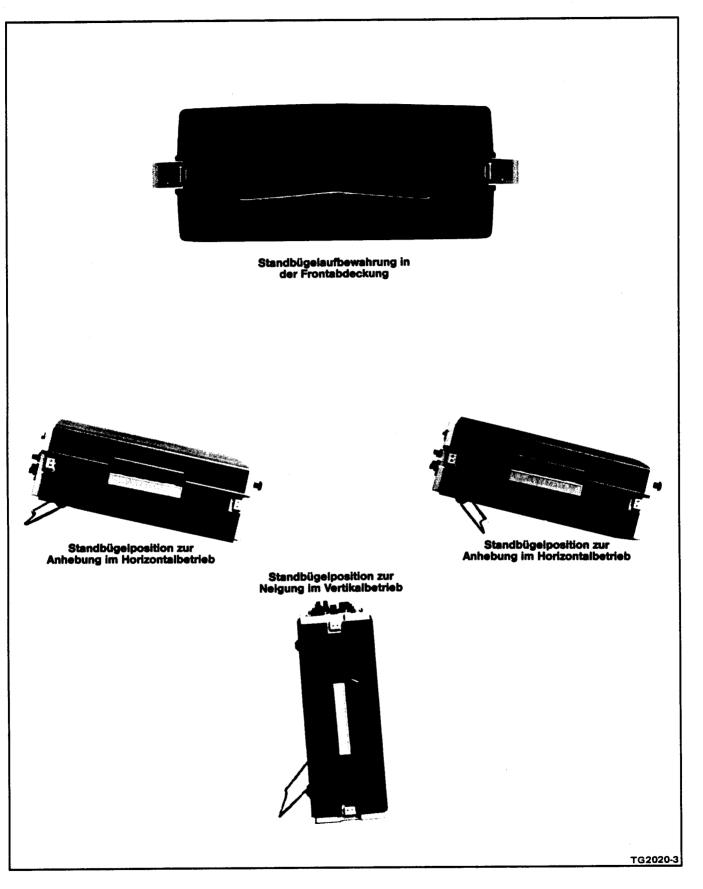

Abb. 2–2. Halteklammern.

۰.

NETZSPANNUNGSWAHL UND SICHERUNGEN

NACH DEM ENTFERNEN DER HINTEREN ABDECK-HAUBE UND VOR DEM ANSCHLUSS AN DIE NETZSPAN-NUNG:

1. Prüfen Sie durch die Plastikabdeckung hindurch, ob sich der entsprechende Netzspannungswahlstecker in der Betriebsposition für die zu erwartende Netzspannungshöhe befindet und ob die richtige Sicherung im Sicherungshalter eingesetzt ist, dessen Schraube auf der Rückseite des Gerätes installiert ist (siehe Abb. 2–4A).

- 2. Wenn ein Umwechseln erforderlich ist, ist folgendermaßen vorzugehen:
- a. Entfernen Sie die zwei Halteschrauben der Plastikabdeckung des Netzspannungswählers und heben Sie die Abdeckung ab. Sie haben jetzt Zugang zu den Netzspannungswahlsteckern, die auf der Rückseite des Gerätes liegen. Siehe Abb. 2–4 und 2–5.
- b. Entfernen Sie den unzutreffenden Spannungswahlstecker und ersetzen Sie ihn durch den der richtigen Netzspannungshöhe entsprechenden Stecker. Damit der nicht benötigte Stecker nicht verloren-

geht, stecken Sie ihn bitte auf die dafür vorgesehenen Aufbewahrungsstifte. Dann montieren Sie die Plastikabdeckung wieder mit den Halteschrauben.

- c. Drehen Sie den Sicherungshalter in Pfeilrichtung und ziehen Sie ihn heraus. Ersetzen Sie die unpassende Sicherung durch eine passende. (Wechselund Ersatzsicherungen werden in Blindhaltern auf der Hauptinterfaceplatine aufbewahrt. Um an die Sicherungen zu gelangen, ist es nötig, das Netzteil aus dem Gehäuse herauszunehmen. Hierzu siehe Gehäuseentferung unter Kapitel 4 Wartung des Gerätes.)
- 3. Ziehen Sie die Netzleitung aus dem Lüftergehäuse heraus.
- 4. Falls nötig, ersetzen Sie den Netzanschlußstecker durch einen passenden, oder benutzen Sie einen Adapter. Prüfen Sie, daß der Netzschalter in Position OFF (Aus) ist.
- 5. Stecken Sie den Netzstecker ein.
- 6. Setzen Sie die gewünschten Einschübe ein.
- 7. Dies beendet den Einbau und die Vorbereitung.

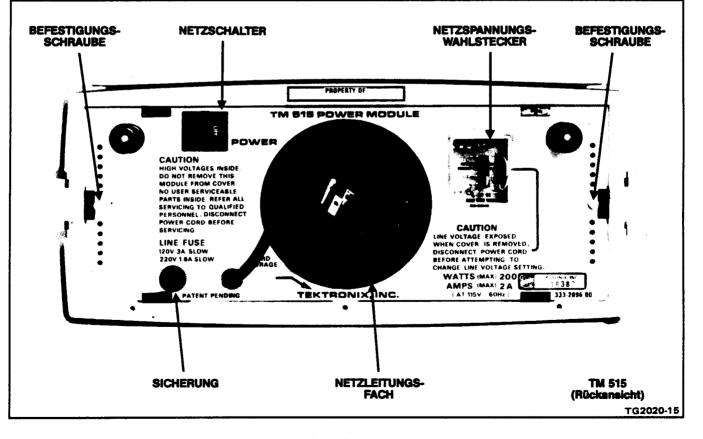

Abb. 2-4A. Rückensicht.

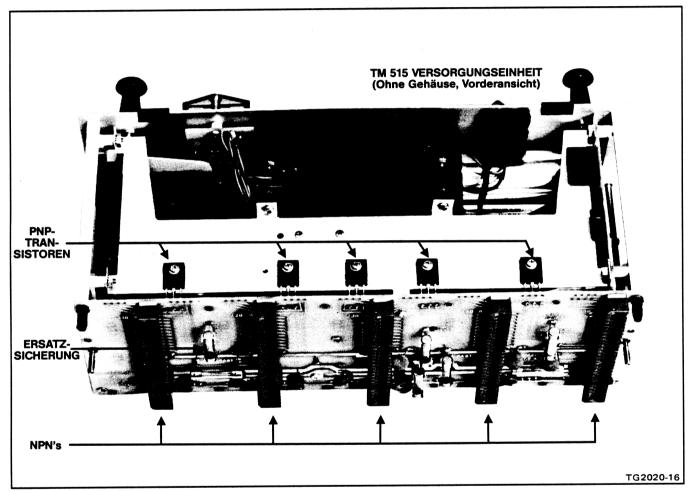

Abb. 2–4B. Vorderansicht.

