

Bluetooth Connectivity Test Solutions

boosting wireless efficiency

Include Bluetooth in your test portfolio

Highlights

- Go/NoGo test for Bluetooth devices
- Minimal investment
- 4400 or 3100 supported

The increase in the utilisation of wireless headsets, connections to personal computers or other types of wireless devices has led to a large percentage of today's mobile phones supporting Bluetooth connectivity. For service centres, this has generated an additional test requirement when verifying the operation of a mobile device.

Service centres can now perform a quick Go/NoGo test on the Bluetooth portion of the mobile by utilising the 4941 Bluetooth Connectivity Hardware along with either the 4400 Series Mobile Phone Tester or the 3100 Mobile Fault Finder. This is achieved by performing a simple inquiry of the device located inside Willtek's RF Shield III or the 4921 RF Shield. Proper response of the Bluetooth device confirms the functionality of both receiver and transmitter.

The 4941 Bluetooth Connectivity Hardware consists of a Bluetooth Adapter, cables and rear panel for either the 4921 RF Shield or Willtek's RF Shield III. This hardware may be connected to either the 4400 or 3100 products. For the 4400 series, the 4489 Bluetooth Connectivity Test Package is offered which includes the 4941 Bluetooth Connectivity Hardware and RAPID! test software, allowing the user to perform a single button press to test both the Bluetooth and cellular portion of the mobiles. Similarly, the 3189 Bluetooth Connectivity Test Package is an offering that complements the 3100 Mobile Fault Finder with an easy to use Bluetooth test.

The Bluetooth Connectivity Test Package is a very cost-effective tool to verify that the customer's mobile device will properly communicate with a Bluetooth headset, PC or other wireless devices.