取 扱 説 明

取付け

取付け手順に関しては本章の最後の部分に述べられています。

電源

本機器はアース電位の中性点を持った電源で使用するように設計されています。多相システムの2相または単相3 線システムの2線で動作させることはできません。標準型 の機器はファンが作動するので、周波数範囲は48~60Hz です。オプション06型は400Hzまで使用することができま す。

消費電力

5 台のプラグインが組み込まれた場合、TM515型は高い 方の動作電圧で最高240Wの電力を必要とします。実際の消 費電力はプラグインの組み合わせや動作状態によって変わ ります。

負荷について 電力はフラグインの機能的な組合せ、外部 負荷、各々のフラグインの消費電力に注意して効率よくご 使用下さい。

最適の状態とは、

- (1) 5つのプラグイン・ホールがすべて同じ負荷であること。
- (2) 電力はできる限り外部負荷で消費すること。
- (3) 約25℃の周囲温度で使用すること。

TM515型には高電力プラグイン・ホールがありませんの で、プラグインの選択にはご注意下さい。プラグインの中 には、この電源本体では使用できないものもあります。た とえばTM500シリーズのパワー・サプライはこの本体では 最大定格電流を供給できません。他のプラグインの組み合 わせでも十分な機能を発揮できないこともあります。最大 消費電力がそれぞれ75Wのプラグインを3つ使用した場合、 すべてのプラグインが最大定格で動作したならば、サーマ ル・カットアウトが作動するか、そうでない時はヒューズ が切れます。

TM515型には、各プラグイン・ホールに対し各1対ずつ 割り合てられたPNP、NPNトランジスタがあります。プラ グインの電源はこのトランジスタを通して供給されます。 安定化回路はプラグイン内にありますが、熱を十分放散で きるようにシリーズ・トランジスタは本体側にあります。

動作温度

TM515型は0~50℃の周囲温度で動作することができま す。内部温度が安全動作温度以上に上がった場合には、サ ーマル・カットアウト装置により自動的に電源が切断し、 TM515型を保護します。この装置は内部温度が安全動作温 度に復帰すれば再び電源を接続します。

TM515型の格納温度は-40℃~+75℃までですが、機器 のシャーシが動作温度範囲内に戻ってから電源を投入して 下さい。

プラグイン

本体を動作させるのにすべてのプラグイン・ホールにプ ラグインを組み込む必要はありません。必要なプラグイン のみ組み込んで下さい。

注意

プラグインを抜き差しする場合にはTM515型の 電源を切ってから行って下さい。切らずに抜き差 ししますとアークが生じ、中の回路に悪影響を与 えます。

プラグインの取付け

- TM515型のコネクタ内にはいっているプラスチックの 位置決めスペーサとプラグインのエッジ・コネクタのカ ット部分が一致していることを確認します。
- 機器の前面下部についている3本のボルトをはずして PLUG-IN RETAINERを取りはずします。
- プラグイン・ホールの上下のガイドに沿ってプラグインを差し込み、さらにコネクタにプラグインのエッジ・コネクタがしっかりと固定されるまで押して下さい。プラグインを取りはずす場合には、左下隅にあるつまみを引っぱりそのまま引き抜きます。
- 4. PLUG-IN RETAINERを収り付けます。

電源投入の手順

TM515型の後部パネルのPOWERスイッチをONの位置に します。プラグインの中には独立した電源スイッチを持っ ているものもあり通常OUTPUTと書かれています。プラグ インを動作させるにはこのボタンを押します。これによって プラグインへの電源供給をコントロールすることができま す。プラグインを作動させるには、本体の電源を入れてか ら、このスイッチを入れます。

システム構成

互換性

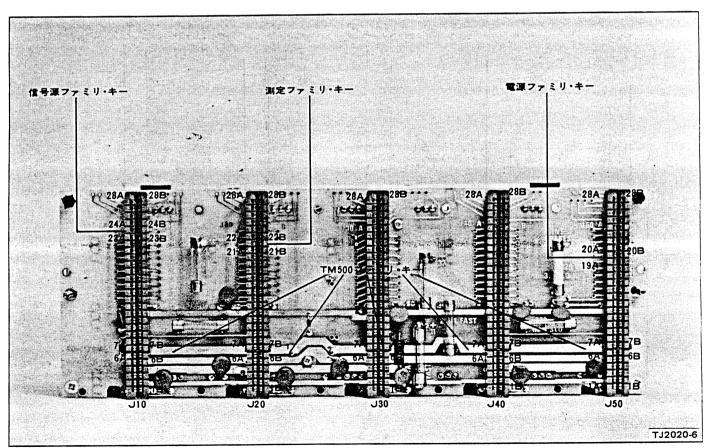

当社のプラケインは外観上、他のシリーズのプラケイン と類似しています。しかし電気的には互換性がありません。 ですから他のシリーズのプラグインと組み合わせができな いよう、TM515型のインターフェイス・コネクタのピン6 と7に位置決めスペーサがはいっています。(1-1 図参照) TM500シリーズのプラグインはメインのプリント基板上の ピン6と7の部分がカットされています。このスペーサと カット部分が一致していることを確認します。

TM500シリーズのプラグインには白色のつまみがありま すので 簡単に識別できます。

インターフェイス

TM500シリーズはプラグイン方式になっていますので多 くの災なった機能を持たせることが可能です。またTM500 シリーズを信号源、電源、測定器などいくつかの群にわけ ることができ、それらの同種のプラグインに特定のプラグイ ン・ホールを割り当てるため、別に位置決めスペーサを挿 入することもできます。この位置決めスペーサの追加によ って、同種のプラグイン群のみ使用可能なプラグイン・ホ ールをプログラムすることができます。この方法でTM515 型のすべてのプラグイン・ホールに特定の機能を持たせる ことができます。位置決めスペーサの部品番号はメカニカ ル・パーツ・リストをご参照下さい。

さらにジャンパ線を使ってインターフェイスを容易にす ることが可能です。内部コネクタのA面とB面のピン14~ 28を使って、インターフェイス・ボードの後側をジャンパ 線で按続することによりプラグインの信号を内部でやりと りすることができます。オブション02型の説明の項をご参 照下さい。後部インターフェイスの各ピンのI/Oの割り当て については各プラグインの取扱説明書をお読み下さい。一 旦特殊目的用にジャンパ線を接続したら内部インターフェ イス・コネクタに位置決めスペーサを取付けて、ジャンパ 線の配線に合わせたプラグインの適合性を保持するように します。

2-1図 インターフェイス・ボード

機器の組み立て

前面および後部カバーの取りはずし

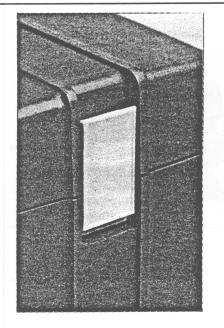

キャビネットの左右両端に、カバーがはずれないように 固定しておく白いプラスチックのとめ具がついています。

これらをはずすには、とめ具の上端をケースから離れるように押し広げます。

次にとめ具の他端をはずしカバーをとりはずします。 (2-2図参照)

底部金具の使用

前面カバー内に、測定に便利なように機器を適当な角度 に保つための金具が付属しています。必要な場合には、こ の金具を収納部分から取りはずして、ご希望の角度で観測 できるように取り付けて下さい。2-3図参照。

閉じている時

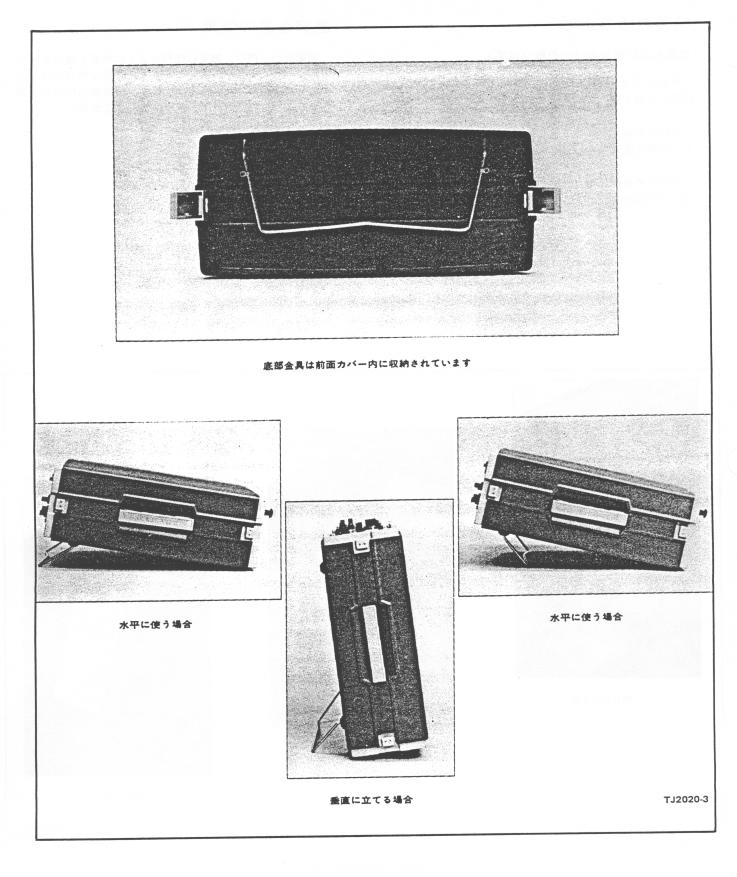

とめ具がはずれ かけた状態

開いた時

TJ2020-2

2-2図 とめ具のはずし方

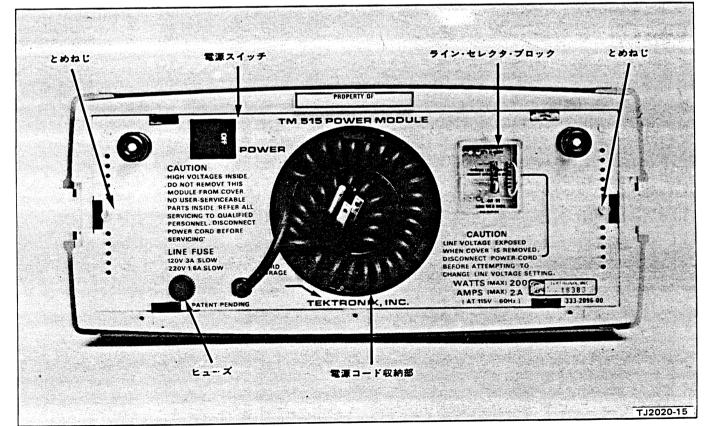

2-3図 底部金具の使用法と収納

電源電圧セレクタ及びヒューズ

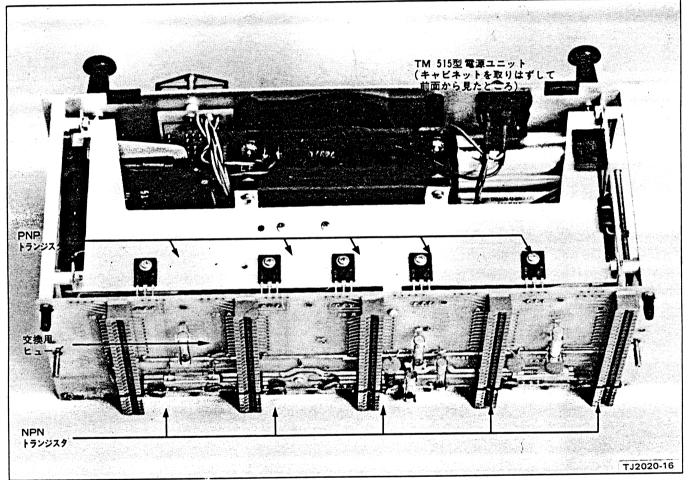

後部カバーを取りはずしてから電源を入れるまで

- (1) 機器を使用するにあたって適切な電源電圧が選択されているかどうかを透明プラスチック・カバーを通して確認します。また機器の後部にねじどめされている、ライン・ヒューズ・ホルダに、電源電圧に合ったヒューズが取り付けられているか調べます。(2-4図)
- (2) ヒューズの交換が必要な場合は次の手順に従います。
 - (a) 2個のとめねじをはずし、透明プラスチックの電源
 電圧セレクタ・カバーを取りはずします。(2-4図、
 2-5図参照。)
 - (b) 不適当なブロックをはずし、L、M、Hのうち希望する 電源電圧のブロックを取り付けます。不適当なブロッ クはストレージ・ピンに取り付け、なくさないように します。透明プラスチック・カバーを再び取り付けま す。

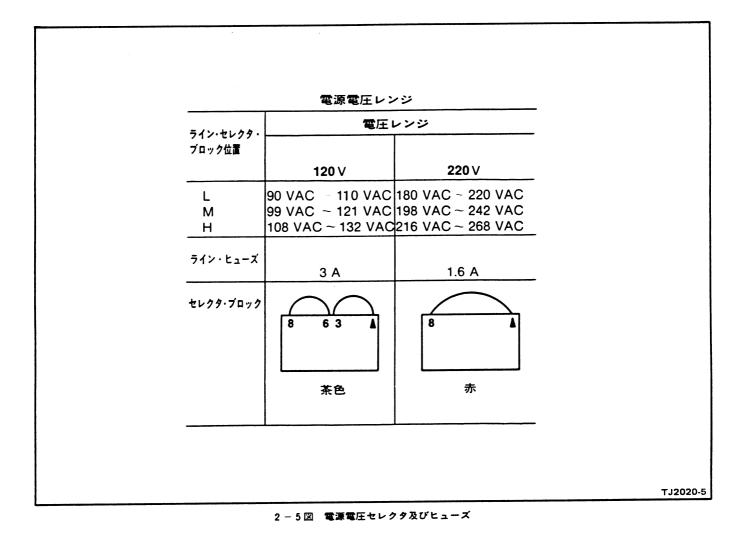

- (c) ヒューズ・ホルダ・ノブを回して、機器から離れる ように引っぱります。不適当なヒューズを取りはずし、 適切なものを取り付けます。(交換用ヒューズはメイ ン・インターフェイス・ボード上のブランク・ホルダ に収納されています。ヒューズを取り出す際には、必 ず電源を取りはずして下さい。この取扱説明書中の第 2章をご参照下さい。)
- (3) 電源コードを収納部分から引き出します。
- (4) 必要であれば電源差し込みプラグを変更するか、交換 アダプタを使用します。さらに電源スイッチがOFFになっていることを確めます。
- (5) 電源コードを差し込みます。
- (6) プラグインを差し込みます。
- (7) ブラグインの取付けが完了したら、電源を入れること ができます。

MAINTENANCE

GENERAL

Introduction

This section of the manual is meant to support the entire TM 500-Series family of modules with a general coverage of the most commonly-needed service information pertinent to preventive maintenance, troubleshooting, ordering parts, and replacing components and sub-assemblies.

Cabinet Removal

Dangerous potentials exist at several points throughout the system. When the system must be operated with the cabinet removed, do not touch exposed conections or components. Some transistors have voltage present on their cases. Disconnect power before cleaning the system or replacing parts.

Two screws on the rear panel secure the case to the TM 515 Power Unit. Unscrew them and lift the power unit straight up to take the two apart. Do not operate the system with the case removed any longer than necessary for troubleshooting and calibration. Re-install the power unit to protect the interior from dust and to remove personnel shock hazards, as well as provide proper ventilation.

When reinstalling the power unit in the case, care should be taken to align the Power Supply mounts with their respective holes in the Chassis (Support) Assembly. You may find it easier to fit the case to the supply. Look down through the front end of the open case to make sure the mounts align with their respective holes in the assembly. Then, carefully holding the two units together, invert the whole assembly and screw the two mounting bolts into place. See Fig. 3-1.

Cleaning

Avoid using chemical cleaning agents that might damage plastic parts. Avoid chemicals containing benzene, toluene, xylene, acetone, or similar solvents. **Exterior.** Loose dust may be removed with a soft cloth or a dry brush. Water and a mild detergent may be used. Abrasive cleaners should not be used.

Interior. Cleaning the interior of any unit should precede calibration since the cleaning process could alter the settings of calibration adjustments. Use low-velocity compressed air to blow off accumulated dust. Hardened dirt can be removed with a soft brush, cotton-tipped swab, or a cloth dampened in a solution of water and mild detergent.

Preventive Maintenance

Preventive maintenance steps performed on a regular basis will improve the reliability of the instrumentation systems. However, periodic checks of the semiconductors in the absence of a malfunction are not recommended as preventive maintenance measures. See Semiconductor Checking information under Troubleshooting Techniques which follow. A convenient time to perform preventive maintenance is just before instrument calibration.

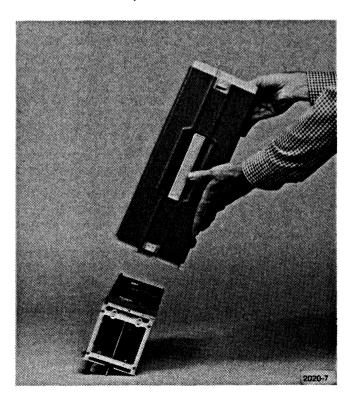

Fig. 3-1. Reassembly Guide-Pin Alignment.

Maintenance—TM 515

Calibration

To ensure accurate signal generation and measurement, the performance of individual units composing the system should be checked periodically. Refer to the instruction manual for each unit for complete calibration and verification procedures.

TROUBLESHOOTING AIDS

Introduction

The following is provided to augment information contained elsewhere in this and other TM 500-Series manuals when troubleshooting becomes necessary.

Circuit Description

Each manual has a section devoted to explaining circuit operating theory. Used conjointly with the schematics, this can be a powerful analytic tool.

Diagrams

Block diagrams and detailed schematic diagrams are located on foldout pages in the Service section of most of the TM 500-Series manuals. The schematic diagrams show the component values and assigned circuit reference numbers of each part necessary to the circuit design. Usually the first page of the Diagram section defines the the circuit symbols and reference designators used in that particular instrument. Major circuits are usually identifiable by a series of component numbers. Important waveforms and voltages may be shown within the diagrams or on adjoining aprons. Those portions of the circuits located on circuit boards are enclosed with a blue or gray outline.

Circuit Board Illustrations

Illustrations showing component locations keyed with a grid scheme for each circuit board are usually placed on the back of a foldout page and sequenced as close as possible to an associated schematic. The GRID LOC columns, located near the Parts Location Grid, keys each component to easy location on the board.

Component and Wiring Color Codes

Colored stripes or dots on electrical components signify electrical values, tolerances, etc., according to EIA standards. Components not color-coded usually have information printed on the body. The wiring coding follows the same EIA standards, except as follows:

Power Cord Conductor Identification

| Conductor | Color | Alternate Color |
|----------------------|--------------|-----------------|
| Ungrounded (Line) | Brown | Black |
| Grounded (Neutral) | Blue | White |
| Grounding (Earthing) | Green-Yellow | Green-Yellow |

Testing Equipment

Generally, a wide-band oscilloscope, a probe, and a multimeter are all that is needed to perform basic waveform and voltage checks for diagnostic purposes on units in this module. The calibration procedures in the manual for each plug-in lists specific test equipment and the features necessary to adequately check out that particular unit.

TROUBLESHOOTING TECHNIQUES

Introduction

This troubleshooting procedure is arranged in an order that checks the simple possibilities before proceeding to extensive troubleshooting.

Control Settings

Incorrect control settings can indicate a trouble that does not exist. If there is any question about the correct function of any control, see the Operating Instructions section of the manual for the instrument involved.

System and Associated Equipment

Before proceeding with troubleshooting the TM 500-Series system, check that the instruments in the system are operating correctly. Check for proper interconnection between the power module and the plug-ins. Check the line voltage at the power source. Check that the signal is properly connected and that the interconnecting cables and signal source are not defective.

Cam Switch Charts

Cam switches shown on the diagrams are coded on comprehensive charts to locate the cam number of the switch contact in the complete switch assembly, counting from the front, or knob end, toward the rear of the switch. The charts also indicate with a solid dot when each contact is closed. Some contacts are momentarily closed between detent positions and these are identified through the use of a triangular dot between detents in the contact drawing. The associated plug-ins can be checked for proper operation quickly by substituting other like units known to be operating properly. If the trouble persists after substitution, then the power module is probably at fault. Moving a properly operating plug-in from one appropriate compartment to another might help determine if one or more compartments have a problem.

Visual Check

Inspect the portion of the system in which the trouble is suspected. Many troubles can be located by visual clues such as unsoldered connections, broken wires, damaged circuit boards, damaged components, etc.

Instrument Calibration

Check the calibration of the suspected plug-in or the affected circuit if the trouble is obviously in a certain circuit. The trouble may only be a result of misadjustment or may be corrected by re-calibration. Complete calibration instructions are given in the manual for each instrument in the system.

Circuit Isolation

Note the trouble symptoms. These often identify the circuit in which the trouble is located. When trouble symptoms appear in more than one circuit, check the affected circuits by making waveform and voltage measurements.

Incorrect operation of all circuits often means trouble in the power supplies. Using a multimeter, check first for correct voltages of the individual regulated supplies according to the plug-in schematics and calibration procedures. Defective components elsewhere in the instruments can appear as power supply problems. In these instances, suspected circuits should be disconnected from apparently bad power supplies one at a time to narrow the search.

Voltages and Waveforms

Often, defective components can be located by using waveform and voltage indications when they appear on the schematic or in the calibration procedures. Such waveforms and voltage labels are typical indications and will vary between instruments. To obtain operating conditions similar to those used to take these readings, refer to the first diagram in the service section of the plug-in manuals.

Component Checking

If a component cannot be disconnected from its circuit, then the effects of the associated circuitry must be considered when evaluating the measurement. Except for soldered-in transistors and integrated circuits, most components can be lifted at one end from the circuit board.

Transistors and IC's

Turn the POWER switch OFF before removing or replacing any semiconductor.

A good check of transistor operation is actual performance under operating conditions. A transistor can most effectively be checked by substituting a new component for it (or one which has been checked previously). However, be sure that circuit conditions are not such that a replacement transistor might also be damaged.

If substitute transistors are not available, use a dynamic tester. Static-type testers are not recommended, since they do not check operation under simulated operating conditions. A suction-type desoldering tool must be used to remove soldered-in transistors; see Component Replacement procedure for details.

Integrated circuits can be checked with a voltmeter, test oscilloscope, or by direct substitution. A good understanding of the circuit description is essential to troubleshooting circuits using IC's. Operating waveforms, logic levels, and other operating information for the IC's are given in the Circuit Description section of the appropriate manual. Use care when checking voltages and waveforms around the IC's so that adjacent leads are not shorted together. A convenient means of clipping a test probe to the 14- and 16-pin in-line IC's is with an integrated circuit test clip. This device also doubles as an extraction tool.

Diodes

Do not use an ohmmeter that has a high internal current. High currents may damage the diode.

A diode may be checked for an open or shorted condition by measuring the resistance between terminals. When an ohmmeter scale having an internal source of between 800 mV and 3 V, the resistance should be very high in one direction and very low when the leads are reversed.

Resistors

Check the resistors with an ohmmeter. Resistor tolerances are given in the Electrical Parts List in every manual. Resistors do not normally need to be replaced unless the measured value varies widely from the specified value.

Capacitors

A leaky or shorted capacitor can be detected by checking resistance with an ohmmeter on its highest scale. Use an ohmmeter that will not exceed the voltage rating of the capacitor. The resistance reading should be high after initial charge of the capacitor. An open capacitor can best be detected with a capacity meter, or by checking whether it passes ac signals.

PARTS ORDERING AND REPLACING

Obtaining Replacement Parts

Most electrical and mechanical parts can be obtained through your local Tektronix field office or representative. However, you should be able to obtain many of the standard electronic components from a local commercial source in your area. Before you purchase or order a part from a source other than Tektronix, Inc., please check the electrical parts list for the proper value, rating, tolerance, and description.

Special Parts. Some parts are manufactured or selected by Tektronix, Inc., to satisfy particular requirements, or are manufactured for Tektronix, Inc., to meet our specifications. Most of the mechanical parts used in this system have been manufactured by Tektronix, Inc. Order all special parts directly from the local Tektronix Field Office or representative.

Ordering Procedure. When ordering replacement parts from Tektronix, Inc., please include the following minimum information:

- 1. Instrument Type (PS 501, SG 502, DC 501, etc.).
- 2. Instrument Serial Number (for example, B010251).

3. A description of the part (if electrical, include the circuit number).

4. Tektronix part number.

Please do not return any instruments or parts before receiving directions from Tektronix, Inc.

A listing of Tektronix Field Offices, Service Centers, and representatives can be found in the Tektronix Product Catalog and Supplements.

Replacing Parts

The exploded view drawing associated with the Mechanical Parts List, located to the rear of most manuals, may be especially helpful when disassembling or reassembling individual components or sub-assemblies.

Circuit Boards. If a circuit board is damaged beyond repair, the entire assembly, including all soldered-on components, can be replaced.

To remove or replace a board, proceed as follows:

1. Disconnect all leads connected to the board (both soldered lead connections and solderless pin connections).

2. Remove all screws holding the board to the chassis or other mounting surface. Some boards may be held fast by plastic mounting clips around the board edges. For these, push the mounting clips away from the circuit board edges to free the board. Also, remove any knobs, etc., that would prevent the board from being lifted out of the instrument.

3. Lift the circuit board out of the unit. Do not force or bend the board.

4. To replace the board, reverse the order of removal. Use care when replacing pin connectors. If forced into place incorrectly positioned, the pin connectors may be damaged.

Transistors and IC's. Transistors and IC's should not be replaced unless they are actually defective. If removed from their sockets during routine maintenance, return them to their original sockets. Unnecessary replacement or switching of semiconductor devices may affect the calibration of the instruments. When a transistor is replaced, check the operation of the part of the instrument that may be affected.

Replacement semiconductors should be of the original type or a direct replacement. Figure 3-2 shows the lead configurations of the semiconductors used in this instrument system. When removing soldered-in transistors, use a suction-type desoldering tool to remove the solder from the holes in the circuit board. An extracting tool should be used to remove the 14- and 16-pin integrated circuits to prevent damage to the pins. This tool is available from Tektronix, Inc. Order Tektronix Part No. 003-0619-00. If an extracting tool is not available, use care to avoid damaging the pins. Pull slowly and evenly on both ends of the IC. Try to avoid having one end of the IC disengage from the socket before the other end. To replace one of the power transistors mounted on the power module chassis adjacent to the interface circuit board, first unsolder the leads. Then, loosen the nuts which clamp the transistor to the chassis. Remove the defective transistor. When replacing the transistor, use a mica washer on the metal tap with silicone grease to increase heat transfer from the transistor to the chassis.

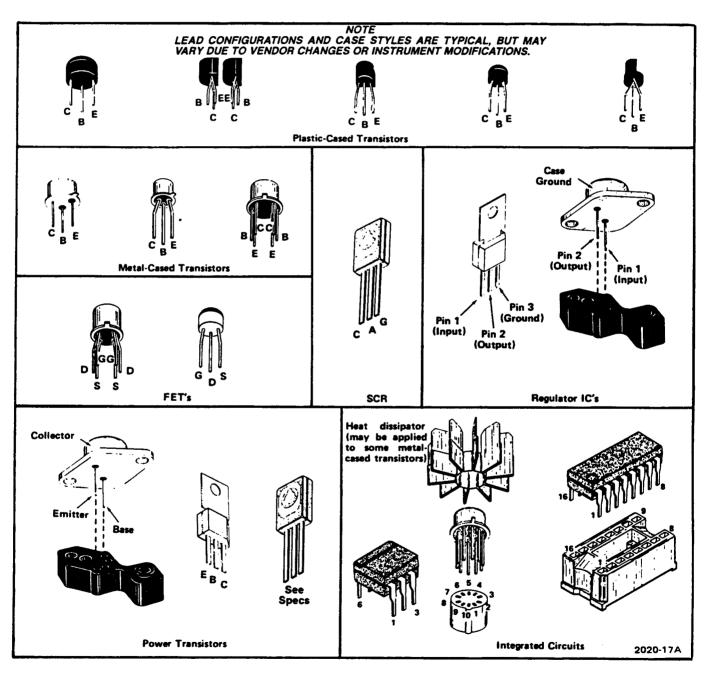

Fig. 3-2. Semiconductor device lead configurations found in the TM 500 family.

Maintenance—TM 515

This instrument contains semiconductor devices that are susceptible to damage from static discharge. Most semiconductor devices can be easily damaged by static discharge when they are not installed in a circuit and they can also be damaged in the circuit when a low-impedance path does not exist. The following categories are especially susceptible to static discharge damage: MOS or CMOS microcircuits or discreets, linear microcircuits with MOS inputs, ECL, Schottky signal diodes, Schottky TTL, high frequency bipolar transistors, JFETS, linear microcircuits, low power Schottky TTL, and TTL.

The probability of damage increases with the level of static discharge and with the number of times that the device is subjected to a static discharge. The accumulative damage may not be apparent for several months. Levels of static discharge that can cause damage varies with device types and may be as low as 100 V or less. The use of some suction-type solder removers, walking across carpeted floors, and other activities in a technical environment can develop static charges of thousands of volts.

Some precautions against static discharge damage are: 1. drain body static buildup with a wrist bracelet through a 100 k Ω resistor to earth ground; 2. use a grounded nonmetallic conductive bench top such as special anti-static polyethylene sheeting; 3. always store and ship circuit boards and semiconductors in their original anti-static type shipping materials (avoid non-conductive plastic and styrofoam material); 4. minimize handling of static sensitive components and keep component leads shorted together when the device is not in the circuit (handle by component body, not leads).

Interconnecting Pins

To replace a pin that is mounted on a circuit board, first disconnect any pin connectors. Then, unsolder the damaged pin and pull it out of the board with a pair of pliers. Be careful not to damage the wiring on the board with too much heat.

Ream out the hole in the circuit board with a 0.031-inch drill. Remove the ferrule from the new interconnecting pin and press the new pin into the hole in the circuit board. Position the pin in the same manner as the old pin and resolder. If the old pin was bent at an angle to mate with a connector, bend the new pin to match the associated pins.

NOTE

A pin replacement kit including necessary tools, instructions, and replacement pins is available from Tektronix, Inc.

Option 5

This factory-installed option adds 25-mil square-pin connectors to the interconnecting jacks at all pin locations from pins 14A and B through pins 28A and B. These pins are installed for convenient intermodule connections of a specialized nature. This will keep the interface flexible by making it easy and fast to change customized wiring using prepared wires with square-pin receptacles and long-nose pliers or tweezers. It also protects the circuit board from damage by repeated soldering and unsoldering of jumper wires. For more information concerning this option see Section 2, Operating Instructions.

Option 7

The following described bus wires and keys are added to the connector boards of the TM 515 Power Module to provide rear interface connections between the TM 500 Counter Plug-in containing Option 7, the TR 502, and the SW 503.

Bus Wires. Six-conductor ribbon cable (Tektronix Part No. 175-0829-00) is used to make bus connections between the following points:

B14 on J10, J20, and J30 B15 on J10, J20, and J30 B16 on J10, J20, and J30 B17 on J10, J20, and J30 B18 on J10, J20, and J30 A18 on J10, J20, and J30

Barrier Keys. Plastic barrier keys (Tektronix Part No. 214-1593-02) are inserted between pins 21 and 22 on J10, between pins 23 and 24 on J20, and between pins 17 and 18 on J30.

Once the above bus connections are made and barrier keys inserted, the three connectors are system dedicated and the three slots should only be used for systemdedicated plug-ins.

Cam Switches

Repair of cam-type switches should be undertaken only by experienced maintenance personnel. Switch alignment and spring tension of the contacts must be carefully maintained for proper operation of the switch. For assistance, contact your local Tektronix Field Office or representative.

NOTE

A cam-type switch repair kit including necessary tools, instructions, and replacement contacts is available from Tektronix, Inc. Order Tektronix Part No. 040-0541-00.

The cam-type switches consist of rotating cam drums which are turned by front-panel knobs, and sets of springleaf contacts mounted on adjacent circuit boards. The contacts are actuated by lobes on the cams. These switches can be disassembled for inspection, cleaning, repair, or replacement as follows:

1. Remove the screws which hold the metal cover on the switch, and lift the cover off the switch. The switch is now open for inspection or cleaning.

2. To completely remove a switch from the circuit board, first remove any knobs or shaft extensions. Loosen the coupling at the potentiometer at the rear of the switch, and pull the long shaft out of the switch assembly.

3. Remove the screws (from the opposite side of the circuit beard) that hold the cam drum to the board.

4. To remove the car drum from the front support block, remove the retaining g from the shaft on the front of the switch and slide the cam drum out of the support block. Be careful not to lose the small detent roller.

5. To replace defective switch contacts, follow the instructions given in the switch repair kit.

6. To re-install the switch assembly, reverse the above procedure.

Pushbutton Switches

The pushbutton switches are not repairable and should be replaced as a unit if defective. Use a suction-type desoldering tool to remove solder from the circuit board when removing these switches.

Incandescent Bulbs

Most of these light bulbs are mounted on the sub-panel using plastic sleeve stand-offs. Unsolder the lead wires and pull the bulb out of the sleeve from the rear of the subpanel. Extreme care should be exercised to keep from melting the plastic.

Light-Emitting Diodes

LED's used as indicators are mounted on the subpanels with plastic sleeve sockets similar to the incandescent bulb mountings or they are soldered directly to a subassembly and so mounted that they protrude through holes in the panel. In these cases, the sub-assembly must be exposed and the anode and cathode lead orientations carefully noted before unsoldering the defective LED. See Fig. 3-3 for LED lead identifying information.

Power Transformer

Replace the transformer only with a Tektronix direct replacement transformer. Refer to the exploded view drawing at the rear of this manual for disassembly necessary to expose the power transformer. Refer to the schematic diagram color-coding and lead identification information for correct wiring. After replacement, check out the power supply voltages before installing a plug-in.

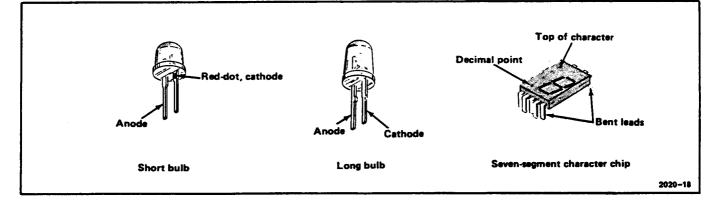

Fig. 3-3. Light-emitting diode (LED) lead orientation illustration.

Maintenance-TM 515

Packaging Information

A list of standard accessories (and part numbers) is located in the Replaceable Mechanical Parts list.

If the Tektronix instrument is to be shipped to a Tektronix Service Center for service or repair, attach a tag showing owner (with address) and the name of an individual at your firm that can be contacted. Include the complete instrument serial number and a description of the service required. Save and re-use the package in which your instrument was shipped. If the original packaging is unfit for use or not available, repackage the instrument as follows:

Surround the instrument with polyethylene sheeting to protect the finish of the instrument. Obtain a carton of corrugated cardboard of the correct carton strength and having inside dimensions of no less than 6 inches more than the instrument dimensions. Cushion the instrument by tightly packing 3 inches of dunnage or urethane foam between carton and instrument on all sides. Seal the carton with shipping tape or an industrial stapler.

The carton test strength for this instrument is 275 pounds per square inch.

OPTIONS

Your instrument may be equipped with one or more of the following options. This section directs the reader to where the option is documented.

Option 5

Information concerning this option may be found in Section 2, Operating Instructions; and Section 3, Maintenance.

Option 6

Information concerning this option may be found in Section 1, Specifications; Section 2, Operating Instructions; Section 3, Maintenance; and Section 6, Diagrams.

Option 7

Information concerning this option may be found in Section 3, Maintenance.

REPLACEABLE ELECTRICAL PARTS

PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.

DIAGRAMS AND CIRCUIT BOARD ILLUSTRATIONS

Symbols

Graphic symbols and class designation letters are based on ANSI Standard Y32.2-1975.

Logic symbology is based on ANSI Y32.14-1973 in terms of positive logic. Logic symbols depict the logic function performed and may differ from the manufacturer's data.

The overline on a signal name indicates that the signal performs its intended function when it is in the low state.

Abbreviations are based on ANSI Y1.1-1972.

Other ANSI standards that are used in the preparation of diagrams by Tektronix, Inc. are:

| Y14.15, 1966 | Drafting Practices. |
|--------------|--|
| Y14.2, 1973 | Line Conventions and Lettering. |
| Y10.5, 1968 | Letter Symbols for Quantities Used in Electrical Science and Electrical Engineering. |
| | an National Standard Institute 1430 Broadway w York, New York 10018 |

Component Values

Electrical components shown on the diagrams are in the following units unless noted otherwise:

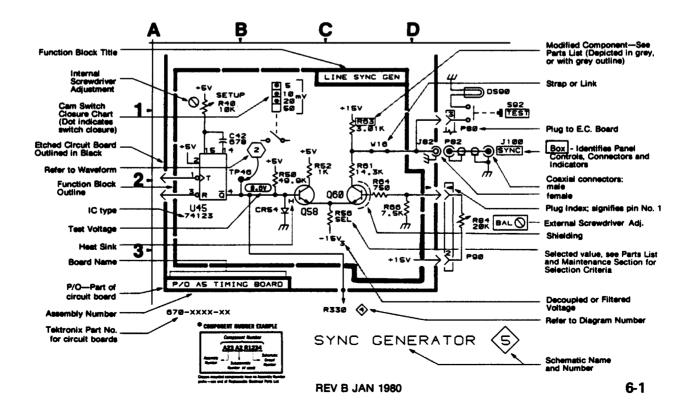

Capacitors = Values one or greater are in picofarads (pF). Values less than one are in microfarads (μF) .

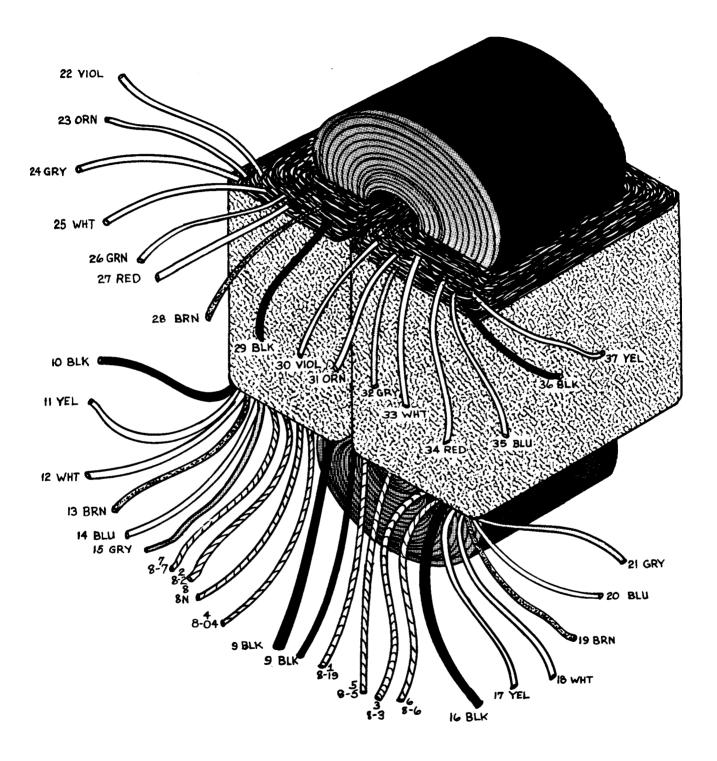

Resistors = Ohms (Ω).

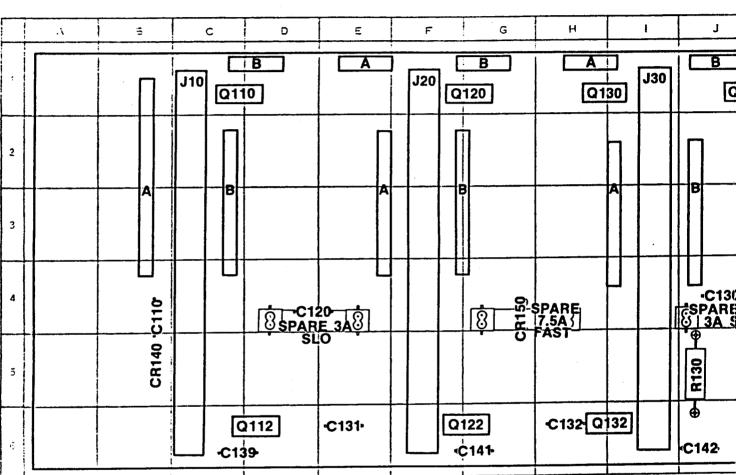

The information and special symbols below may appear in this manual.----

Assembly Numbers and Grid Coordinates

Each assembly in the instrument is assigned an assembly number (e.g., A20). The assembly number appears on the circuit board outline on the diagram, in the title for the circuit board component location illustration, and in the lookup table for the schematic diagram and corresponding component locator illustration. The Replaceable Electrical Parts list is arranged by assemblies in numerical sequence; the components are listed by component number [•](see following illustration for constructing a component number). The schematic diagram and circuit board component location illustration have grids. A lookup table with the grid coordinates is provided for ease of locating the component. Only the components illustrated on the facing diagram are listed in the lookup table. When more than one schematic diagram is used to illustrate the circuitry on a circuit board, the circuit board illustration may only appear opposite the first diagram on which it was illustrated; the lookup table will list the diagram number of other diagrams that the circuitry of the circuit board appears on.

REV A JAN 1980

REPLACEABLE **MECHANICAL PARTS**

PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available. and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number

Change information, if any, is located at the rear of this manual

ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.

FIGURE AND INDEX NUMBERS

Items in this section are referenced by figure and index numbers to the illustrations

INDENTATION SYSTEM

This mechanical parts list is indented to indicate item relationships. Following is an example of the indentation system used in the description column.

12345 Name & Description Assembly and/or Component Attaching parts for Assembly and/or Component . . . • . . . Detail Part of Assembly and/or Component Attaching parts for Detail Part Parts of Detail Part Attaching parts for Parts of Detail Part

Attaching Parts always appear in the same indentation as the item it mounts, while the detail parts are indented to the right. Indented items are part of, and included with, the next higher indentation. The separation symbol - - - * - - - indicates the end of attaching parts.

Attaching parts must be purchased separately, unless otherwise specified.

TM 515

REV APR 1985

MANUAL CHANGE INFORMATION

At Tektronix, we continually strive to keep up with latest electronic developments by adding circuit and component improvements to our instruments as soon as they are developed and tested.

Sometimes, due to printing and shipping requirements, we can't get these changes immediately into printed manuals. Hence, your manual may contain new change information on following pages.

A single change may affect several sections. Since the change information sheets are carried in the manual until all changes are permanently entered, some duplication may occur. If no such change pages appear following this page, your manual is correct as printed.

Manual Change Information

Date: October 11, 1990 Change Reference: 69432

Product: TM 515

Manual Part Number: 070-2020-02

Description

The following changes should be made to the Replaceable Electrical Parts List of the Instruction Manual.

Replaceable Electrical Parts (partial)
